different bandgaps and confined energy levels. However, local peaks are observed in some cases (the random 2 and random 3 cases in Figure 18.16). This might be the result of the small sampling volume used in the simulation. In real devices with much larger area, these different local peaks merge into the overall spectral broadening. Figure 18.17b shows the calculated full width half maximum (FWHM) of the emission spectrum is around 80–120 meV at room temperature, which is close to the experimental results.

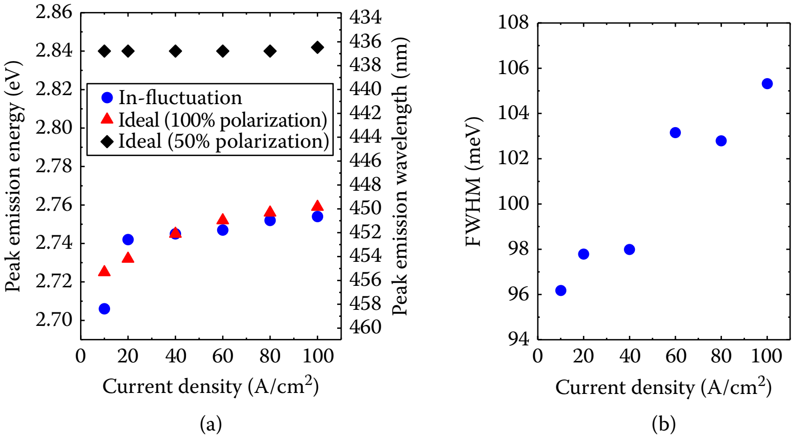

FIGURE 18.17 (a) The position of emission peak shift at different current density. (b) The full width half maximum (FWHM) of the emission spectrum. (From T.-J. Yang et al., *Journal of Applied Physics*, 116, 113104, 2014.)

Homogeneous broadening mechanisms usually will not lead to such large linewidths. If we compare the calculated intensity to the uniform QW case, the emission is stronger due to three factors occurring in the high In content regions where carriers localize in high indium region (deep potential): (1) there is less electron–hole separation; (2) there is more screening of electric field at a given current; and (3) there is an increased QW occupancy factor due to carrier localization. Figure 18.17a shows the blue shift of the spectrum when increasing the current density. A 40 meV (~ 7 nm) blue shift is observed when the current density increases from 10 to 100 A/cm^2, which is close to most experimental observations. Comparing with simulations of ideal QWs, assuming 50% polarization only leads to a very small blue shift due to a very reduced QCSE and the emission peak shifts to much shorter wavelength, while assuming a 100% polarization gives a reasonable shift, while, however, leading to very large forward bias (see the discussion in Section 18.4.3.1).

18.4.3 The Influence of Indium Fluctuation on the Carrier Transport and the Efficiency Droop

To model the vertical carrier transport in the 3D indium fluctuation cases, we used LEDs with six InGaN QWs with GaN barriers and included an AlGaN EBL, as shown in Figure 18.15b. We considered an MQW with a 100-nm p-doped GaN layer and a 200-nm n-doped GaN layer. The QW and barrier widths are 3 and 10 nm, respectively. We focus on 450-nm MQW blue LEDs ($In_{0.17}Ga_{0.83}N$). In the ideal QW case, the indium composition was uniformly 17%. In our case, we assigned the indium fluctuation in each QW randomly as described above. The maximum indium composition, which is determined by the random number generator, was around 18%–19%.

18.4.3.1 The Simulation Result of *c*-Plane LED

The simulation result is shown in Figure 18.18a. This is the calculated conduction band potential landscape. The indium-rich regions correspond to regions with a lower potential. The carriers will localize in the relatively lower potential regions because carriers inherently tend to stay in low-energy regions, as shown in Figure 18.18b. Consequently, the radiative recombination rate increases in the indium-rich region because of the carrier screening of the polarization fields, as shown in Figure 18.18c.

18.4.3.2 The *I*–*V* Curve

Next, we focused on the comparison of transport between the QW including indium fluctuation and uniform QW. Figure 18.19a shows the *I*–*V* curves. The forward voltage V_f used here is for a current density of

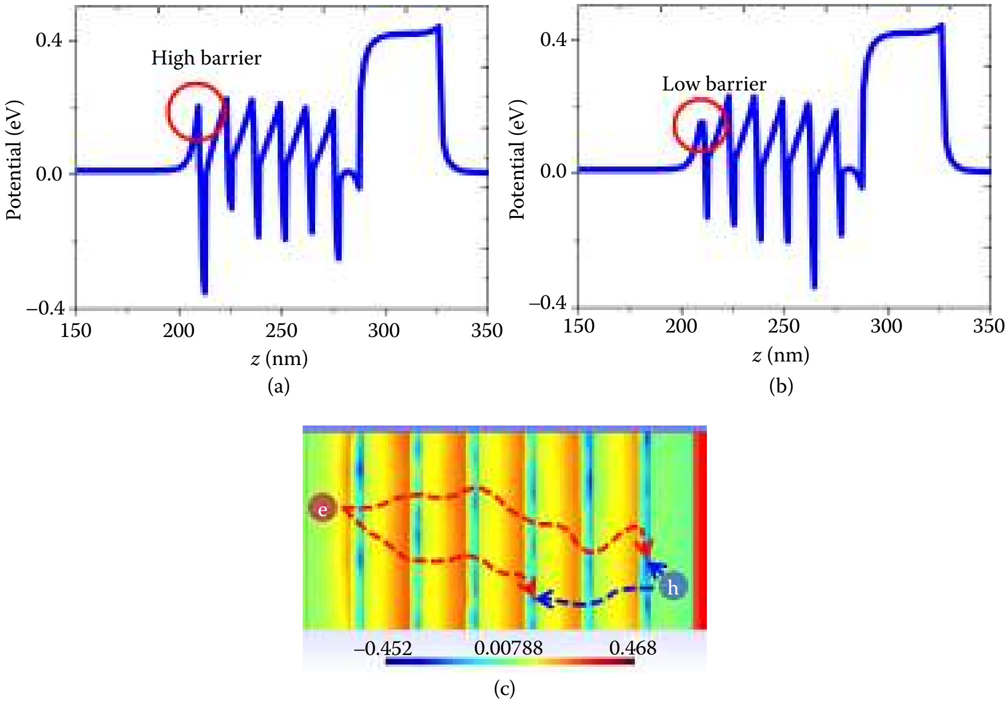
20 A/cm^2. For commercial blue light LEDs, V_f is around 2.8–3.0 V. For the ideal QW simulation (with uniform indium composition and 100% theoretical polarization value), V_f is almost 4.4 V, which is far larger than experimental results. This is also observed in most commercial simulation software with the same parameters set, which was also discussed in our twodimensional (2D) modeling results [23]. Some suggest including tunneling in the model to get a smaller V_f. But our calculation shows that using Wentzel–Kramers–Brillouin (WKB) tunneling between ideal QWs and 100% polarization cannot push V_f



(a)

(b)

(c)

lower than 3.7 V. On the other hand, when including indium fluctuations, we calculated a V_f of 3.05 V even without considering tunneling.

The reason why the V_f shifts to a reasonable value is that the indium composition will directly affect the bandgap potential in the QW due to different strength of the polarization field that in turn affects the bandgap potential in the QW. As we can see for the first QW in Figure 18.20a and b, the potential at the high indium region is lower than the potential at the lower indium region. However, due to the strong lattice mismatch, the piezo polarization charge will induce a triangular shape barrier between the GaN barrier and InGaN QW. The piezo polarization-inducing barrier height also depends on the indium composition. As shown in picture, the barrier at the high indium region is high due to the large polarization difference. On the other hand, the barrier at the low indium side will be reduced. For carriers, they are much easier to flow through the low barrier (low indium side) and localize in the low potential region (high indium side). This is the main reason why the *I*–*V* curve shifts to a value that matches experimental data more closely. Because the carriers will inherently find a percolation path and transport in the device, the indium fluctuation will strongly influence the carrier transport. Figure 18.20c illustrates the carrier transport in the device. Nevertheless, the V_f calculated is still slightly higher than the experimental result. Recent studies show that QW LEDs without *V*-pit or GaN substrate LED with very low dislocation density have a V_f around 3.2–3.4 eV, which is close to our prediction because the influence of V-pit has not yet been included in our simulation. In addition, the indium fluctuations of the piezoelectric field–induced GaN barrier might enhance the tunneling since the induced barrier height will be smaller at the lower indium composition site. This might further lower the V_f.

18.4.3.3 The Droop Behavior of IQE

Turning to the dependence of IQE on current, there are several reasons proposed for origins of droop, such as overflow [1–3], Auger recombination [4–9], and defects [10–14]. For the idealized uniform QW without considering the Auger effect and with EBL, the efficiency peak occurs at 80 A/cm^2 and at a very large bias (~ 4.5V). (Figure 18.19b) (considering only vertical transport and neglecting the influence of sheet resistance). Although the drift process becomes dominant at this high bias, the electrons are blocked by the EBL, and the overflow is weak. Even including the Auger recombination, the droop effect only occurs at 4.0 V, which is very large compared to commercial data sheets. Note that this large bias condition across the junction should not occur in the real device application. If we observe the most recent experimental results, we can find that the droop occurs at very low current density (~10 A/cm^2) and the applied bias is typically lower than 3.1 V. In the past, most researchers focused on the current density and disregarded the voltage except when discussing the wall plug efficiency. However, here the voltage plays a key role in understanding physical processes in LEDs.

When Auger recombination is excluded from the simulation, there is no droop even when the current is ~200 A/cm^2 (Figure 18.19b). This is due to the blocking action of EBL. With In fluctuations included, a small droop occurs when the current density is above 400 A/cm^2 and the applied voltage above 3.5 V is larger than V_{BI} and ΔE_c, which is unphysical as the resistive voltage drop should only occur in n and p-layer surrounding the depletion region. The biased voltage larger than built-in voltage V_{BI} including the ΔE_c should not be exist in the depletion region. Such voltages are very different from observed ones since the experimental droop typically occurs at 2.8–3.0 V from commercial data sheets (Figure 18.24).

At 3.0 V, the bias is smaller than the built-in voltage, V_{BI} (3.3 V in our case), and the carrier transport is mainly dominated by the diffusion process, as we can see in Figure 18.22a. The potential in the p-region

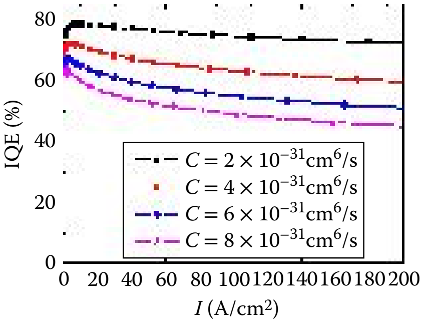

FIGURE 18.21 The internal quantum efficiency (IQE) curves with different Auger coefficients.

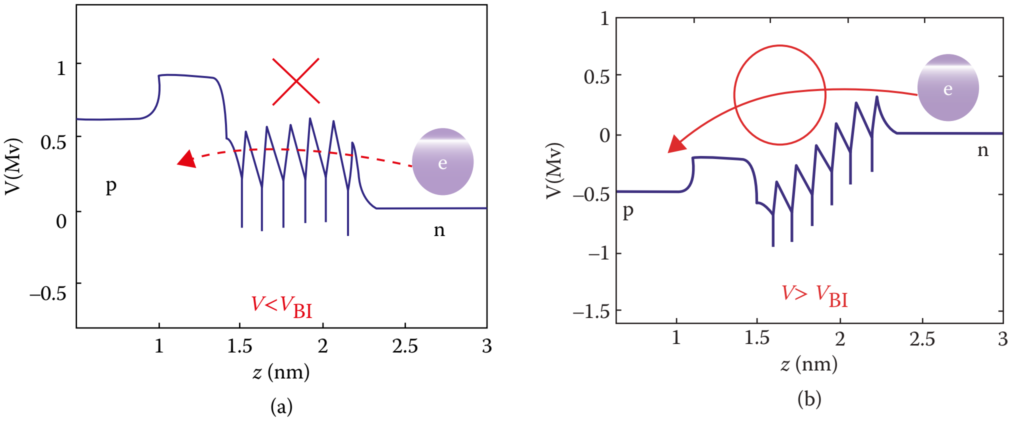

FIGURE 18.22 (a) When $V < V_{BI}$, it is mainly dominated by the diffusion process. It is harder for the carrier to overflow or overshoot the active region. (b) When $V > V_{BI}$, the carrier start to overflow or overshoot the device. However, the droop of a commercial grade light-emitting diode (LED) occurs at $V << V_{BI}$.

including the extra barrier height from the AlGaN EBL is much higher than the n-region and forms a large barrier to the carriers. Therefore, it is harder for carriers to spill over the barrier especially with the existence of the AlGaN barrier. Even with the polar optical phonon absorption process to gain the electron energy (~90 meV), it is still hard to overcome the 0.3–0.4 eV barrier. On the other hand, when the voltage exceeds the V_{BI}, as we can see in Figure 18.22b, the band structure reverses. In this situation, the carrier transport turns from the diffusion process to the drift process. The carriers start to overflow the device. Therefore, the simulation only sees the droop caused by overflow at a voltage higher than the built-in voltage (>3.3 V), if the Auger recombination is not considered. Therefore, the droop caused by the overflow only happens when the bias is larger than the built-in voltage or even larger bias when the AlGaN EBL is added.

Since the actual droop occurs at a very low bias in the experiments, we need to consider other factors that might cause droop effect at low bias. When the Auger recombination is included, the result shows that the droop occurs at 3.0 V, which matches closely to the experimental data. Consequently, we conclude that the droop effect is mainly dominated by the Auger recombination rate or other reasons such as carrier density dependent nonradiative recombination by defects.

As we can see in Figure 18.19a and b, when Auger recombination is included, droop occurs in both cases of ideal QW or QW incorporating In fluctuations. However, in the former case the bias voltage is again an unphysical 4.0 V, while in the latter case it is 3.0 V, which matches experimental data. Consequently, we conclude that the droop effect is mainly dominated by Auger recombination, enhanced by the effect of indium fluctuations. In addition, it should be pointed that due to the memory limitation, we calculated the vertical carrier transport within a limited area. In a real device, current crowding [42] issues can make local current density much higher than expected, making the droop effect worse, as discussed in earlier studies [43,44]. Figure 18.21 shows the IQE curves with the different Auger recombination coefficients, C. With larger values of C, the IQE curves show earlier droop onset, lower IQE peak, and more severe droop effects.

18.4.3.4 The Comparison of IQE between the Ideal QW and In-Fluctuation QW

In Figure 18.19b, the indium fluctuation case shows a good IQE performance with the higher IQE peak value and lower droop effect. Due to the carrier localization, the QCSE will be screened by the localized carrier charge. As a result, the better electron–hole overlapping will lead to a higher efficiency peak. On the other hand, in the ideal QW case, the IQE curve reaches the peak value when the applied bias is over 4.0 V, which is much larger than V_{BI} (3.3V). Therefore, the carrier leakage starts to affect the droop effect so the IQE curve shows a severe droop effect in the ideal QW case.

In conclusion, we prove that by considering the indium fluctuation in MQW LEDs, the electrical and optical properties are much closer to the commercial blue light LEDs. The droop behavior might be dominated by the Auger recombination at the lower current density since the voltage is much smaller than V_{BI}, and the ratio of the overflow mechanism might increase only when the bias is close to or larger than V_{BI} and the current density gets larger.

18.5 Carrier Transport in Green LEDs: Influence of Possible Imperfection in QWs

18.5.1 Introduction

Simulations with a proper model can provide some suitable evidence or clues to improve the optimization of devices. Before the 3D random alloy fluctuation model was proposed, scientists had focused on the current behavior of blue LEDs, because the I–V behavior could not be modeled well with 1D transport computer-aided design (CAD) software without considering the random alloy fluctuation. To explore the carrier transport and recombination mechanism in green LEDs, we conduct a preliminary examination of the electric property of green p-n LEDs.

18.5.2 Carrier Transport in Green LEDs Considering Indium Fluctuations Only

Initially, we constructed a green emitting p-n LEDs with five pairs of uniform 3-nm/10-nm $In_{0.27}Ga_{0.73}N$/GaN MQWs (517-nm green emission) and a fluctuated case for comparison. Both the cases are composed of 295-nm n-doped layer with 5×10^{18} cm^{-3} doping density and a 100-nm p-type layer with 2×10^{19} cm^{-3} doping density. Figure 18.23a shows the epilayers of all the simulated structure here. The chip size for the 3D case is 250 nm × 40 nm. The average composition for the 3D fluctuated case is 21%, as shown in Figure 18.23b, where the maximum composition of the fluctuated case is around 27%. Table 18.5 lists the input parameters of all the cases in this section. Figure 18.24 shows the calculated I–V curves of green LEDs. As expected, the 1D vertical transport model with a 100% theoretical polarization value failed to describe the experimental observation because of strong polarization fields. Even when the ideal polarization is reduced to 50%, the calculated result still shows a large difference with the extracted experimental values. However, the simulated green emitting LED with random alloy fluctuations also performs a larger driving voltage compared to the experimental result. Obviously, carriers still could not percolate through the fluctuated piezoelectric barriers in the simulation because the average compositions of QWs are so high that the piezoelectric fields will result in high potential barriers. The assumption of average 21% fluctuated QWs with 27% maximum composition might be far removed from the real devices. Our past study also shows that a much larger period of composition fluctuation will further reduce the turn-on voltage [23]. Therefore, it is worth taking further investigation.

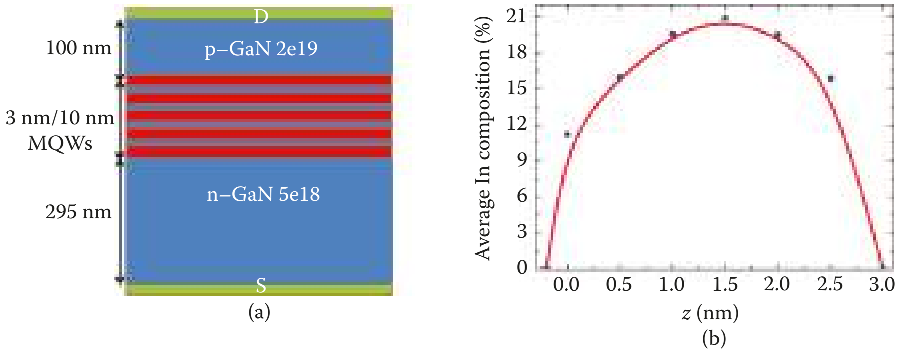

FIGURE 18.23 (a) The structure of the simulated green light-emitting diode (LED). (b) The average composition of the quantum well along the growth direction in the 3D fluctuated case.

TABLE 18.5 Detailed Parameters of Each Epilayer for Green Emission LEDs

18.5.3 Imperfection of QWs in Green LEDs

Some studies [47,48] have shown that the QWs are not perfect. The studies in Refs. [47,48] further indicated that large-scale well-width fluctuation exists in the commercial green LED samples. Inconsistent growth temperature between GaN layer and $In_xGa_{1-x}N$ might be the main reason for the interrupted void regions among the QWs. Especially when the indium composition increases, the difference of the required growth temperature with GaN will be larger. To further understand how the imperfect QWs affect the electrical property of green p-n LEDs, we apply the 3D model in examining the imperfection of QW in the green LED device.

18.5.4 3D Examination of Green LEDs with Imperfect QW Model and Random Indium Fluctuations Model

To examine the carrier transport in the void structures, we construct a 3D structure with random alloy fluctuations that is much closer to the real physics. The structure is with different void densities. The distance of void is 30 and 40 nm. The input parameters are listed in Table 18.5. Due to the huge computation time in the 3D calculation, the calculation area is limited to 250 nm × 40 nm in the lateral direction. All the epilayers are the same as mentioned previously. The side view and section view composition distributions are shown in Figure 18.25. Compared to the normal fluctuated QWs, the map with imperfect QWs will have some void regions in the QW region. The void regions are also not aligned with one another according to experimental observations [47,48]. Figure 18.26a shows that the 3D model with different void lengths can better model the V_f of the experimental data. The conduction band potential at 3.05 V of 3D fluctuation with 40-nm l_{void} shows that the piezoelectric barriers are smaller in the void region, which is shown in Figure 18.26b. In addition the piezoelectric fields near the normal fluctuated QW region have the insufficient impact on the void region. Hence, the carriers would prefer to percolate through the void regions into the active area, which might be closer to the real devices.

Figure 18.27 shows the calculated vector profile of both electron and hole currents. The results indicate that the void regions dominate the current flow path for both electron and hole currents. While carriers percolate into the void regions, other carriers might prefer to flow into the low potential areas locatied at the stripe QWs. As a result, the smaller V_fs in imperfect QW cases are attributed to an alternative percolation path provided by the void regions.

To conclude this section, we applied the 3D model to show that the void regions in the green emission LEDs indeed affect the carrier injection. The imperfect regions provide an additional injection path for the

carrier percolation. Although more reports of microscope observations in green emitting QWs are needed to prove that the structure of green LEDs are commonly imperfect, this preliminary simulated survey can still provide some hints for future modeling of the physical properties of green LEDs.

18.6 Summary

For the sake of simplicity, the simulation of the InGaN/GaN multiple QW LED usually assumes the uniform QW. However typical simulation results, such as the extremely high forward voltage (V_f), were far from the experimental data. These extra voltages will make the interpretation of carrier transport inaccurate. Because the extra voltage applied in the junction does not appear in the real device and will change the current transport mechanism from diffusion process into drift process. Therefore, it is important to make voltage fitting at accurate as possible. The simulation results show that by including the random indium fluctuation distribution in the QW, we can get a more reasonable fitting in the I–V curve.

For the transport issue with the random alloy fluctuation in the unipolar system, the simulation results of n-i-n GaN/InGaN/GaN MQW structures show that the fluctuated piezoelectric barrier induced by random alloy fluctuations will provide some current flow paths for the percolation transport, and the fluctuation model can give a reliable explanation for how the carriers perform in real devices. In modeling the emission spectrum, we found that the indium fluctuation will lead to a broader emission spectrum. The main reason is that the indium fluctuation forms several In-rich clusters, which look like quantum dots. The carriers localize in the QD-like regions and lead to different levels of quantum confinement. The effective bandgaps at each region vary from the different indium composition and the confined size of the indium clusters, which are the two important roles to affecting the discrete energy of quantum confinement. In addition, the emission strength will also be enhanced due to the better electron–hole localization effects.

We also analyzed the influence of indium fluctuations on the carrier transport. The simulation result of the *I*–*V* curve shifts to a value that is close to the experimental data. It indicates that the indium fluctuation does strongly affect the transport in the device. The main reason is that the low indium composition region will reduce the large potential barrier induced by the QCSE. For the uniform QW structure, the large V_f mainly comes from the strong band bending, which makes carriers hard to travel across the quantum barrier. For the indium fluctuation case, the reduction of the band bending at low indium regions provides a leaky way for carriers to flow through. The tunneling effect is not included in the indium fluctuation model but this will be a future project and may push the *I*–*V* curve to an even lower value. Furthermore, the IQE peaks occur at about 3.0 V, which also matches up to the experimental observation. Based on these simulation results, we tried to explain the cause of the droop effect. At a low bias condition, the droop effect is mainly dominated by the Auger recombination since the voltage is much lower than V_{BI}. When the bias gets higher and reaches the built-in voltage, the ratio of the droop influenced by carrier leakage will increase since the carrier transport turns from diffusion process into drift process at the reverse band condition.

Finally, we analyzed the green LED. We found that green emitting LEDs are difficult to use the traditional model to describe their physical property. Even for simulations that consider nanoscale alloy disorders, the calculated result differs from the experimental result. According to some reports, the green LEDs might exist in large-scale fluctuations, such as imperfect QWs in devices. Hence, we applied 3D models to examine the performance of the LEDs with imperfect QWs. The results show that the void region in the QWs provide an alternative path for carrier percolation. Thus, the IV of our simulation cases may approach the experimental observation more closely. In the future, we can model the green emission LEDs more elaborately based on the imperfect QW model.

19.1 Introduction

More than 30 years ago, the concept of a superluminescent light-emitting diode (SLED) was proposed for the first time (Kaminow and Marcuse 1983). It can be briefly described as an edge-emitting semiconductor light source that operates in the so-called superluminescence regime, also known as the amplified spontaneous emission (ASE) regime. This means that the gain medium is pumped to a level beyond transparency but below the threshold for starting lasing activity. As a consequence of this particular operating range, SLEDs combine some aspects of the electro-optical performance from standard light-emitting diodes (LEDs) and laser diodes (LDs). They are able to produce high-output powers with high brightness similar to high-power LDs. On the other hand, they show a broadband emission spectrum similar to LEDs. With respect to their coherence properties, this translates into high spatial coherence similar to LDs and low temporal coherence like LEDs. A more detailed comparison is given in Rossetti et al. (2012).

Due to these intermediate characteristics, SLEDs are preferred light sources for many applications, including fiber-optic gyroscopes (FOGs) (Burns et al. 1983), fiber-optic current sensors (FOCSs) (Bohnert et al. 2002), optical coherence tomography (OCT) (Schmitt 1999; Drexler and Fujimoto 2008), structural health monitoring with optical fiber sensors (Wild and Hinckley 2009), speckle-free illumination (Rossetti et al. 2012), metrology systems (Dufour et al. 2005), or optical test equipment for fiber-optic networks (Senior 2009). In order to meet the different requirements of these applications, broadband SLEDs at various emission wavelengths with different spectral bandwidths and shapes are used. SLEDs can be designed for wavelengths ranging from 390 nm up to 2700 nm. They can be realized in GaN (390–570 nm), GaAs (570–1150 nm), InP (1150–2000 nm), or GaSb (2000–2700 nm). Figure 19.1 shows a selection of typical ASE spectra obtained for various commercially available SLED modules operating at center wavelengths from around 400 to 1550 nm (Exalos 2017).

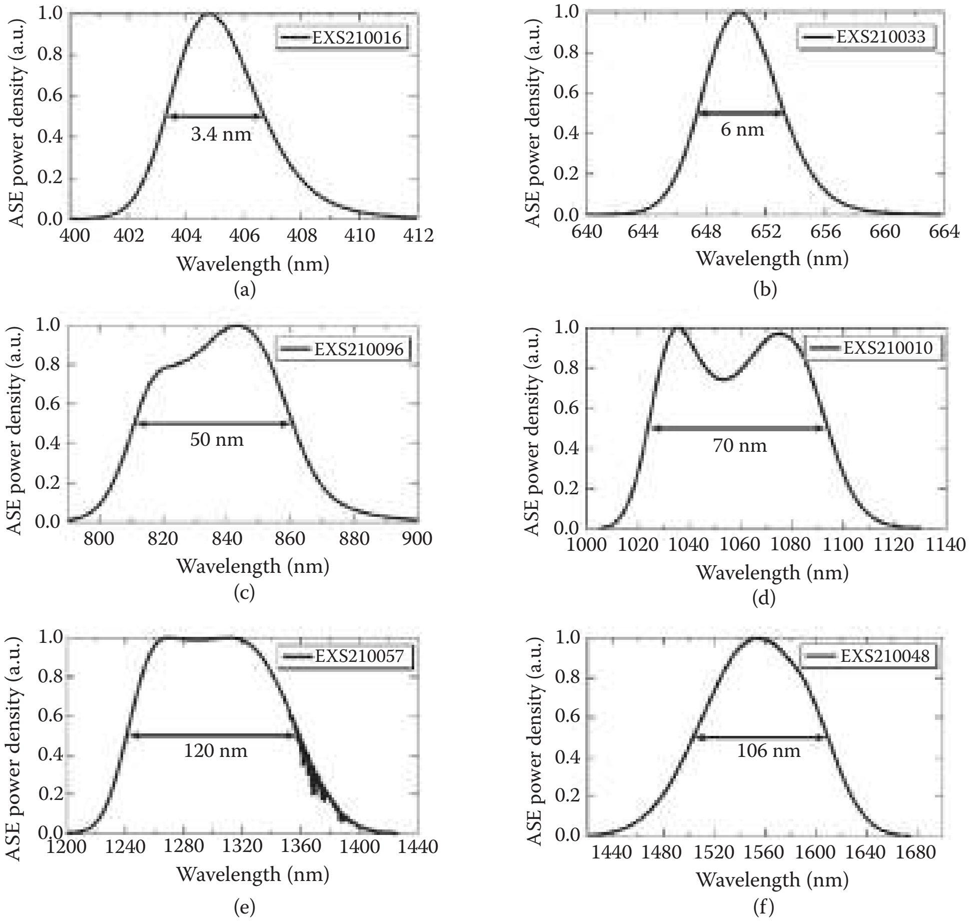

FIGURE 19.1 Measured amplified spontaneous emission (ASE) spectra (on a linear scale) obtained for six different superluminescent light-emitting diode (SLED) modules operating at relevant wavelength ranges from about 400 to 1550 nm. The full-width at half maximum (FWHM) or 3-dB bandwidth is given in the diagrams. The Gaussian-shaped spectra shown in (a), (b), and (f) are based on a single transition epitaxial design, whereas the spectra with two humps shown in (c), (d), and (e) are based on a multitransition epitaxial design, as explained in Section 19.3.1.

Traditionally, the vast majority of SLEDs are employed in systems with light emission in the near infrared from 750 to 1600 nm (see Figure 19.1c through f). Over the last decade, the emerging interest in speckle-free red–green–blue (RGB) applications forced the development of SLEDs operating in the visible wavelength range (see Figure 19.1a and b). Based on the technology for red LDs, which has been well established over the last 30 years, the demonstration of a red SLED realized in GaAs was a straightforward task (Semenov et al. 1993a). In contrast, the development of blue and green SLEDs has been confronted with a couple of intrinsic technological difficulties (Rossetti et al. 2012). One of them is the choice of the substrate material, which can be GaN, SiC, sapphire, or others. For SLEDs and LDs, high-quality substrate materials with good thermal conductivity and low dislocation densities are considered to be of utmost importance. Therefore, past development activities have focused on the growth of the epitaxial layer structure on free-standing (mainly *c*-plane) GaN substrates. The first GaN-based SLEDs emitting in the blue violet spectral region could be demonstrated just a few years ago (Feltin et al. 2009; Rossetti et al. 2010), whereas research and development for the demonstration of green SLEDs is still ongoing. Very recently, the first long-wavelength SLED realized in GaSb for optical sensing at 2.4 μm has been demonstrated (Wootten et al. 2014).

19.2 Design and Modeling of SLED Devices

19.2.1 SLED Geometry and Epitaxial Design

Typically, SLEDs are realized as epitaxially grown layers on a substrate in an index-guided ridge-waveguide geometry similar to Fabry–Pérot-type LDs. The latter consists of a straight waveguide with optical dielectric coatings applied at the facets of the chip, typically a high-reflective (HR) at the back facet and a partial-reflective (PR) coating at the front facet (see, e.g., Macleod 2010). The straight waveguide in combination with reflecting facets defines a resonant cavity that allows for the build-up of longitudinal cavity modes and laser oscillations. In contrast, several tricks are applied to SLEDs for the suppression of resonant cavity modes in order to minimize modulations in the ASE spectrum (so-called spectral ripples) or, even worse, to prevent the starting of lasing. The most popular and very efficient way to achieve this is the tilting of the waveguide by a few degrees with respect to the normal of the facets (Alphonse et al. 1988) in combination with the application of antireflection (AR) coatings (Macleod 2010) at the facet sides. The residual net modal reflectivity of such a design can be calculated using the analytical model presented in Marcuse (1989). Exemplary reflectivity calculations as a function of the tilt angle are given in Matuschek and Duelk (2013). Other methods are based on the incorporation of an absorber section at the back-facet side of the waveguide (Patterson et al. 1994; Kwong et al. 2008), the use of a bent (Semenov et al. 1993b), or tapered (Koyama et al. 1993) waveguide structure, or a combination of various methods (see, e.g., Lee et al. 1973; Nagai et al. 1989; Semenov et al. 1993a; Middlemast et al. 1997).

The ASE process occurs in the active region along the SLEDs waveguide structure. The most common approach to realize a positive material gain is based on a single-quantum well (SQW) or multiquantum well (MQW) active region design (see, e.g., Chuang 1995). For some applications, a bulk layer approach might be advantageous, as it is the case, for example, for SLEDs that require a low polarization extinction ratio (PER),[†] that is, the amount of transverse electric (TE)- and transverse magnetic (TM)-polarized output power should be as equal as possible (Heo et al. 2011). Quantum-dot epi structures for SLEDs have been proposed (Sun et al. 1999) and demonstrated a few times as well. However, this technology has various severe limitations, like a limited wavelength range (so far 1050–1200 nm), low differential gain requiring long SLED chips and large drive currents, manufacturing challenges, and others (Rossetti et al. 2008).

Figure 19.2 shows the schematic front view of a typical SLED structure for an SQW epitaxial layer design. Generally, quantum well (QW) active-region designs allow for the use of strained layers. Compressively strained QW layers are required for SLED designs showing a high PER greater than ~10 dB, which is desired for many applications. Maximum strain values up to 3% (with respect to the lattice constant of the substrate material) may be realized in practice. Higher strain values may lead to the formation of dislocations and are therefore detrimental to achieving a good long-term reliability. In addition to the relative strain of an individual layer, the total integrated net strain for the entire active region must be taken into account too. Hence, strain compensation by incorporation of tensile strained barrier layers is a useful option for strain relaxation over the active region (Tansu and Mawst 2001).

The QW and barrier layers are sandwiched between (undoped or partially doped) waveguide layers that are surrounded by highly doped *n*- and *p*-cladding layers. The high refractive index of the active-region and waveguide layers leads to the confinement of the optical mode in vertical direction. On the other hand, the ridge-waveguide geometry ensures the lateral mode confinement. As a result, the epitaxial layer stack realized in a ridge-waveguide geometry allows for the build-up of transverse optical modes with a lateral extension roughly given by the ridge width and a vertical extension as given by the thickness of the waveguide layers. For almost all applications, single-mode operation on the fundamental optical mode is preferred. Hence, care has to be taken to avoid the occurrence of higher-order modes or leaky substrate

---

[†] The PER is defined as $\mathrm{PER} = 10 \cdot \lg\left(\frac{P_{\mathrm{TE}}}{P_{\mathrm{TM}}}\right)$ dB, where P_{TE} and P_{TM} is the SLED's total output power from the front facet in TE and TM polarization, respectively.

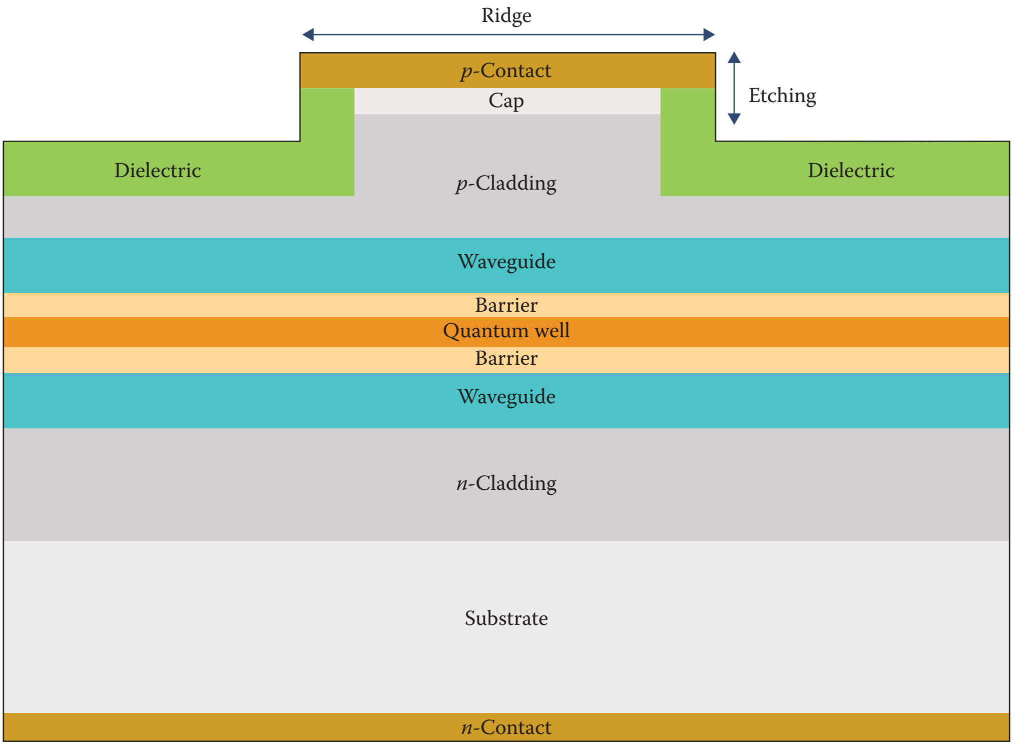

FIGURE 19.2 Basic layer structure of a single-quantum well (SQW) epitaxy. The QW and barrier layers are sandwiched between waveguide layers followed by the cladding layers on both sides. The ridge-waveguide geometry ensures the lateral guiding of the optical mode, whereas the vertical guiding is a consequence of the refractive-index profile defined by the material composition of the different layers.

modes. The latter are particularly a problem for GaN-based epi structures in the visible due to the high refractive index of the substrate material (Laino et al. 2007; Matuschek and Duelk 2013). Moreover, some output power might be lost into higher-order lateral modes if such modes are supported by the lateral waveguide (see, e.g., Coldren et al. 2012). The number of supported lateral modes, and thus, the corresponding power loss scales with the width of the ridge waveguide. Therefore, the stripe width is typically chosen to be smaller than 10 μm.

As mentioned earlier, the appropriate choice of semiconductor materials depends primarily on the wavelength range of interest, and thus, on the bandgap energy of available semiconductor compound material. In Table 19.1, the substrate materials and the most commonly used compound materials for the functional layers of the epitaxial structure, as shown in Figure 19.2, are summarized for the different wavelength regimes.

19.2.2 Modeling and Simulation Approaches

A couple of different approaches exist for the modeling and simulation of SLEDs. Generally, the analytical insight into the electro-optical performance decreases with the complexity of the set of coupled equations taken under consideration. On the other hand, the accuracy increases when more effects are taken into account.

Commercially available packages (Synopsis 2017; Crosslight Software 2017; Photon Design 2017) allow for full three-dimensional (3D) simulations. They are based on the coupling of solvers for the various problems involved in the simulation of an SLED (so-called multiphysics treatment) (Li and Li 2010). Typically,

TABLE 19.1 Materials Used for the Epitaxial Layers of an SLED Grown on a Substrate Depending on the Wavelength Range of Interest

Wavelength Range	390–570 nm	570–1150 nm	1150–2000 nm	2000–2700 nm
Substrate	GaN	GaAs	InP	GaSb
Cladding	$Al_xGa_{1-x}N$	$Al_xGa_{1-x}As$ $Al_xGa_yIn_{1-x-y}P$	InP $Al_xIn_{1-x}As$	$Al_xGa_{1-x}As_{1-y}Sb_y$
Waveguide	GaN	$Al_xGa_{1-x}As$ $Al_xGa_yIn_{1-x-y}P$	$Al_xGa_yIn_{1-x-y}As$ $In_xGa_{1-x}As_{1-y}P_y$	$Al_xGa_{1-x}As_{1-y}Sb_y$
Active region (QWs + barriers)	$In_xGa_{1-x}N$	$Al_xGa_yIn_{1-x-y}P$ $Al_xGa_yIn_{1-x-y}As$ $In_xGa_{1-x}As_{1-y}P_y$	$Al_xGa_yIn_{1-x-y}As$ $In_xGa_{1-x}As_{1-y}P_y$	$Al_xGa_{1-x}As_{1-y}Sb_y$ $In_xGa_{1-x}As_{1-y}Sb_y$

Note: The general definition of the quaternary materials includes the special case that the materials may reduce to ternary or binary materials if the material fractions x and/or y are equal to 0 or 1.

the quantum-mechanical problem is described using the $\mathbf{k}\cdot\mathbf{p}$ method and the optical modes are found from a Helmholtz equation (Chuang 1995). These equations are coupled to the semiconductor equations, for example, as Poisson equation and drift-diffusion equation and to a heat-transfer equation if the thermal properties are also taken into account (Loeser and Witzigmann 2008). All equations are then solved simultaneously and self-consistently for each iteration step, yielding a solution for all local and global variables of the system.

In analytical approaches both the physical dimensionality of the problem and the number of coupled equations are reduced. They are normally based on a traveling-wave equation for the electric field (Park and Li 2006) or the optical power (or photon density) (Matuschek and Duelk 2013; Milani et al. 2015) and on rate equations for the carrier density. The material gain is either calculated from quantum-mechanical equations or using simplified semianalytical equations assuming a logarithmic or linear gain dependence on the carrier density (Coldren et al. 2012). In order to calculate the net modal gain, both the optical confinement factor and the internal loss coefficient are required. The first can be calculated from the overlap integral of the optical modes with the active layers. The latter can be used, for instance, as a free fitting parameter or it can be extracted from an *inverse efficiency versus chip length* plot, which is obtained from the *L–I* characteristics of LDs measured for various chip lengths. The LD design for such measurements differs from the SLED design only in the straight ridge waveguide and its facets are typically uncoated.

19.2.3 *L–I* Characteristics of Reflecting SLEDs

SLEDs operate in the ASE regime, that is, spontaneously emitted photons induce the process of stimulated emission of photons while traveling along the waveguide. Hence, the number of forward- and backward-propagating photons grows exponentially in direction to both facets of the chip. On the other hand, the SLED's *L–I* characteristic follows to good approximation a power law with chip length–dependent exponent because of the logarithmic gain dependence on current density as shown in Matuschek and Duelk (2013). The analytic derivation of this power law was based on the assumption of an ideal SLED without any residual reflectivity at both facet sides.

Here, we want to extend this approach to the general case of SLEDs with arbitrary effective modal reflectivities at the chip's front- and back-facet sides. This derivation includes special cases of standard SLEDs and of so-called reflecting SLEDs (R-SLEDs). Typical SLEDs feature a tilted ridge-waveguide geometry with tilt angles smaller than 15° and high-quality AR coatings deposited at both facet sides in order to avoid any resonant cavity effect. In contrast, R-SLEDs consist of a tilted waveguide section in direction to the front facet with deposited AR coating and a straight waveguide section toward the chip's back facet with a deposited HR coating (Matuschek and Duelk 2014), as shown in Figure 19.3. As explained below in more detail, R-SLEDs are able to produce much higher output powers due to the double-pass geometry

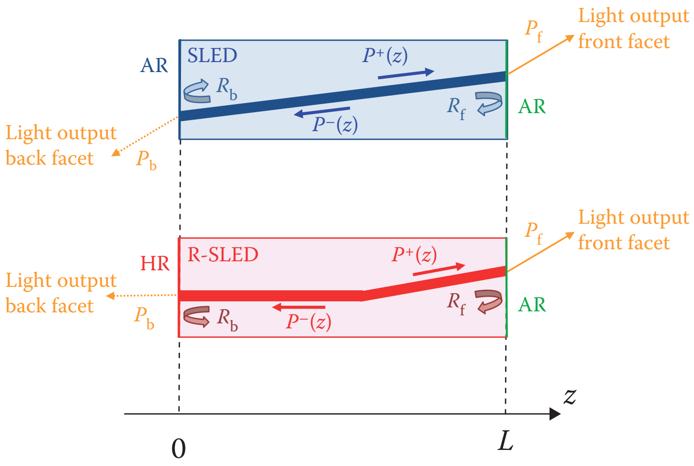

FIGURE 19.3 Schematic top view of an SLED and an R-SLED with effective modal reflectivities R_f and R_b. The power is exponentially amplified in both directions along the (partially) tilted ridge-waveguide structure, where P^+ denotes the power distribution for forward-propagating photons and P^- for backward-propagating photons, respectively. P_f and P_b are the powers, which are coupled out and can be measured at the front- and back-facet sides of the SLED or R-SLED. The z-axis is defined by the propagation direction of photons along the ridge-waveguide structure, so that the single-path length is slightly greater than the vertical distance between the facets due to the tilt.

compared to standard SLEDs under same operating conditions. However, the drawback is that such devices are much more susceptible to the appearance of ripples in the ASE spectrum and/or starting of undesired lasing operation.

In the following, the longitudinal power distribution for two counter-propagating waves is derived under the condition of steady-state continuous wave (CW) operation. Based on a one-dimensional (1D) traveling-wave amplifier approach similar to (Marcuse 1983; Matuschek et al. 2008), the differential equations

$$\frac{\mathrm{d}P^+(z)}{\mathrm{d}z} = \left\{g_{\mathrm{mod}} - \alpha_{\mathrm{i}}\right) \cdot P^+(z) + \frac{n_{\mathrm{sp}}\hbar\omega v_{\mathrm{gr}}}{2L} g_{\mathrm{mod}}\,, \tag{19.1}$$

$$-\frac{\mathrm{d}P^-(z)}{\mathrm{d}z} = \left\{g_{\mathrm{mod}} - \alpha_{\mathrm{i}}\right) \cdot P^-(z) + \frac{n_{\mathrm{sp}}\hbar\omega v_{\mathrm{gr}}}{2L} g_{\mathrm{mod}}\,, \tag{19.2}$$

determine the power distribution $P^{\pm}(z)$ for forward- and backward-propagating photons of the same longitudinal mode with angular frequency ω. $g_{\mathrm{mod}} = \Gamma g_{\mathrm{mat}}$ is the modal gain with g_{mat} being the material gain and Γ the mode confinement factor. α_{i} is the internal loss coefficient, n_{sp} the population inversion factor, L the effective chip length of the tilted ridge-waveguide structure, and $v_{\mathrm{gr}} = c/n_{\mathrm{gr}}$ the group velocity with the speed of light in vacuum, c, and the effective group index, n_{gr}. The independent variable (z-coordinate) is defined in the range $z \in [0;\, L]$, where the boundaries are defined by the chip's front and back facet (see Figure 19.3). The second term on the right-hand side describes the generation of light by spontaneously emitted photons, whereas the first term describes the stimulated amplification process by already existing photons.

It should be noted that, generally, there is one set of equations for each longitudinal mode. Here, we have omitted an index for the number of the longitudinal mode. We solve the equations for the mode closest to the gain maximum. Finally, the total power values are obtained by summing over an effective number of longitudinal modes, which is proportional to the full-width at half maximum (FWHM) or 3-dB bandwidth of the emitted ASE power spectrum (Matuschek and Duelk 2013). As explained in detail in Marcuse (1983), *it is not necessary to treat this ASE process as a coherent signal since it distributes itself continuously over a relatively wide band of wavelengths with random phases between adjacent wavelength components*. Hence, a description using powers instead of fields with definite amplitude and phase is sufficient.

Equations 19.1 and 19.2 can be easily solved if we assume that the gain is homogeneous in longitudinal direction, that is, we neglect any gain saturation effects. This approximation is justified for low-power SLEDs but might be questionable for SLEDs and R-SLEDs operating at high injection currents, and thus, at high-output powers, as will be shown at the end of this section. Then the general solution is given by

$$P^{+}(z) = P_0^{+} \cdot G(z) + a \cdot \{G(z) - 1\}\,, \tag{19.3}$$

$$P^{-}(z) = P_L^{-} \cdot G(L - z) + a \cdot \{G(L - z) - 1\}\,, \tag{19.4}$$

with

$$a = \frac{n_{\mathrm{sp}}\hbar\omega v_{\mathrm{gr}}}{2L} \frac{g_{\mathrm{mod}}}{g_{\mathrm{mod}} - \alpha_{\mathrm{i}}}, \tag{19.5}$$

where we have introduced the gain amplification factor

$$G(z) = \exp\left\{(g_{\mathrm{mod}} - \alpha_{\mathrm{i}})z\right\}. \tag{19.6}$$

The subscripts 0 and L denote power values at positions $z = 0$ and $z = L$ inside the chip.

Equations 19.3 and 19.4 are coupled by the boundary conditions

$$P_L^{-} = R_{\mathrm{f}} \cdot P_L^{+}, \tag{19.7}$$

$$P_0^{+} = R_{\mathrm{b}} \cdot P_0^{-}, \tag{19.8}$$

where R_{f} and R_{b} are the effective modal reflectivities at the front and back sides, respectively. Using these boundary conditions, we can derive the expressions

$$P_L^{+} = a \cdot \frac{1 + G(L)R_{\mathrm{b}}}{1 - G^2(L)R_{\mathrm{b}}R_{\mathrm{f}}} \cdot (G(L) - 1)\,, \tag{19.9}$$

$$P_0^{-} = a \cdot \frac{1 + G(L)R_{\mathrm{f}}}{1 - G^2(L)R_{\mathrm{b}}R_{\mathrm{f}}} \cdot (G(L) - 1)\,, \tag{19.10}$$

for the light powers that hit the facets from inside the chip. It should be noted that Equations 19.9 and 19.10 are symmetric with respect to an exchange of the chip's front- and back-facet sides.

The power coupled out of the chip is obtained by multiplying (Equations 19.9 and 19.10) with the effective transmittance of the front- and back-facet coatings, T_{f} and T_{b}.[†] Thus, taking the values of all variables at the spectral position of the gain maximum, which we indicate by adding a subscript index 0 at each relevant variable and summing over the number of effectively contributing modes finally leads to

---

[†] Generally, the inequality $R_{\mathrm{f/b}} + T_{\mathrm{f/b}} < 1$ holds because of slight absorption that might occur in the applied dielectric coatings. Moreover, for tilted SLED sections light that is not reflected back at the facet into the waveguide but elsewhere, is lost and not covered by the reflectivities $R_{\mathrm{f/b}}$.

$$P_f = \tilde{P} \cdot \frac{1 + G_0(L)R_\mathrm{b}}{1 - G_0\,(2L)\,R_\mathrm{b}R_\mathrm{f}} \cdot \left\{G_0(L) - 1\right) \cdot T_\mathrm{f}, \tag{19.11}$$

$$P_\mathrm{b} = \tilde{P} \cdot \frac{1 + G_0(L)R_\mathrm{f}}{1 - G_0\,(2L)\,R_\mathrm{b}R_\mathrm{f}} \cdot \left\{G_0(L) - 1\right) \cdot T_\mathrm{b}. \tag{19.12}$$

The prefactor $\tilde{P}$ is given by

$$\begin{aligned} \tilde{P} = n_\mathrm{eff}a_0 &= n_\mathrm{eff} \cdot \frac{n_\mathrm{sp}\hbar\omega_0 v_{\mathrm{gr},0}}{2L} \frac{g_{\mathrm{mod},0}}{g_{\mathrm{mod},0} - \alpha_{\mathrm{i},0}} \\ &= \Delta\lambda_\mathrm{3dB} \cdot \frac{n_\mathrm{sp}hc^2}{\lambda_0^3} \frac{g_{\mathrm{mod},0}}{g_{\mathrm{mod},0} - \alpha_{\mathrm{i},0}}, \end{aligned} \tag{19.13}$$

where we have estimated the effective mode number, n_eff, by the 3-dB bandwidth of the ASE output spectrum, $\Delta\lambda_\mathrm{3dB}$, and the longitudinal mode spacing, $\lambda_0^2/(2n_{\mathrm{gr},0}L)$. Strictly speaking, the replacement of the sum by an effective mode number requires that the dispersion of the effective modal facet reflectivities and coating transmittance can be neglected over the relevant spectral range.

Equations 19.11 and 19.12 together with Equation 19.13 represent the general solution for the front- and back-facet output power of an SLED with arbitrary front- and back-side reflectivity. They are particularly useful for analyzing differences observed in the output power from both facets caused by residual facet reflections. In Matuschek et al. (2008), very similar expressions were derived and a short discussion of the consequences on the front-to-back output power ratio was given. In the following, we apply our general results to two special cases of an SLED, namely an ideal standard SLED and an ideal R-SLED.

19.2.3.1 Ideal Standard SLED

An SLED device is assumed where both facets do not have any residual reflection. This condition is nearly fulfilled for real devices with sufficiently great tilt angle and AR-coated facets. In this limit, we can set $R_\mathrm{f} = R_\mathrm{b} = 0$ and $T_\mathrm{f} = T_\mathrm{b} = 1$ and obtain

$$P_f = P_\mathrm{b} = \tilde{P} \cdot \left\{G_0(L) - 1\right) = \Delta\lambda_\mathrm{FWHM} \cdot \frac{n_\mathrm{sp}hc^2}{\lambda_0^3} \frac{g_{\mathrm{mod}\,,0}}{g_{\mathrm{mod}\,,0} - \alpha_{\mathrm{i},0}} \cdot \left(e^{(g_{\mathrm{mod}\,,0} - \alpha_{\mathrm{i},0})\cdot L} - 1\right). \tag{19.14}$$

Inserting a logarithmic gain model in Equation 19.14 yields a power law for the SLED's L–I characteristic with chip length–dependent exponent. The consequences of this power law have been discussed and experimentally proven in detail in Matuschek and Duelk (2013) and are not repeated here.

19.2.3.2 Ideal R-SLED

An SLED device is assumed with a perfect front facet having zero residual reflection, similar to an ideal standard SLED, but with a back facet being a perfect reflector that reflects all incident light back into the waveguide. For real devices, this condition is fairly well realized with effective modal reflectivity values of about 90% or even higher for the HR coating. Moreover, the waveguide at the back facet must be straight or perpendicular with respect to the facet in order to avoid any geometrical reduction of the effective modal reflectivity. In the limit of an ideal R-SLED we can set $R_\mathrm{f} = T_\mathrm{b} = 0$ and $R_\mathrm{b} = T_\mathrm{f} = 1$ and obtain

$$P_f = \tilde{P} \cdot \left\{G_0\,(2L) - 1\right) = \Delta\lambda_\mathrm{FWHM} \cdot \frac{n_\mathrm{sp}hc^2}{\lambda_0^3} \frac{g_{\mathrm{mod}\,,0}}{g_{\mathrm{mod}\,,0} - \alpha_{\mathrm{i},0}} \cdot \left(e^{2\cdot(g_{\mathrm{mod}\,,0} - \alpha_{\mathrm{i},0})\cdot L} - 1\right) \tag{19.15}$$

for the total power out of the front facet. It should be obvious that under those assumptions no power will exit the back facet of the chip, that is, $P_b = 0$.

Comparing Equation 19.15 with Equation 19.14, it follows directly that with respect to output power from the front facet an R-SLED of length L behaves like a standard SLED of twice the length $2L$. This result seems intuitive since the amplification process for photons is extended over a distance, which corresponds to one round-trip in the chip with perfect reflection at the back facet. However, it is important to realize that with respect to current injection the chip is still a short chip of length L. This means that an R-SLED of length L emits the same power out of the front facet as a standard SLED of length $2L$ at same current density values J or, in other words, at half values of the injection current I. Also, under these conditions the average carrier densities are approximately the same and, thus, the emitted ASE output spectra with their corresponding FWHM bandwidth. Consequently, the prefactor of Equation 19.13 has the same value in both cases.

19.2.4 Experimental and Numerical Verification of the Analytical Model

In this section, we want to verify the results derived from the analytical treatment by comparing them with experimental results as well as results obtained from a full 3D simulation of the SLED and R-SLED under consideration. The simulation software is based on a finite-element discretization of the device. Using the $\mathbf{k}\cdot\mathbf{p}$ method, the quantum mechanical system is described by a 6×6 Luttinger–Kohn Hamiltonian and the eigenvalue problem is solved as well as a Helmholtz equation for the optical modes (Chuang 1995). These equations are coupled to the semiconductor equations and thermal equations as described earlier. All equations are then solved self-consistently on a discrete mesh.

As an object for our study, we use SLED and R-SLED chips from the same epi wafer with light emission in the wavelength region around 860 nm. All chips are operated at a heat-sink temperature of 25°C. The MQW epi structure of these chips is based on (Al)GaAs/(In)GaAs layers grown on a GaAs substrate (see Table 19.1). For the simulation, the effective modal reflectivity values have not been set to the ideal values 0 and 1 but to values of 10^{-9} for the AR-coated facets with tilted waveguide section and 0.95 for the back facet with straight waveguide section. These values are quite realistic for well-designed SLED and R-SLED structures. The simulator has been calibrated by adjusting the L–I characteristics and ASE output spectra for short standard SLEDs with chip lengths ranging from 500 to 850 μm.

Figure 19.4 shows the results obtained for the 850-μm-long SLED chip after the calibration procedure. Obviously, the measured L–I curve is almost exactly reproduced by the simulation. Moreover, the detailed shape of the measured ASE spectra is also simulated very accurately for different levels of injection currents. The quality of the analytical model is shown by the dotted L–I characteristic, which is obtained from Equation 19.14 by following the procedure described in Matuschek and Duelk (2013). The center wavelength and 3-dB bandwidth have been taken from the ASE spectrum at an injection current of 100 mA. The modal gain as a function of the current density has been derived from the full 3D simulation by averaging over the z-direction. Apparently, the output power at high-injection currents is somewhat overestimated by the analytical model because the relatively simple model does not take into account self-heating and gain saturation effects of the chip.

After successful calibration, we are able to compare the electro-optical properties of a 1750-μm standard SLED with an 840-μm R-SLED. The chip length ratio is 2.08, which is close to the ideal value of two. Moreover, the back-facet coating of the R-SLED chip is not a real HR coating but only a PR coating with a reflectance value of about 20%. Figure 19.5 shows the measured and simulated front-facet output power as a function of the current density for both types of SLEDs. For our considerations the effective width of current injection is not relevant. Therefore, we scale the current values only by the chip length so that the density values are defined by $J = I/L$. As can be seen, the agreement between all curves is excellent. Only the measured power of the R-SLED (dash-dotted line) is slightly smaller because of the nonideal reflectance of the PR coating. First of all, this proves that an R-SLED behaves like a standard SLED of twice the length

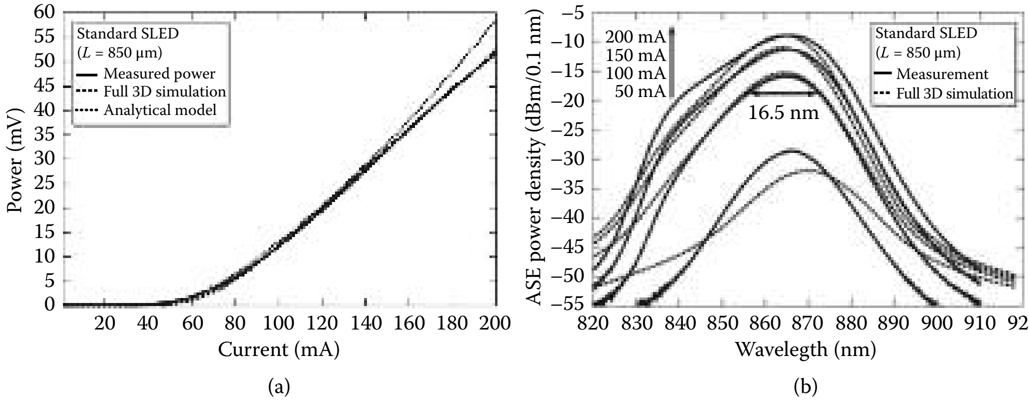

FIGURE 19.4 (a) L–I characteristics and (b) ASE output spectra (on an absolute logarithmic scale) for an 850-μm-long standard SLED chip. Solid lines represent measurement data and dashed lines simulation results obtained from a full 3D simulation after the calibration procedure. The dotted L–I characteristic follows from the analytical model according to Equation 19.14, as explained in the text. The ASE spectra are shown for four different injection currents: 50, 100, 150, and 200 mA. At 100 mA the 3-dB spectral bandwidth is about 16.5 nm. Note that all simulated ASE spectra have been shifted slightly by the same amount in wavelength so that they coincide at their maximum values with the measured spectra. This allows a better comparison of the detailed behavior of the spectral shapes.

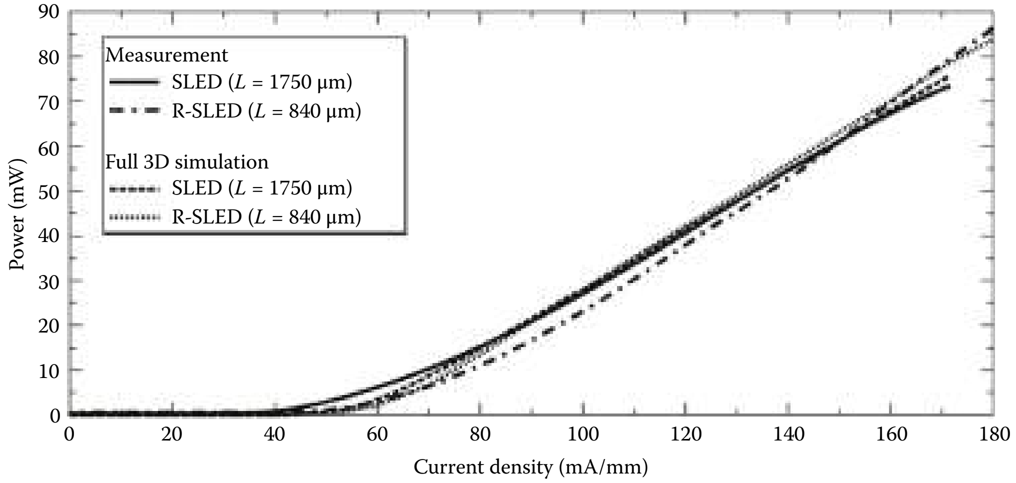

FIGURE 19.5 Measured (solid and dash–dotted line) and simulated (dashed and dotted line) front-facet output power of an SLED chip with length 1750 μm and an R-SLED chip with length 840 μm as function of current density, as described in the text. All curves agree almost perfectly.

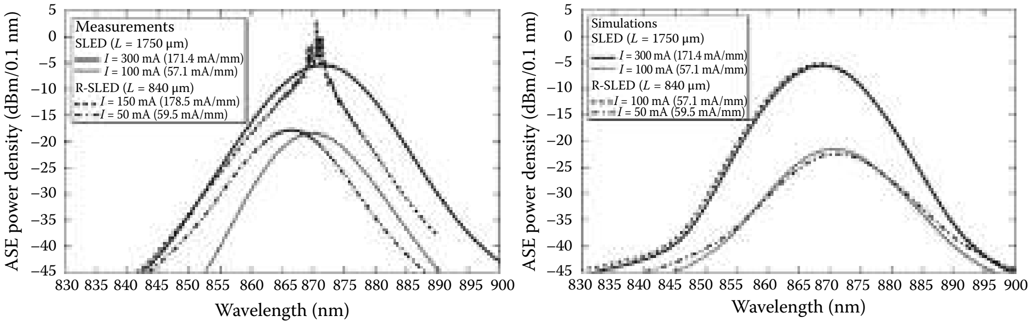
at the same current density. Second, experimental results can be accurately reproduced and extrapolated once the simulator is well calibrated.

This is further demonstrated by analyzing the ASE output spectra. Figure 19.6a shows measured ASE spectra and Figure 19.6b shows simulated ASE spectra for both chips at two different levels of current density. In the first case, the current density with values slightly below 60 mA/mm is just above the threshold for ASE operation, which is why the output power is low. In the second case, the current density is beyond 170 mA/mm, resulting in the chips operating at high front-facet output powers of about 75 mW. The simulated curves coincide more or less over the entire spectral range for both current densities, whereas a



(a)

(b)

FIGURE 19.6 (a) Measured and (b) simulated ASE output spectra of an SLED chip with length 1750 μm and an R-SLED chip with length 840 μm at two different levels for the current density. The dotted and dash-dotted lines correspond to a current density slightly below 60 mA/mm and the solid and dashed lines to a value slightly above 170 mA/mm. In contrast to Figure 19.4b, no additional wavelength shift has been applied to the ASE spectra.

small wavelength shift can be observed for the measured curves. This is explained by the fact that even nominally identical chips from the same epi wafer have slightly different center wavelengths of the emitted ASE spectra. Furthermore, the thermal heat sinking toward the submount might not be identical for all chips. A more important difference, which can be observed for the measurements at the high current densities, is that the ASE spectrum of the R-SLED is somewhat narrower and shows strong periodic modulations (spectral ripples) in the center part. The periodicity corresponds to the longitudinal mode spacing defined by the length of the linear cavity. This is a clear indication of a resonant cavity effect (Fabry–Pérot modulation) caused by the high back-side reflectivity and demonstrates the tendency of an R-SLED to start lasing at high levels of current injection. In Section 19.3.2, the influence of spectral ripples on the coherence function will be discussed.

To gain further insight into the physical properties of an SLED and R-SLED, respectively, we analyze the longitudinal distribution of the optical intensity and the carrier density along the z-axis inside the chip based on the results obtained from the full 3D simulation (see Figure 19.7). The intensity profiles have been extracted at the center of the optical mode, and the maximum value at the front facet has been normalized to unity. The carrier density profiles have been extracted at the center of one of the QWs. The z-axis has been defined so that the back facet of the R-SLED coincides with the middle of the standard SLED and the front facets almost coincide, too. With this definition, all chip properties of the standard SLED are symmetric with respect to the origin. As shown in the upper plot, the shapes of the optical intensity profiles are quite similar for the same current density. However, as can be clearly seen, for low current densities (dotted and dash–dotted lines) the growth of the optical intensity in direction to the front facet is almost exponential, whereas the optical intensity saturates for higher current densities (solid and dashed lines) and, hence, higher optical output powers. This gain saturation behavior due to high optical powers is directly linked to the longitudinal carrier density distribution as shown in the lower plot. At low current densities, the carrier density is almost constant along the chip with a value of about 3.3×10^{-18} cm^{-3}. In contrast, at high current densities the carrier density decreases strongly by more than 40% from the origin toward the front facet with a terminal value of about 2.8×10^{-18} cm^{-3}. Low values of the carrier density mean low material gain, and thus, low gain amplification of the optical power.

Our investigations can be summarized as follows:

- At same current densities an R-SLED behaves very similar like a standard SLED with twice the length.
- An important difference is that R-SLEDs show ripples in the ASE spectrum and may have the tendency to start lasing operation.
- For long SLED chips and for R-SLEDs at high-output powers, gain saturation effects are not negligible anymore.

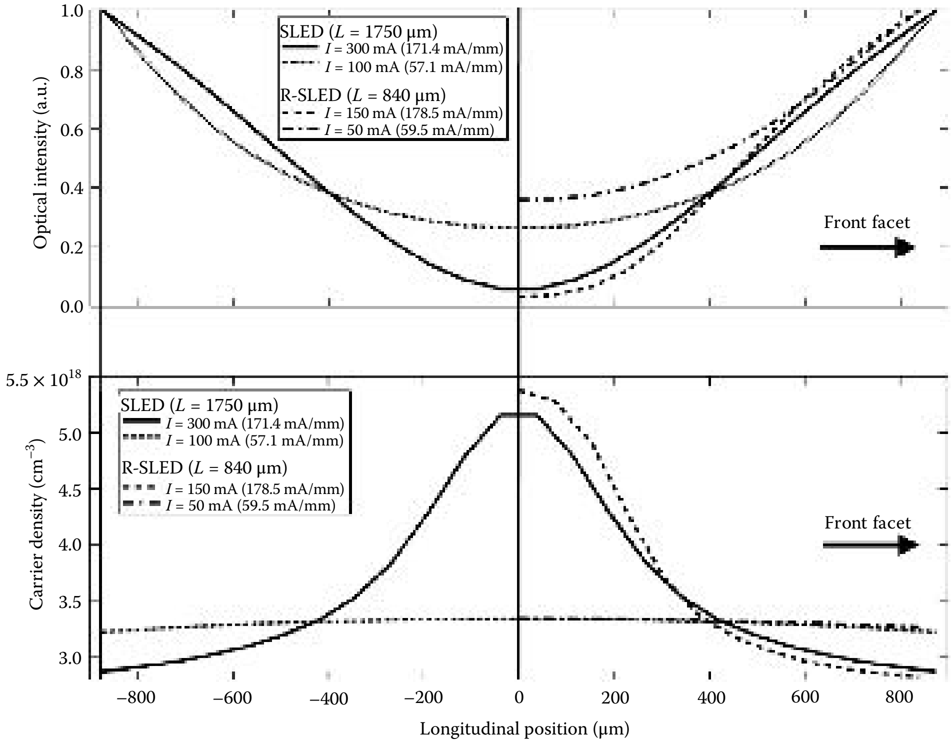


FIGURE 19.7 Longitudinal distribution of the optical intensity (upper plot) and carrier density (lower plot) along the z-axis inside the chip of an SLED chip with length 1750 μm and an R-SLED chip with length 840 μm at two different levels for the current density. The dotted and dash-dotted lines correspond to a current density slightly below 60 mA/mm and the solid and dashed lines to a value slightly above 170 mA/mm.

19.3 SLED Designs with Specified Targets

Commercial SLEDs have to fulfill target specifications for the electro-optical performance (output power, wavelength, bandwidth, spectral shape, ripple, PER, etc.) that are defined by the application. Also, their long-term reliability has to meet certain lifetime requirements (e.g., 10% power drop over 5000 hours of operation or 50% power drop over 100,000 hours of operation) that are dependent on the application and the intended use of operation. The shape and width of the ASE spectrum is directly linked to the coherence function, which is the autocorrelation function of an SLED. This is of particular importance for applications like OCT, as explained below. It is well known that increasing the output power is, in general, accompanied by a reduction in the ASE spectral bandwidth. Hence, methods are required to overcome this limitation.

19.3.1 Broad-Bandwidth SLED Designs

Generation of light in an SLED is based on the recombination from an electronic state in the conduction band with a hole state in the valence band (VB). In a QW, the bound states build a discrete set of subbands. In the simplest case, the SLED's epitaxial structure is based on an SQW active-region design or an MQW structure consisting of uncoupled identical QWs. Such designs can be reduced to the discussion of the quantized SQW states. Here, we restrict our discussion to the VB for heavy holes because ASE spectra of SLEDs consisting of compressively strained QWs are dominated by transitions to the heavy-hole sub-bands.

19.3.1.1 SLEDs with Bell-Shaped (Gaussian) ASE Spectra

The spectral shape of the ASE spectra is mainly determined by the fundamental sub-band transition from the first electronic state to the first heavy-hole state $\{e_1 \rightarrow hh_1)$, as long as the carrier density is sufficiently low, so that the population of other sub-band states can be neglected (Chen et al. 1990). Generally, single transition designs yield bell-shaped (Gaussian) ASE spectra as shown in Figure 19.1a, b, and f. Such spectra are preferred with respect to the avoidance of side lobes in the near optical path length difference (OPD) range of the coherence function (see Section 19.3.2). An increasing carrier density in the QW leads at first to a rising population of high-energy states in the fundamental sub-bands, and thus, to a broadening of the spectrum. If other sub-band states start to become significantly populated, an additional hump tends to appear on the short-wavelength side (as shown in Figure 19.1c). Hence, with increasing population of the sub-bands, the spectral appearance changes continuously from being bell shaped in direction to an M-shaped double-humped spectrum (see Figure 19.1d).

19.3.1.2 SLEDs with M-Shaped (Double-Humped) ASE Spectra

Generally, all approaches for the design of SLED structures showing an ASE spectrum with ultrawide emission bandwidth are based on a multitransition design. This means that more than just one optical transition contributes to the emission spectrum. One has to distinguish between two principally different approaches. The first one is based on the SQW (or MQW) epitaxial design, as just discussed, in which, in addition to the fundamental transition, other transitions fulfilling the quantum-mechanical selection rules are utilized to contribute to the generation of light. If properly designed, such QW structures allow for the enormous enlargement of the spectral bandwidth (Semenov et al. 1993b; Kondo et al. 1992). The second approach is based on the use of nonidentical (so-called chirped) QWs (Lin et al. 2004). Chirping means that at least one QW of an MQW epitaxial layer structure is differently designed compared to the other QW(s), yielding optical transitions at different wavelengths. Chirping can be achieved by a different QW thickness and/or different material compositions for the QW and/or the barrier layers. The basic idea of utilizing chirped QWs is demonstrated in Figure 19.8 for a chirped double-quantum well (DQW) structure. Due to the greater band-gap energy and thinner QW thickness of the right QW, the fundamental transition results in photons with higher energy (shorter wavelength) compared to the left QW. Thus, an ultrawide bandwidth design may be achieved if the spectral separation chosen between both fundamental transitions is sufficiently large.

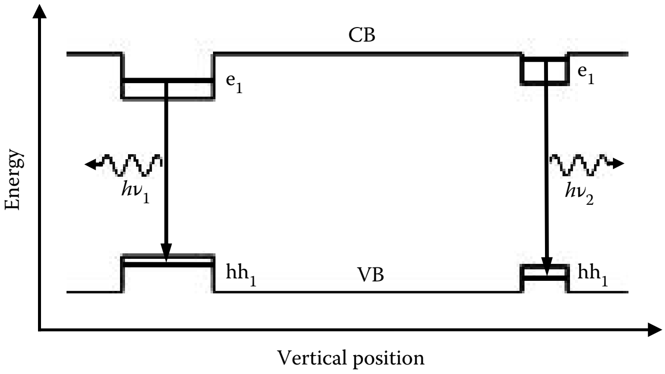

FIGURE 19.8 Energy-band diagram for two uncoupled chirped quantum wells (QWs). The horizontal lines in the wells indicate the first bound electronic state in the conduction band (CB), e_1, and the first bound hole state in the valence band (VB) for each QW separately. For the VB we restrict ourselves to the heavy hole band with its states hh_1. The arrows indicate the fundamental transition from the CB to the VB for both QWs. The electron–hole recombination results in the emission of a long-wavelength photon with energy $h\nu_1$ from the left QW and a short-wavelength photon with energy $h\nu_2$ from the right QW.

As mentioned earlier, ultrawide ASE spectra tend to exhibit a double-humped spectral shape. Such spectra show their maximum spectral bandwidth when both humps are well balanced, i.e., for approximately the same peak strength (the so-called flat-top condition). For a given chip design and a given heat-sink temperature, this situation can be achieved only over a limited range of operation currents. This makes such designs less flexible compared to single-transition designs. Moreover, the non-Gaussian spectral shape is unfavorable with respect to the occurrence of side lobes in the coherence function as mentioned earlier. The stronger the deviation from a Gaussian shape, the higher the side lobes are in the coherence function.

Generally, the width of the ASE spectrum broadens with the energy separation between allowed transitions to the heavy-hole VB. As a consequence of a greater spectral separation, first of all, the dip between both humps obvious in the ASE spectra at flat-top condition increases yielding a negative impact on the coherence function. And second, the SLED has to be driven at higher currents for operation at flat-top condition. The reason is that higher carrier densities in the QWs are required in order to lift the energetically more distant transitions on the short-wavelength side. This might be used as a positive side effect or if it is undesired, this effect can be compensated for by using chips with shorter active segment length. Nevertheless, it is obvious that the approach described here is limited to finding the best compromise between spectral bandwidth and the depth of the spectral dip.

19.3.1.3 Flattening of M-Shaped ASE Spectra

The M-shape approach can be optimized by a flattening of the spectral dip (see Figure 19.1e). This requires the use of at least one additional transition between QW states yielding photons with a wavelength somewhere around the spectral position of the dip. The additional transition fills up the dip between both peaks in the ASE spectrum. It can be realized in different ways, as discussed in the following.

The first possibility is the use of a chirped MQW active region design with at least one of the chirped QWs having its fundamental transition in the spectral range of the dip (Lin et al. 1996). For MQW structures consisting of a large number of QWs an elaborated approach is based on the continuous chirp of the fundamental transition wavelength for each QW over a wide spectral range.

Another possibility is the utilization of coupled QWs, where the coupling is caused by the finite potential walls between the QWs. For a coupled DQW active region design, the coupling leads to a splitting of the fundamental sub-band states, where the coupling strength, and thus, the splitting can be adjusted by the thickness of the barrier layers between the QWs and/or the well depth. The latter can be adjusted by the material composition of the barrier layers. If properly designed, the transition wavelength of the short-wavelength photon appears in the spectral range of the dip.

A third possibility to reduce or even remove the dip is the combination of two or more SLEDs with spectrally shifted ASE spectra. The SLEDs are designed so that the spectral peak of one SLED coincides with the dip of the other SLED. The combined spectrum is flatter and potentially broader if the SLEDs are appropriately designed. The flattening effect is demonstrated by the example of the M-shaped ASE spectrum for the 1050-nm SLED shown in Figure 19.1d. We assume that a second SLED has been designed with similar spectrum just shifted by 24 nm to shorter wavelengths. For simplicity reasons we take the original spectrum (the dashed curve in Figure 19.9) and shift it accordingly in order to obtain the dotted curve. Now, we assume that the output spectra are combined via a dispersion-free 50:50 coupler. This corresponds to a simple linear addition of both spectra with the same weight, resulting in the solid curve shown in Figure 19.9. Obviously, the original dip at around 1050 nm is removed and the resulting spectrum looks rather bell shaped. In the following section, the impact of the SLED combination on the coherence function is discussed.

19.3.2 Coherence Function and Coherence Length

As mentioned earlier, for OCT applications, the coherence function is of major interest. It allows the extraction of the coherence length, which determines the theoretical limit for the axial resolution of an

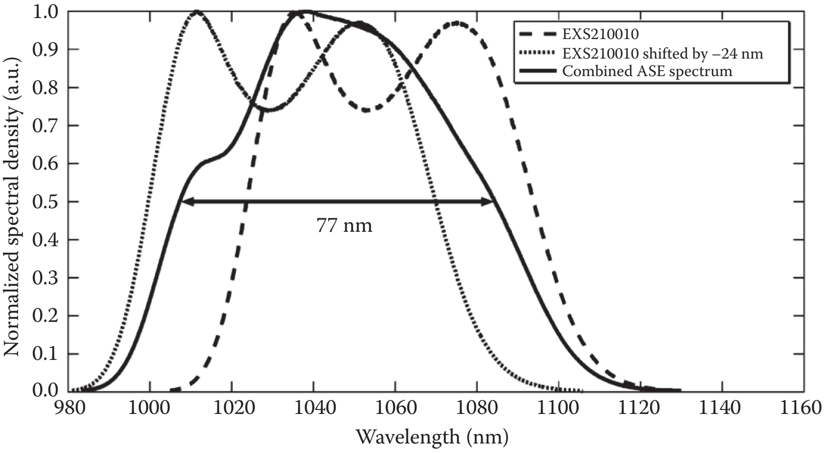

FIGURE 19.9 The dashed line shows the same ASE spectrum as plotted in Figure 19.1d for module EXS210010. The dotted curve shows the same spectrum shifted by 24 nm to shorter wavelengths. The solid curve is obtained as the linear superposition of both spectra. The FWHM bandwidth of the combined spectrum is 7 nm greater compared to the width of each single spectrum.

OCT imaging system (Duelk and Hsu 2015). For a broadband light source, the coherence length can be written as

$$l_{\text{coh}} = \gamma \cdot \frac{2 \cdot \ln(2)}{\pi} \cdot \frac{\lambda_{3\text{dB}}^2}{\Delta\lambda_{3\text{dB}}}, \tag{19.16}$$

with $\lambda_{3\text{dB}}$ being the 3-dB center wavelength and $\Delta\lambda_{3\text{dB}}$ the 3-dB bandwidth of the ASE spectrum. The factor γ depends on the shape of the ASE spectrum. For an ideal Gaussian shape, the factor is unity, $\gamma = 1$, for other shapes, $\gamma > 1$. For SLEDs with double-humped ASE spectra operating at flat-top condition, a value of $\gamma \approx 1.19$ is typically used. This yields a penalty of roughly 20% in coherence length caused by the deviation from an ideal Gaussian shape. As an example, for the ASE spectrum shown in Figure 19.1e, we calculate for the coherence length $l_{\text{coh}} \approx 7.4$ μm using Equation 19.16 with $\lambda_{3\text{dB}} = 1300$ nm, $\Delta\lambda_{3\text{dB}} = 120$ nm, and assuming a flat-top shape with $\gamma = 1.19$.

The coherence length can be directly determined from the coherence function, too. The latter is equivalent to the SLED's autocorrelation function, and thus, according to the Wiener–Khinchin theorem, the Fourier transform of the ASE spectrum (Schmitt 1999). Figure 19.10 shows the coherence function as a function of the OPD obtained for the ASE spectrum just discussed. The coherence function is symmetric with respect to the OPD. Its drop-off from the maximum value at zero OPD to 50% defines the coherence length, that is, the coherence length is the half-width at half maximum (HWHM). From the coherence function shown in Figure 19.10a near zero, we extract a coherence length of 7.9 μm. This value is close to the value estimated from Equation 19.16. Moreover, side lobes are visible at an OPD of 20 μm with a side-lobe suppression ratio (SLSR) of about 10 dB. The side lobes are caused by the non-Gaussian flat-top shape of the ASE spectrum. For applications like OCT, those side lobes may generate imaging artifacts if they are not suppressed by an additional windowing function in the OCT signal processing (Duelk and Hsu 2015). Therefore, SLED designs with bell-shaped ASE spectra are preferred for such applications. Figure 19.11 shows the coherence functions, which correspond to the ASE spectra plotted in Figure 19.9 for module EXS210010 and the combined SLED spectrum. Obviously, going from the M-shaped to the rather bell-shaped ASE spectrum leads to a strong reduction of the side lobes with an increase of the SLSR from 7 to 13 dB. As a side effect, the coherence length decreases by almost 1 μm from 8.6 to 7.7 μm due to the broadening of the combined SLED spectrum by 7 nm.

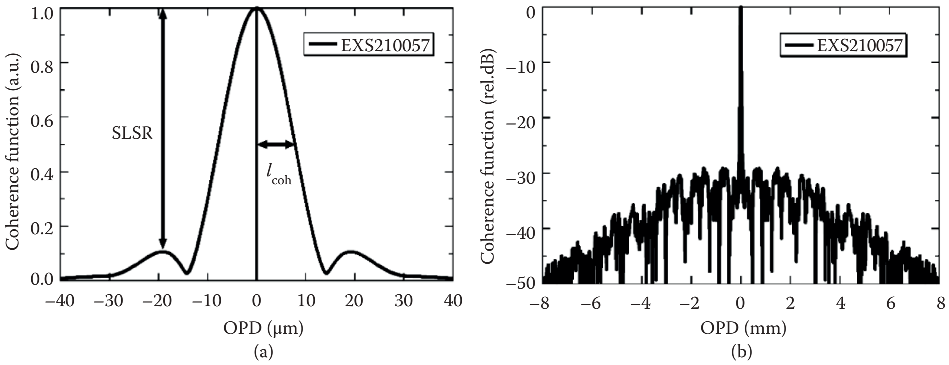

FIGURE 19.10 Coherence function versus optical path length difference (OPD) obtained for the ASE spectrum shown in Figure 19.1e for SLED EXS210057. (a) Linear plot over a small OPD range. The coherence length defined by the half-width at half maximum (HWHM) value is found to be 7.9 μm (in air) and the side-lobe suppression ratio (SLSR) roughly 10 dB. (b) Logarithmic plot over the full OPD range.

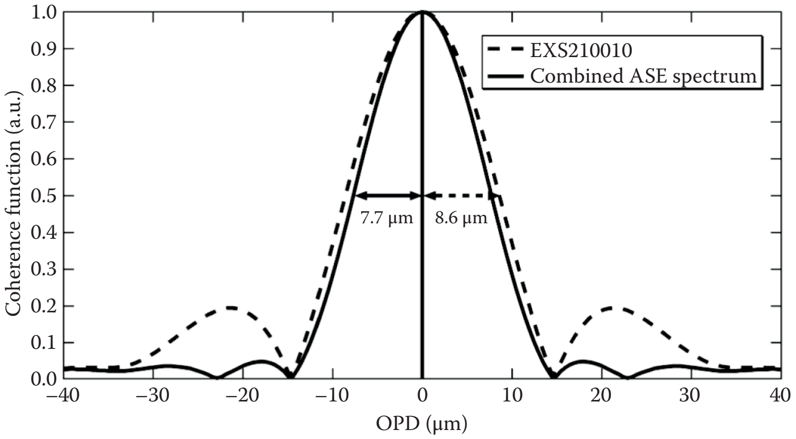

FIGURE 19.11 Coherence function in the near OPD range obtained for the ASE spectra plotted in Figure 19.9 for module EXS210010 (dashed curve) and the combined SLED spectrum (solid curve). From the dashed curve an SLSR of 7 dB and a coherence length of 8.6 μm is extracted, whereas the values found from the solid curve are 13 dB and 7.7 μm, respectively.

Periodic modulations in the ASE spectrum caused by the build-up of a resonant cavity, as discussed in Section 19.2.4, may show up as secondary coherence subpeaks at an OPD of a few millimeters (see, e.g., Figure 18.1 in Duelk and Hsu 2015). Figure 19.10b is free of such secondary coherence peaks as the ASE spectrum is smooth and free of spectral ripple. In order to avoid OCT imaging artifacts (so-called "ghost lines"), a secondary peak suppression ratio (SPSR) of at least 25 dB is needed. The SPSR requirement defines the tolerance for the maximum allowed spectral ripples in the ASE spectrum. As a consequence, this might cause R-SLED designs to be impractical for OCT applications.

19.3.3 High-Power SLED Designs

In addition to the requirements for the ASE output spectrum, SLEDs should typically deliver a minimum amount of output power at a given injection current. A variety of methods exist for increasing the SLED's front-facet output power, and thus achieve a high-power design. In the following, we describe possible approaches and discuss their advantages and drawbacks.

19.3.3.1 Increasing the Injection Current

The most obvious approach is just to increase the injection current. This is possible as long as the point for the thermal roll-over is not reached. But one should take into account that the increasing carrier density may have a strong influence on the shape of the ASE output spectrum. As discussed in Section 19.3.1, ASE spectra resulting from a single optical transition will typically remain bell shaped with broader bandwidth. However, for M-shaped ASE spectra, which may be well balanced for a lower injection current, as shown in Figure 19.1d and e, the low-wavelength peak will strongly grow with increasing injection current. This leads to an unfavorably strong reduction of the spectral bandwidth compared to the preferred flat-top condition.

19.3.3.2 Increasing the Chip Length

The output power can be increased for a given injection current by increasing the active segment length, that is, the length of the gain medium. This method works for operating currents sufficiently above the ASE threshold level because the latter increases with increasing chip length. Longer chips lead to a reduction of both the thermal resistance and the series resistance leading to lower junction temperatures for SLED chips running in CW mode of operation. Moreover, the carrier density is reduced resulting in the opposite effect on the ASE spectra, as explained in Section 19.3.3.1.

19.3.3.3 Using an R-SLED Design

As discussed in Section 19.2.3, a very efficient way to design an ultimate high-power SLED structure is the R-SLED approach. This allows for very high-output powers using relatively short chips. The main drawback of this approach is the enhancement of spectral ripples or even worse the tendency to start lasing due to the build-up of a resonant cavity. This may lead to an increase of the noise level in general and the appearance of strong secondary coherence subpeaks. Hence, the R-SLED design might be the optimum choice for insensitive applications with respect to resonant-cavity effects. For other applications, this approach might not work or is not recommended.

19.3.3.4 High-Power SLEDs by Epitaxial Design

The epitaxial design of the active-region layers has a strong influence on the SLED's *L*–*I* characteristic. Typically, it is easier to design SLEDs delivering higher-output powers by increasing the number of QWs and/or by increasing the thickness of the QW layers. Modifying the epitaxial design in this way has diverse and complicated effects on the expected electro-optical performance. For example, the injection current required for reaching ASE threshold increases in general with increasing total thickness of the active region. Moreover, the carrier density is reduced, having a similar effect on the ASE spectrum as described earlier in Section 19.3.3.2 for an extended chip length.

Therefore, the approach that has to be chosen for the realization of a specific SLED design depends on the whole set of target specification. The expected *L*–*I* characteristics and ASE spectra for a given active region design finally determine the appropriate chip length and injection current for device operation. There are no simple and strictly valid rules for finding the optimal SLED design. However, it can be approached using the discussion presented in this section as a guideline.

19.4 Summary

SLEDs are employed over a wide range of different applications with emitted ASE spectra covering the wavelength range from the visible to the near infrared. The band-gap energy of available semiconductor materials determines the appropriate choice of the substrate and epitaxial layer materials for the design of a specific SLED structure. Most SLEDs are realized in a tilted ridge-waveguide geometry similar to a Fabry–Pérot LD, which allows for the formation of optical modes. The target specifications mainly on the output power and the ASE spectrum determine the active-region design. SQW and MQW structures are most commonly used to achieve material gain.

The performance of SLED structures can be simulated like other opto-electronic devices using full 3D simulation tools. Such complex tools couple the different problems involved in the physical device description (multiphysics treatment). The simulation results are rather accurate at the expense of analytical insight. Analytical approaches based on traveling-wave equations describing the longitudinal propagation of light reduce the dimensionality of the problem and the number of coupled equations. They are particularly useful to derive an analytical expression for the SLED's *L–I* characteristic. We have presented a simple model that includes the influence of arbitrarily strong modal reflectivities at both facets on the output power. Using our analytical results, we have compared the performance of standard SLEDs with the new class of so-called R-SLEDs. Furthermore, our model has been verified by a comparison against experimental data and results obtained from full 3D simulations.

The design of SLEDs with specific target requirements has been discussed. In particular, the appearance of single-peaked (bell-shaped) and double-humped (M-shaped) ASE spectra for broad bandwidth SLED structures and how it affects the corresponding coherence functions has been analyzed in detail. Various methods for boosting the output power have been illustrated with their implications particularly on the ASE spectra. These findings can be finally used as a guideline for the design of a specific broad-bandwidth high-power SLED structure.

20.1 Introduction

The rapid growth in the development of optical networks requires small, inexpensive, and easy-to-integrate optical amplifiers for use as basic amplifiers (power boosters, in-line amplifiers to compensate for fiber loss, and optical receiver preamplifiers) and also as optoelectronic signal processing devices such as wavelength converters, optical switches, intensity and phase modulators, logic gates, and dispersion compensators.

There are two main classes of optical amplifier: optical fiber amplifiers (OFAs) and semiconductor optical amplifiers (SOAs). OFAs are optical amplifiers that use optical fiber as the gain medium, which in most cases is a glass fiber doped with rare-earth ions such as erbium (for operation in the 1.55-μm telecommunications band). The active dopant is supplied with energy by an external pump laser. OFAs are relatively large devices, with advantages such as wide optical bandwidth (tens of nm), high gain (>20 dB), high saturation output power (>20 dBm), defined as the output signal power at which the gain is half that of the unsaturated gain, low-noise figure, and low polarization sensitivity. When an OFA is used to amplify an optical data signal, its slow gain dynamics (the lifetime of the excited energy levels are typically in the tens of ms range) are a significant advantage as the amplifier only experiences the average power of the data signal. This results in low intersymbol interference and, when used to amplify wavelength division multiplexed signals, low interchannel cross-talk. However, OFA's slow dynamics preclude its use in optical signal processing applications.

To achieve optical gain, an SOA uses an electrically pumped semiconductor material, as is the case for a semiconductor laser, such that a population inversion occurs between the material conduction and valence bands. An incoming light wave is amplified when the resulting stimulated emission exceeds losses due to stimulated absorption and other material or structural losses. By appropriate choice of the gain material and its bandgap energy, SOAs can be designed to operate in the wavelength region of choice, typically the 1.3- and 1.55-μm optical communication windows (Connelly, 2002a; Dutta and Wang, 2013). Various SOA designs have been shown to achieve gain, noise figure, saturation output power, and optical bandwidths comparable to those for OFAs; however, SOAs can exhibit significant polarization sensitivity. The main advantages of SOAs over fiber amplifiers are their small size and compatibility with photonic integrated circuit (PIC) technology. SOAs have much faster dynamics than OFAs, which can lead to data signal distortion and interchannel cross-talk when operated in the gain-saturated regime. However, high-speed dynamics and nonlinearities can be exploited to realize all-optical signal processing functions.

In this chapter, the basic principles and types of SOA are reviewed followed by descriptions and implementations of relatively simple models that are used to gain insight into important SOA static, dynamic, and nonlinear behavior. The models described are (1) quasi-analytic static model, (2) bulk SOA static model including amplified spontaneous emission (ASE), (3) time-domain model including ASE, which is used to simulate pattern effects and a cross-gain modulation (XGM)-based wavelength converter, (4) pulse amplification analytic model, which is also used to simulate a cross-phase modulation (XPM)-based wavelength converter, and (5) a four-wave mixing (FWM) analytic model. Further chapters describe more detailed descriptions and models of particular types of SOA.

20.2 Basic Principles

The principle of operation of a traveling-wave SOA is shown in Figure 20.1. The amplifier consists of an electrically pumped active waveguide. An incoming light wave is amplified as it propagates through the waveguide. Antireflection (AR) coatings are used to suppress the end facet reflections, which are approximately 32% in uncoated devices. Through the use of AR coatings and optimized waveguide designs (such as using a tilted waveguide geometry), reflectivities as low as 10^{-5} or less can be achieved. The models described in this chapter assume zero facet reflectivities. The input signal experiences a single-pass power gain $G = \exp(gL)$, where g is the gain coefficient at the signal wavelength and L the amplifier length. Although SOA waveguides are designed to be single mode, they support two orthogonal polarization modes, the transverse electric (TE) and transverse magnetic (TM) modes.

The amplification process adds broadband noise (spontaneous emission) to the propagating signal, caused by spontaneous recombination of conduction band electrons to valence band holes. This noise is subsequently amplified, leading to ASE. In the linear operating region, where the gain is constant and the ASE statistics are not affected by the input signal, the output ASE power spectral density (W/Hz) in a single polarization state at the signal energy E_s is given by

$$\rho_{\text{ASE}} = n_{\text{sp}} E_s (G - 1), \tag{20.1}$$

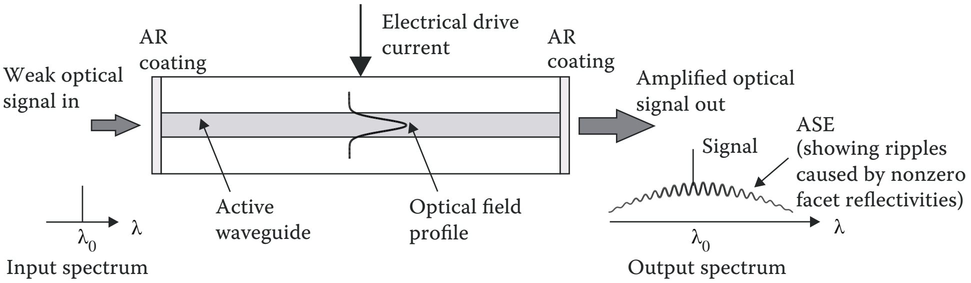

FIGURE 20.1 Semiconductor optical amplifier (SOA) basic structure.

where n_{sp} is the population inversion factor having a maximum possible value of 1. The amplifier noise factor F is defined as the ratio of the amplifier input to output signal-to-noise ratios (SNRs). F quantifies the degradation of the SNR, as determined in terms of the signal and noise levels in the photocurrent of an ideal photodetector placed in the signal path, due to the insertion of the amplifier in a signal transmission system (Baney et al., 2000; Kweon, 2002). The ideal photodetector responsivity $R = e/E$ (having a quantum efficiency equal to 1), where e and E are the electronic charge and light wave photon energy, respectively. Assuming that the input signal is shot-noise limited, the input SNR is equal to $P_{\mathrm{s}}/(2E_{\mathrm{s}}B_{\mathrm{e}})$, where P_{s} is the input signal power and B_{e} the detector electrical bandwidth. In practical receivers, the photodetector is preceded by an optical bandpass filter of bandwidth B_{o} that passes the signal and greatly reduces the ASE. The average signal and total ASE powers after the optical filter are $P_{\mathrm{s}}G$ and $2\rho_{\mathrm{ASE}}B_{\mathrm{o}}$, respectively, with corresponding photodetector shot-noise current variances (A^2), after electrical filtering, of $\sigma_{\mathrm{sig}}^2 = 2eRGP_{\mathrm{s}}B_{\mathrm{e}}$ and $\sigma_{\mathrm{sp}}^2 = 2eR\rho_{\mathrm{ASE}}B_{\mathrm{o}}B_{\mathrm{e}}$ (Olsson, 1989; Kweon, 2002). Since the photodetector is a square-law type detector, the signal also beats with the ASE giving rise to a signal-spontaneous beat noise current variance $\sigma_{\mathrm{s\text{-}sp}}^2 = 4R^2GP_{\mathrm{s}}\rho_{\mathrm{ASE}}B_{\mathrm{e}}$. The beating of the ASE with itself leads to spontaneous–spontaneous beat noise having a current variance $\sigma_{\mathrm{sp\text{-}sp}}^2 = 2R^2\rho_{\mathrm{ASE}}^2B_{\mathrm{e}}(2B_{\mathrm{o}} - B_{\mathrm{e}})$. The output SNR, $\mathrm{SNR}_{\mathrm{out}}$, is the ratio of the square of the signal photocurrent $(RGP_{\mathrm{s}})^2$ to the sum of the noise variances. If the optical filter bandwidth is small enough such that $\sigma_{\mathrm{sp\text{-}sp}}^2$ and σ_{sp}^2 are negligible compared to the other two noise sources (the signal-spontaneous beat noise limit), then

$$\mathrm{SNR}_{\mathrm{out}} = \frac{(RGP_{\mathrm{s}})^2}{4R^2GP_{\mathrm{s}}\rho_{\mathrm{ASE}}B_{\mathrm{e}} + 2eRGP_{\mathrm{s}}B_{\mathrm{e}}}. \tag{20.2}$$

The noise factor is then

$$F = \frac{2\rho_{\mathrm{ASE}}}{GE_{\mathrm{s}}} + \frac{1}{G}. \tag{20.3}$$

The noise figure (NF) is F expressed in decibel units, $\mathrm{NF} = 10\log_{10} F$ dB. For large gains, $F \approx 2n_{\mathrm{sp}}$. Since the maximum value of n_{sp} is 1, the minimum noise figure possible is 3 dB. Usually, the shot-noise term in Equation 20.3 is much smaller than the signal-spontaneous beat noise term so

$$F = \frac{2\rho_{\mathrm{ASE}}}{GE_{\mathrm{s}}}. \tag{20.4}$$

Nonzero reflectivities lead to multiple passes of the signal and ASE, with constructive interference occurring at discrete optical frequencies ν_q that are integer multiples r of the ratio of the speed of light in the amplifier c/n_{eff}, where n_{eff} is the waveguide effective index (defined as the ratio of the propagation constant in the waveguide to the free space propagation constant), to the round-trip distance $2L$. As the latter quantity is much greater than the wavelength, r is very large. The frequency spacing $\Delta\nu$ between adjacent resonances is $\Delta\nu = c/(2n_{\mathrm{eff}}L)$. For a typical SOA with $L = 1$ mm and $n_{\mathrm{eff}} = 3.5$ and operating in the 1.55-μm region, the wavelength spacing is 1.2 nm. When the effect of nonzero reflectivities is significant, the SOA is termed a Fabry–Pérot SOA (FP-SOA) because of its similarity to a Fabry–Pérot resonator. The signal gain of an FP-SOA at optical frequency ν is given by

$$G_{\mathrm{FP}}(\nu) = \frac{(1-R_1)(1-R_2)G}{(1-\sqrt{R_1R_2}G)^2 + 4\sqrt{R_1R_2}G\sin^2[\pi(\nu-\nu_r)/\Delta\nu]}, \tag{20.5}$$

where R_1 and R_2 are the SOA input and output facet reflectivities, respectively. FP resonances cause undesirable ripples in the signal gain and ASE spectrums (Figure 20.1). If the single-pass gain is high enough such that the denominator in Equation 20.5 approaches 0, G_{FP} will become very large and the SOA will begin to oscillate, at which point it behaves as a laser and not as an amplifier.

A reflective semiconductor optical amplifier (RSOA) can be formed by applying an AR coating to the input facet and a highly reflective coating to the opposite facet. RSOAs have applications such as modulators in passive optical networks (Lee et al., 2005).

20.2.1 Typical Bulk SOA Structure

A bulk material SOA operating in the 1550-nm region is shown in Figure 20.2 (Connelly, 2007). The active region is sandwiched between two separate confinement heterostructure (SCH) layers, which have a lower refractive index than the active region, and hence confine the light. The p–n junctions formed by the p-type and n-type InP layers act as current blocks, thereby providing good confinement of the injected carriers in the active region. An important SOA geometrical parameter is the optical confinement factor Γ defined as the fraction of the transverse (to the propagation direction) optical intensity overlapping with the active region. In general, Γ is polarization dependent, so the TE and TM confinement factors Γ_{TE} and Γ_{TM} are unequal. They are only equal in an unstrained bulk material SOA having a square cross-section waveguide. Such SOAs are difficult to fabricate as they require optical confinement in both transverse directions. Most commercial SOAs use rectangular cross-section waveguides and consequently, $\Gamma_{TE} \neq \Gamma_{TM}$. Confinement factors can be determined using formulas (Chuang, 2009) or commercial mode solvers. If $\Gamma_{TE} \neq \Gamma_{TM}$ and the material gain is polarization independent, then the SOA gain will be polarization dependent. In Figure 20.2, the introduction of tensile strain between the active region and SCH layers is used to increase the TM to TE material gain ratio, to compensate for the higher Γ_{TE} value caused by the waveguide asymmetry, and thereby reduce polarization sensitivity. The tapered regions act as mode expanders that couple light from the active waveguide to an underlying passive waveguide, thereby simplifying coupling to external optical fibers.

20.2.2 Quantum Well, Dot and Dash SOAs

SOAs that use bulk materials require high transparency current densities (at which the SOA has unity gain). The active layer in quantum well (QW) SOAs have much smaller thicknesses (~5–10 nm) than in conventional bulk structures (~100 nm). In bulk material, the injected carriers can move in three dimensions whereas in a QW they are confined to two dimensions. The enhanced quantum effects result in a significantly different band structure and material gain compared to bulk material. The small thickness of the QW allows many QWs to be stacked to form a multiple quantum well (MQW) active region. MQW SOAs have a number of advantages compared to bulk SOAs. Because of the small active region volume compared to bulk SOAs, a reduced injection current is sufficient to create a large carrier density in the

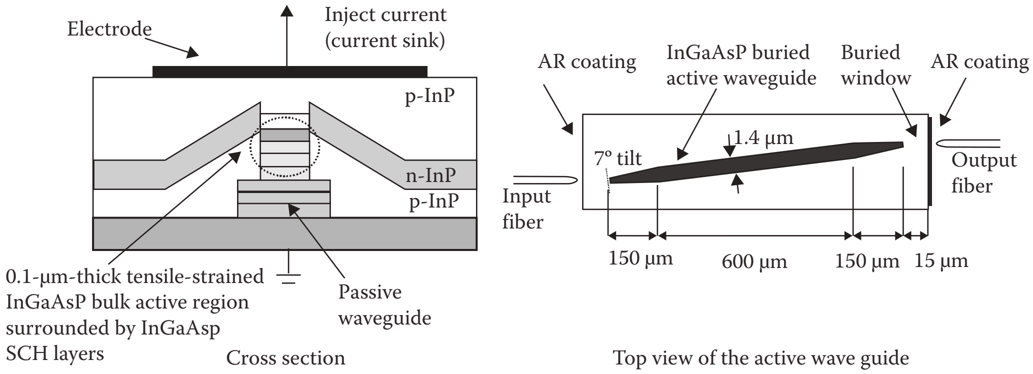

FIGURE 20.2 Typical SOA structure (Connelly, 2007). The buried windows and 7° tilted waveguide (with respect to the end facets) further reduce the effective facet reflectivity.

active region resulting in a broader gain spectrum and shorter carrier lifetime (related to the average time for conduction band electrons to recombine with valence band holes). Shorter carrier lifetimes result in shorter gain recovery times, which is of particular importance in reducing pattern effects when the SOA is used to amplify high-speed data. Furthermore, the loss coefficient in MQW active regions is significantly smaller than that in bulk devices, which leads to an improvement in noise performance. The polarization sensitivity of QW structures can be reduced by using strained QWs. Strain-induced band structure modifications also result in a reduction in loss mechanisms such as Auger recombination and intervalence band absorption (IVBA). The linewidth enhancement factor (LEF) is also reduced, which results in amplified pulses experiencing less spectral broadening, leading to superior high-speed performance as compared to bulk and unstrained QW SOAs. Bulk and QW SOAs have typical gain recovery lifetimes in the range of hundreds of picoseconds; so, when used to amplify data signals, significant pattern effects can be present at baud rates in the region of tens of Gbaud/s. Pattern effects also induce nonlinear phase noise through the self-phase modulation (SPM) effect, which can be a more serious performance degradation factor when advanced modulation formats are used. The amount of SPM is directly related to the LEF.

A quantum dot (QD) is a semiconductor nanostructure with dimensions that typically range from 2 to 10 nm, which confines the motion of injected carriers to all three spatial directions (Akiyama et al., 2007). Compared to bulk and QW SOAs, QD SOAs have been shown to have improved gain bandwidth, noise figure, and saturation output power as well as enhanced nonlinear effects such as FWM. Polarization insensitive QD SOAs have been realized using optimized QD shapes along with close stacking of the QD layers. Of particular significance is the ultrafast gain recovery lifetime, typically of the order of a few picoseconds, a factor of ten lower than that for bulk and QW SOAs so that QD SOAs are capable of amplifying ultrafast data signals with little or no pattern effects (Ben-Ezra et al., 2005). QD SOA LEFs can be much lower than for bulk and QW SOAs and so are particularly suitable for amplifying very high baud rate advanced modulation data signals.

Quantum dash (QDash) SOAs are of interest as an alternative to QD SOAs, since they have some dot-like properties and can more easily be made to operate in the 1.55-μm region, although they also have been shown to have longer gain recovery times in the range of hundreds of picoseconds (Lelarge et al., 2007).

20.3 Quasi-Analytic Static Model

As the input signal power to an SOA is increased, the gain reduces as the electrically pumped conduction band carriers (electrons) in the active material are depleted by stimulated recombination with holes in the valence band. To determine the factors that influence SOA gain at high input powers, a simple traveling-wave-based model can be used (Connelly, 2002a). The carrier density n dependent material gain g_{m} per unit length at the signal wavelength is assumed to be a linear function $g_{\mathrm{m}} = a(n - n_{\mathrm{t}})$, where a is the differential of the material gain with respect to n and n_{t} is the transparency carrier density. The carrier density rate equation is

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{\eta I}{eV} - \frac{n}{\tau_{\mathrm{c}}} - \frac{\Gamma a(n - n_{\mathrm{t}})P}{AE_{\mathrm{s}}}, \tag{20.6}$$

where I is the bias current and E_{s} the signal photon energy. The injection efficiency η is the fraction of the SOA current entering the active region. The active region cross-section area, $A = dW$, where d and W are the active waveguide thickness and width, respectively, and the active region volume $V = AL$. τ_{c} is the interband carrier lifetime due to nonradiative and radiative spontaneous recombination processes including trap, Auger, and spontaneous emission. The propagation of the signal power P is described by the traveling-wave equation

$$\frac{\mathrm{d}P}{\mathrm{d}z} = \left[\Gamma a(n - n_{\mathrm{t}}) - \alpha\right] P, \tag{20.7}$$

where z is the propagation direction (along the amplifier axis) measured from the input and α is the loss coefficient. Under steady-state conditions, the time differential in Equation 20.6 is zero, from which

$$n = \left(\frac{\tau_c \eta I}{eV}\right)\frac{P_{sat}}{P + P_{sat}} + n_t \frac{P}{P + P_{sat}}. \tag{20.8}$$

The saturation power P_{sat} is defined as

$$P_{sat} = \frac{AE_s}{\Gamma a \tau_c}, \tag{20.9}$$

Defining the spatially dependent normalized power $p(z) = P(z)/P_{sat}$, the unsaturated carrier density $n_0 = \tau_c \eta I/(eV)$ and the unsaturated gain coefficient $g_0 = \Gamma a (n_0 - n_t)$, Equation 20.8 can be written as

$$n(z) = \frac{n_0}{1+p} + \frac{n_t p}{1+p}. \tag{20.10}$$

Inserting Equation 20.10 into Equation 20.7 gives

$$\frac{dp}{dz} = \left(\frac{g_0}{1+p} - \alpha\right)p. \tag{20.11}$$

The unsaturated gain $G_0 = \exp[(g_0 - \alpha)L]$. Equation 20.11 can be solved numerically, using, e.g., the Runge–Kutta method, with the boundary condition $p(0) = P_{in}/P_{sat}$, where P_{in} is the input signal power. The amplifier gain G is calculated as the ratio of the output power $P_{out} = p(L)P_{sat}$ to the input power. The calculated gain versus output power is shown in Figure 20.3a for various values of G_0 with $\exp(\alpha L) = 10$. The carrier density is calculated using Equation 20.10. For a given SOA, G_0 corresponds to a particular value of bias current. The normalized saturation output power $p_{o,sat}$ is defined as the normalized output power at which the amplifier gain is half the unsaturated gain. From Figure 20.3a, it can be seen that $p_{o,sat} \approx -3.8$ dB for the 20 dB unsaturated gain curve and almost independent of G_0. The saturation output power $P_{o,sat} = p_{o,sat}P_{sat}$, which from the form of Equation 20.9 can be increased by reducing a and τ_c. In real SOAs, these two parameters are not constants but for a given structure and material depend on wavelength and carrier density.

Consider a square cross-section bulk SOA with parameters $W = d = 0.4$ μm, $L = 600$ μm, $\Gamma = 0.45$, $\tau_c = 0.5$ ns, $a = 1 \times 10^{-20}$ m^2, $n_t = 2.5 \times 10^{24}$ m^{-3}, and $\exp(\alpha L) = 10$. If the unsaturated gain is 20 dB at a bias current of 150 mA and assuming 100% injection efficiency, then $n_o = 4.9 \times 10^{24}$ m^{-3}, $g_0 = 1.1 \times 10^4$ m^{-1} and for a signal wavelength of 1550 nm, $P_{sat} = 9.6$ dBm and so $P_{o,sat} = 5.8$ dBm. Figure 20.3b shows the signal power and carrier density distributions for various values of normalized input power. At input powers $\ll P_{sat}$, the carrier density is uniform throughout the amplifier. Models that include ASE show that below saturation, the carrier density is not uniform but is symmetrical with minima at the SOA ends and a maximum at the center. As the level of saturation increases, the carrier distribution becomes less uniform, until the amplifier is highly saturated, at which the carrier density throughout the amplifier approaches its transparency value. As Figure 20.3b shows, the spatial distribution of the carrier density in a SOA can vary greatly. A further disadvantage of this model is that the spontaneous recombination term in Equation 20.4 is assumed to be a linear function of n. In practice, spontaneous recombination is more accurately modeled as a polynomial function of carrier density, so τ_c is actually carrier dependent.

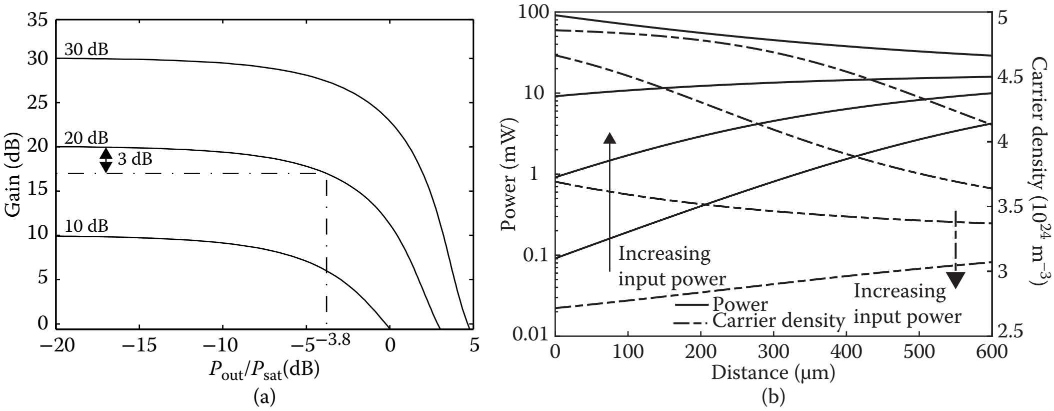

FIGURE 20.3 (a) Gain characteristics for various unsaturated gains. (b) Carrier density and power distributions for normalized input powers of 0.01, 0.1, 1, and 10. The unsaturated gain is 20 dB.

20.4 Bulk SOA Static Model Including ASE

The simple model described above illustrates SOA operational principles, in particular, saturation effects, but it is of limited use in a real SOA analysis. Most importantly, it does not include gain coefficient wavelength dependency or ASE, which contributes to gain saturation and determines the amplifier noise performance. In this section, a modified version of the wideband models for an unstrained bulk SOA that includes ASE (Connelly, 2001, 2007) is considered. The SOA has the same active region geometry and confinement factor as used in the quasi-analytic static model. The bulk material is unstrained, and thereby polarization independent. In the mathematical formulation, Γ_{TE} and Γ_{TM} are assumed to be different but are assumed to be equal in the simulations.

20.4.1 Material Gain

The material gain g_m and spontaneous gain g_{sp} (used to determine the additive spontaneous emission) of the unstrained bulk material are calculated using methods detailed in Jones and O'Reilly (1993) and Connelly (2007). Typical gain spectra are shown in Figure 20.4. The net gain coefficient, at energy E and polarization p (TE or TM), $g_p(n, E) = \Gamma_p g_{m,p} - \alpha_p$ and the loss coefficient $\alpha_p(n) = \alpha_0 + \Gamma_p\,\alpha_1\,n$, where α_0 is the waveguide scattering loss and α_1 the IVBA coefficient loss coefficient (Suematsu and Adams, 1994), with values of 3000 m^{-1} and 7500×10^{-24} m^2, respectively (Connelly, 2001).

20.4.2 Traveling-Wave and Carrier Density Rate Equations

A traveling-wave approach is used to determine signal and the TE and TM ASE photon rates. Transverse variations in the optical field are not considered, and as such, the model has a one-dimensional spatial dependency. The traveling-wave equation for the forward propagating signal photon rate N_s is

$$\frac{dN_s}{dz} = g_s\,N_s, \tag{20.12}$$

where g_s is the net gain coefficient at the signal polarization and photon energy E_s. The boundary condition at the input $N_s(z = 0) = P_{in}/E_s$, where P_{in} is the input signal power. For a given carrier density spatial

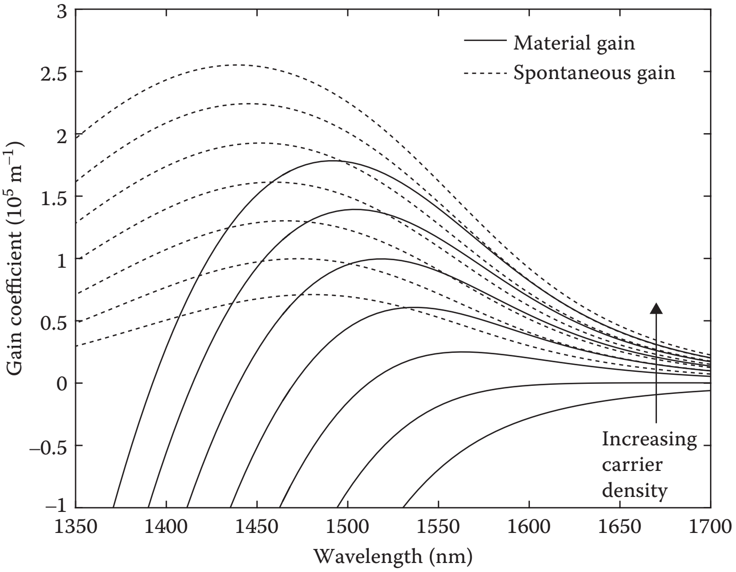

FIGURE 20.4 Unstrained bulk material gain and spontaneous emission gain spectra. The carrier density ranges from 2 to 5×10^{24} m^{-3} in increments of 0.5×10^{24} m^{-3}. The model takes into account intraband relaxation effects and carrier density–dependent bandgap shrinkage. The bandgap wavelength at zero carrier density is 1.55 μm.

distribution, Equation 20.12 has the solution

$$N_s(z) = \frac{P_{in}}{E_s} \exp\left(\int_0^z g_s \mathrm{d}z \right), \tag{20.13}$$

which can be calculated using numerical integration. To model ASE, a spectral slicing scheme is used in which the ASE is split into M spectral slices, each of energy width ΔE. The traveling-wave equations for the forward (+) and backward (−) propagating kth spectral slice $N^{\pm}_{p,k}$ with polarization p and centered at energy E_k are given by

$$\frac{\mathrm{d}N^{\pm}_{p,k}}{\mathrm{d}z} = \pm g_{p,k} N^{\pm}_{p,k} \pm \Gamma_p g_{sp,p,k} \Delta E, \tag{20.14}$$

with boundary conditions $N^{+}_{p,k}(z = 0) = 0$ and $N^{-}_{p,k}(z = L) = 0$. The last term on the right-hand side (RHS) of Equation 20.14 is the additive spontaneous emission into the kth spectral slice. For a given carrier density spatial distribution, Equation 20.14 has the solution

$$N^{+}_{p,k}(z) = \exp\left(-\int_0^z g_{p,k}\, \mathrm{d}z \right) \int_0^z \left[\exp\left(\int_0^z g_{p,k}\, \mathrm{d}z \right) \Gamma_p\, g_{sp,p,k} \Delta E \right] \mathrm{d}z \tag{20.15}$$

$$N^{-}_{p,k}(z) = \exp\left(-\int_z^L g_{p,k}\, \mathrm{d}z \right) \int_z^L \left[\exp\left(\int_z^L g_{p,k}\, \mathrm{d}z \right) \Gamma_p\, g_{sp,p,k} \Delta E \right] \mathrm{d}z, \tag{20.16}$$

which can be calculated using numerical integration. The carrier density rate equation is

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{\eta I}{eV} - R(n) - \frac{1}{\mathrm{d}W}\left[\Gamma_{\mathrm{s}}\, g_{\mathrm{m},p}N_{\mathrm{s}} + \sum_{p=\mathrm{TE,TM}}\sum_{k=1}^{M}\Gamma_p\, g_{\mathrm{m},p,k}(N^{+}_{p,k} + N^{-}_{p,k})\right]. \tag{20.17}$$

The first term on the RHS of Equation 20.17 is the carrier pumping due to the injected bias current. The injection efficiency η is assumed to be equal to 1. Γ_{s} is the confinement factor of the signal polarization. The nonstimulated emission recombination rate $R(n)$ is given by

$$R(n) = A_{\mathrm{tr}}n + R_{\mathrm{rad}}(n) + Cn^3, \tag{20.18}$$

where A_{tr} and C are the trap and Auger coefficients, respectively. Trap recombination is mainly caused by Shockley–Read–Hall recombination at defects in the material (Fukuda, 1991). The spontaneous radiative recombination rate $R_{\mathrm{rad}}(n)$ is commonly assumed to be a bimolecular process approximated by $R_{\mathrm{rad}} = Bn^2$, where the bimolecular recombination coefficient B is often taken to be a fitting parameter; however, it can be directly calculated from the material gain (Chuang, 2009). For the material under consideration, $B \approx 2.8 \times 10^{-16} - 0.24 \times 10^{-40}\mathrm{n}\ \mathrm{m}^3\mathrm{s}^{-1}$. Auger recombination involves three carriers: an electron and hole, which recombine in a band-to-band transition and give off the resulting energy to another electron or hole (Chuang, 2009). Because SOAs usually operate with high carrier (electron) densities, the hole density is almost equal to the carrier density so the Auger recombination rate is proportional to n^3. The Auger coefficient for a particular material or structure can be calculated from first principles, but this is difficult and there is often a high degree of uncertainty in values quoted in the literature. In most models, typical values are used or it is treated as a fitting parameter. Here, C is taken to be equal to $3 \times 10^{-41}\ \mathrm{m}^6\mathrm{s}^{-1}$. At the high carrier densities present in SOAs and if the defect level is low, trap-induced recombination is often assumed to be negligible compared to the other two processes and can be ignored, as is the case here. The third term on the RHS of Equation 20.17 is the amplified signal-induced carrier density depletion rate. $\Gamma_{\mathrm{s}}N_{\mathrm{s}}$ is the photon rate in the active region, which is multiplied by $g_{\mathrm{m},p}$ to obtain the conduction band to valence band carrier recombination rate per unit length. Division by the active region cross-section area results in the carrier density depletion rate. The fourth term on the RHS of Equation 20.17 is the ASE-induced carrier density depletion rate, which is obtained in a similar fashion to that for the amplified signal.

20.4.3 Algorithm and Simulations

Under static conditions, the time differential in Equation 20.17 is equal to zero; the aim of the numerical algorithm is to determine the signal, ASE photon rates, and the carrier density such that this is the case (Connelly, 2007). The model equations cannot be solved analytically, thereby requiring a numerical solution (Connelly, 2001, 2007). Fifty spatial points are used for numerical integration and 150 spectral slices covering a range of 1250–1650 nm. First, the material gain and spontaneous gain are calculated for the spectral slice energies and particular values of carrier density within the expected range. The bimolecular recombination coefficient is calculated for the same carrier density values. Initially, the carrier density in the amplifier is set to some reasonable value (e.g., $3 \times 10^{24}\ \mathrm{m}^{-3}$). The signal intensity and ASE photon rates are then estimated using Equations 20.13, 20.15, and 20.16. An updated value for n at each spatial section is then estimated using Equation 20.17 with the time derivative set to zero, and subsequently the gain and spontaneous recombination rate throughout the amplifier, using interpolation of the full calculations, followed by the signal and ASE photon rates. This process is continued until the values of the ASE photon rates converge to a suitable tolerance (0.1%). Amplifier characteristics such as gain, ASE spectrum, and noise figure can then be calculated. The polarization-dependent ASE output spectral density (W/Hz) at E_k is given by

$$\rho_{p,k} = \frac{h E_k}{\Delta E} N^{+}_{p,k}(z = L). \tag{20.19}$$

In the signal-spontaneous beat noise limit, the noise figure spectrum is given by

$$NF_{p,k} = 10 \log_{10}\left(\frac{2\rho_{p,k}}{E_k G_{p,k}}\right), \tag{20.20}$$

where $G_{p,k}$ is the amplifier gain at E_k (Baney et al., 2000; Olsson, 1989). The maximum gain achievable is mainly limited by ASE. The small-signal gain and ASE spectra are shown in Figure 20.5 for bias currents ranging from 40 to 100 mA. The gain and ASE spectrum peaks shift to shorter wavelengths as the bias current increases, an effect which is present in real SOAs, and they both saturate at high bias currents. The 3-dB optical gain bandwidth at a bias of 100 mA is 30.6 nm. The corresponding ASE spectrum has a 3-dB bandwidth of 34.4 nm; in general, the ASE spectral width is a reasonably good measure of the amplifier gain bandwidth. Figure 20.6a shows the small-signal gain and noise figure bias current dependency. The gain begins to saturate at bias currents at which the ASE saturates; the noise figure reaching a limiting value of approximately 11.7 dB. The ASE and carrier density spatial distributions are shown on Figure 20.6b for no input signal. The latter has a symmetrical profile with a maximum at the center, in contrast to the quasi-analytic model, which does not include ASE. The gain, output signal, and ASE powers versus input power characteristics are shown in Figure 20.7a for a bias current of 100 mA at which the unsaturated gain is 23.3 dB and $P_{\mathrm{o,sat}} = 4.9$ dBm. The reduction in ASE power is clearly seen as the amplifier is driven into saturation by the input signal. As the input power level is increased, the amplified signal begins to compete for the available gain and the carrier density distribution becomes more asymmetrical, as shown in Figure 20.7b for a moderate saturation level.

The model can be used to investigate the effects of different material and geometrical parameters on SOA performance and is thereby useful in SOA design.

The bias current and signal wavelength are 100 mA and 1550 nm, respectively.

20.5 Time-Domain Model Including ASE

The most common application of SOAs is for modulated signal amplification, so it is of interest to model time-domain behavior such as pattern effects, XGM, SPM, and XPM (Obermann et al., 1998; Durhuus et al., 1992; Asghari et al., 1997; Occhi et al., 2003). By including the time differential term in Equation 20.17, the static model described above can be used to model SOA dynamics having timescales as short as hundreds of picoseconds (Connelly, 2002b). The carrier density is initialized to some suitable value and the initial values of the signal and ASE photon rates are set to zero. The carrier density at the next time step is determined by solving Equation 20.17 using the modified Euler method, which is a second-order technique (Press et al., 2007) and for a given time step is significantly more accurate than simply replacing the time differential by a first-order finite difference (Euler method). Nonetheless, an appropriate time-step size must be chosen to prevent stability issues and ensure accuracy. Assuming that the propagation time through the amplifier is much less than the time variation of the optical input and current, the ASE and signal photon rates can be determined using Equations 20.13, 20.15, and 20.16. The new values of the photon rates are then used in Equation 20.17 to determine the carrier density at the next time step until the time span of interest is completed.

The carrier density rate Equation 20.17 can be expressed as

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{\eta I}{eV} - n\left(\frac{1}{\tau_\mathrm{c}} + \frac{1}{\tau_\mathrm{s}}\right), \tag{20.21}$$

where the inverse of the nonstimulated emission carrier lifetime τ_c is given by

$$\frac{1}{\tau_\mathrm{c}} = \frac{R(n)}{n}, \tag{20.22}$$

and the inverse of the stimulated recombination carrier lifetime τ_s is given by

$$\frac{1}{\tau_\mathrm{s}} = \frac{1}{n\,\mathrm{d}W}\left[\Gamma_\mathrm{s}\, g_{\mathrm{m},p} N_\mathrm{s} + \sum_{p=\mathrm{TE,TM}} \sum_{k=1}^{M} \Gamma_p\, g_{\mathrm{m},p,k}(N_{p,k}^{+} + N_{p,k}^{-})\right]. \tag{20.23}$$

The total effective carrier lifetime τ_eff is

$$\tau_\mathrm{eff} = \left(\frac{1}{\tau_\mathrm{c}} + \frac{1}{\tau_\mathrm{s}}\right)^{-1}, \tag{20.24}$$

which depends on the amplifier operating point and input optical power and also has a strong spatial dependency. The smaller the τ_eff, the faster the gain recovery time. Figure 20.8 shows the output power, spatially averaged effective carrier lifetime $\tau_\mathrm{eff,m}$, and instantaneous gain for an amplified 5-Gb/s non-return-to-zero (NRZ) data stream with high and low powers of 0.1 mW and 0.1 μW, respectively. The bias current, unsaturated gain, and signal wavelength are 100 mA, 23.3 dB, and 1550 nm, respectively. The amplified data distortion is due to the dynamic changes of the carrier and photon distributions causing pattern effects on a timescale approximately given by $\tau_\mathrm{eff,m}$, which for the simulations shown in Figure 20.8 can vary between 370 and 850 ps. At higher bit rates the severity of pattern effects increases and consequently their effect on system performance.

20.5.1 XGM Wavelength Converter

XGM occurs when an intensity-modulated input data signal (the pump) causes dynamic changes in the carrier density and thereby the gain experienced by a copropagating or counter-propagating light wave (the probe) at a different wavelength to the data signal. Carrier density changes also cause changes in the active region refractive index and thereby the phase of both the pump and probe leading to SPM and XPM. XGM can be used to realize wavelength converters in which data is copied from an input pump data signal to an input continuous wave (CW) probe. An XGM-based 2.5-Gb/s wavelength converter with copropagating pump and probe light waves is shown in Figure 20.9. When the pump power is high, the gain experienced by the probe is reduced and vice versa, hence the inverted pump data is transferred to the probe. The above time-domain model is used to simulate the converter, as shown in Figure 20.9. The performance degrades as the bit rate increases, as the dynamic gain is unable to follow the variations in the input pump power. Because of their superior dynamics, compared to bulk or QW SOAs, QD SOAs can be used as XGM wavelength converters at much higher bit rates.

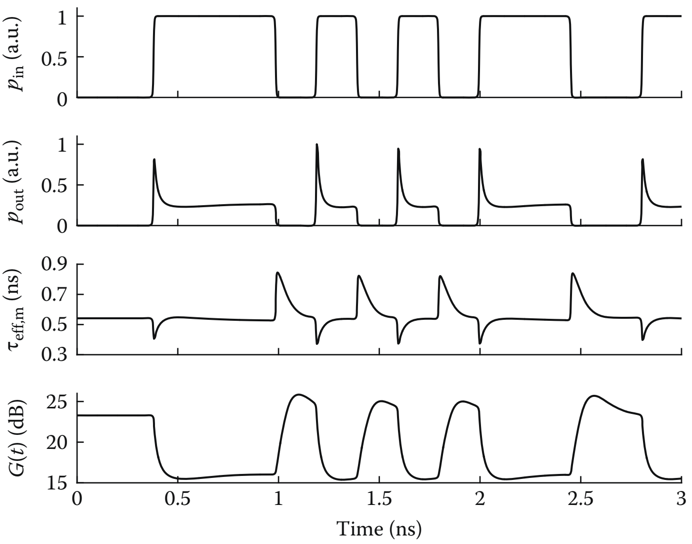

FIGURE 20.8 Simulated SOA output power, spatially averaged effective carrier lifetime, and instantaneous gain for an input NRZ 5-Gb/s data sequence. The data high- and low-level powers are 0.1 mW and 0.1 μW, respectively. The bias current, unsaturated gain, and signal wavelength are 100 mA, 23.3 dB, and 1550 nm, respectively. The simulation time step is 2.5 ps.

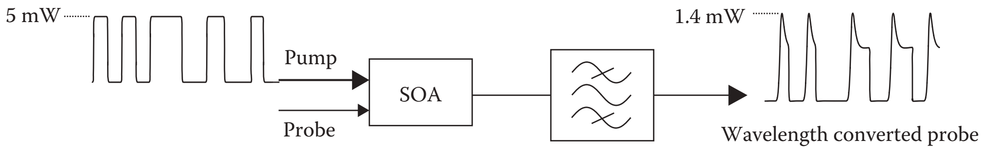

FIGURE 20.9 Cross-gain modulation (XGM)-based wavelength converter and simulated wavelength converted probe output. The bandpass filter is used to select the probe signal. The pump input is a 30-dB extinction ratio NRZ 2.5-Gb/s data sequence with a peak power and wavelength of 5 mW and 1550 nm, respectively. The input probe power and wavelength are 10 μW and 1560 nm, respectively. The bias current is 100 mA.

20.6 Pulse Amplification Analytic Model

Because SOAs have wide optical bandwidths and fast gain recovery lifetimes, they can be used to amplify optical pulses with full width at half-maximum (FWHM) pulse widths in the picosecond range. By exploiting SOA nonlinearities using materials with intrinsically faster gain recovery times, it is possible to amplify femtosecond pulses. Many pulse amplification models are described in the literature; here a simple model (Agrawal and Olsson, 1989), which does not include ASE, is described. The model is applicable to pulse widths greater than the intraband relaxation time (typically <0.1 ps). The amplifier is assumed to be polarization independent. The optical field can be written as $A(t) = \sqrt{P(t)}\,\exp[j\varphi(t)]$, where P and φ are the temporal power and phase. The gain coefficient g at the signal wavelength is modeled as $g = \Gamma a\,(n - n_{tr})$. The power, phase, and gain coefficient dynamics are determined by solving

$$\frac{\partial P}{\partial z} = (g - \alpha)P \tag{20.25}$$

$$\frac{\partial\varphi}{\partial z} = -\frac{1}{2}\alpha_{\mathrm{H}}\, g \tag{20.26}$$

$$\frac{\partial g}{\partial\tau} = \frac{(g - g_0)}{\tau_{\mathrm{c}}} - \frac{gP}{E_{\mathrm{sat}}}. \tag{20.27}$$

τ is the pulse local time measured with respect to a time frame moving with the pulse. The temporal dependence of g, induced by the propagating pulse power, leads to dynamic changes in the pulse phase, i.e., SPM. τ_{c} is the interband carrier lifetime, which is typically the order of hundreds of picoseconds in bulk and QW SOAs, and α_{H} is the LEF—a proportionality factor relating phase changes to changes in the gain (Henry, 1982). α_{H} is often taken to be a constant, but for a given material is carrier density and wavelength dependent. The saturation energy $E_{\mathrm{sat}} = E_{\mathrm{s}} Wd/(\Gamma a)$. To determine the evolution of the pulse shape and phase, a numerical solution of Equations 20.25 through 20.27 is required. However, if it is assumed that $\alpha << g$ then Equations 20.23 through 20.25 can be solved to obtain a closed-set of equations for the output pulse power and phase given by

$$P_{\mathrm{out}}(\tau) = G(\tau)P_{\mathrm{in}}(\tau) \tag{20.28}$$

$$\varphi_{\mathrm{out}}(\tau) = \varphi_{\mathrm{in}}(\tau) - \frac{\alpha_H}{2}h(\tau), \tag{20.29}$$

where the instantaneous gain $G(\tau) = \exp[h(\tau)]$. If the input FWHM pulse width $\tau_p << \tau_c$, then the integrated gain $h(\tau)$ is given by

$$h(\tau) = -\ln\left\{1 - \left(1 - \frac{1}{G_0}\right)\exp\left[-\frac{U_{\mathrm{in}}(\tau)}{E_{\mathrm{sat}}}\right]\right\}, \tag{20.30}$$

where $G_0 = \exp(g_0 L)$ is the unsaturated gain, g_0 is the unsaturated gain coefficient, and

$$U_{\mathrm{in}}(\tau) = \int_{-\infty}^{\tau} P_{\mathrm{in}}(\tau')\,\mathrm{d}\tau'. \tag{20.31}$$

The output pulse frequency chirp, defined as the time derivative of its instantaneous phase divided by 2π, is given by

$$\Delta\nu_{\mathrm{out}}(\tau) = \Delta\nu_{\mathrm{in}}(\tau) + \frac{\alpha(G_0 - 1)}{4\pi G_0}\frac{P_{\mathrm{out}}(\tau)}{E_{\mathrm{sat}}}\exp\left[\frac{-U_{\mathrm{in}}(\tau)}{E_{\mathrm{sat}}}\right], \tag{20.32}$$

where $\Delta\nu_{\mathrm{in}}$ is the input pulse chirp. The model is applicable to pulse widths of the order of picoseconds to tens of picoseconds. For pulse widths >1 ps, nonlinear intraband processes such as carrier heating (CH) and spectral hole burning (SHB) that have characteristic time constants in the subpicosecond range are important; so, models that take such effects into account are required (Hong et al., 1994; Mecozzi and Mork, 1997). Once the output pulse power and phase are known, its power spectrum can be calculated. To show the effects of an SOA on an amplified pulse consider an unchirped zero phase Gaussian input pulse,

$$P_{\mathrm{in}}(\tau) = \frac{E_{\mathrm{in}}}{\tau_0\sqrt{\pi}}\exp\left[-\left(\frac{\tau}{\tau_0}\right)^2\right], \tag{20.33}$$

where E_{in} is the pulse energy. τ_o is related to τ_p by $\tau_p \approx 1.665\tau_0$. Simulated amplified pulse shape, chirp, and spectrum are shown in Figure 20.10. The amplified pulse is asymmetric because the leading edge of

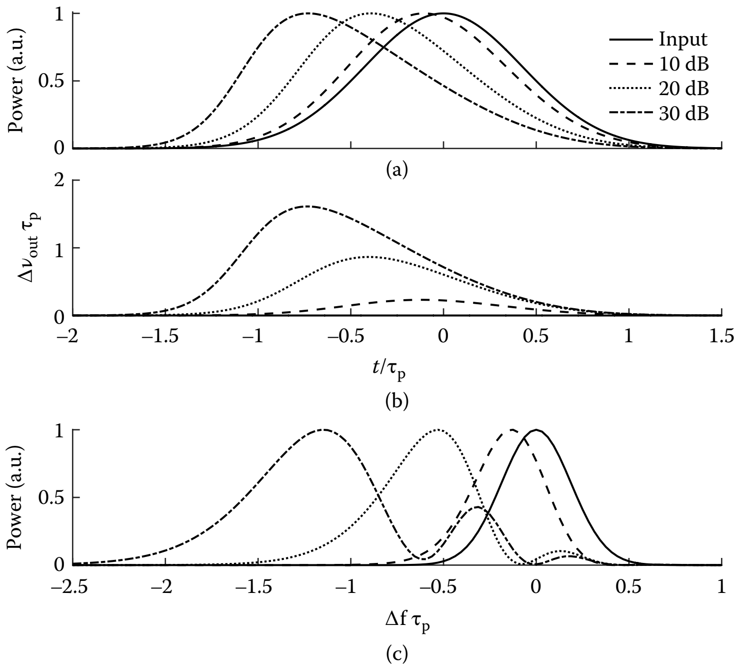

FIGURE 20.10 Amplified pulse; (a) power, (b) chirp, and (c) spectrum. Δf is the frequency deviation from the input light wave center frequency. The input is a zero-chirp Gaussian pulse with $E_{in}/E_{sat} = 0.1$. The parameter is the unsaturated gain and $\alpha_H = 5$.

the pulse experiences a larger gain than the trailing edge. The amplified pulse is chirped and its spectrum is broader than the input spectrum. At high gains, the amplified pulse spectrum exhibits a multipeak structure caused by SPM-induced frequency chirp.

20.6.1 SOA XPM Mach–Zehnder Wavelength Converter

XGM-based wavelength converters suffer from the disadvantage that high-input pump powers are required to obtain the large SOA gain modulation depth necessary to achieve a large converted signal extinction ratio. The associated high-carrier depletion rates lead to a significant increase in the gain recovery lifetime, which limits the data rates at which such converters can operate. To overcome the trade-off between speed and modulation depth SOA XPM can be used (Asghari et al., 1997). XPM occurs when an intensity-modulated input data signal (the pump) causes dynamic changes in the carrier density and, consequently, the active region refractive index and thereby the phase of a copropagating or counter-propagating probe signal at a different wavelength to the pump. In an SOA XPM-based wavelength converter, the probe phase changes are converted into amplitude changes by incorporating one or two SOAs in an interferometric structure such as the Mach–Zehnder interferometer (MZI) shown in Figure 20.11. If sufficient phase shift is achieved with a low-gain modulation index, and the interferometer visibility is high, then the XPM converter performance will be superior to XGM-based converters. An optical delay line is used to adjust the relative delay between the modulated input pump pulses reaching each SOA. The interferometer output probe power, assuming that destructive interference occurs between the recombining probe light waves when their relative phases are equal, is given by

$$p(t) = \frac{P_{probe}}{4}\left[G_1(t) + G_2(t) - 2\sqrt{G_1(t)G_2(t)}\cos\left(\varphi_1(t) - \varphi_2(t)\right)\right], \tag{20.34}$$

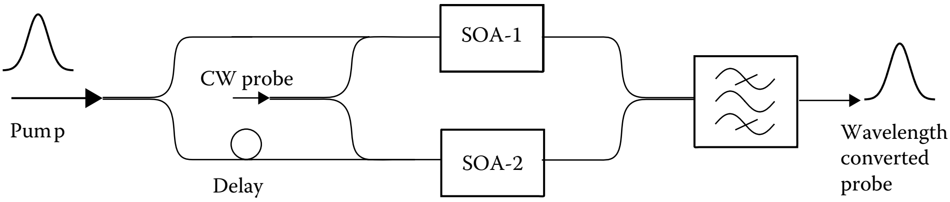

FIGURE 20.11 SOA Mach–Zehnder interferometer (MZI) wavelength converter.

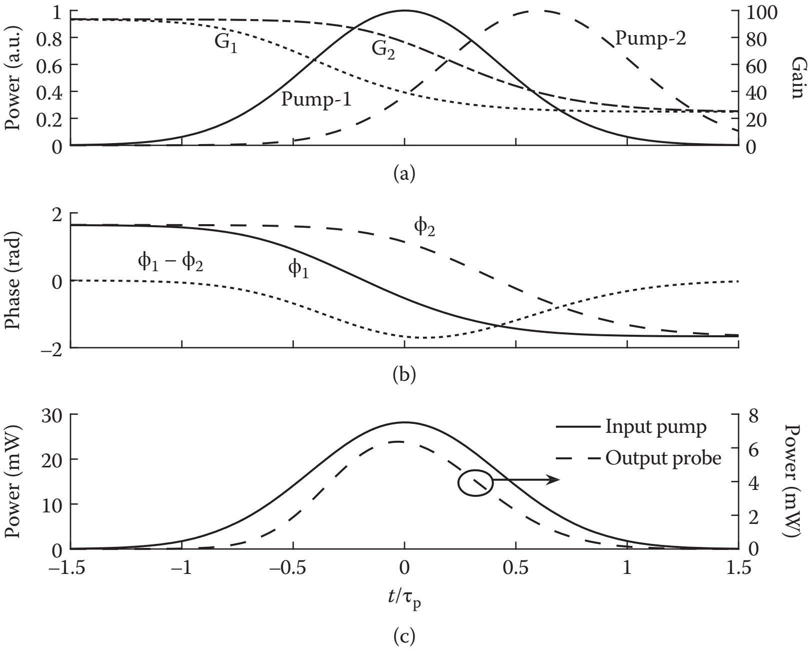

FIGURE 20.12 SOA MZI wavelength converter simulations. (a) SOA input pump powers and dynamic gains, (b) induced SOA probe phase shifts and difference, (c) comparison between the input pump and converted probe pulse shapes.

where P_{probe} is the input CW probe power, $G_1(t)$, $\varphi_1(t)$, $G_2(t)$, and $\varphi_2(t)$ are the gain and phase changes of the SOA in the upper and lower interferometer arms, respectively. The couplers have splitting and coupling ratios of 3 dB. The pulse amplification model described above can also be used to model XPM in the case where the input pump pulse width is much less than the intraband lifetime and assuming that the gain has fully recovered since the previous pulse. Including the effects of relatively slow interband processes requires a numerical solution. In the following simulations, an MZI with two identical SOAs having gains of 20 dB and $\alpha_H = 5$ is considered. The input pump is a zero-chirp Gaussian pulse with $E_{\text{in}}/E_{\text{sat}} = 0.03$. The CW input probe power is −10 dBm. The delay between the pump pulses entering SOA-1 and SOA-2 is equal to 0.6 of the input pump pulse width. These settings were chosen to obtain a converted probe pulse shape similar to the input pump pulse, as shown in Figure 20.12. The input pump pulse causes dynamic gain saturation and associated probe phase shifts. In the unsaturated state, the phase difference between the probe light waves in the interferometer arms is zero, leading to total destructive interference and thereby a zero output probe signal. The arrival of the pump pulses in the SOAs creates a window in which the magnitude of the phase difference increases, leading to constructive interference and thereby a nonzero converted probe signal pulse.

20.7 FWM Analytic Model

FWM is a *coherent* nonlinear process that can occur in an SOA between two copolarized input optical fields, a strong pump and a weaker probe at angular frequencies ω_0 and $\omega_0 - \Omega$, where Ω is the pump and probe detuning Agrawal (1988). Beating between the optical fields results in the establishment of gain and refractive index pulsations in the SOA at the detuning frequency. In most practical applications of FWM, in particular wavelength conversion, the detuning is much larger than the inverse of the interband carrier lifetime (typically in the nanosecond range) and the pulsations are caused by fast intraband processes, in particular CH and SHB. The gain and index pulsations result in nondegenerate FWM, in which energy from the pump and probe is coupled into a new copropagating field at frequency $\omega_0 + \Omega$, called the conjugate, so termed because its dynamic phase is the opposite of the signal phase.

SHB is caused by the injected pump signal creating a hole in the *intraband* carrier distribution. This modulates the occupation probability of carriers within a band leading to fast gain modulation. CH is caused by stimulated emission and free carrier absorption. Stimulated emission subtracts carriers that are cooler than average while free carrier absorption moves carriers to higher-energy levels in the band. The resulting increase in temperature decreases the gain. Two characteristic times are associated with CH: the carrier–phonon scattering time τ_1, which is the average time carriers require to cool down to the semiconductor lattice temperature, and the carrier–carrier scattering time τ_2, which is the average time taken by the carrier population to reach a heated equilibrium from the initial nonheated equilibrium. The latter time constant is also associated with SHB. The characteristic times are of the order of tens to hundreds of femtoseconds, so FWM-based wavelength converters can operate with detuning frequencies as high as hundreds of GHz. A comprehensive analysis of FWM in SOAs requires a numerical solution to a set of coupled-mode equations Agrawal (1988). The electric field in the SOA can be expressed as

$$E(z,t) = E_1 \exp\left\{j[k_1 z - (\omega_0 - \Omega)t]\right\} + E_0 \exp\left[j(k_0 z - \omega_0 t)\right] + E_2 \exp\left\{j[k_2 z - (\omega_0 + \Omega)t]\right\}, \quad (20.35)$$

where the copropagating and copolarized pump, probe, and conjugate field amplitudes are E_0, E_1, and E_2, respectively, with corresponding frequencies of ω_0, $\omega_0 - \Omega$, and $\omega_0 + \Omega$, and propagation coefficients k_0, k_1, and k_2. If it is assumed that the conjugate power is small relative to the copropagating input pump and probe powers, then an analytic model can be used to predict the SOA FWM characteristics (Mecozzi et al., 1995). In this model, the FWM conversion efficiency η defined as the ratio of the output conjugate to input probe powers is given by

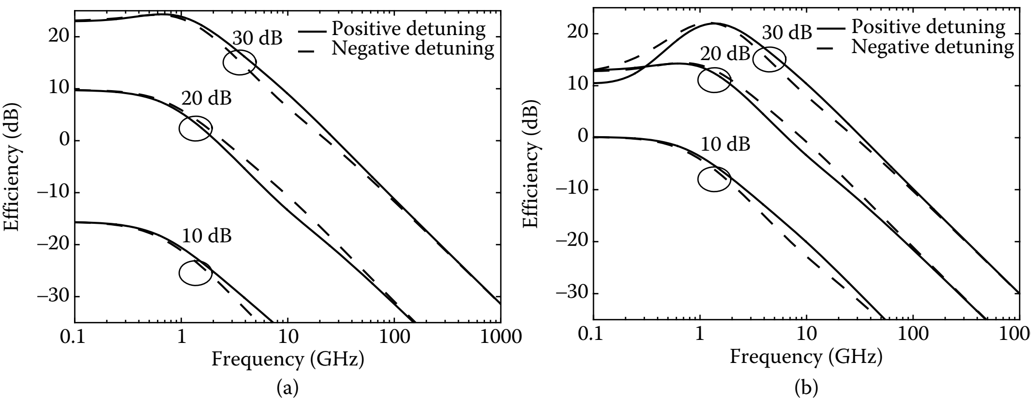
$$\eta = G\left|G_1\right|^2. \quad (20.36)$$

G is the saturated amplifier gain, which can be calculated using Equation 20.11, where p is taken to be the sum of the pump and probe powers. The unsaturated gain $G_0 = \exp[(g_0 - \alpha)L]$, where g_0 and α are the unsaturated gain and loss coefficients, respectively.

$$G_1 = \frac{-1 + j\alpha_H}{\alpha_H} \exp\left[-\frac{1}{2}\sigma F_{\mathrm{cd}}(\Omega)\right] \sin\left[\frac{\alpha_H}{2}\sigma F_{\mathrm{cd}}(\Omega)\right] - \frac{1}{2}\varepsilon_{\mathrm{sh}} P_{\mathrm{sat}} H_{\mathrm{sh}}(\Omega)\,\sigma F_{\mathrm{sh}} - \frac{1}{2}\varepsilon_{\mathrm{ch}} P_{\mathrm{sat}} H_{\mathrm{ch}}(\Omega)\,\sigma F_{\mathrm{ch}} \quad (20.37)$$

$$F_{\mathrm{cd}}(\Omega) = \frac{1}{1 - j\Omega\tau_{\mathrm{c}}\zeta}\left[\ln\left(\frac{1 + GP_{\mathrm{T}}/P_{\mathrm{sat}} - j\Omega\tau_{\mathrm{c}}}{1 + P_{\mathrm{T}}/P_{\mathrm{sat}} - j\Omega\tau_{\mathrm{c}}}\right) + \zeta \ln\left(\frac{G_0}{G}\right)\right] \quad (20.38)$$

$$F_{\mathrm{ch}} = -\frac{1}{\zeta}\left[\frac{P_T}{P_{\mathrm{sat}}}(G-1) - \ln\left(\frac{G_0}{G}\right)\right] \quad (20.39)$$



(a)

(b)

FIGURE 20.13 Four-wave mixing (FWM) efficiency versus absolute value of frequency detuning for input pump and probe powers of (a) 200 and 20 μm, and (b) 20 and 2 μm, respectively.

$$F_{\mathrm{sh}} = \ln\left(\frac{G_0}{G}\right) \tag{20.40}$$

$$S(0) = P_{\mathrm{sat}}\left(\frac{1-\zeta}{\zeta}\right)\frac{1-(G/G_0)^{\zeta}}{G-(G/G_0)^{\zeta}} \tag{20.41}$$

$$\sigma = \frac{P_0}{P_0+P_1}. \tag{20.42}$$

$\varepsilon_{\mathrm{ch}}$ and $\varepsilon_{\mathrm{sh}}$ are parameters characterizing the strengths of CH and SHB processes, respectively, and $\zeta = \alpha/g_0$. P_0 and P_1 are the input pump and probe powers, respectively, and the total input power $P_T = P_0 + P_1$. The Fourier transforms H_{ch} and H_{sh} of the nonlinear gain responses due to CH and SHB, respectively, are given by

$$H_{\mathrm{ch}}(\Omega) = \frac{1}{(1-j\Omega\tau_1)(1-j\Omega\tau_2)} \tag{20.43}$$

$$H_{\mathrm{sh}}(\Omega) = \frac{1}{1-j\Omega\tau_2}. \tag{20.44}$$

The spatial dependence of the saturated gain G can be determined using Equation 20.9, where p is taken to be the sum of the normalized pump and probe powers. Figure 20.13 shows the calculated efficiency for different values of amplifier unsaturated gain and input pump/probe powers with model parameters: $P_{\mathrm{sat}} = 10$ mW, $\alpha_H = 4.0$, $\tau_c = 0.25$ ns, $\tau_1 = 750$ ps, $\tau_2 = 15$ ps, $\varepsilon_{\mathrm{sh}} = 10.0$ W^{-1}, $\varepsilon_{\mathrm{ch}} = 2.5$ W^{-1}, and exp(αL) = 5 dB. The efficiency characteristics are asymmetric and show a more peaked structure as the amplifier gain is increased. The efficiency can be greater than unity for frequencies up to hundreds of GHz, i.e., frequency conversion with gain, so FWM-based SOA wavelength converters are of particular importance in wavelength division multiplexed systems with wide wavelength channel spacing.

20.8 Conclusion

SOAs have many uses in optical networks, not only as basic amplifiers but also as fundamental components in all-optical signal processing applications. Although SOAs have been investigated for many years, the development of new SOA structures and incorporation in PICs, advanced materials such as QDs, and exploitation of ultrafast nonlinearities make SOA research and development an exciting field of study.

The successful advancement of SOA technology requires the development of accurate models, which can be a significant challenge requiring a deep knowledge and understanding of many diverse areas such as photonic materials, device design, optoelectronic nonlinearities, noise modeling, and communication systems design. This chapter has given an overview of SOA basics and used relatively simple models to explain important SOA characteristics and applications. Further chapters consider more advanced models applied to particular types of SOAs.

21.1 Introduction

Eras in modern human history have often been labeled by their most significant and widely adopted technological achievements. It is no wonder that the last several decades proudly bear the name "The Information Age." Information, in its many forms, is an invaluable asset and its dissemination, collection, storage, and analysis have been the primary focus of researchers in numerous fields. Ever-increasing hunger for information exchange has driven supporting technologies to new levels. The transition from electric to optical domain has proved to be one of the most significant milestones of modern communications. According to TeleGeography and Huawei Marine Networks, as of early 2017, it has been estimated that close to 1.1 million kilometers of submarine optical cables exist, each bearing several optical fibers, and approximately 99% of all international telecommunications traffic is carried over this infrastructure. Starting from the overloaded backbone links, optical technology was gradually implemented in the lower levels of network hierarchy, with the ultimate goal of reaching individual users in the foreseeable future. Decreasing attenuation, eliminating electromagnetic interference, reducing the power consumption, and diminishing the possibility of eavesdropping are just some of the advantages the new technology has realized (Ramaswami, 2002). With advantages also come challenges, as we are gravitating toward increased efficiency, which includes increased capacity over larger distances with decreased signal degradation and power consumption, and aggregation of fixed and mobile networks into a single network architecture (Carapellese et al., 2014). Aside from information exchange, information processing and storage in the optical domain remain in focus as we pursue all-optical solutions to mitigate unnecessary electro-optic and opto-electric conversion (Ramaswami, 2002; Sygletos et al., 2008). Many steps have already been taken, both in the physical layer, where new materials and production technologies significantly influenced performance, and in the higher levels of abstraction, where new modulation formats and protocols have been introduced (Ramaswami, 2002; Gladisch et al., 2006; Sygletos et al., 2008). Devices that are simple, but can perform multiple functions, have always been highly regarded. One example is the semiconductor optical amplifier (SOA)—a photonic device that under adequate conditions can amplify the input optical signal. SOAs have been extensively studied and perfected over the past three decades. Similar to laser diodes, they are compact and easy to produce and integrate with other photonic devices on a single chip (Xing et al., 2004). Wide amplification spectrum makes them suitable for use in wavelength-division multiplexed (WDM) optical networks (Mecozzi and Wiesenfeld, 2001; Zimmerman and Spiekman, 2004; Kani, 2010). SOAs consume relatively little power (Xing et al., 2004; Sygletos et al., 2008; Koenig et al., 2014), they are transparent to the optical signal modulation format (Schmuck et al., 2013; Koenig et al., 2014), and they can be designed to be polarization insensitive (Mathur and Dapkus, 1992; Carlo et al., 1998; Michie et al., 2006).

Aside from being used as standalone amplifiers, SOAs can be used for numerous other important functions (Olsson, 1989; Mecozzi and Wiesenfeld, 2001), such as switching (Stabile and Williams, 2011; Figueiredo et al., 2015), modulation/remodulation (Totović et al., 2011; Pham, 2014), wavelength conversion (Joergensen et al., 1997; Dailey and Koch, 2009), signal regeneration (Sygletos et al., 2008), all-optical flip-flops (Pitris et al., 2015), and all-optical random access memory (RAM) cells (Vyrsokinos et al., 2014), to name just a few.

21.2 General Structure and Operation Principles of TW- and R-SOA

Although SOAs come in many different forms, they all share several common features. Each SOA consists of an active region and a cladding and can have either highly reflective or antireflective facets, or a combination of the two, as shown in Figure 21.1. The two most commonly used SOA structures are the traveling-wave (TW) SOA and the reflective (R) SOA.

In the TW-SOA, both facets are coated with an antireflective layer, and the optical signal travels only once through the active region. In other words, input and output ports of TW-SOA are on opposite sides. This is preferable configuration for using SOA as a standalone amplifier, whether as a booster, in-line, or preamplifier (Olsson, 1989; Xing et al., 2004). On the other hand, the R-SOA has one antireflective and one highly reflective facet, which causes the signal to be reflected and travel through the active region twice. Both input and output ports are on the same side, namely at the antireflective facet. The rear facet can be made semitransparent, rather than highly reflective, which is usually the case if the interface between the cleaved semiconductor facet and air is responsible for reflection. This may be a useful feature, since now two output signals can be used, one at the rear and one at the front facet. An SOA with both facets highly reflective is the Fabry–Pérot (FP) SOA (Adams et al., 1985; Thylén, 1988). Due to the feedback loop provided by the highly reflective facets, the FP-SOA closely resembles a laser diode, although it is not typically used to generate coherent signal by itself (Yariv and Yeh, 2007). Nevertheless, its spectrum does exhibit pronounced resonances and antiresonances, unlike TW- and R-SOAs, where ripples in spectrum are much more subtle and are the result of residual reflectivity of the antireflective facets (Yariv and Yeh, 2007).

FIGURE 21.1 Schematic representation of the semiconductor optical amplifier (SOA), with relevant geometrical parameters and signals denoted. The active region is based on the unstrained bulk $In_{0.53}Ga_{0.47}As$ and designed to be polarization insensitive. (R-SOA, reflective SOA; TW-SOA, traveling-wave SOA.)

The active region is responsible for the signal amplification through the mechanism of stimulated emission, where the electric bias current is used to achieve population inversion. The purpose of the built-in waveguide is to confine the optical signal that propagates along the SOA and prevent its leaking into the cladding. The output signal of any SOA should ideally be an amplified replica of the input signal, although, in practice, a certain amount of noise is always superimposed, due to the always-present spontaneous emission. Aside from the photons initially generated through the process of spontaneous emission, noise propagation leads to its amplification, which finally results in amplified spontaneous emission (ASE) noise. Although the noise is typically regarded as the unwanted by-product of the device operation, there are numerous examples of using the noise either to generate or deliberately modify the optical signal (Yamatoya and Koyama, 2004; de Oliveira Ribeiro et al., 2005; Kang et al., 2006; Gebrewold et al., 2015), or enhance the overall SOA performance (Valiente et al., 1996).

SOAs can also be classified based on the material used for the active region, where each material has advantages and disadvantages. The simplest choice is bulk semiconductor (Michie et al., 2006; Connelly, 2007; Mazzucato et al., 2015; Totović et al., 2015). However, due to the several drawbacks of bulk SOA, such as high recovery time (Zilkie et al., 2007), and broad ASE spectrum (Totović et al., 2013), other solutions have emerged.

Depending on the desired improvement, different materials with a higher degree of confinement can be used (Zilkie et al., 2007), starting from multiple quantum well (MQW) (Nagarajan et al., 1992; Keating et al., 1999; Qin et al., 2012), and continuing to quantum dash (QDash) (Gioannini, 2004; Reithmaier et al., 2005; Qasaimesh, 2013) and quantum dot (QD) materials (Berg et al., 2001; Qasaimesh, 2003; Kim et al., 2009). SOAs with the active region based on these materials usually exhibit better performance in one or more aspects, at the expense of increased complexity and production cost. For example, QD SOA has fast recovery time, which is crucial for ultrafast signal processing, but due to the dot size distribution, it has moderate material gain and wide ASE spectrum, with full-width at half-maximum (FWHM) reaching double the values reported for MQW and QDash SOAs (Zilkie et al., 2007). On the other hand, QDash SOA has high differential gain and requires much lower driving currents in comparison with other active region types and outperforms bulk SOA in terms of time needed for gain recovery (Reithmaier et al., 2005).

21.3 Modeling of Material and Structural Parameters

Before proceeding to the SOA analysis, it is necessary to understand the physical principles responsible for its operation and quantify them through the parameters typically used for description of photon–electron interaction in the active media. In addition, the waveguide should be optimized to provide polarization-insensitive operation, and the parameters describing it should also be studied.

21.3.1 Material Gain, Radiative Spontaneous Recombination, and Refractive Index Variation

Some of the most important optical properties of an SOA's active layer, determining its functional performance and parameters, are material gain, radiative spontaneous recombination (spontaneous emission) rate, and refractive index. Material gain, or gain per unit length, together with several other structural parameters, is responsible for defining the transmission (device) gain, i.e., the ratio of powers of the output and input optical signals, which is a figure of merit for the amplifier's capability to amplify the input optical signal by stimulated emission of photons (Connelly, 2002). Radiative spontaneous recombination rate and its spectral distribution represent the defining parameters that sculpt ASE spectrum and the SOA's noise (Silver et al., 2000; Connelly, 2002), whereas the refractive index variation directly affects the SOA linewidth enhancement factor (LEF) (Wang et al., 2007), further influencing the SOA's performance in cross-phase modulation (XPM) systems and optical switching.

In SOAs, stimulated emission has interband character, meaning that it occurs between the conduction band (CB) and the valence band (VB) of the semiconductor. Since these electronic bands consist of dispersed energy levels with different density per unit energy and occupation probability, the material gain significantly differs from gain in other solid-state or gas optically active media, which have a few (usually three or four) energy levels involved in the process of stimulated emission and its provisioning. The spreading of energy levels in the bands leads to a broad spectrum of material gain, which increases with the increase of injected carrier density or, equivalently, the current density. The radiative stimulated recombination rate is generally proportional to material gain (Chuang, 1995; Coldren et al., 2012), similar to the radiative spontaneous recombination rate (Chuang, 1995; Coldren et al., 2012). The material gain, as well as the radiative spontaneous recombination rate and the refractive index change, is, generally speaking, the function of three quantities: the joint density of states, electron/hole occupation probability, and a constant corresponding to a single optical transition between the two energy levels, one in CB and the other in VB.

The model of material gain, and the other two parameters, depends on the degree of carrier confinement in the active region of the SOA and the semiconductor strain introduced by the confinement. However, the models may differ with respect to degree of accuracy, i.e., approximations adopted in the model. The common framework for calculating optical properties of semiconductor bulk and quantum confined structures is the envelope function approximation (Meney et al., 1994). Within this framework, a relatively simple, so-called "two-band" model is used for material gain calculation (Chuang, 1995). It is based on the assumption of parabolic band dependence $E(k)$, where E is the energy and k is the wave vector of electron (hole) in the conduction (valence) band. Each band is treated separately by the effective mass Schrödinger equation (Chuang, 1995). More sophisticated multiband envelope function models account for the VB mixing effect, which essentially means that the character of sub-bands is a mixture of heavy hole (HH), light hole (LH), and split-off (SO) band. This effect occurs as a result of quantum confinement and becomes more prominent as the degree of confinement increases.

The most common multiband envelope function models are the Luttinger–Kohn (LK) 4×4 (Chuang, 1991) and 6×6 models (Chao and Chuang, 1992). The former model (LK 4×4) accounts for HH and LH band mixing, whereas the latter (LK 6×6) includes SO band, in addition to HH and LH bands. A more advanced multiband approach is based on the 8×8 $\mathbf{k}\cdot\mathbf{p}$ model (Meney et al., 1994; Liu and Chuang, 2002; Gvozdić and Ekenberg, 2006), which comprises all three VBs and the CB. In addition to nonparabolicity of VB, this model accounts for nonparabolicity of CB as well. However, its fundamental drawback is the occurrence of the spurious solutions, which can be avoided to some extent by various techniques (Foreman, 1997; Cartoixa et al., 2003; Kolokolov et al., 2003; Veprek et al., 2007).

21.3.1.1 Two-Band Model

Although relatively rough, the two-band model might be used in case of bulk, and even other types of quantum confined structures, but with modest accuracy. It is suitable for the unstrained bulk active region since the optical matrix element is isotropic in this case (Chuang, 1995), which means that material gain is the same for any direction of the amplified light polarization. Contrarily, in case of quantum confined semiconductor structures, material gain is polarization dependent. Nevertheless, the two-band model can still be implemented even in the case of quantum wells. If the optical dipole matrix element is averaged over the azimuthal angle corresponding to the plane of the quantum well, it is possible to derive its angular dependence with respect to the confinement direction of the quantum well (Chuang, 1995).

Here, the detailed expressions for material gain g, spontaneous emission rate per unit energy r_{sp} and refractive index variation Δn_{r} are presented for the unstrained bulk active region, according to the two-band model (Chuang, 1995). They are all functions of photon energy $\hbar\omega$ and carrier density n, which is included in expressions through the carrier-dependent quasi-Fermi levels:

$$g\left(n,\hbar\omega\right)=C_{\mathrm{g}}\frac{M_{\mathrm{b}}^{2}}{4\pi^{2}}\sum_{i=\mathrm{HH,LH,SO}}\left(\frac{2\mu_{i}}{\hbar^{2}}\right)^{3/2}\int\limits_{E_{\mathrm{g},i}}^{\infty}\frac{\gamma}{\pi}\frac{\sqrt{x-E_{\mathrm{g},i}}}{(x-\hbar\omega)^{2}+\gamma^{2}}\left(f_{\mathrm{FD}}^{\mathrm{c}}-f_{\mathrm{FD}}^{\mathrm{v}}\right)\mathrm{d}x, \tag{21.1}$$

$$r_{\mathrm{sp}}\left(n,\hbar\omega\right)=\frac{8\pi n_{\mathrm{r}}^{2}\left(\hbar\omega\right)^{2}}{h^{3}c^{2}}C_{\mathrm{g}}\frac{M_{\mathrm{b}}^{2}}{4\pi^{2}}\sum_{i=\mathrm{HH,LH,SO}}\left(\frac{2\mu_{i}}{\hbar^{2}}\right)^{3/2}\int\limits_{E_{\mathrm{g},i}}^{\infty}\frac{\gamma}{\pi}\frac{\sqrt{x-E_{\mathrm{g},i}}}{(x-\hbar\omega)^{2}+\gamma^{2}}f_{\mathrm{FD}}^{\mathrm{c}}\cdot\left(1-f_{\mathrm{FD}}^{\mathrm{v}}\right)\mathrm{d}x, \tag{21.2}$$

$$\Delta n_{\mathrm{r}}\left(n,\hbar\omega\right)=\frac{q^{2}\hbar^{2}}{n_{\mathrm{r}}\varepsilon_{0}m_{0}^{2}}\frac{M_{\mathrm{b}}^{2}}{2\pi^{2}}\sum_{i=\mathrm{HH,LH,SO}}\left(\frac{2\mu_{i}}{\hbar^{2}}\right)^{3/2}\int\limits_{E_{\mathrm{g},i}}^{\infty}\frac{\left(x-\hbar\omega\right)\sqrt{x-E_{\mathrm{g},i}}}{x\left(x+\hbar\omega\right)\left[\left(x-\hbar\omega\right)^{2}+\gamma^{2}\right]}\left(f_{\mathrm{FD}}^{\mathrm{v}}-f_{\mathrm{FD}}^{\mathrm{c}}\right)\mathrm{d}x. \tag{21.3}$$

In previous equations, $C_{\mathrm{g}}=\pi q^{2}/(n_{\mathrm{r}}c\varepsilon_{0}m_{0}^{2}\omega)$, where q is the absolute electron charge, m_0 is the free-electron mass, n_{r} is the refractive index of the active region, c is the speed of light in vacuum, ε_0 is the vacuum permittivity, $\omega=2\pi\nu$ is the angular photon frequency, with ν being its frequency, and $\hbar=h/(2\pi)$ is the reduced Planck's constant, with h being the Planck's constant. In Equations 21.1 through 21.3, $M_{\mathrm{b}}^{2}=m_{0}E_{\mathrm{p}}/6$ stands for the bulk momentum matrix element squared, where E_{p} is the interband matrix element, $\mu_{i}=(m_{\mathrm{e}}^{-1}+m_{i}^{-1})^{-1}$ and $E_{\mathrm{g},i}$ are the reduced effective mass and the energy gap between the CB bottom E_{c} and the VB top $E_{\mathrm{v},i}$, respectively, where i stands for the HH, LH, and SO band. With $f_{\mathrm{FD}}^{\mathrm{c}}(E)=f_{\mathrm{FD}}^{\mathrm{c}}[E_{\mathrm{c}}+\mu_{i}/m_{\mathrm{e}}\cdot(x-E_{\mathrm{g},i})]$ and $f_{\mathrm{FD}}^{\mathrm{v}}(E)=f_{\mathrm{FD}}^{\mathrm{v}}[E_{\mathrm{v},i}-\mu_{i}/m_{i}\cdot(x-E_{\mathrm{g,i}})]$ we denote the Fermi–Dirac distribution $f_{\mathrm{FD}}^{(j)}(E)=\{1+\exp[(E-E_{\mathrm{f}}^{(j)}/k_{\mathrm{B}}T)]\}^{-1}$ for the CB ($j=c$) and the VB ($j=v$), characterized by the corresponding quasi-Fermi levels $E_{\mathrm{f}}^{(j)}$, where k_{B} is the Boltzmann constant and T is the temperature. The half linewidth of the Lorentzian function is denoted by γ.

21.3.1.2 Multiband Model

The LK 4 × 4 and 6 × 6 Hamiltonians are usually implemented in the analysis of quantum confined structures. However, this approach can be very useful in the calculation of gain of strained bulk material (Connelly, 2007), which is polarization dependent in this case. As shown by Connelly (2007), and Mazzucato et al. (2015), eigenvectors of multiband Hamiltonian can be used to find the components of the optical matrix elements along the directions corresponding to polarizations of incoming light.

Totović et al. (2013) present an analysis of the material gain, radiative spontaneous recombination rate spectrum, and refractive index variation in MQWs based on the 8 × 8 $\mathbf{k}\cdot\mathbf{p}$ method (Liu and Chuang, 2002; Gvozdić and Ekenberg, 2006). The analysis is done for an MQW active region consisting of six coupled 0.13% tensile-strained $In_{0.516}Ga_{0.484}As$ quantum wells, which are strain-compensated by the $In_{0.9}Ga_{0.1}As_{0.3}P_{0.7}$ 0.26% compressively strained barriers. The well thickness is $L_w = 19$ nm, while the barriers between the wells are $L_b = 10$ nm thick, making the total thickness of the structure $L_z = 6L_w + 5L_b = 164$ nm. The electronic band structure calculation accounts for Burt–Foreman Hermitianization (Foreman, 1993) and biaxial strain generated by lattice-mismatched growth of the well-barrier layers. By using an appropriate basis set, the 8×8 Hamiltonian is decoupled into two 4×4 Hamiltonians (H_U and H_L) corresponding to the upper (U) and lower (L) block Hamiltonians (Liu and Chuang, 2002). In calculating the band structure, the finite difference method (FDM) is employed. For determining g, r_{sp}, and Δn_r, the following relations are used (Chuang, 1995; Liu et al., 2001; Liu and Chuang, 2002):

$$g(n,\hbar\omega) = \frac{q^2\pi}{n_r c\varepsilon_0 m_0^2 \omega L_z} \sum_{\eta=U,L}\sum_{\sigma=U,L}\sum_{n,m}\int \left|\mathbf{e}\cdot\mathbf{M}_{nm}^{\eta\sigma}\right|^2 \frac{\gamma}{\pi} \frac{f_{\eta n}^{c} - f_{\sigma m}^{v}}{\left(E_{nm}^{\eta\sigma} - \hbar\omega\right)^2 + \gamma^2} \frac{k_t \mathrm{d}k_t}{2\pi}, \tag{21.4}$$

$$r_{sp}(n,\hbar\omega) = \frac{q^2 n_r \omega}{\pi\hbar c^3 \varepsilon_0 m_0^2 L_z} \sum_{\eta=U,L}\sum_{\sigma=U,L}\sum_{n,m}\int \left|M_{sp}\right|^2 \frac{\gamma}{\pi} \frac{f_{\eta n}^{c}\cdot\left(1 - f_{\sigma m}^{v}\right)}{\left(E_{nm}^{\eta\sigma} - \hbar\omega\right)^2 + \gamma^2} \frac{k_t \mathrm{d}k_t}{2\pi}, \tag{21.5}$$

$$\Delta n_r(n,\hbar\omega) = \frac{q^2\hbar^2}{n_r \varepsilon_0 m_0^2 L_z} \sum_{\eta=U,L}\sum_{\sigma=U,L}\sum_{n,m}\int \left|\mathbf{e}\cdot\mathbf{M}_{nm}^{\eta\sigma}\right|^2 \frac{E_{nm}^{\eta\sigma} - \hbar\omega}{E_{nm}^{\eta\sigma}\cdot\left(E_{nm}^{\eta\sigma} + \hbar\omega\right)} \frac{f_{\eta n}^{v} - f_{\sigma m}^{c}}{\left(E_{nm}^{\eta\sigma} - \hbar\omega\right)^2 + \gamma^2} \frac{k_t \mathrm{d}k_t}{2\pi}, \tag{21.6}$$

where η and σ stand for one of the two 4 × 4 Hamiltonians (H_U or H_L) and corresponding to the nth conduction and the mth valence sub-band, respectively, and k_t is the in-plane wave vector, while $f_{\eta n}^{c}(k_t)$ and $f_{\sigma m}^{v}(k_t)$ are the Fermi–Dirac distributions for CB and VB, respectively. In these relations, $E_{nm}^{\eta\sigma} = E_{nm}^{\eta\sigma}(k_t)$ is the energy difference between the eigenenergy of the nth conduction sub-band corresponding to the η-Hamiltonian and mth valence sub-band of the σ-Hamiltonian, whereas $\mathbf{M}_{nm}^{\eta\sigma} = \mathbf{M}_{nm}^{\eta\sigma}(k_t)$ is the corresponding momentum matrix element vector (Liu and Chuang, 2002). Depending on the unit polarization vector **e**, the components of the $\mathbf{M}_{nm}^{\eta\sigma}$ vector correspond to the transverse-electric (TE) mode ($\mathbf{e} = \mathbf{x}$ or $\mathbf{z}$) or the transverse-magnetic (TM) mode ($\mathbf{e} = \mathbf{y}$). In the calculation of r_{sp}, the average matrix element for the three polarization directions is used, i.e., $|M_{sp}(k_t)|^2 = (2|\mathbf{M}_{TE}(k_t)|^2 + |\mathbf{M}_{TM}(k_t)|^2)/3$.

The spectral dependencies of material gain, radiative spontaneous recombination rate, and refractive index variation are shown in Figure 21.2. In Figure 21.2a through c, the results are given for the bulk unstrained $In_{0.53}Ga_{0.47}As$ active region, calculated using the two-band model and the parameters listed in Table 21.1. In Figure 21.2d through f, the same quantities, calculated using the multiband model, are given for an MQW active region consisting of six coupled 0.13% tensile-strained $In_{0.516}Ga_{0.484}As$ quantum wells, which are strain-compensated by the $In_{0.9}Ga_{0.1}As_{0.3}P_{0.7}$ 0.26% compressively strained barriers. The spectral dependencies for the MQW active region are given only for TE polarization and are determined based on the parameters given in Table 21.2.

In addition to bulk and QWs, the SOA's active region often comprises self-assembled QDs. The calculation of the optical properties of QDs can be based on sophisticated **k·p** models, such as 8 × 8 **k·p** model (Grundmann et al., 1995; Stier et al., 1999). However, due to the statistical nature of the QD size, very precise calculation is usually meaningless. Therefore, some simple methods can also be sufficiently effective as in the two-band model (Kim and Chuang, 2006; Kim et al., 2008).

21.3.2 Waveguide Design and Polarization Insensitivity

In addition to high transmission gain, high optical output power, low-noise, and low-energy consumption, in many SOA applications polarization insensitivity of modal gain is required. This demand can be difficult to fulfill since polarization dependence of modal gain is caused by SOA's waveguide geometry, through confinement factor, and material choice, through the optical transitions. Therefore, careful analysis and design of the waveguide structure and material gain are needed (Labukhin and Li, 2006). Numerical

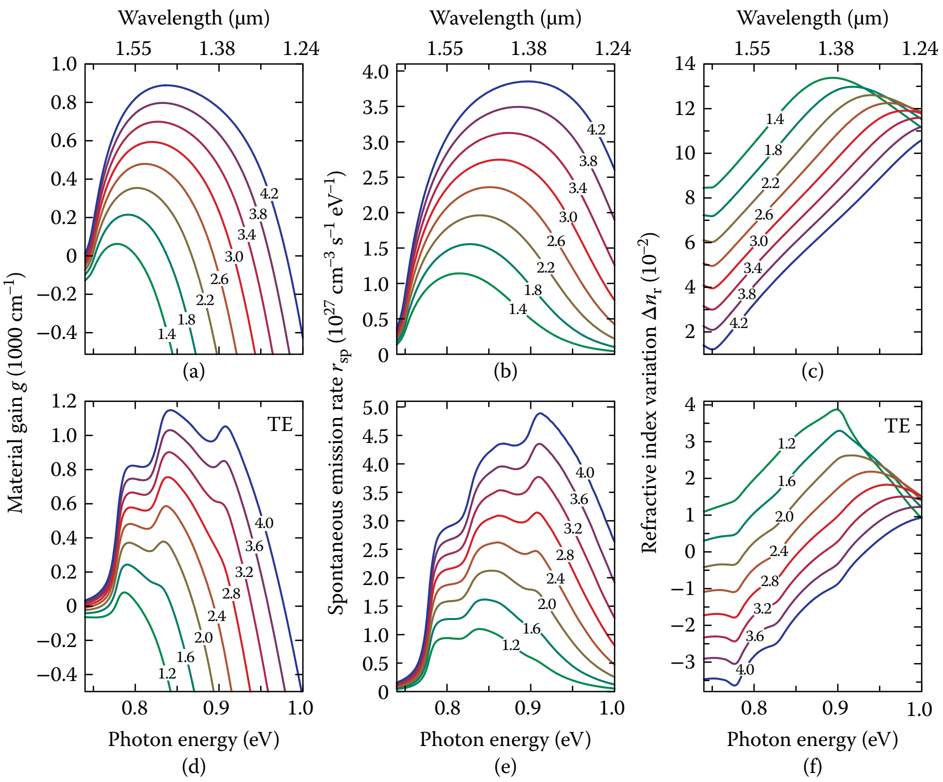

FIGURE 21.2 Spectral dependency of (a, d) material gain, (b, e) radiative spontaneous recombination rate per unit energy, and (c, f) refractive index variation for different carrier densities n (10^{18} cm^{-3}) for (a) through (c) bulk and (d) through (f) multiple quantum well (MQW) active region.

TABLE 21.1 Material Parameters Used for Band Calculation for Bulk SOA

Symbol	Quantity	$In_{0.53}Ga_{0.47}As$	$In_{0.76}Ga_{0.24}As_{0.52}P_{0.48}$
E_g	Energy gap CB–VB (HH, LH)	748 meV	1001 meV
$E_{g,SO}$	Energy gap CB–VB (SO)	1115 meV	1246 meV
Δ_{SO}	SO energy	367 meV	245.3 meV

modeling of the active region's susceptibility, the real and imaginary parts of which correspond to refractive index and material gain, in combination with the calculation of the waveguide propagation constant and confinement factor is an inevitable and important step in the quest for the optimal, polarization-insensitive design of SOA. Waveguide polarization sensitivity comes from significant disproportion of its cross-section dimensions, where the width is usually one order of magnitude larger than its thickness, raising the difference in TE and TM wave propagation and the corresponding confinement factors. Moreover, as shown in

TABLE 21.2 Material Parameters Used for Band Calculation for MQW SOA

Symbol	Quantity	$In_{0.516}Ga_{0.484}As$	$In_{0.9}Ga_{0.1}As_{0.3}P_{0.7}$

SOA, semiconductor optical amplifier; MQW, multiple quantum well; SO, split-off; CB, conduction band; VB, valence band.

Section 21.3.1, quantum-confined and stressed bulk semiconductors in active region exhibit polarization-dependent dipole optical matrix elements, leading to additional variation of TE and TM modes. An unstrained bulk material is polarization isotropic and in this case square waveguide cross-section may provide SOA polarization insensitivity (Connelly, 2001; Michie et al., 2006). Unfortunately, such waveguide design is technologically very demanding (Connelly, 2001; Michie et al., 2006). Moreover, it leads to large far-field divergence and consequently to poor coupling efficiency from the SOA to optical fiber (Connelly, 2002). This can be overcome by tapering the active waveguide near the amplifier facets (Connelly, 2002; Michie et al., 2006).

Nevertheless, there are other solutions for polarization-insensitive operation of SOA proposed in the literature. The majority of these proposals concern MQW SOA and rely on any of the following concepts: MQWs with tensile barriers (Magari et al., 1991, 1994), tensile-strained QWs (Ito et al., 1998; Carrère et al., 2010), tensile-strained QWs with compressive barriers (Godefroy et al., 1995; Zhang and Ruden, 1999), alternation of tensile and compressive QWs (Mathur and Dapkus, 1992; Joma et al., 1993; Tiemeijer et al., 1993; Tishinin et al., 1997; Silver et al., 2000), and the delta-strained QW (Carlo et al., 1998; Cho and Choi, 2001). The concept based on MQWs with tensile barriers (Magari et al., 1991, 1994) essentially relies on considerable increase of barrier refractive index for TM mode in comparison with TE mode, as a consequence of LH band contribution, which modifies the bandgap and shifts the wavelength toward the longer wavelength side due to the tensile strain. The approach based on tensile-strained MQWs with compressive barriers, proposed by Zhang and Ruden (1999), involves the barrier width optimization such that the HH sub-bands are grouped tightly and the LH sub-bands are widely separated in energy. The uppermost valence sub-bands, which have large occupation probability and strongly contribute to the gain, consist of a single LH sub-band and a group of coupled HH sub-bands, giving rise to balanced gains for the TE and TM polarizations. The method of alternation of separate tensile and compressive QWs (Silver et al., 2000) requires thick QWs (around 14 nm) and with high strain (around −0.8%). Due to the thick tensile layers, the difference in density of states of the two types of wells leads to significant charge redistribution within the active region. The space charge modifies the band profile and forces holes to move from the tensile well to the compressive well, increasing TE gain. In order to compensate for hole redistribution, the number of tensile wells can be increased so that they outnumber the compressive wells.

Otherwise, the thickness of the compressive wells can be increased to minimize the charge redistribution effects.

In unstrained MQWs, HH band sub-bands are usually higher than those of LH band, resulting in higher TE gain than the TM one. In delta-strained QWs (Cho and Choi, 2001), the delta layer introduces larger VB discontinuity for HH bands than LH bands, and the quantized energy levels for HH bands experience a shift downward, in contrast to those corresponding to LH bands, which shift upward. As a consequence, the TM transition strength for the transition between the first conduction sub-band and the top LH-like valence sub-band is much larger than the TE transition strength.

In addition to polarization insensitivity, SOA has to provide as high as possible transmission gain. Totović et al. (2013), presented a case study, where both design criteria have been implemented: high device gain and polarization insensitivity. The study analyzes two types of SOA waveguides, with active regions described in Section 21.3.1: unstrained bulk and tensile-strained MQWs, which are strain compensated by compressively strained barriers. In order to satisfy the first design criterion, the upper limit of the confinement factor is set to approximately 30%, thereby preventing the strong influence of ASE on SOA saturation (de Valicourt, 2012). Due to the gain isotropy, polarization-insensitive operation of bulk SOA requires equal confinement factors for both polarizations ($\Gamma_{TE} = \Gamma_{TM}$) (Connelly, 2001; Labukhin and Li, 2006; Michie et al., 2006). This requires optimization of the waveguide structure since confinement factor Γ_{TE} is usually larger than Γ_{TM} (Connelly, 2002; Labukhin and Li, 2006; Michie et al., 2006). Instead of using the unstrained, it is possible to implement a tensile-strained bulk active region, which leads to the polarization and gain anisotropy (Michie et al., 2006; Connelly, 2007). If the difference between the confinement factors is sufficiently small, a carefully chosen amount of tensile strain (Michie et al., 2006; Connelly, 2007) may compensate for the difference in the confinement factors Γ_{TE} and Γ_{TM} without the waveguide optimization. This can provide an efficient way for polarization-insensitive operation of bulk SOAs.

Similarly, tensile-strained MQWs in the active region, for which TM gain dominates over TE gain, may compensate for the difference in confinement factors Γ_{TE} and Γ_{TM}, leading to balanced modal gains for both polarizations, $\Gamma_{TE}g_{TE} = \Gamma_{TM}g_{TM}$, in the wavelength range of interest. The design of the MQW active region and the waveguide as a whole can be performed by a self-consistent iterative procedure involving calculation of the confinement factors and material gain, which ultimately, should provide optimized well/barrier dimensions, strain, number of wells, and waveguide cladding. The self-consistent procedure becomes important if the calculation of the confinement factor accounts for the refractive index variation of the active region, associated with variation of the material gain, and caused by carrier injection into the MQW structure (Totović et al., 2013). For the MQW active region from Section 21.3.1, the procedure leads to the confinement factor ratio $\Gamma_{TM}/\Gamma_{TE} = 0.806$, with $\Gamma_{TE} = 22\%$. The same procedure is applied in the optimization of the waveguide for unstrained bulk SOA. The optimization is performed for 1.55 μm and an average carrier density of 2×10^{18} cm^{-3}, for both bulk and MQW SOAs. The modal gains for TE and TM polarization of the optimized MQW active region are compared in Figure 21.3 for a range of photon energies and carrier densities.

It should be brought to attention that the temperature variation can significantly affect the refractive index and consequently the confinement factor. If efficient heat sink is not available for SOA, temperature effects should be accounted for in the design of the waveguide. More details on temperature effects will be given in Section 21.4.3.4.

The proposed design of the MQW waveguide is similar to those described by Wünstel et al. (1996) and Wolfson (2001) in both optical confinement and layer thicknesses. A rigorous treatment of the confinement factor should take into account the variation of the refractive index imaginary part, i.e., gain, in the active region (Visser et al., 1997). However, in this case study, the focus was set only on the variation of the real part of refractive index Δn_r due to the carrier injection. Although for other carrier densities and photon energies confinement factors somewhat detune from the optimal values and ratio, they partially compensate for the material gain ratio detuning, toning down the difference in modal gains for the TE and TM modes.

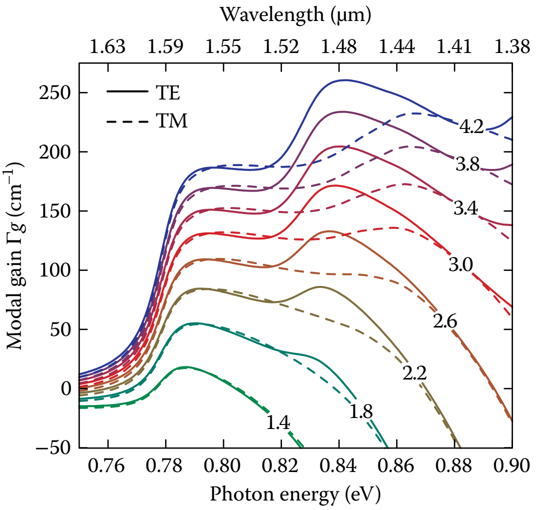

FIGURE 21.3 Spectral dependency of modal gain for polarization insensitive multiple quantum well (MQW) active region for the transverse-electric (TE) (solid lines) and transverse-magnetic (TM) (dashed lines) modes, for different carrier densities n (10^{18} cm^{-3}).

Distribution of the transversal components of the electric $\mathbf{E}(x, y)$ and magnetic $\mathbf{H}(x, y)$ fields is determined by a system of Helmholtz equations (Kawano and Kitoh, 2001):

$$\nabla_{\perp}^{2}\mathbf{E}\left(x,y\right)+\left[\left(n_{\mathrm{r}}+\Delta n_{\mathrm{r}}\right)^{2}k_{0}^{2}-\beta^{2}\right]\mathbf{E}\left(x,y\right)=0, \tag{21.7}$$

$$\left(n_{\mathrm{r}}+\Delta n_{\mathrm{r}}\right)^{2}\boldsymbol{\nabla}_{\perp}\left[\frac{1}{\left(n_{\mathrm{r}}+\Delta n_{\mathrm{r}}\right)^{2}}\boldsymbol{\nabla}_{\perp}\mathbf{H}\left(x,y\right)\right]+\left[\left(n_{\mathrm{r}}+\Delta n_{\mathrm{r}}\right)^{2}k_{0}^{2}-\beta^{2}\right]\mathbf{H}\left(x,y\right)=0, \tag{21.8}$$

where $\Delta n_{\mathrm{r}} = \Delta n_{\mathrm{r}}(n, \hbar\omega)$ is the refractive index variation, which is nonzero only in the active region of SOA, k_0 is the wave vector, $\beta = n_{\mathrm{eff}}k_0$ is the wave propagation constant, and n_{eff} is the effective index of refraction, also dependent on n and $\hbar\omega$. Equations are solved using the finite element method (FEM), with all boundaries set to the Neumann boundary conditions, except for the top ridge, which is set to the Dirichlet boundary condition.

Confinement factors for TE and TM polarizations are defined as (Kawano and Kitoh, 2001)

$$\Gamma_{\mathrm{TE}}=\int_{\mathrm{a.r.}}\left|\mathbf{E}\left(x,y\right)\right|^{2}\mathrm{d}x\mathrm{d}y\Big/\int_{-\infty}^{+\infty}\left|\mathbf{E}\left(x,y\right)\right|^{2}\mathrm{d}x\mathrm{d}y, \tag{21.9}$$

$$\Gamma_{\mathrm{TM}}=\frac{1}{n_{\mathrm{a.r.}}^{2}}\int_{\mathrm{a.r.}}\left|\mathbf{H}\left(x,y\right)\right|^{2}\mathrm{d}x\mathrm{d}y\Big/\sum_{i}\frac{1}{n_{i}^{2}}\int_{i}\left|\mathbf{H}\left(x,y\right)\right|^{2}\mathrm{d}x\mathrm{d}y, \tag{21.10}$$

where a.r. stands for the active region and i stands for each subdomain of the waveguide, including the active region. It should be noted that the background part of the refractive index $n_{\mathrm{r},i}$, with excluded Δn_{r} for the active region, is derived from Adachi's interpolation formulas (Adachi, 1989), and it is consequently a function of photon energy, i.e., $n_{\mathrm{r},i} = n_{\mathrm{r},i}(\hbar\omega)$. Since this dependence has abrupt changes, quantities shown in Figure 21.4 cannot exhibit smooth behavior.

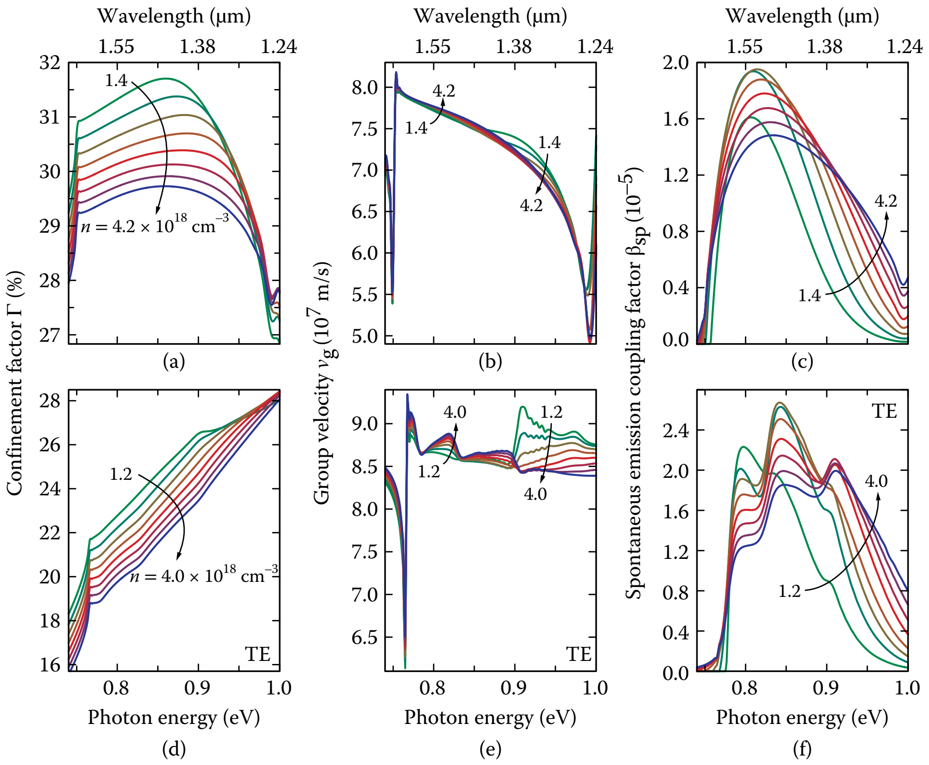

FIGURE 21.4 Spectral dependency of (a, d) confinement factor, (b, e) group velocity, and (c, f) spontaneous emission coupling factor for different carrier densities n (10^{18} cm^{-3}) for (a) through (c) bulk and (d) through (f) multiple quantum well (MQW) active region.

Another important parameter for ASE noise modeling in SOAs is the spontaneous emission coupling factor $\beta_{sp}(n, \hbar\omega)$, which is defined as the spontaneous emission rate coupled to the one optical mode, relative to the total spontaneous emission rate, $R_{sp}(n) = \int r_{sp}(n, \hbar\omega)\mathrm{d}(\hbar\omega)$, and can be calculated according to the following expression (Coldren et al., 2012):

$$\beta_{sp} = \frac{\Gamma v_g}{V}\frac{g n_{sp}}{R_{sp}}, \tag{21.11}$$

where V is the active region volume and Γ and g are the averaged values of confinement factor and material gain over polarizations, respectively, obtained in the same way as the average optical matrix element for radiative recombination rate. Here, $n_{sp}(n, \hbar\omega)$ is the population inversion factor defined by (Coldren et al., 2012)

$$n_{sp} = \left[1 - \exp\left(\frac{\hbar\omega - \Delta E_f}{k_B T}\right)\right]^{-1}, \tag{21.12}$$

where $\Delta E_f = E_f^{(c)} - E_f^{(v)}$ is the difference between the quasi-Fermi levels of CB and VB. In order to calculate β_{sp}, in addition to confinement factor, it is necessary to calculate the group velocity of the light $v_g(n, \hbar\omega)$:

$$v_g = \frac{\partial\omega}{\partial\beta} = \frac{1}{\hbar}\cdot\left[\frac{\partial\beta}{\partial(\hbar\omega)}\right]^{-1}. \tag{21.13}$$

Spectral dependencies of the confinement factor, group velocity, and spontaneous emission coupling factor are shown in Figure 21.4, for both bulk and the MQW active region, optimized to be polarization insensitive. Therefore, the quantities for the MQW active region are given only for TE polarization.

21.4 Rate Equations

In order to analyze the SOA's performance, it is first necessary to identify the main physical processes underlying its operation, which are related to the interaction mechanisms between photons and carriers. These are then typically presented in the form of a coupled system of differential equations denoted as the rate equation system. Optical signal can be described either in terms of complex electric field or in terms of photon density and phase. On the other hand, carriers are modeled either via carrier density (Dailey and Koch, 2007; Totović et al., 2013) or material gain (Shtaif et al., 1998), or, in some cases, using the integrated material gain along the direction of signal propagation (Agrawal and Olsson, 1989; Cassioli et al., 2000; Antonelli and Mecozzi, 2013).

For TW-SOA, it usually suffices to analyze only the forward-propagating optical signal, with respect to the longitudinal axis. However, for R-SOA, both forward and backward-propagating optical signals need to be accounted for. Although the model's complexity increases when counterpropagating optical signals are analyzed, it is often good practice to develop the generalized model since it can easily be customized to account for any SOA type by simply changing the power reflectivity coefficient of the front and/or rear facet.

21.4.1 Basic Rate Equations

During the decades of SOA study, a variety of models of different complexity emerged. Some of them are based on signal power (Agrawal and Olsson, 1989), intensity (Adams et al., 1985), or photon density analysis (Totović et al., 2014), which may or may not include a separate phase equation, whereas the others treat the optical signal using the complex electric field envelope (Melo and Petermann, 2008; Schrenk, 2011; Antonelli and Mecozzi, 2013). In its basic form, the SOA model describes the interaction between the carrier density $n(z, t)$ and the two counterpropagating optical signals, forward (+) and backward (−), with respect to the longitudinal z-axis, all of which are dependent on both time t and the z-coordinate. For SOA operation, it is necessary to achieve population inversion, which is done using the electric (bias) current I. When the bias current is low, carriers are mainly drained by spontaneous recombination, which can be nonradiative, yielding phonons (Ghafouri-Shiraz, 2004), or radiative, which produces noncoherent spectrally wide optical signal, regarded as noise. As the current increases beyond the transparency value, enough carriers exist in the active region to make the stimulated emission the dominant process and the input signal can be amplified during propagation. For the simplest case of bulk SOA, carrier dynamics can be described as follows (Coldren et al., 2012; Totović et al., 2013):

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{I}{qV} - \left[An + R_{\mathrm{sp}}(n) + Cn^3\right] - R_{\mathrm{st}}(n). \tag{21.14}$$

The first term on the right-hand side (RHS) of Equation 21.14 describes the rate at which the carriers are "pumped" into the active region, where q is the elementary charge, and $V = WHL$ is the active region volume, dependent on the active region width W, height H, and length L. The second term accounts for the loss of carriers through spontaneous recombination, where $R_{\mathrm{sp}}(n)$ is the total radiative spontaneous recombination rate, and A and C are the Shockley–Read–Hall and Auger coefficients, respectively, related to nonradiative spontaneous recombination (Coldren et al., 2012). In some instances, carrier loss due to radiative and nonradiative spontaneous recombination is modeled as n/τ, where τ is the carrier lifetime, which is treated either as constant (Thylén, 1988; Shtaif et al., 1998; Totović et al., 2016) or dependent on carrier density (Melo and Petermann, 2008; Xia and Ghafouri-Shiraz, 2016). Finally, the last term on the RHS of Equation 21.14, $R_{st}(n)$, accounts for the loss of carriers due to stimulated emission, either through the amplification of the signal alone or the signal and noise combined.

21.4.1.1 Electric Field Envelope Model

Each optical signal can be represented by its electric field, which can be separated into the carrier signal and the slowly varying envelope along the propagation direction. The complex envelope can then be analyzed either as is (Loudon et al., 2005), or, more commonly, it can be normalized such that its squared magnitude represents photon density (Connelly, 2007; Totović et al., 2011), power (Agrawal and Olsson, 1989; Cassioli et al., 2000), or intensity (Henry, 1982). Regardless of the choice for normalization, the system of equations remains the same since the underlying spatiotemporal dependence is unmodified by the normalization constants. The evolution of electric field envelopes $E_{\pm}(z, t)$, normalized such that their square magnitude represents photon densities, $|E_{\pm}(z, t)|^2 = S_{\pm}(z, t)$, propagating forward (+) and backward (−) along the longitudinal z-axis, is governed by the following system of equations (Agrawal and Olsson, 1989):

$$\pm\frac{\partial E_{\pm}}{\partial z} + \frac{1}{v_g}\frac{\partial E_{\pm}}{\partial t} = \frac{1}{2}\left(\Gamma g - \alpha_i\right) E_{\pm}. \tag{21.15}$$

Here, v_g is the group velocity, Γ stands for the optical confinement factor, which determines the portion of the signal propagating through the active region relative to the total photon density, and g is the material gain of the active region, all given at the signal frequency ω. These quantities can be derived from the models given in Section 21.3, and in Figures 21.2 and 21.4, by interpolation at the signal central energy $\hbar\omega$. With $\alpha_i = K_0 + \Gamma K_1 n$ active region loss is denoted (Connelly, 2001), where K_0 and K_1 stand for the carrier-independent and carrier-dependent loss coefficients, respectively, which take into account the intrinsic material loss and the free-carrier and inter-VB absorption (Dailey and Koch, 2009; Schrenk, 2011). It should be noted that, in general, all parameters appearing in Equation 21.15, namely v_g, Γ, g, and α_i, depend on carrier density n, and implicitly on t and z. This dependence notation is omitted from Equation 21.15 and the equations that will follow for compactness and clarity. Nevertheless, it is common to treat v_g and/or Γ as constants (Jin et al., 2003; Totović et al., 2014), which simplifies the model at the expense of accuracy.

Input optical signal, given by its normalized envelope E_0, is assumed to be entering the device at the front facet ($z = 0$), with the amplitude reflection coefficient r_1, and transmission coefficient t_1, as shown in Figure 21.5. The front facet is usually coated with the antireflective layer, and it is a common practice to neglect any residual reflectivity and assume $r_1 = 0$ and $t_1 = 1$, especially if the analytical or semianalytical solution is sought (Antonelli and Mecozzi, 2013; Totović et al., 2014). On the other hand, the rear facet ($z = L$) has the amplitude reflection coefficient r_2, which can be neglected for TW-SOA, but needs to be accounted for in the case of an R-SOA. If the cleaved facet is used as a high-reflecting one, the amplitude reflection coefficient can be determined as $r_2 = (1 - n_r)/(1 + n_r)$ under the assumption of TE polarization,

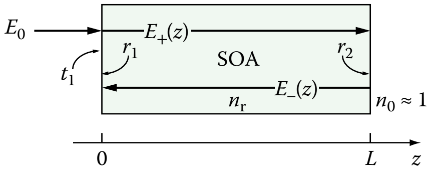

FIGURE 21.5 Semiconductor optical amplifier (SOA) structure with relevant optical signals, refractive indices, and reflection and transmission coefficients denoted.

where n_r is the refractive index of the active region. Boundary conditions according to Figure 21.5 read (Adams et al., 1985, Jin et al., 2003)

$$\begin{aligned} E_+(0) &= t_1 E_0 + r_1 E_-(0), \\ E_-(L) &= r_2 E_+(L). \end{aligned} \tag{21.16}$$

It is common practice to introduce the LEF α in Equation 21.15, which accounts for the phase modulation due to variation of real and imaginary parts of susceptibility χ (Henry, 1982; Agrawal and Olsson, 1989; Dailey and Koch, 2009; Antonelli and Mecozzi, 2013). This variation can be induced by injection of carriers, α_N, and carrier heating (CH), α_CH (Occhi et al., 2003). The total phase change will be the sum of these two contributions since they can be treated as uncorrelated. Carrier-induced LEF is defined as (Osinski and Buus, 1987; Occhi et al., 2003)

$$\alpha_\mathrm{N} = -\frac{\partial Re\{\chi\}/\partial n}{\partial Im\{\chi\}/\partial n} = -2k_0 \frac{\partial n_\mathrm{r}/\partial n}{\partial g/\partial n}, \tag{21.17}$$

where $k_0 = 2\pi\nu/c$ is the wave vector. For a small change in carrier density, which usually is the case, the derivatives in Equation 21.17 can be replaced with finite differences, which leads to (Henry, 1982; Osinski and Buus, 1987)

$$\alpha_\mathrm{N} = -2k_0 \frac{\Delta n_\mathrm{r}}{\Delta g}, \tag{21.18}$$

where Δn_r and Δg are the differential change in refractive index and material gain, respectively, induced by carrier density variation (Henry, 1982; Osinski and Buus, 1987; Agrawal, 1990). The deviation Δn_r is a result of several different mechanisms, including dipole band-to-band transition (Dailey and Koch, 2009; Qin et al., 2012), band-filling (Burstein–Moss effect), bandgap shrinkage, and free-carrier absorption (plasma effect) (Bennett et al., 1990). Band-filling is related to the decrease in absorption for photon energies slightly above nominal bandgap, caused by low density of states in CB that are easily filled, and is mostly pronounced for heavily doped semiconductors (Moss et al., 1973). Bandgap shrinkage is related to large concentrations of electrons at the bottom of CB, which repel one another due to Coulomb force, leading to the lowering of the energy of CB (Bennett et al., 1990). Finally, free-carrier absorption describes transition of free carriers to the higher-energy level due to photon absorption, and the change in refractive index can be described using the Drude model (Moss et al., 1973; Dailey and Koch, 2009; Qin et al., 2012). These four effects are assumed to be independent, and the total refractive index deviation can be found as a sum of their respective contributions.

Another contribution to LEF, caused by carrier temperature variation, is defined as (Occhi et al., 2003)

$$\alpha_\mathrm{CH} = -2k_0 \frac{\partial n_\mathrm{r}/\partial T}{\partial g/\partial T}. \tag{21.19}$$

However, this contribution is often neglected in SOA models, and LEF is assumed to be $\alpha \approx \alpha_\mathrm{N}$. Equation 21.15 now becomes

$$\pm\frac{\partial E_\pm}{\partial z} + \frac{1}{v_\mathrm{g}}\frac{\partial E_\pm}{\partial t} = \frac{1}{2}\left[\Gamma g\,(1 - i\alpha) - \alpha_\mathrm{i}\right] E_\pm. \tag{21.20}$$

It should be stressed that, depending on the sign convention adopted for the α-parameter, there may be variation in the literature in the sign prefixing α in Equation 21.20.

Having defined the equations which govern spatiotemporal electric field envelope distribution of the counterpropagating optical signals, it is possible to devise the stimulated emission rate in Equation 21.14, which is proportional to the total photon density in the amplifier's active region, S_Σ:

$$R_{\mathrm{st}}(n) = v_{\mathrm{g}} g S_\Sigma = v_{\mathrm{g}} g \left|E_+ + E_-\right|^2 . \tag{21.21}$$

It can be seen from Equation 21.21 that the interference between the two counterpropagating optical signals will cause the spatial grating in the carrier density distribution. However, characteristic grating length will be of the order of the signal's wavelength λ, and it will be easily washed out by the diffusion (Yacomotti et al., 2004; Serrat and Masoller, 2006; Totović et al., 2013). This justifies neglecting of all high-frequency terms, keeping only the sum of the squared electric field magnitudes, i.e., photon densities, $S_\Sigma = |E_+|^2 + |E_-|^2 = S_+ + S_-$. Depending on the model complexity, S_Σ can also include ASE noise.

21.4.1.2 Photon Density Model

By expressing the electric field envelope in terms of photon densities, $S_\pm$, and phase, $\varphi_\pm$:

$$E_\pm(z,t) = \sqrt{S_\pm(z,t)} \exp\left[i\varphi_\pm(z,t)\right], \tag{21.22}$$

Equation 21.20 can be reduced to the system of coupled TW equations for forward and backward propagation directions, written with respect to photon densities (Qin et al., 2012):

$$\pm\frac{\partial S_\pm}{\partial z} + \frac{1}{v_{\mathrm{g}}}\frac{\partial S_\pm}{\partial t} = \left(\Gamma g - \alpha_{\mathrm{i}}\right) S_\pm, \tag{21.23}$$

and phase (Agrawal and Olsson, 1989):

$$\pm\frac{\partial \varphi_\pm}{\partial z} + \frac{1}{v_{\mathrm{g}}}\frac{\partial \varphi_\pm}{\partial t} = -\frac{1}{2}\Gamma g \alpha. \tag{21.24}$$

Using the definition of LEF, Equation 21.24 can be written in yet another form that emphasizes the underlying cause of phase variation (Agrawal, 1990; Dailey and Koch, 2007; Qin et al., 2012):

$$\pm\frac{\partial \varphi_\pm}{\partial z} + \frac{1}{v_{\mathrm{g}}}\frac{\partial \varphi_\pm}{\partial t} = k_0 \Gamma \Delta n_{\mathrm{r}}. \tag{21.25}$$

If the signal is assumed to preserve its coherence during propagation, both Equations 21.23 and 21.25 are required; otherwise, it is sufficient to use only Equation 21.23 in modeling an SOA. Appending the phase equation to the model is important especially if the input signal carries information encoded in its phase, which is the case for many advanced modulation formats, such as phase shift keying (PSK), quadrature amplitude modulation (QAM), and quadrature phase shift keying (QPSK), to name a few (Schmuck et al., 2013; Koenig et al., 2014).

Assuming that the signal entering the device at the front facet ($z = 0$) is $E_0 = \sqrt{S_0}\exp(i\varphi_0)$, boundary conditions given by Equation 21.16 can now be rewritten using Equation 21.22. Additionally, amplitude reflection and transmission coefficients can be written as functions of the power reflectivity coefficients R_1 and R_2, corresponding to front and rear facets, respectively. The input signal does not change the propagation direction during transmission through the front facet, so no phase change is present, and $t_1 = \sqrt{(1 - R_1)}$ (Adams et al., 1985). On the other hand, during reflection at any facet, the signal being reflected does change the propagation direction, and a phase change of π needs to be accounted for. This can also be inferred from the definition of the amplitude reflection coefficient r_2 for the cleaved facet, which is negative. Finally, amplitude reflection coefficients can be written as $r_1 = \sqrt{R_1}\exp(i\pi)$ and $r_2 = \sqrt{R_2}\exp(i\pi)$. Substituting amplitude reflection and transmission coefficients in Equation 21.16, and expressing electric fields in terms of photon densities and phase, yields:

$$\begin{aligned}&\sqrt{S_+(0)}\exp[i\varphi_+(0)] = \sqrt{1-R_1}\sqrt{S_0}\exp(i\varphi_0) + \sqrt{R_1}\exp(i\pi)\sqrt{S_-(0)}\exp[i\varphi_-(0)],\\&\sqrt{S_-(L)}\exp[i\varphi_-(L)] = \sqrt{R_2}\exp(i\pi)\sqrt{S_+(L)}\exp[i\varphi_+(L)].\end{aligned} \tag{21.26}$$

By multiplying previous set of equations with their corresponding complex conjugates, the boundary conditions for photon densities can be derived:

$$\begin{aligned}&S_+(0) = (1-R_1)S_0 + R_1S_-(0) - 2\sqrt{(1-R_1)S_0}\sqrt{R_1S_-(0)}\cos[\varphi_0 - \varphi_-(0)],\\&S_-(L) = R_2S_+(L).\end{aligned} \tag{21.27}$$

Equating the arguments of the left-hand side (LHS) and RHS of Equation 21.26, the following boundary conditions for phases can be found (Totović et al., 2013):

$$\begin{aligned}&\varphi_+(0) = \arctan\left[\frac{\sqrt{(1-R_1)S_0}\sin\varphi_0 - \sqrt{R_1S_-(0)}\sin\varphi_-(0)}{\sqrt{(1-R_1)S_0}\cos\varphi_0 - \sqrt{R_1S_-(0)}\cos\varphi_-(0)}\right],\\&\varphi_-(L) = \varphi_+(L) + \pi.\end{aligned} \tag{21.28}$$

Typically, the input optical signal is given in terms of power rather than photon density. For the input optical power P_0, the photon density can be determined as $S_0 = \Gamma P_0/(\hbar\omega v_g WH)$, where $\hbar\omega$ is the signal energy.

21.4.1.3 Signal Spectral Dependence

Most of the parameters figuring in Equations 21.23 and 21.25 do exhibit spectral dependence, as shown in Figures 21.2 and 21.4. When working with photon densities, signal is assumed to be infinitely spectrally narrow and centered at the energy corresponding to the maximum spectral photon density, $\hbar\omega_0$. This assumption justifies the usage of a simplified model where the parameter values are given at the signal central energy, as is the case with Equation 21.23. In practice, signal will always have a finite spectral width, which is not necessarily narrow and cannot always be neglected. This is especially important if SOAs are used in WDM systems, where multiple signals at different wavelengths travel through the active region. In order to correctly model the signal propagation in this case, Equation 21.23 is rewritten in terms of spectral photon density, $s_\pm(\hbar\omega, z, t)$, for forward and backward propagation (Totović et al., 2013):

$$\pm\frac{\partial s_\pm}{\partial z} + \frac{1}{v_g}\frac{\partial s_\pm}{\partial t} = \left(\Gamma g - \alpha_i\right)s_\pm. \tag{21.29}$$

It should be stressed that now v_g, Γ, g, and α_i are spectrally dependent. Additionally, two more changes to the model are required. The first is related to the carriers consumed by stimulated emission in Equation 21.14, which can be determined using

$$R_{st}(n) = \int_0^\infty v_g g s_\Sigma \mathrm{d}(\hbar\omega), \tag{21.30}$$

where $s_\Sigma = s_+ + s_-$. The second is related to the boundary conditions given in Equation 21.27, which are now written with respect to $s_\pm$ instead of $S_\pm$. Finally, if no reflection coating is used for the R-SOA's rear facet, the reflection coefficient R_2 also becomes spectrally dependent through $n_\mathrm{r}(\hbar\omega)$.

21.4.2 Amplified Spontaneous Emission

Spontaneous recombination can usually be viewed as an undesirable side effect of SOA operation, from several viewpoints. First, the carriers that should be reserved for signal amplification are indefinitely lost, meaning that the higher bias currents are required to achieve the same material gain. Second, the random nature of spontaneous recombination induces fluctuations in carrier density, which in turn causes the material gain and refractive index to change. This leads to fluctuations in both intensity and phase of the amplified signal (Ghafouri-Shiraz, 2004). Finally, radiative spontaneous recombination generates wideband signal with random phase, polarization, and spatial orientation. Once these photons are generated, they become impossible to separate from the signal, so they travel jointly through the active region and become amplified. Even if the signal is filtered at the SOA's output, a certain amount of noise will always be present in the narrow band around the signal central energy (Yariv and Yeh, 2007). An additional drawback is that the noise will have higher optical power when the input signal is vague since more carriers will be available for spontaneous recombination (Talli and Adams, 2003; Totović et al., 2013; Koenig et al., 2014). As the signal becomes more amplified, fewer carriers remain, and the ASE contribution becomes less important in terms of power.

The process of spontaneous emission is at its core stochastic, and, within the framework of the semiclassical approach, it can be modeled statistically in terms of its probability, similarly to the shot noise present in electronic devices (Ghafouri-Shiraz, 2004). The nature of ASE noise led to the development of numerous models of different degree of complexity, which can be roughly divided into two categories: deterministic, which do not require any random generators (Talli and Adams, 2003; Totović et al., 2013), and stochastic, which require random sources with certain probability density functions (Marcuse, 1984; Cassioli et al., 2000; Park et al., 2005; Melo and Petermann, 2008; Totović et al., 2011). In the semiclassical framework, ASE is usually treated as white Gaussian noise process, or as Poisson process (Park et al., 2005), whereas in the quantum mechanical formalism the noise is treated using the set of appropriate quantum noise operators, including spontaneous emission process, internal absorption, and vacuum field fluctuations (Shtaif et al., 1998). It has been shown by Shtaif et al. (1998) that the semiclassical results are essentially the same as the ones obtained using quantum description, with the exception of the shot noise term, which needs to be explicitly added to the semiclassical intensity. However, for sufficiently small bandwidths, the shot noise term can be ignored (Shtaif et al., 1998).

21.4.2.1 Deterministic Approach

It has already been pointed out that signal and noise travel together, which would justify modification of the photon density equation, either Equation 21.23 or Equation 21.29, to include another term modeling the rate with which the spontaneous photons are generated (Park et al., 2005; Dailey and Koch, 2007; Zhou et al., 2007; Totović et al., 2015). However, from the standpoint of detailed device analysis, it may be useful to separate noise and signal equations, allowing them to be coupled through the carrier rate equation since these two processes are uncorrelated (Ghafouri-Shiraz, 2004). ASE is known to have wide spectrum; therefore, it is more appropriate to use spectral photon densities, $a_\pm(\hbar\omega, z, t)$, rather than photon densities, for its description. The system of equations for two counterpropagating ASE signals reads (Talli and Adams, 2003; Melo and Petermann, 2008; Totović et al., 2013):

$$\pm\frac{\partial a_\pm}{\partial z} + \frac{1}{v_\mathrm{g}}\frac{\partial a_\pm}{\partial t} = \left(\Gamma g - \alpha_\mathrm{i}\right) a_\pm + \frac{1}{2v_\mathrm{g}}\Gamma\beta_\mathrm{sp} r_\mathrm{sp}, \tag{21.31}$$

where r_sp is the radiative spontaneous recombination rate per unit energy, given by Equation 21.2 or Equation 21.5, depending on the active region type, and β_sp is the spontaneous emission coupling factor given by Equation 21.11. Boundary conditions for noise are $a_+(0) = R_1 a_-(0)$ and $a_-(L) = R_2 a_+(L)$. Phase is not analyzed since it is random and can be averaged to zero. In other words, under the usual operating conditions, i.e., if no resonant cavity is present, ASE does not exhibit coherent behavior.

In order to have the complete model, it is necessary to include ASE together with the signal when calculating total spectral photon density, $s_\Sigma = s_+ + s_- + a_+ + a_-$, which further influences $R_{st}(n)$, given by Equation 21.30.

It should be noted that many other deterministic approaches for ASE analysis exist. The choice depends on the desired model complexity and the tradeoff between accuracy and computational resource consumption. These approaches include the photon statistic master equation method (Mukai and Yamamoto, 1982), field beating (Olsson, 1989), the equivalent circuit model (Berglind and Gillner, 1994; Ghafouri-Shiraz, 2004), the semiclassical wave theory model (Donati and Giuliani, 1997).

21.4.2.2 Resonant Properties of the SOA Cavity

In the previous pages, during the discussion of facet's power reflectivities and boundary conditions, it was assumed that all antireflective facets have zero reflectivity. Although this assumption can be helpful for model simplification, it can also mask some of the processes present in SOAs (Thylén, 1988; Zhou et al., 2007). Residual reflectivity, which always has some finite value, provides a feedback loop that acts as a filter, giving rise to resonances and antiresonances (Adams et al., 1985; Schrenk, 2011). This effect has been reported in both experimental (Olsson, 1989) and theoretical SOA analyses (Zhou et al., 2007; Totović et al., 2013), mostly related to ASE noise. An example of the output spectrum of the signal and noise combined, with visible resonant footprint of the cavity, calculated using the model presented by

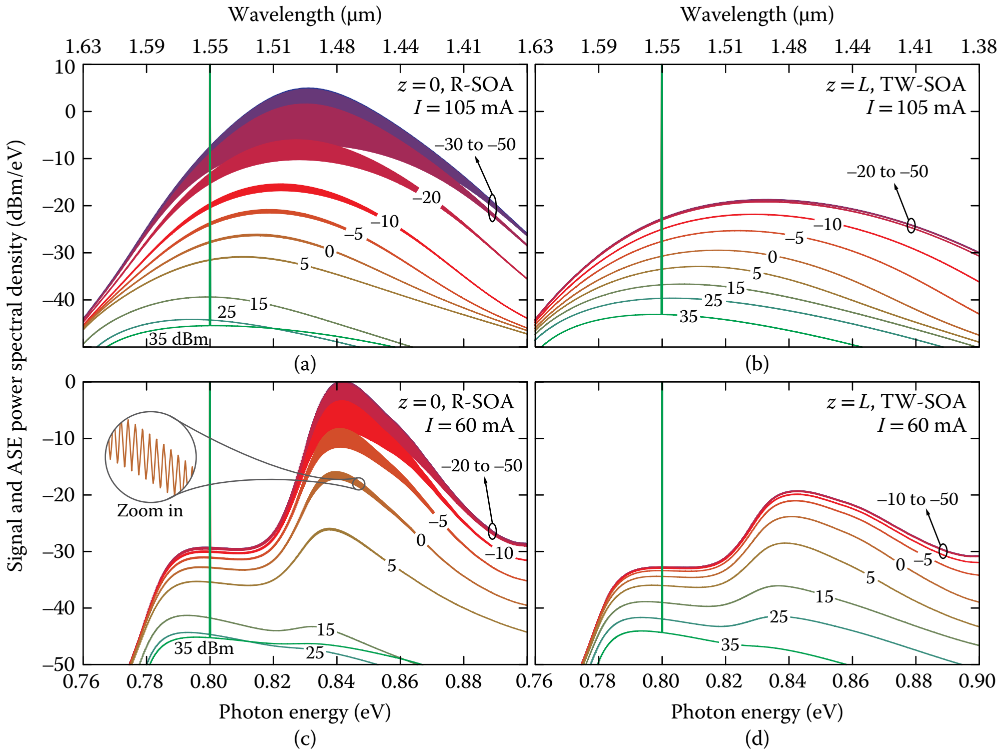

FIGURE 21.6 Total power spectral density at the semiconductor optical amplifier's (SOA's) output for different input optical powers in the case of (a, c) reflective (R) SOA at $z = 0$, and (b, d) traveling wave (TW) SOA at $z = L$, for (a, b) bulk and (c, d) multiple quantum well (MQW) active region.

Totović et al. (2013), is given in Figure 21.6. It can be seen that R-SOA, Figure 21.6a and c, exhibits more pronounced resonances and antiresonances in comparison with TW-SOA, Figure 21.6b and d, which is a consequence of the highly reflective rear facet. The ASE noise spectrum profoundly depends on the optical power of the input signal and resonant pattern washes out as the input optical power increases. This is to be expected since the strong signal easily depletes the carriers and suppresses the noise, consequently reducing the effect of multiple round trips within the cavity on its spectrum. The difference between the output spectrums for distinct active region types, bulk, Figure 21.6a and b, and MQW, Figure 21.6c and d, is a result of different spectrums of radiative spontaneous emission rate and material gain, given in Figure 21.2.

In order to develop the model capable of capturing ripples in the ASE output spectrum, two approaches can be used. One would require an equation for ASE phase evolution in addition to Equation 21.31, which describes ASE spectral photon density. This would enable us to account for interference, and subsequently filtering property of the SOA cavity. However, due to the random nature of the ASE noise phase, this approach would require a random number generator (Park et al., 2005) and could essentially be categorized as a stochastic model. Another approach is based on spectrum slicing and analysis of photon density corresponding to each resonance, or mode, followed by photon redistribution over the energy range between the two antiresonances according to the cavity transfer function. This has been shown to be equivalent to the analysis of the electric field or the spectral photon density and phase (Adams et al., 1985). The phase equation will be included implicitly during the assessment of resonant and antiresonant frequencies of the mth cavity mode, ω_m^{r}, and ω_m^{a}, respectively. These can be derived by equating the phase accumulation during the cavity round trip to $2m\pi$ for resonant, or $(2m-1)\pi$ for antiresonant frequencies, where m is an integer. The single-pass phase shift, Φ, will be the same for either propagation direction and can be found from Equation 21.25 as

$$\Phi = \int_0^L \frac{\partial \varphi_+}{\partial z}\mathrm{d}z = \int_0^L \left(-\frac{1}{v_{\mathrm{g}}}\frac{\partial \varphi_+}{\partial t} + k_0 \Gamma \Delta n_{\mathrm{r}} \right)\mathrm{d}z = \frac{\omega}{v_{\mathrm{g}}}L + k_0 \int_0^L \Gamma \Delta n_{\mathrm{r}}\mathrm{d}z. \tag{21.32}$$

Here, $\omega/v_{\mathrm{g}} = n_{\mathrm{eff},0}k_0 = \beta_0$ is the wave propagation constant for zero carrier density, where $n_{\mathrm{eff},0}$ is the effective index of refraction for zero carrier density or the background index of refraction. Resonant and antiresonant frequencies are calculated from

$$2\frac{\omega}{c}\left(n_{\mathrm{eff},0}L + \int_0^L \Gamma \Delta n_{\mathrm{r}}\mathrm{d}z \right) = \begin{cases} 2m\pi, & \text{for } \omega_m^{\mathrm{r}} \\ (2m-1)\pi, & \text{for } \omega_m^{\mathrm{a}} \end{cases}. \tag{21.33}$$

Since both Γ and Δn_{r} depend on photon energy, $\hbar\omega$, resonant and antiresonant frequencies cannot be expressed in a closed analytical form. Additionally, we can conclude that ω_m^{r} and ω_m^{a} depend on carrier density through the second term in the LHS of Equation 21.33 since both Γ and Δn_{r} depend on n. This implies that the spectral output of either TW- or R-SOA will not be static; rather the frequencies corresponding to resonances and antiresonances will be shifted in the presence of the optical signal (Schrenk, 2011; Totović et al., 2013). However, comparing to the first term in the LHS of Equation 21.33, the contribution of the second term is usually small and can be justifiably neglected.

By integrating Equation 21.31 over the energy between each of the two antiresonances, ω_m^{a} and $\omega_{m+1}^{\mathrm{a}}$, a system of equations can be developed, written with respect to noise photon densities of the mth mode, $A_\pm^m(z,t)$, for forward (+) and backward (−) propagation directions (Schrenk, 2011; Totović et al., 2013):

$$\pm\frac{\partial A_\pm^m}{\partial z} + \frac{1}{v_{\mathrm{g}}}\frac{\partial A_\pm^m}{\partial t} = \left(\Gamma_m g_m - \alpha_{\mathrm{i}}^m\right)A_\pm^m + \frac{1}{2v_{\mathrm{g}}^m}\Gamma_m \beta_{\mathrm{sp}}^m R_{\mathrm{sp}}^m, \tag{21.34}$$

where the index m denotes the parameter values corresponding to the mth cavity resonance, and R_{sp}^{m} stands for the fraction of radiative spontaneous recombination rate injected into the mth mode. This approach, relying on separating amplification and filtering properties of the amplifier cavity, reduces time, memory, and processing resource consumption during simulation.

The filtering function of the amplifier is given in the form of an Airy function corresponding to the FP cavity (Adams et al., 1985):

$$G_m(\hbar\omega) = \frac{\left(1-R_1\right)\left(1-R_2\right)G_{\mathrm{s}}^{m}}{\left(1-G_{\mathrm{s}}^{m}\sqrt{R_1R_2}\right)^2 + 4G_{\mathrm{s}}^{m}\sqrt{R_1R_2}\sin^2\Phi(\hbar\omega)}, \tag{21.35}$$

where Φ is the single-pass phase shift, defined by Equation 21.32, and G_{s}^{m} stands for the single-pass gain at resonant energy $\hbar\omega_m^{\mathrm{r}}$:

$$G_{\mathrm{s}}^{m} = \exp\left[\int_0^L \left(\Gamma_m g_m - \alpha_{\mathrm{i}}^{m}\right)\mathrm{d}z\right]. \tag{21.36}$$

The transmittance given by Equation 21.35 accounts for the signal amplification, so care should be exercised when using it with Equation 21.34. Prior to photon filtering, the transmittance needs to be normalized to unity over the mth mode energy range since the noise amplification has already been accounted for using Equation 21.34, and only photon redistribution is required. The normalized filtering function $T_m(\hbar\omega)$ can be found as

$$T_m(\hbar\omega) = \frac{G_m(\hbar\omega)}{\left(\hbar\omega_{m+1}^{\mathrm{a}} - \hbar\omega_m^{\mathrm{a}}\right)^{-1}\int_{\hbar\omega_m^{\mathrm{a}}}^{\hbar\omega_{m+1}^{\mathrm{a}}} G_m(\hbar\omega)\,\mathrm{d}(\hbar\omega)}, \tag{21.37}$$

which is equivalent to

$$T_m(\hbar\omega) = \frac{G_m(\hbar\omega)}{\pi^{-1}\int_0^{\pi} G_m(\Phi)\,\mathrm{d}\Phi} = \frac{\sqrt{1+\gamma_m}}{1+\gamma_m\sin^2\Phi}, \tag{21.38}$$

where the γ-parameter is defined as follows:

$$\gamma_m = \frac{4G_{\mathrm{s}}^{m}\sqrt{R_1R_2}}{\left(1-G_{\mathrm{s}}^{m}\sqrt{R_1R_2}\right)^2}. \tag{21.39}$$

The validity of the previous model can be easily checked by analysis of the corner case where any of R_1 or R_2 is equal to zero. This would yield $\gamma_m = 0$, and $T_m = 1$, which corresponds to the case of uniformly distributed photons. This result is to be expected since for zero reflectivity no feedback loop exists.

Finally, the spectral photon densities of the noise at the SOA's output can be found using (Totović et al., 2013)

$$\begin{aligned} a_-(0,\hbar\omega) &= \sum_m \left[\left(\hbar\omega_{m+1}^{\mathrm{a}} - \hbar\omega_m^{\mathrm{a}}\right)^{-1} A_-^{m}(0)\,T_m(\hbar\omega)\right], \\ a_+(L,\hbar\omega) &= \sum_m \left[\left(\hbar\omega_{m+1}^{\mathrm{a}} - \hbar\omega_m^{\mathrm{a}}\right)^{-1} A_+^{m}(L)\,T_m(\hbar\omega)\right], \end{aligned} \tag{21.40}$$

where the summation is done over the modes m from 1 to the total number of accounted modes M.

In order to increase the efficiency of numerical calculations related to noise, an approach based on grouping of several adjacent modes into clusters was proposed by Totović et al. (2013). Although this degrades the accuracy to a certain point, the small intermodal space between resonances, which is of the order of $\Delta\nu = 70$ GHz, or $\Delta\lambda = 0.54$ nm for the active region length of 800 μm, ensures that no significant changes for any spectrally dependent parameter exist within the cluster. The proposed optimal number of modes within one cluster is 5, based on the fact that material gain and stimulated emission rate do not change more than 2% for bulk and 3% for MQW active region, within the cluster's range of frequencies, for the most part of the spectrum. In addition, the grouping of modes need not be uniform. In other words, clusters can comprise a lower number of modes in the frequency range close to the signal central frequency and maximum spontaneous emission rate and that number can be increased approaching the edges of spontaneous emission spectrum.

21.4.2.3 Stochastic Approach

Implementing any stochastic process relies on random number generators, or sources, meaning that only numerical analysis is possible in this case. Nonetheless, this approach can be very useful for investigating statistical properties of noise and signals. As both amplitude and phase of noise signal are random, it is suitable to use the equation written with respect to the normalized electric field envelope Equation 21.20, modified such that it includes a noise generator:

$$\pm\frac{\partial E_\pm}{\partial z} + \frac{1}{v_g}\frac{\partial E_\pm}{\partial t} = \frac{1}{2}\left[\Gamma g\left(1 - i\alpha\right) - \alpha_i\right]E_\pm + \mu_\pm. \tag{21.41}$$

Here, the complex term $\mu_\pm(z, t)$ stands for the random noise source, also known as the Langevin noise source (Henry, 1986; Coldren et al., 2012), which can be modeled as the Poisson or Gaussian phase-independent spatially uncorrelated white noise process (D'Ottavi et al., 1995; Cassioli et al., 2000; Park et al., 2005), based on the fluctuation-dissipation theorem (Shtaif et al., 1998). This implies that the mean value of $\mu_\pm(z, t)$ is zero, whereas the autocorrelation function satisfies the following condition:

$$\left\langle\left\langle \mu_\pm(z,t)\,\mu_\pm^*\left(z - z', t - t'\right)\right\rangle\right\rangle = \frac{1}{v_g^2}\Gamma\beta_{sp}R_{sp}L\delta\left(z'\right)\delta\left(t'\right). \tag{21.42}$$

Recalling that Equation 21.20 does not include spectrally dependent parameters, it can be seen that the noise source defined in this manner has infinite bandwidth and consequently infinite power due to neglected spectral dependence of material gain (Cassioli et al., 2000). In practice, material gain will have finite bandwidth and will limit the noise power to a finite value. This effect can be included by passing $\mu_\pm(z, t)$ through the bandpass filter, which will result in

$$\left\langle\left\langle \mu_{F\pm}(z,t)\,\mu_{F\pm}^*\left(z - z', t - t'\right)\right\rangle\right\rangle = \frac{1}{v_g^2}\Gamma\beta_{sp}R_{sp}LB_F\delta\left(z'\right), \tag{21.43}$$

where $\mu_{F\pm}(z, t)$ is the band-limited noise source and B_F is the noise equivalent bandwidth (D'Ottavi et al., 1995; Cassioli et al., 2000). If the segmentation along the spatial coordinate is small enough, such that the carrier density can be considered constant, in numerical simulations the Dirac delta function can be replaced with the inverse step size Δz (Marcuse, 1984):

$$\left\langle\left\langle \mu_{F\pm}(z,t)\,\mu_{F\pm}^*\left(z - z', t - t'\right)\right\rangle\right\rangle = \frac{1}{v_g^2}\Gamma\beta_{sp}R_{sp}LB_F\frac{1}{\Delta z}. \tag{21.44}$$

Now the noise source can be expressed as follows (Marcuse, 1984; Cassioli et al., 2000; Melo and Petermann, 2008):

$$\mu_{\mathrm{F}\pm}(z,t) = \frac{1}{v_{\mathrm{g}}}\sqrt{\Gamma\beta_{\mathrm{sp}}R_{\mathrm{sp}}B_{\mathrm{F}}\frac{L}{\Delta z}}x_{\mathrm{e}}, \tag{21.45}$$

where x_{e} is the complex Gaussian random variable. According to the sampling theorem, the sampling period, which is equivalent to the simulation time-step Δt, needs to be less than or equal to $1/(2B_{\mathrm{F}})$. The complex Gaussian random variable can be expressed in terms of its real and imaginary parts, which finally gives

$$\mu_{\mathrm{F}\pm}(z,t) = \sqrt{\frac{1}{2v_{\mathrm{g}}}\Gamma\beta_{\mathrm{sp}}R_{\mathrm{sp}}\frac{L}{v_{\mathrm{g}}}\frac{1}{\Delta t\Delta z}}\frac{x_1 + ix_2}{\sqrt{2}}, \tag{21.46}$$

where x_1 and x_2 are independent and identically distributed numerically generated Gaussian random variables with zero mean and unit variance (Melo and Petermann, 2008). Similarly, x_{e} can be expressed in terms of magnitude and phase, also distributed according to the Gaussian statistics, with zero mean and unit variance.

21.4.2.4 Noise Figure

The usual method of quantifying the noise is by determining the noise figure (NF). It can be shown (Simon et al., 1989) that the intrinsic NF of an SOA can be obtained using

$$\mathrm{NF}_{\mathrm{dB}} = 10\log_{10}\left[\frac{1}{G} + 2\frac{\left(G_{\mathrm{s}}-1\right)\left(1+R_1G_{\mathrm{s}}\right)}{G_{\mathrm{s}}\left(1-R_1\right)}n_{\mathrm{sp}}\frac{\Gamma g}{\Gamma g - \alpha_{\mathrm{i}}}\right], \tag{21.47}$$

where G stands for the device (transmission) gain and G_{s} for the single pass gain, defined by Equation 21.36.

21.4.3 Extended Rate Equation Model

Previous discussion on SOA modeling covered the most important aspects of the photon–carrier interaction dynamics. Nevertheless, many more upgrades to the model are possible, and the choice of the model complexity mainly depends on the intended SOA usage. Whenever possible, it is good practice to simplify the model and exclude the effects that bear little to no improvement to the results, in order to reduce resource consumption during computation. Some of the upgrades are listed in the following pages, but many more do exist, e.g., separate analysis of polarization components (Pillai et al., 2006; Melo and Petermann, 2008), inclusion of nonlinearities, etc.

21.4.3.1 Carrier Diffusion

Although often omitted from consideration, carrier diffusion plays an important role in SOA modeling. It provides the means for washing out the spatial grating in carrier density distribution caused by the interference between the electric fields of the counterpropagating optical signals (Yacomotti et al., 2004; Serrat and Masoller, 2006; Totović et al., 2013). In this manner, its effects are implicitly accounted for by neglecting the high frequency terms in carrier density spatial distribution and replacing $|E_+ + E_-|^2$ with $|E_+|^2 + |E_-|^2$. This approach, however, has its limitations. It has been shown that only "fast" spatial grating, coming from counterpropagating fields of the same mode, can be neglected, whereas the "slow" one, resulting from interference effects of the different longitudinal modes, remains to a certain degree (Yacomotti et al., 2004; Serrat and Masoller, 2006). In order to encompass all possible cases, the SOA model can be generalized by modifying the carrier density rate Equation 21.14 to include the term describing diffusion (Agrawal and Olsson, 1989; Serrat and Masoller, 2006):

$$\frac{\partial n}{\partial t} = D\frac{\partial^2 n}{\partial z^2} + \frac{I}{qV} - \left[An + R_{\text{sp}}(n) + Cn^3\right] - R_{\text{st}}(n), \tag{21.48}$$

where D stands for the diffusion coefficient and $R_{\text{st}}(n)$ includes the square magnitude of the sum of both signal and noise counterpropagating electric fields.

21.4.3.2 Nonlinear Gain Suppression

The two most important effects that can influence material gain on a short-term scale are spectral hole burning (SHB) (Ahn and Chuang, 1990) and CH (Willatzen et al., 1991). The former represents formation of frequency selective dip in the gain spectrum as a consequence of stimulated emission, whereas the latter describes the fact that the temperature of carriers and lattice may differ. Both can be phenomenologically accounted for by introducing the nonlinear gain suppression factor, ε, which causes gain reduction proportional to the photon density in the active region (Willatzen et al., 1991; Totović et al., 2013). Instead of using the so-called linear gain g, which is dependent only on photon energy and carrier density, equations should be modified such that nonlinear gain is used $g_{\text{NL}} = g/(1 + \varepsilon S_\Sigma)$, which also accounts for gain dependence on photon density. The complete set of equations for wideband SOA modeling can now be written in the following form (Totović et al., 2013):

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{I}{qV} - \left(An + R_{\text{sp}} + Cn^3\right) - \frac{R_{\text{st}}}{1+\varepsilon S_\Sigma}, \tag{21.49}$$

$$\pm\frac{\partial s_\pm}{\partial z} + \frac{1}{v_{\text{g}}}\frac{\partial s_\pm}{\partial t} = \left(\frac{\Gamma g}{1+\varepsilon S_\Sigma} - \alpha_{\text{i}}\right)s_\pm, \tag{21.50}$$

$$\pm\frac{\partial \varphi_\pm}{\partial z} + \frac{1}{v_{\text{g}}}\frac{\partial \varphi_\pm}{\partial t} = \frac{k_0\Gamma\Delta n_{\text{r}}}{1+\varepsilon S_\Sigma}, \tag{21.51}$$

$$\pm\frac{\partial a_\pm}{\partial z} + \frac{1}{v_{\text{g}}}\frac{\partial a_\pm}{\partial t} = \left(\frac{\Gamma g}{1+\varepsilon S_\Sigma} - \alpha_{\text{i}}\right)a_\pm + \frac{1}{2v_{\text{g}}}\Gamma\beta_{\text{sp}}r_{\text{sp}}. \tag{21.52}$$

Presence of the nonlinear gain suppression also modifies the position of resonant and antiresonant frequencies, given by Equation 21.33, and the new condition can be derived from Equation 21.51:

$$2k_0\left(n_{\text{eff},0}L + \int_0^L \frac{\Gamma\Delta n_{\text{r}}}{1+\varepsilon S_\Sigma}\mathrm{d}z\right) = \begin{cases} 2m\pi, & \text{for } \omega_m^{\text{r}} \\ (2m-1)\pi, & \text{for } \omega_m^{\text{a}} \end{cases}. \tag{21.53}$$

21.4.3.3 Carrier Transport Model for MQW and QD SOAs

As previously discussed, materials with higher levels of confinement can outperform bulk SOAs in many aspects. The most common choice of active regions aside from bulk are the ones based on MQWs or QDs. Due to the different carrier dynamics, these devices usually require a more elaborate model of carrier rate equations than the one introduced for bulk SOA.

The MQW region in lasers and SOAs is usually embedded into the separate confinement heterostructure (SCH) region. Injected carriers from the outer edges of the SCH region diffuse across the region, leading to the subsequent capture and emission of carriers by the quantum wells.

Figure 21.7 shows a typical SCH MQW active region. Carrier transport effects in MQW SOA can be modeled by rate equations written with respect to the carrier density in the barrier (continuum) states,

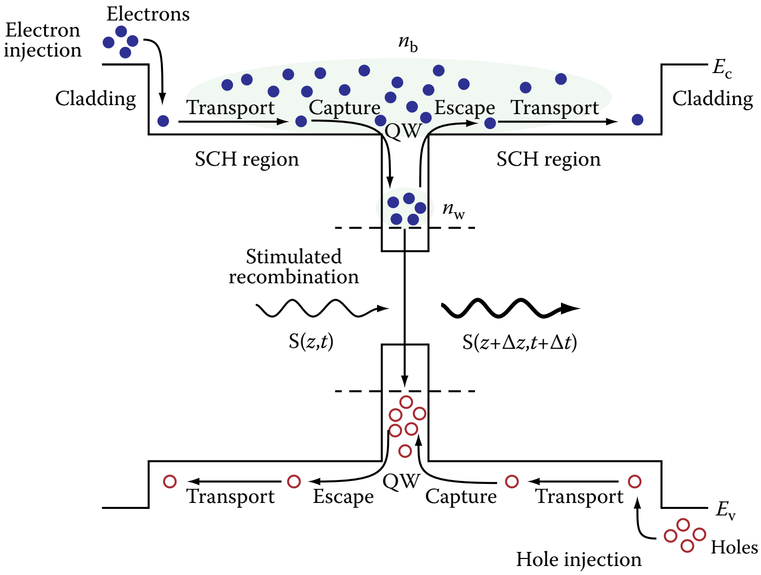

FIGURE 21.7 Band diagram of the multiple quantum well (MQW) semiconductor optical amplifier's (SOA's) active region and schematics showing carrier injection, transport, capture, escape and signal amplification by stimulated emission. (SCH, separate confinement heterostructure; QW, quantum well.)

including the SCH region and active layers, n_b, and the carrier density in the bound states of the well region, n_w, similar to SCH MQW lasers (Nagarajan et al., 1992; Keating et al., 1999; Totović et al., 2012). This model is referred to as the reservoir model (Nagarajan et al., 1992; Keating et al., 1999) and is equivalent to models that incorporate additional effects such as diffusive transport. Coupling of the carrier density in the barrier states above the MQWs to the carrier density in the MQWs is modeled by two terms representing carrier capture and escape into and from the wells, respectively:

$$\frac{dn_b}{dt} = \eta_{inj}\frac{I}{qV_b} - \frac{n_b}{\tau_b} - \frac{n_b}{\tau_{bw}} + \frac{n_w}{\tau_{wb}}\frac{V_w}{V_b}, \tag{21.54}$$

$$\frac{dn_w}{dt} = \frac{n_b}{\tau_{bw}}\frac{V_b}{V_w} - \frac{n_w}{\tau_w} - \frac{n_w}{\tau_{wb}} - \frac{R_{st}}{1+\varepsilon S_\Sigma}. \tag{21.55}$$

Here, η_{inj} is the injection efficiency, V_b is the volume of the SCH and active region, V_w is the volume of the well region, τ_b and τ_w are the carrier recombination lifetimes in the barrier and in the well region, respectively, τ_{bw} is the effective carrier diffusion across the SCH region and capture time by the wells, and τ_{wb} is the thermionic emission and carrier diffusion time from the well to the barrier states.

The TW equations for the counterpropagating optical photon densities retain the same form as in the case of the bulk SOA, with the exception of material gain and internal loss of the active region, which now dominantly depend on carrier density in the bound states of the well, n_w:

$$\pm\frac{\partial S_\pm}{\partial z} + \frac{1}{v_g}\frac{\partial S_\pm}{\partial t} = \left(\frac{\Gamma g}{1+\varepsilon S_\Sigma} - \alpha_i\right) S_\pm. \tag{21.56}$$

A more detailed model of the MQW active region's carrier dynamics may comprise additional rate equations for the reservoir model. For example, in addition to barrier states, well states may be divided into the excited state (ES) and the ground state (GS) (Qin et al., 2012). An even more elaborate approach is required for asymmetric MQW structures, where the tunneling effect of carriers through the barriers needs to be accounted for (Lysak et al., 2005, 2006).

The basic rate equations for QD SOA are essentially the same as for the detailed model of the MQW active region (Qin et al., 2012). The discrete energy levels in the well of QDs include the GS level and the ES level, which is doubly degenerated. The populations of these two levels are described by separate carrier densities, n_G and n_E, respectively, which are normalized with respect to the total dot volume V_D. Dots are interconnected by the wetting layer (WL), described by the carrier density, n_W, which is normalized to the WL volume, V_W. It can be assumed that the carriers are injected directly from the contacts into the WL and the barrier dynamics is thus ignored in the model (Berg et al., 2001; Qasaimesh, 2003). The rate equations describing the carrier dynamics read

$$\frac{\mathrm{d}n_W}{\mathrm{d}t} = \frac{I}{qV_W} + \frac{n_E}{\tau_e^E}\frac{V_D}{V_W}f'_W - \frac{n_W}{\tau_c}f'_E - \frac{n_W}{\tau_{sp}}, \tag{21.57}$$

$$\frac{\mathrm{d}n_E}{\mathrm{d}t} = \frac{n_W}{\tau_c}\frac{V_D}{V_W}f'_E + \frac{n_G}{\tau_e^G}f'_E - \frac{n_E}{\tau_e^E}f'_W - \frac{n_E}{\tau_0}f'_G - \frac{n_E}{\tau_{sp}}, \tag{21.58}$$

$$\frac{\mathrm{d}n_G}{\mathrm{d}t} = \frac{n_E}{\tau_0}f'_G - \frac{n_G}{\tau_e^G}f'_E - \frac{n_G}{\tau_{sp}} - \frac{R_{st}}{1+\varepsilon S_\Sigma}. \tag{21.59}$$

Here, τ_e^E is the escape time of carriers from the ES level to WL, τ_c is the capture time of carriers from the WL to the ES level, τ_{sp} is the spontaneous recombination time, which is assumed to be identical for all levels, τ_e^G is the excitation time of carriers from the GS level to the ES level, and τ_0 is the intradot relaxation time. In Equations 21.57 through 21.59, $f'_{W,E,G} = 1 - f_{W,E,G}$ denote the probabilities of finding an empty carrier state at the WL band edge, the ES and GS levels, respectively, which are closely related to the carrier densities of the corresponding levels (Berg et al., 2001). Finally, material gain is now dependent on carrier density in the GS state. A similar model can be implemented in the case of active regions based on QDashes.

Last, when QDs are embedded into the QW region, it is necessary to extend the model with an additional rate equation that deals with the QW dynamics. Each additional state in QDs also requires a separate rate equation (Kim et al., 2009).

21.4.3.4 Carrier Heating

During the discussion on effects that cause material gain to behave nonlinearly, CH was introduced. Moreover, CH is responsible for phase variation, through Equation 21.19. Depending on the SOA regime of operation, CH might be accounted for phenomenologically, using the nonlinear gain suppression factor, ε, and LEF, α_{CH}, or, in the case of ultrafast applications, a more elaborate model can be used. The temperature dynamics in SOAs can be described using the carrier temperature rate equation (Dailey and Koch, 2007, 2009; Xia and Ghafouri-Shiraz, 2015):

$$\frac{\mathrm{d}T}{\mathrm{d}t} = \frac{1}{\partial U/\partial T}\left(\frac{\mathrm{d}U}{\mathrm{d}t} - \frac{\partial U}{\partial n}\frac{\mathrm{d}n}{\mathrm{d}t}\right) - \frac{T-T_0}{\tau}, \tag{21.60}$$

where T is the carrier temperature, T_0 is the lattice temperature, U is the total carrier plasma energy density, and τ is the electron–phonon interaction time. In this model, electron and hole plasmas are assumed to be equal in both temperature, T, and density, n (Dailey and Koch, 2007). The rate of energy density change can be found to be (Xia and Ghafouri-Shiraz, 2015)

$$\begin{aligned}\frac{\mathrm{d}U}{\mathrm{d}t} &= -v_g\sum_l\left(\hbar\omega_l - E_g\right)g_l\left(S_+^l + S_-^l\right) + v_g\Gamma K_1 n\sum_l \hbar\omega_l\left(S_+^l + S_-^l\right)\\ &\quad - v_g\sum_m\left(\hbar\omega_m - E_g\right)g_m\left(A_+^m + A_-^m\right) + v_g\Gamma K_1 n\sum_m \hbar\omega_m\left(A_+^m + A_-^m\right),\end{aligned} \tag{21.61}$$

where summations are done over each mode l of the two counterpropagating signal photon densities $S^l_{\pm}$, and each mode m of the two counterpropagating ASE noise photon densities $A^m_{\pm}$. The free-carrier and intravalence absorption is captured in ΓK_1. The remaining derivatives, namely, $\partial U/\partial T$ and $\partial U/\partial n$, can be determined from the energy density distribution function (Xia and Ghafouri-Shiraz, 2015), given as (Dailey and Koch, 2009; Coldren et al., 2012)

$$U = \frac{2}{\sqrt{\pi}} k_B T \left(N_c F^c_{3/2} + N_v F^v_{3/2} \right), \tag{21.62}$$

where N_c and N_v stand for the effective densities of states for CB and VB, respectively, and $F^c_{3/2}$ and $F^v_{3/2}$ are the Fermi–Dirac integrals of order 3/2 for CB and VB, respectively. Having determined the rate of temperature change, it is possible to account for its variation in calculating the material gain, radiative spontaneous recombination rate, and variation of index of refraction, which are all temperature dependent through the Fermi–Dirac functions, Equations 21.1 through 21.3, or Equations 21.4 through 21.6, depending on the active region type. The analysis by Xia and Ghafouri-Shiraz (2015) confirms that the difference in carrier density and material gain caused by CH does influence the signal amplification in the picosecond regime of SOA operation.

21.4.3.5 Distributed Bias Current

It is common practice to assume that the driving current of SOA gets instantaneously uniformly distributed along the active region. In practice, this lumped electrode model is not always appropriate. Electric current does require a finite amount of time to travel from the contact to the edges of the electrode, and modeling it as a traveling microwave (TMW) might be more suitable in some cases, especially when the time delay is a significant fraction of the modulation period (Tauber et al., 1994; Mørk et al., 1999; Totović et al., 2015). This distributed nature of the current can have important implications on the results when SOAs are directly modulated at high bitrates (Tauber et al., 1994; Wu et al., 1995; Liljeberg and Bowers, 1997). Moreover, the microwave will be attenuated during the propagation, and the loss can sometimes be very high at typical modulation frequencies (Tauber et al., 1994). An additional point worth noting is that the microwave can be reflected at the end of an electrode, depending on the load impedance. When the microwave reflection coefficient differs from zero, two counterpropagating microwaves will exist (Totović et al., 2015):

$$I(z,t) = \bar{I} + \Delta I_F(z) \exp\left[i\left(2\pi f t - \beta_e z\right)\right] + \Delta I_B(z) \exp\left[i\left(2\pi f t + \beta_e z\right)\right]. \tag{21.63}$$

Here $\bar{I}$ is the stationary value of bias current, ΔI_F and ΔI_B are the small-signal bias current amplitudes for forward (F) and backward (B) propagation with respect to z-axis, which are defined by the spatially variable voltage across the electrode, f is the modulation frequency, $\beta_e = 2\pi f/v_e$ is the microwave propagation constant, $v_e = c/n_e$ is the microwave velocity, and n_e is the effective electric refractive index. Bias current will induce carrier density change through the carrier rate Equation 21.49, which will lead to change in all carrier-dependent parameters.

21.5 Overview of Steady-State and Dynamic TW- and R-SOA Models

Both TW- and R-SOA have found their application niches within the optical networks and photonic circuits. In order to make the optimal choice regarding the SOA material and geometric properties, as well as operating conditions, it is necessary to analyze their performance, in both the steady-state and dynamic regimes. This can be done either experimentally or theoretically, using any of the models presented in this section. Essentially, two borderline approaches can be used depending on required precision, available time, and computational resources. The first one is largely exploited in commercially available software for optical network analysis and relies on a significant number of approximations that either allow for analytical or semianalytical solutions or a relatively simple numerical approach using efficient numerical methods. The second one includes a detailed and comprehensive analysis and is mostly used in SOA design and optimization.

Modeling of steady-state and dynamic properties of SOAs essentially reduces to efficient and accurate self-consistent solving of coupled rate equations written with respect to the counterpropagating signals and noise, and carrier density, with imposed boundary and initial conditions. In the case of TW-SOA, the equation system usually comprises only the forward-propagating TW equation, whereas in the case of R-SOA both forward and backward TW equations are needed. The number of rate equations describing the carrier density depends on the material used for the active region and anticipated model accuracy. A self-consistent approach is required since the carrier depletion in the active region is caused by the stimulated amplification of the input optical signal, and this in turn modifies the material gain and, consequently, further amplification of the signal. If the carrier depletion is weak and the carrier density is approximately uniformly distributed along the active region, the TW equation for the forward-propagating signal (Equation 21.23) can be analytically solved. In the case of the continuous wave (CW), i.e., stationary input optical signal $S_{\text{in}} = S_+(z = 0)$, the output photon density $S_{\text{out}} = S_+(z = L)$ is given by

$$S_{\text{out}} = G_{\text{s}} S_{\text{in}} = S_{\text{in}} \exp\left[\left(\Gamma g - \alpha_{\text{i}}\right) L\right], \tag{21.64}$$

where G_{s} is the single pass gain. An analogous relation can be written for the electric field, where the factor 1/2 should be accounted for in the argument of exponential function: $\exp[(\Gamma g - \alpha_{\text{i}})L/2])$, or $G_{\text{s}}^{1/2}$. In the case of the time-dependent (nonstationary) input optical signal, the solution of Equation 21.23 for the forward-propagating photon density reads

$$S_{\text{out}}(t) = S_{\text{in}}\left(t - \frac{L}{v_{\text{g}}}\right) \exp\left[\left(\Gamma g - \alpha_{\text{i}}\right) L\right]. \tag{21.65}$$

Here, a reference frame traveling with the signal is used, and therefore the temporal dependence of the input signal, $S_{\text{in}}(t)$, is replaced with $S_{\text{in}}(t - L/v_{\text{g}})$. It can be seen that in both cases the output photon density is proportional to G_{s}.

The above relations can be generalized and may also be applied for an SOA section in which the carrier density is uniformly distributed. In this case, S_{in} and S_{out} represent the section's input and output photon densities, ${S_+}^{k-1} = S_+(z_{k-1})$ and ${S_+}^{k} = S_+(z_k)$ for forward propagation, and ${S_-}^{k} = S_-(z_k)$ and ${S_-}^{k-1} = S_-(z_{k-1})$ for backward propagation, respectively, as shown in Figure 21.8. The decrease of the section length makes the assumption of the uniform carrier distribution more justified. This fact represents the basis for the development of various methods, which can provide efficient stationary and time-domain modeling of TW- and R-SOA.

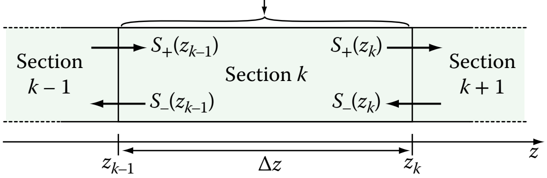

FIGURE 21.8 Schematic representation of the semiconductor optical amplifier (SOA) section with the relevant carrier and photon densities.

21.5.1 Steady-State Models

One of the oldest methods used in modeling of SOAs, optical waveguides, and semiconductor lasers is the transfer matrix method (TMM) (Chu and Ghafouri-Shiraz, 1994), which has long been regarded as an efficient and powerful numerical tool. The robustness and simplicity of its implementation on computer platforms are the major reasons for its success and popularity in using it to analyze complex photonics structures. The method assumes that the entire amplifier is divided into p sections, each with a length of $\Delta z = L/p$, where L is the amplifier length. Each section is labeled such that the kth section extends from $(k-1)\Delta z$ to $k\Delta z$. The value of Δz is small enough such that the carrier density, material gain, and modal gain can be assumed as uniform along each section. If only the forward-propagating wave is of interest, as in TW-SOA, the output photon densities of subsequent sections, S_+^{k-1} and S_+^k, satisfy the relation that is a generalized form of Equation 21.64

$$S_+^k = G_k S_+^{k-1} = S_+^{k-1} \exp\left[\left(\Gamma g_k - \alpha_{\mathrm{i},k}\right)\Delta z\right], \tag{21.66}$$

where g_k and $\alpha_{\mathrm{i},k}$ are the material gain and active region loss corresponding to section k, respectively, and G_k stands for the single pass gain of the kth section. In the case of bidirectional propagation (forward and backward), as in R-SOA or FP-SOA, the matrix relating $(k-1)$th and the kth section may be written in the following form, based on Equation 21.66:

$$\begin{bmatrix} S_+^k \\ S_-^k \end{bmatrix} = \begin{bmatrix} G_k & 0 \\ 0 & G_k^{-1} \end{bmatrix} \begin{bmatrix} S_+^{k-1} \\ S_-^{k-1} \end{bmatrix}. \tag{21.67}$$

Same method can be applied when the TW equation is written with respect to the electric field envelope (Equation 21.15) instead of photon density, intensity, or power. In this case, the transfer matrix may comprise the information about phase (Chu and Ghafouri-Shiraz, 1994):

$$\begin{bmatrix} E_+^k \\ E_-^k \end{bmatrix} = \begin{bmatrix} G_k^{1/2}\exp(i\beta\Delta z) & 0 \\ 0 & G_k^{-1/2}\exp(i\beta\Delta z) \end{bmatrix} \begin{bmatrix} E_+^{k-1} \\ E_-^{k-1} \end{bmatrix}. \tag{21.68}$$

By using input parameters, namely, bias current I and injected optical power P_0, or electric field $E_0 = S_0^{1/2}\exp(i\varphi_0)$, along with boundary conditions and transfer matrices, the carrier density for each section can be found from the Equation 21.14. In the case of R-SOA, the carrier rate equation will be converted into a p-dimensional system of transcendental equations with respect to carrier densities corresponding to all sections (Totović et al., 2014). Once the carrier density in each section is known, the transfer matrices can be used in the evaluation of the photon density or the corresponding electric field envelope in each of the SOA sections.

In this consideration, it is assumed that the photon density, or the corresponding envelope of the electric field, represents the signal. Most of the steady-state models do not account for the noise contribution to the signal, assuming that its phase is uncorrelated to the signal's phase. Therefore, some models neglect the noise (Chu and Ghafouri-Shiraz, 1994), while others use separate TW equations for the signal and the ASE (Jin et al., 2003; de Valicourt et al., 2010), which means that the signal and noise are generally treated separately. However, coupling between the signal and noise is provided by the carrier rate equation that accounts for both contributions, which finally affects the carrier density in the active region and all carrier dependent parameters, and consequently, the photon density. In the case of steady-state analysis, it is possible to solve the TW equation for ASE (Equation 21.31) on domain Δz of section k, and use it in the TMM. The solution is given by

$$a_+^k = G_k a_+^{k-1} + \sigma_k \frac{G_k - 1}{\ln G_k}, \tag{21.69}$$

where a_+^{k-1} and a_+^k represent ASE spectral photon densities at the input and the output of the kth section, respectively, whereas $\sigma_k = 1/(2v_g)\Gamma\beta_{sp}r_{sp}^k\Delta z$ is the contribution of the radiative spontaneous recombination rate spectral density in section k. If the ASE spectrum is uniform over an optical noise bandwidth B_N, the photon density corresponding to ASE can be obtained by multiplying Equation 21.69 by B_N. Otherwise, the total ASE photon density can be found by integrating Equation 21.69 over the ASE bandwidth. The above result can be generalized for both propagation directions (de Valicourt et al., 2010) and written in the following matrix form:

$$\begin{bmatrix} a_+^k \\ a_-^k \end{bmatrix} = \begin{bmatrix} G_k & 0 \\ 0 & G_k^{-1} \end{bmatrix} \begin{bmatrix} a_+^{k-1} \\ a_-^{k-1} \end{bmatrix} + \frac{\sigma_k}{\ln G_k} \begin{bmatrix} G_k - 1 \\ G_k^{-1} - 1 \end{bmatrix}. \tag{21.70}$$

This matrix form does not strictly fit into the standard transfer matrix form due to additional vector representing the ASE contribution of the kth section. However, a considerable number of time-domain multisection methods accounts for ASE by using the form defined by Equation 21.70 (Durhuus et al., 1992; Davis and O'Dowd, 1994; Kim et al., 1999; Occhi et al., 2003; Park et al., 2005; Mathlouthi et al., 2006; Morel and Sharaiha, 2009). Since these methods are not essentially different from TMM, they can be referred to as TMMs.

Although TMM is simple for implementation, it requires a significant number of matrix multiplications, increasing linearly with the number of sections. A large number of multiplications may cause error accumulation and inaccuracy in the evaluation of photon density or the corresponding electric field envelope. The TW equations can be solved by implementation of the FDM rather than the TMM (Connelly, 2001, 2002). Forward differences are used for forward-propagating TWs, and backward differences for backward-propagating TWs. The carrier rate equation in each mesh point is used for determining the carrier density value. Since the self-consistent method implementation is required, the process of calculation of carrier and photon densities relies on iterative procedure, with adjustment of at least one variable in each iteration step, usually the carrier density. However, the carrier density variation along the amplifier is rather small even for a wide range of the signal input powers (Totović et al., 2013). On the other hand, the photon density varies significantly, up to several orders of magnitude. Therefore, the control of the iteration process by the carrier density adjustments, as proposed by Connelly (2001, 2002), makes the process very sensitive since the small variation of the carrier density leads to a large variation of the photon density. It is shown by Jin et al. (2003) that iterations based on photon density may provide faster convergence and increased stability of the iteration process.

21.5.2 Dynamic Models

Due to its simplicity and popularity, TMM has been modified and implemented in the development of the large-signal dynamic model (Davis and O'Dowd, 1994; Kim et al., 1999). The model is bidirectional, which makes it suitable for both TW- and R-SOA time-domain simulations. Similar multisection time-domain models, based on the time-dependent version of Equation 21.67 or Equations 21.68 and 21.70, can also be found in the literature (Occhi et al., 2003; Park et al., 2005; Mathlouthi et al., 2006; Kim et al., 2009). It has been shown by Park et al. (2005) that only the "fullwave" model, which accounts for the intensity and phase of the superimposed electric fields of the signal and noise, provides accurate results. The model based solely on photon densities of signal and noise (or their optical powers) overestimates the influence of the noise on the signal (Park et al., 2005). On the other hand, the model in which the signal is represented by the electric field, and spontaneous emission noise by the photon density, underestimates the effect of noise on the signal (Park et al., 2005).

Another time-domain multisection, wideband, and bidirectional method has been derived using the inverse Fourier transform of the frequency-domain propagation equation (Durhuus et al., 1992). It is essentially a type of TMM, comprising complex time delay. Due to included wideband spectral dependence, it is suitable for simulation of multichannel amplification. A similar method proposed by Morel and Sharaiha

(2009) is implemented in a commercially available software, Advanced Design System from Keysight Technologies (www.keysight.com), after conversion of transfer matrices, including complex time delay, into an equivalent SOA circuit. Another recently developed equivalent circuit model, more precisely transmission line model (TLM), was presented by Xia and Ghafouri-Shiraz (2016). A multisection wideband time-domain method based on the finite-impulse response (FIR) filter scheme has been proposed by Toptchiyski et al. (1999) and Runge et al. (2010). The method is based on two computational steps in each section. The first step includes calculation of local gain with its linear and nonlinear components, as well as the local nonlinear phase change. Then, the propagation equations for the forward- and backward-traveling fields are solved by accounting for the spectral profile of the gain through the implementation of an FIR filter. The FDM can also be applied in time-domain simulations of SOAs. A comprehensive improved finite-difference beam propagation model (IFD-BPM) (Razaghi et al., 2009) has been used for modeling of temporal and spectral properties of copropagating and counterpropagating picosecond optical pulses with different wavelengths. The aforementioned model includes the following effects: interband gain and refractive index dynamics, CH, SHB, two-photon absorption (TPA), ultrafast nonlinear refraction (UNR), gain dispersion, gain peak shift with carrier density variation, and group velocity dispersion (GVD). Due to numerous linear and nonlinear effects, the forward and backward TW equations become essentially nonlinear propagation equations, and are named modified nonlinear Schrödinger equations. Solving these equations is based on coordinate transformation, which can be successfully done by trapezoidal integration and central difference technique. The same method has been also used in the development of the R-SOA pulse propagation model (Connelly, 2012). An interesting method for modeling of SOA time-domain response and four-wave mixing (FWM) was proposed by Mecozzi and Mørk (1997) and Cassioli et al. (2000). The method assumes a relatively small variation of carrier density along the amplifier and consequently a small gain variation. It is based on the analytical integration of material gain over the entire SOA length. This eliminates the spatial coordinate dependence and allows for the amplifier dynamics to be described by solving a set of ordinary differential equations for the complex gain. The ASE noise is modeled by an equivalent noise source with appropriate statistical properties. When the internal loss is included, the method's complexity increases. The SOA simulator is implemented in the Simulink® software, based on the MATLAB® engine and routines for numerical calculations, because of its capability to deal with time-domain analysis of dynamical systems. A similar approach, based on the delayed differential equation, has been used in the derivation of R-SOA's time-domain transmission function, which is then implemented in the semianalytical analysis of FWM in R-SOA (Antonelli and Mecozzi, 2013). The fundamental condition for the method implementation is that the round-trip time of the pulse is small compared to its duration. An improved version of this, the so-called reduced model, is proposed by Dúill and Barry (2015), where the improvement is achieved by the inclusion of the internal losses.

If the dynamic effects of interest occur on a much larger time scale than the time required for the signal to travel along the active region, a simplification to the dynamic model can be introduced by assuming instantaneous propagation of signals across the SOA length (Connelly, 2014, 2015). This assumption significantly simplifies the model by reducing the TW equations to their steady-state form, which can then be solved using the corresponding finite differences for each propagation direction. In this manner, spatial distributions of photon and carrier densities are calculated at each point in time, under the quasi-steady-state conditions. This approach might be helpful as a basis for the simple TW- and R-SOA models; however, a detailed model does require accounting for the finite time needed for wave propagation. In this case, the system of coupled partial differential TW equations may be solved numerically using a first-order upwind scheme based on the FDM (Totović et al., 2011) in order to obtain a full spatiotemporal distribution of all relevant quantities.

21.5.3 Case Study: Steady-State Wideband Self-Consistent Numerical Model

In order to fully understand the mechanisms underlying SOA operation, the model needs to be designed such that it accounts for spectral dependencies of all relevant parameters discussed in Section 21.3 and given in Figures 21.2 through 21.4. These models, typically referred to as wideband, are required to operate not with photon densities, but rather their spectral distributions. Additionally, it is good practice to generalize the model such that it supports any facet reflectivity. This makes the model transparent to the SOA type and it can be further used to analyze TW-, FP-, or R-SOA simply by adjusting the facet reflectivities to the desired value. For TW-SOA, the values can be chosen to be either zero, or, if higher precision is required, some small, but finite value, in the range of 10^{-3}–10^{-5}. In the case of FP- or R-SOA, the reflectivity of a highly reflective facet is usually chosen to be equal to the reflectivity of the interface between cleaved semiconductor and air, $R_2 = (n_r - 1)^2/(n_r + 1)^2$, but it can be set to another value if reflective layers are used.

The full system of equations for a steady-state wideband model can be derived from Equations 21.49 through 21.52 by setting the time derivatives of carrier density and spectral photon densities to zero:

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{I}{qV} - \left(An + R_{\mathrm{sp}} + Cn^3\right) - \frac{R_{\mathrm{st}}}{1 + \varepsilon S_\Sigma} = 0, \tag{21.71}$$

$$\pm\frac{\mathrm{d}s_\pm}{\mathrm{d}z} = \left(\frac{\Gamma g}{1 + \varepsilon S_\Sigma} - \alpha_{\mathrm{i}}\right) s_\pm, \tag{21.72}$$

$$\pm\frac{\mathrm{d}\varphi_\pm}{\mathrm{d}z} = \beta_0 + k_0 \frac{\Gamma \Delta n_r}{1 + \varepsilon S_\Sigma}, \tag{21.73}$$

$$\pm\frac{\mathrm{d}a_\pm}{\mathrm{d}z} = \left(\frac{\Gamma g}{1 + \varepsilon S_\Sigma} - \alpha_{\mathrm{i}}\right) a_\pm + \frac{1}{2v_{\mathrm{g}}}\Gamma \beta_{\mathrm{sp}} r_{\mathrm{sp}}, \tag{21.74}$$

where

$$S_\Sigma(n) = \int_0^\infty \left(s_+ + s_- + a_+ + a_-\right) \mathrm{d}(\hbar\omega), \tag{21.75}$$

$$R_{\mathrm{st}}(n) = \int_0^\infty v_{\mathrm{g}} g \left(s_+ + s_- + a_+ + a_-\right) \mathrm{d}(\hbar\omega). \tag{21.76}$$

Boundary conditions for the signal can be derived from Equations 21.27 and 21.28 and are given by the following set of equations at the front facet:

$$s_+(0) = \left(1 - R_1\right) s_0 + R_1 s_-(0) - 2\sqrt{\left(1 - R_1\right) s_0}\sqrt{R_1 s_-(0)} \cos\left[\varphi_0 - \varphi_-(0)\right], \tag{21.77}$$

$$\varphi_+(0) = \arctan\left[\frac{\sqrt{\left(1 - R_1\right) s_0}\sin\varphi_0 - \sqrt{R_1 s_-(0)}\sin\varphi_-(0)}{\sqrt{\left(1 - R_1\right) s_0}\cos\varphi_0 - \sqrt{R_1 s_-(0)}\cos\varphi_-(0)}\right], \tag{21.78}$$

and by $s_-(L) = R_2 s_+(L)$, and $\varphi_-(L) = \varphi_+(L) + \pi$ at the rear facet. The input signal is assumed to have Gaussian power spectral distribution $\sigma_{\mathrm{G}}(\hbar\omega)$, with FWHM of 0.1 nm, which is a good approximation of the signal generated by the distributed feedback (DFB) laser. Given the input optical power P_0, input signal spectral density can be found by multiplying the input signal photon density, S_0, by the Gaussian function normalized to unity with respect to energy:

$$s_0(\hbar\omega) = \frac{\Gamma(\hbar\omega) P_0}{\hbar\omega v_{\mathrm{g}}(\hbar\omega) WH} \sigma_{\mathrm{G}}(\hbar\omega). \tag{21.79}$$

In analysis of ASE noise, phase is not included explicitly, and therefore no interference exists at either facet, giving $a_+(0) = R_1 a_-(0)$ and $a_-(L) = R_2 a_+(L)$.

In order to account for the resonant properties of the SOA cavity, the procedure described in Section 21.4.2 for deriving Equation 21.34 from Equation 21.31 can be employed, and Equation 21.74 can be transformed into a system of steady-state equations written with respect to the noise photon densities corresponding to each mode m:

$$\pm \frac{\mathrm{d}A_\pm^m}{\mathrm{d}z} = \left(\Gamma_m g_m - \alpha_\mathrm{i}^m\right) A_\pm^m + \frac{1}{2v_\mathrm{g}^m}\Gamma_m \beta_\mathrm{sp}^m R_\mathrm{sp}^m, \tag{21.80}$$

with boundary conditions $A_+^m(0) = R_1 A_-^m(0)$ and $A_-^m(L) = R_2 A_+^m(L)$. The system given by Equation 21.80 represents the steady-state form of Equation 21.34. Introducing the mode photon densities $A_\pm^m$ also implies that modification of Equations 21.75 and 21.76 is required, where the integral over energies for ASE noise now becomes a sum over modes m:

$$S_\Sigma(n) = \int_0^\infty \left(s_+ + s_-\right) \mathrm{d}(\hbar\omega) + \sum_m \left(A_+^m + A_-^m\right), \tag{21.81}$$

$$R_\mathrm{st}(n) = \int_0^\infty v_\mathrm{g} g \left(s_+ + s_-\right) \mathrm{d}(\hbar\omega) + \sum_m v_\mathrm{g}^m g_m \left(A_+^m + A_-^m\right). \tag{21.82}$$

In this manner, signal amplification will be accounted for by TW Equation 21.80 and the photons will be subsequently redistributed within the mode frequency range using the filtering function (Equation 21.38). The resonant and antiresonant frequencies are found by equating the noise phase accumulation to $2m\pi$ and $(2m-1)\pi$, respectively, the same as in Equation 21.33:

$$2k_0\left(n_{\mathrm{eff},0}L + \int_0^L \frac{\Gamma\Delta n_\mathrm{r}}{1+\varepsilon S_\Sigma}\mathrm{d}z\right) = \begin{cases} 2m\pi, & \text{for } \omega_m^\mathrm{r} \\ (2m-1)\pi, & \text{for } \omega_m^\mathrm{a} \end{cases}. \tag{21.83}$$

In the pursuit of increased efficiency, several adjacent modes can be grouped into clusters of $2l+1$ mode, spanning between two antiresonances, from $\hbar\omega_{m-l}^\mathrm{a}$ to $\hbar\omega_{m+l+1}^\mathrm{a}$, where l stands for a small nonnegative integer. All photons corresponding to one cluster are now treated with a single pair of photon densities $A_\pm^m$, centered at the mth mode resonance, $\hbar\omega_m^\mathrm{r}$, where the values of all spectrally dependent parameters in Equations 21.80 through 21.82 are given at $\hbar\omega_m^\mathrm{r}$. In this manner, the number of equation pairs (comprising one equation for each propagation direction) required for modeling the ASE noise is reduced from the number of modes N to the number of clusters $M = N/(2l+1)$. This method effectively reduces the time and resource consumption at the cost of a modest decrease in accuracy. The error in calculating the photon density corresponding to a cluster will be pronounced in the portions of the spectrum where the ASE noise photon count reaches high values. Since the photon count depends on both the radiative spontaneous recombination rate and the material gain among other parameters, this error can be alleviated by nonuniform clustering of modes; the clusters can comprise only one mode in the vicinity of the signal central frequency, where the material gain and stimulated emission rate are high and the number of modes within the cluster can be increased further away in the spectrum.

21.5.3.1 Implementation of the Self-Consistent Method

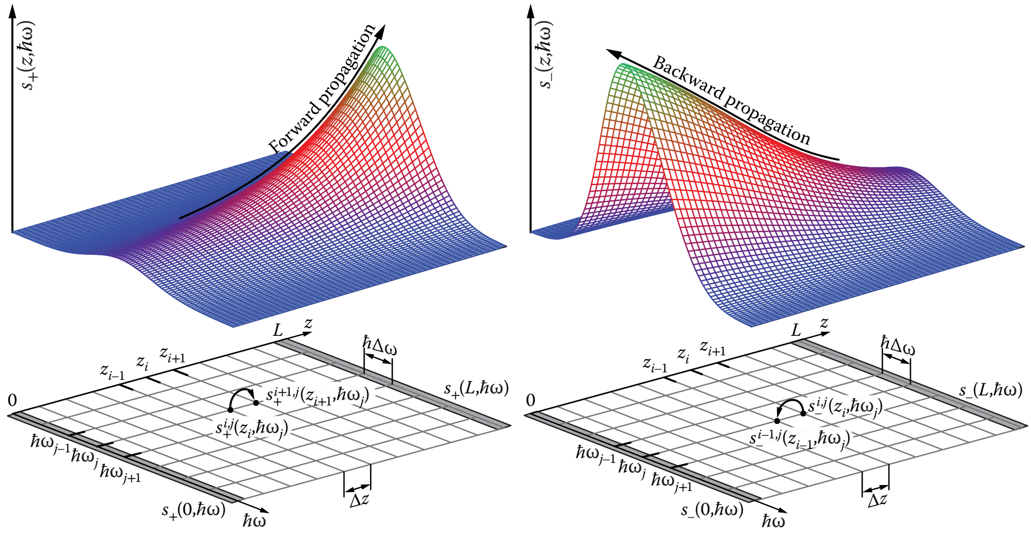
As discussed earlier, the system of equations describing SOA needs to be solved in a self-consistent manner due to the coupling between the signal and noise though the carrier rate equation. Numerical solving of the system requires discretization of the space-spectrum domain into a two-dimensional (2D) mesh, where each point represents a unique pair of position along the longitudinal axis z_i and energy $\hbar\omega_j$. The size of the spectral domain should be chosen such that it covers the region where material gain is positive since in the remaining regions spontaneously emitted photons will be attenuated during propagation and their contribution to the ASE spectrum can be neglected. Step size along the spectral axis should be smaller than the difference between two adjacent resonances of the cavity, which can roughly be estimated from Equation 21.83 as $\Delta(\hbar\omega) = \pi\hbar c/(n_{\mathrm{eff},0}L)$, whereas for the longitudinal axis no particular constraints exist and the smaller step size simply enables a more accurate spatial distribution calculation. The choice of 1001 equidistant points z_i along the longitudinal axis, where i spans from 0 ($z = 0$) to 1000 ($z = L$), provides a quasi-continuous spatial domain, with the step length equal to $\Delta z = L/1000$. An example of such 2D mesh is given in Figure 21.9.

The derivatives over the z-coordinate in Equations 21.72 and 21.73 and Equation 21.80 can now be replaced with finite differences. Depending on the propagation direction of signal and ASE noise, forward or backward, appropriate finite differences are used, forward in the former, and backward in the latter case. This approach allows for successive calculation of the variable values in the next point in space based on the values from the previous one. For forward propagation, the equations can be written in the following generalized form:

$$f_+\left(z_{i+1}\right) = f_+\left(z_i\right) + F_+\left(z_i\right)\Delta z, \tag{21.84}$$

where f_+ stands for any forward-propagating variable, s_+, φ_+, or A_+^m, whereas F_+ denotes the RHS of the corresponding equations, evaluated at the ith point in space, z_i. For backward propagation, using the same generalized notation, the equations can be reduced to

$$f_-\left(z_{i-1}\right) = f_-\left(z_i\right) + F_-\left(z_i\right)\Delta z, \tag{21.85}$$



(a) (b)

FIGURE 21.9 Illustration of the two-dimensional space-spectrum mesh used in the wideband steady-state self-consistent numerical method for modeling semiconductor optical amplifiers (SOAs). The example includes spectral photon density distribution for (a) forward and (b) backward propagations.

where f_- stands for any backward-propagating variable, s_-, φ_-, or A_-^m, whereas F_- denotes the RHS of the corresponding equations, evaluated at the ith point in space, z_i. The coupling between Equations 21.84 and 21.85 is provided by the boundary conditions at $z = 0$ and $z = L$. Carrier density in each point in space can be found as a solution of the transcendental Equation 21.71, which is then followed by calculation of resonant and antiresonant frequencies, using Equation 21.83.

The system given by Equations 21.71 through 21.73, 21.80, and 21.83 represents the basis of one iteration step in the self-consistent numerical method (SCNM). Starting from the arbitrarily chosen carrier density distribution, signal and noise for both propagation directions can be determined and subsequently used for calculating the new carrier distribution. Assuming that the newly calculated carrier density distribution converges to the steady-state distribution, repeating this process should give improved results with each iteration step. The process can be stopped when the difference between the values calculated within two consecutive iteration steps reaches the tolerance point. Although this simplified algorithm is useful for conceptualization of iterative procedure, in practice it suffers from severe instability, and rarely converges. The instability is caused by significant changes in photon spectral densities, up to several orders of magnitude, for subtle changes in carrier density. An approach typically used to alleviate this issue relies on self-consisting tuning of the carrier density (Connelly, 2001) or photon density (Jin et al., 2003) by its averaging over the current and previous iteration step, with proper weight coefficients. Although these approaches have shown to be successful in modeling TW-SOA, in the case of an R-SOA they still diverge for high driving currents and high input signal optical powers. Choosing to simultaneously tune all variables of interest, namely $s_\pm$, $A_\pm^m$, and n, instead of just one, does increase stability, but not sufficiently enough to provide a reliable algorithm. The main issue comes from the interplay between counterpropagating signals and noise, where the backward-propagating ones are the delayed replicas of their forward-propagating counterparts. This "echoing," present whenever either facet reflectivity is nonzero, destabilizes the algorithm and raises the need for restraining the variables through the fading memory of previous iteration steps. Instead of averaging the variables over the current and previous iteration steps, the generalized algorithm assumes inclusion of k previous iteration steps, where $k \geq 1$. In this manner, sudden changes are prevented, and the system steadily converges toward the solution. The contribution of each iteration step can be adjusted using the set of weight coefficients w_i, with a sum of unity, which ponder the results of the ith iteration step during the averaging process. The updated (averaged) iteration variable that is passed to the next iteration step, x_{i+1}, can be found as

$$x_{i+1} = w_i x_i + w_{i-1} x_{i-1} + \ldots + w_{i-k} x_{i-k}. \tag{21.86}$$

The optimal number of iteration steps included will depend on the device's properties, mainly on the front and rear facet reflection coefficients. It has been shown by Totović et al. (2013) that $k = 3$ previous iteration steps, in addition to the current one, suffice to provide a stable algorithm, with a set of weight coefficients $\{w_i, w_{i-1}, w_{i-2}, w_{i-3}\} = \{0.4, 0.3, 0.2, 0.1\}$. The choice of weight coefficients depends on desired robustness of the algorithm and the convergence speed. By using higher pondering values for the current iteration step relative to the previous ones, the iteration process becomes more time efficient at the cost of an increased risk for divergence. Inclusion of several previous iteration steps is required in modeling FP- and R-SOA but can be relaxed to $k = 1$ for TW-SOA.

Prior to entering the iteration procedure, the maximum tolerable relative error $\delta_{\max}$ needs to be defined. The error δ between the two consecutive iteration steps is calculated as a maximum value of relative errors among all monitored variables, for each point in the mesh $(z_i, \hbar\omega_j)$:

$$\delta = \max\left\{\delta(n), \delta\left(s_\pm\right), \delta\left(A_\pm^m\right), \delta\left(\hbar\omega_m^{\mathrm{r}}\right)\right\}. \tag{21.87}$$

The iteration procedure is stopped once the value of the current relative error δ drops below the defined tolerance $\delta_{\max}$. The meticulousness with which the iteration error δ is calculated during each iteration step ensures that all results consistently need to converge in order for the iteration procedure to end. Setting $\delta_{\max}$ to 10^{-3} imposes very strict convergence requirements for all variables.

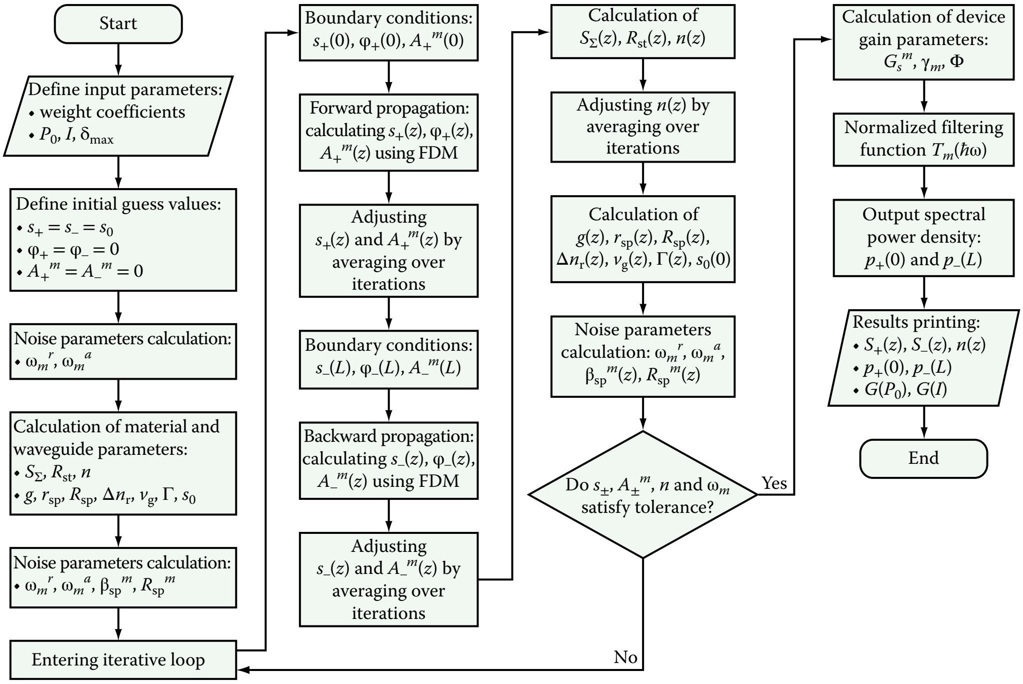
Aside from the input and control parameters, i.e., I, P_0, weight coefficients, and $\delta_{\max}$, SCNM requires a set of initial guess values (IGVs) for all variables. Since the spectral photon density of the input signal, s_0, depends on the confinement factor as shown in Equation 21.79, its IGV is calculated for an arbitrary carrier density between the transparency value n_{tr} and the maximum allowed value, $n_{\max}$, governed by the bias current. The transparency value of the carrier density is determined by equating material gain to zero, whereas the maximum allowed value can be found from Equation 21.71, under the assumption of zero photon density in the active region:

$$\frac{I}{qV} - \left[An_{\max} + R_{\text{sp}}\left(n_{\max}\right) + Cn_{\max}^3\right] = 0. \tag{21.88}$$

The IGV of spectral photon density for the forward-propagating signal, s_+, is then set to the input signal spectral photon density s_0, whereas the IGV for s_- is set either to zero, for TW-SOA, or to s_0, for FP- and R-SOA. The IGV for phase in both propagation directions, $\varphi_\pm$, is chosen to be zero. Before setting IGVs for ASE noise, it is necessary to determine the number of analyzed modes and the type of clustering. For a device length between 500 and 1000 μm, the intermodal space is of the order of 0.5 nm, and $N = 600$ modes covers the portion of the spectrum where ASE is expected to be pronounced. For the 100 modes around the signal central frequency, clusters of 1 mode have been chosen, whereas in the rest of the spectrum, clusters consist of 5 modes. This gives a total of $M = 200$ clusters to be analyzed. The ASE noise is usually orders of magnitude lower than the signal, therefore IGVs for all clusters $A_\pm^m$ are set to zero. The IGV for carrier density is calculated based on the IGVs for signal and noise photon densities by solving the transcendental Equation 21.71 with respect to n at each point z_i along the discretized longitudinal axis. Using Equation 21.83, IGVs for resonant and antiresonant frequencies are determined. Finally, using the appropriate expressions depending on the active region type, bulk or MQW, all material parameters dependent on carrier density can be determined. These include material gain (Equation 21.1 or Equation 21.4), radiative spontaneous recombination rate (Equation 21.2 or Equation 21.5), refractive index variation (Equation 21.3 or Equation 21.6), confinement factor (Equation 21.9), group velocity (Equation 21.13), and spontaneous emission coupling factor (Equation 21.11). Once all IGVs are defined, the iteration procedure can be initialized.

As discussed earlier, the iteration procedure essentially relies on repeating one iteration step and updating variable values according to the current and k previous iteration steps using Equation 21.86. It should be noted that until the number of completed iteration steps reaches k, corresponding IGVs are used as a replacement for the missing previous iteration values. The iteration step starts with solving Equations 21.72, 21.73, and 21.80, for forward propagation and determining s_+, φ_+, and A_+^m, based on the initial conditions at $z = 0$. This is followed by adjusting the variable values by averaging them over previous iteration steps and applying boundary conditions at $z = L$. Next, using Equations 21.72, 21.73, and 21.80, backward propagation is simulated and s_-, φ_-, and A_-^m are determined, and subsequently adjusted by averaging their values over k previous iteration steps. The total photon density in the active region, S_Σ, and the rate of stimulated emission, R_{st}, are found from Equations 21.81 and 21.82, respectively, which gives the basis for determining carrier density distribution using Equation 21.71. After adjusting n by averaging it over previous iteration steps, all parameters dependent on carrier density can be calculated. Finally, at the end of the iteration step, the maximum relative error between two consecutive iteration steps is calculated using Equation 21.87 and compared with the tolerance $\delta_{\max}$. If the tolerance is satisfied, the iteration process has successfully converged to the solution; otherwise the iteration process continues. The algorithm described for SCNM is summarized in Figure 21.10.

When the iteration process successfully converges to the steady-state solution, normalized filtering function of the cavity $T_m(\hbar\omega)$ can be found from Equation 21.38, and the ASE noise spectral photon



Start
Define input parameters:
• weight coefficients
• P_0, I, $\delta_{\max}$
Define initial guess values:
• $s_+ = s_- = s_0$
• $\varphi_+ = \varphi_- = 0$
• $A_+^m = A_-^m = 0$
Noise parameters calculation:
• ω_m^r, ω_m^a
Calculation of material and waveguide parameters:
• S_Σ, R_{st}, n
• g, r_{sp}, R_{sp}, Δn_r, v_g, Γ, s_0
Noise parameters calculation:
• ω_m^r, ω_m^a, β_{sp}^m, R_{sp}^m
Entering iterative loop
Boundary conditions: $s_+(0)$, $\varphi_+(0)$, $A_+^m(0)$
Forward propagation: calculating $s_+(z)$, $\varphi_+(z)$, $A_+^m(z)$ using FDM
Adjusting $s_+(z)$ and $A_+^m(z)$ by averaging over iterations
Boundary conditions: $s_-(L)$, $\varphi_-(L)$, $A_-^m(L)$
Backward propagation: calculating $s_-(z)$, $\varphi_-(z)$, $A_-^m(z)$ using FDM
Adjusting $s_-(z)$ and $A_-^m(z)$ by averaging over iterations
Calculation of $S_\Sigma(z)$, $R_{st}(z)$, $n(z)$
Adjusting $n(z)$ by averaging over iterations
Calculation of $g(z)$, $r_{sp}(z)$, $R_{sp}(z)$, $\Delta n_r(z)$, $v_g(z)$, $\Gamma(z)$, $s_0(0)$
Noise parameters calculation: ω_m^r, ω_m^a, $\beta_{sp}^m(z)$, $R_{sp}^m(z)$
Do $s_\pm$, $A_\pm^m$, n and ω_m satisfy tolerance?
Yes
No
Calculation of device gain parameters: G_s^m, γ_m, Φ
Normalized filtering function $T_m(\hbar\omega)$
Output spectral power density: $p_+(0)$ and $p_-(L)$
Results printing:
• $S_+(z)$, $S_-(z)$, $n(z)$
• $p_+(0)$, $p_-(L)$
• $G(P_0)$, $G(I)$

FIGURE 21.10 Flowchart of the steady-state wideband self-consistent numerical method (SCNM). FDM, finite difference method.

densities determined using

$$a_+(L,\hbar\omega) = \sum_{m=1}^{M}\left[\left(\hbar\omega^{a}_{m+l+1} - \hbar\omega^{a}_{m-l}\right)^{-1} A_+^m(L)\,T_m(\hbar\omega)\right], \tag{21.89}$$

$$a_-(0,\hbar\omega) = \sum_{m=1}^{M}\left[\left(\hbar\omega^{a}_{m+l+1} - \hbar\omega^{a}_{m-l}\right)^{-1} A_-^m(0)\,T_m(\hbar\omega)\right]. \tag{21.90}$$

Finally, the output spectral power densities of signal and noise combined are calculated as

$$p_+(L,\hbar\omega) = \left[1 - R_2(\hbar\omega)\right]\left[s_+(L,\hbar\omega) + a_+(L,\hbar\omega)\right] v_g(\hbar\omega)\, WH\hbar\omega \Big/ \Gamma(\hbar\omega), \tag{21.91}$$

$$p_-(0,\hbar\omega) = \left[1 - R_1(\hbar\omega)\right]\left[s_-(0,\hbar\omega) + a_-(0,\hbar\omega)\right] v_g(\hbar\omega)\, WH\hbar\omega \Big/ \Gamma(\hbar\omega), \tag{21.92}$$

where the signal spectral distribution is calculated using Equations 21.84 and 21.85, whereas the noise spectral distribution is determined from Equations 21.89 and 21.90. It should be noted that, if reflectivities of both facets are chosen to be zero, which is an idealized case of TW-SOA, the previous algorithm can be simplified. After determining and adjusting the forward-propagating variables, the following step, related to backward propagation, can be reduced to calculation and adjusting of only A_-^m since the backward-propagating signal will not exist.

One of the most valuable figures of merit for SOA characterization is the device (transmission) gain G. Strictly speaking, it is defined as the ratio of the signal's output and input photon density, or their corresponding powers, i.e., $G = 10\log_{10}(P_{out}/P_0)$. However, as the signal output photon density cannot be separated from ASE noise in the signal's wavelength range, the output photon density usually includes a small fraction of ASE, which has a negligible effect on G, as long as the input optical power P_0 is sufficiently high (above −40 dBm). For TW-SOA, the output photon density is recorded at the rear facet ($z = L$), $P_{out} = \int p_+(L,\hbar\omega)\mathrm{d}(\hbar\omega)$, whereas for the R-SOA, at the front facet ($z = 0$), $P_{\text{out}} = \int p_-(0, \hbar\omega)\mathrm{d}(\hbar\omega)$. For FP-SOA, either facet can be regarded as the output one, depending on system configuration. In the case when the SOA model bundles up signal and the whole ASE noise spectrum into one quantity, the above definition of device gain G is meaningful for somewhat larger input powers, which can be recognized by the relatively flat dependence of G versus P_0. For insufficient input powers P_0, the device gain tends to increase more rapidly as the input optical power decreases, ultimately reaching the infinite value for the zero-input signal.

21.5.3.2 Results and Discussion

Based on the wideband self-consistent numerical model presented in earlier section, a full analysis of TW- and R-SOA is carried out under the steady-state operation regime. The list of parameters used in the analysis is given in Table 21.3. The remaining parameters, which are both carrier and energy dependent, including g, r_{sp}, Δn_{r}, Γ, v_{g}, and β_{sp}, are determined using the models presented in Section 21.3 and are given in Figures 21.2 and 21.4. Both bulk and MQW-based active regions are optimized to be polarization insensitive, as shown in Figure 21.3, so only TE polarization is analyzed.

21.5.3.2.1 Steady-State Signal and Carrier Densities Spatial Distribution

Figures 21.11 and 21.12 show spatial distribution of carrier densities, $n(z)$, and photon densities of forward and backward-propagating signal and ASE noise combined, $\int[s_+(z, \hbar\omega) + a_+(z, \hbar\omega)]\mathrm{d}(\hbar\omega)$, and $\int[s_-(z, \hbar\omega) + a_-(z, \hbar\omega)]\mathrm{d}(\hbar\omega)$, respectively, for different input optical powers P_0. In Figure 21.11, the distributions are shown for the active region based on the unstrained bulk $\text{In}_{0.53}\text{Ga}_{0.47}\text{As}$, with the parameters listed in Table 21.1, whereas in Figure 21.12, the results are given for MQW consisting of six coupled 0.13% tensile-strained $\text{In}_{0.516}\text{Ga}_{0.484}\text{As}$ quantum wells, which are strain-compensated by the $\text{In}_{0.9}\text{Ga}_{0.1}\text{As}_{0.3}\text{P}_{0.7}$ 0.26% compressively strained barriers, with the parameters given in Table 21.2. In both active region types, carrier dynamics is treated using Equation 21.71. Although this is a somewhat simplified model for MQW SOA, its usage is justified when the volumes of the well and barrier regions do not differ significantly. Namely, the carrier recombination time in the barrier, τ_{b}, figuring in the full system of carrier rate equations describing MQW active region, Equations 21.54 and 21.55, is of the order of nanoseconds, unlike the capture time by the wells τ_{bw}, which has the value between 25 and 55 ps (Keating et al., 1999). On the other hand, it has been shown by Tsai et al. (1995) that the escape time from the wells, τ_{wb}, is one to two orders of magnitude higher in comparison with τ_{bw}. Assuming that the volumes of the well and barrier regions, V_{w} and V_{b}, respectively, are similar, the most significant contribution to $\mathrm{d}n_{\text{b}}/\mathrm{d}t$ comes from the first and the third terms on the RHS of Equation 21.54, whereas the second and fourth terms can be neglected. In

TABLE 21.3 SOA Material and Geometric Parameters

Symbol	Quantity	Value
W	Active region width	2 μm
H	Bulk active region height	140 nm
L_{w}	MQW well thickness	19 nm
L_{b}	MQW barrier thickness	10 nm
H	MQW active region height for six QWs	114 nm
L	Active region length	600 μm
K_0	Carrier independent loss coefficient	$62\ \text{cm}^{-1}$
K_1	Carrier dependent loss coefficient	$7.5 \times 10^{-17}\ \text{cm}^2$
A	Shockley–Read–Hall coefficient	$1.1 \times 10^{8}\text{s}^{-1}$
C	Auger coefficient	$5.82 \times 10^{-29}\ \text{cm}^6/\text{s}$
ε	Nonlinear gain suppression factor	$1.5 \times 10^{-17}\ \text{cm}^3$
$\hbar\omega_0$	Signal central energy	0.8 eV
R_1	Antireflective facet power reflectivity	5×10^{-5}

SOA, semiconductor optical amplifier; MQW, multiple quantum well.

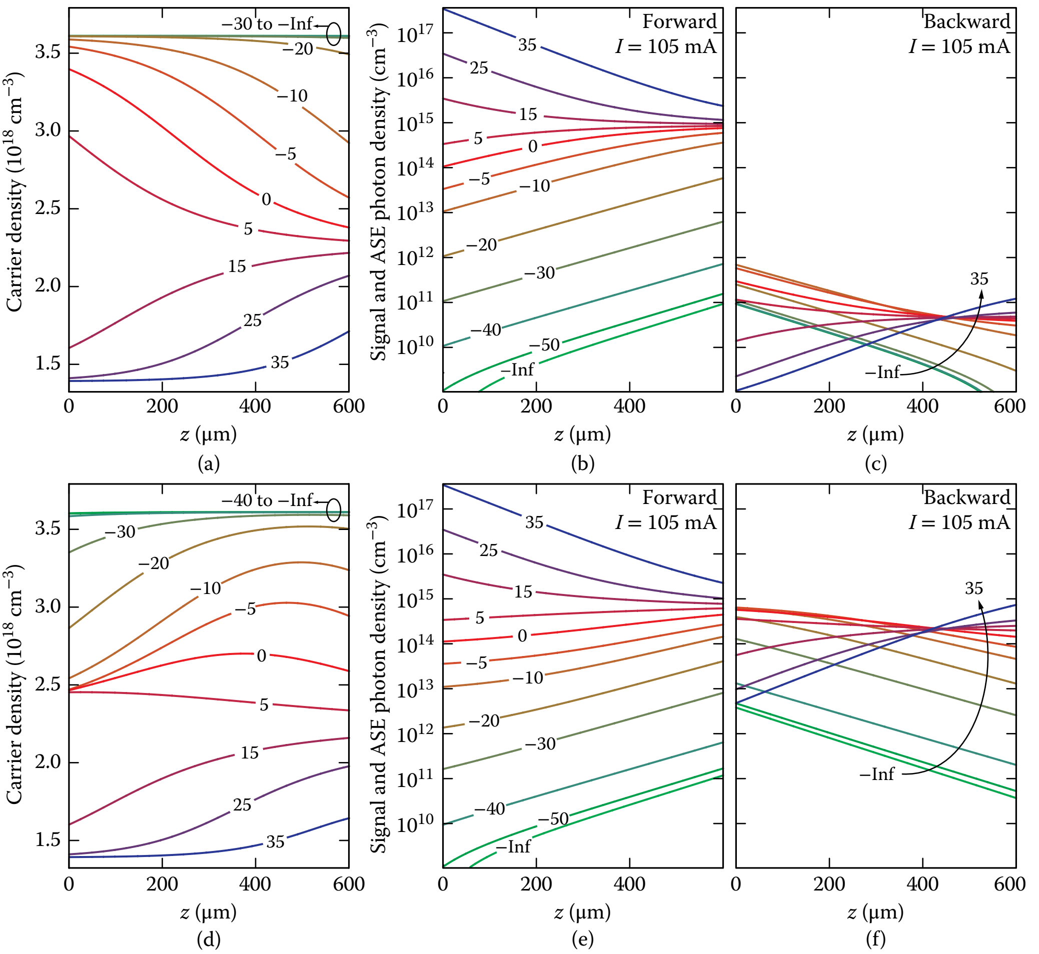

FIGURE 21.11 Spatial distribution of (a), (d) carrier density, and total photon density (signal and amplified spontaneous emission [ASE]) for (b), (e) forward, and (c), (f) backward propagation for different input signal optical powers (given in dBm) in the case of (a) through (c) traveling-wave semiconductor optical amplifier (TW-SOA), and (d) through (f) reflective (R)-SOA, both with the active region based on the unstrained bulk material.

this manner, the generation term $\eta_{\text{inj}}I/(qV_{\text{b}})$ directly influences the carrier density in the barrier states, n_{b}, which is further reflected in the first term of Equation 21.55. This effect becomes even more pronounced if the capture time is short and the steady-state value of n_{b} is quickly reached.

It can be seen that for low input optical powers, up to −30 dBm, the carrier density has values close to the maximum allowed by the available bias current, $n_{\max}$, due to the low consumption by vague optical signals. As P_0 increases, it dumps the carrier density overall and leads to its nonuniform spatial distribution caused by the intensified consumption of carriers. For both SOA types, forward-propagating photon densities have similar values and spatial distributions, as shown in Figure 21.11b and e. The signals are exponentially amplified for low to moderate input optical powers, up to 5 dBm. A further increase of P_0 leads to significant carrier depletion close to the front facet, Figure 21.11a and d, and consequently exponential signal attenuation. The backward-propagating photon densities, Figure 21.11c and f, are orders of magnitude lower for TW-SOA than for R-SOA, which is expected due to very low residual reflectivity of the rear facet. However, spatial distributions are qualitatively similar, and resemble the reversed forward-propagating ones, exponentially amplified for low P_0, and attenuated as P_0 increases. The existence of strong backward-propagating signal in the case of R-SOA leads to a different distribution of $n(z)$

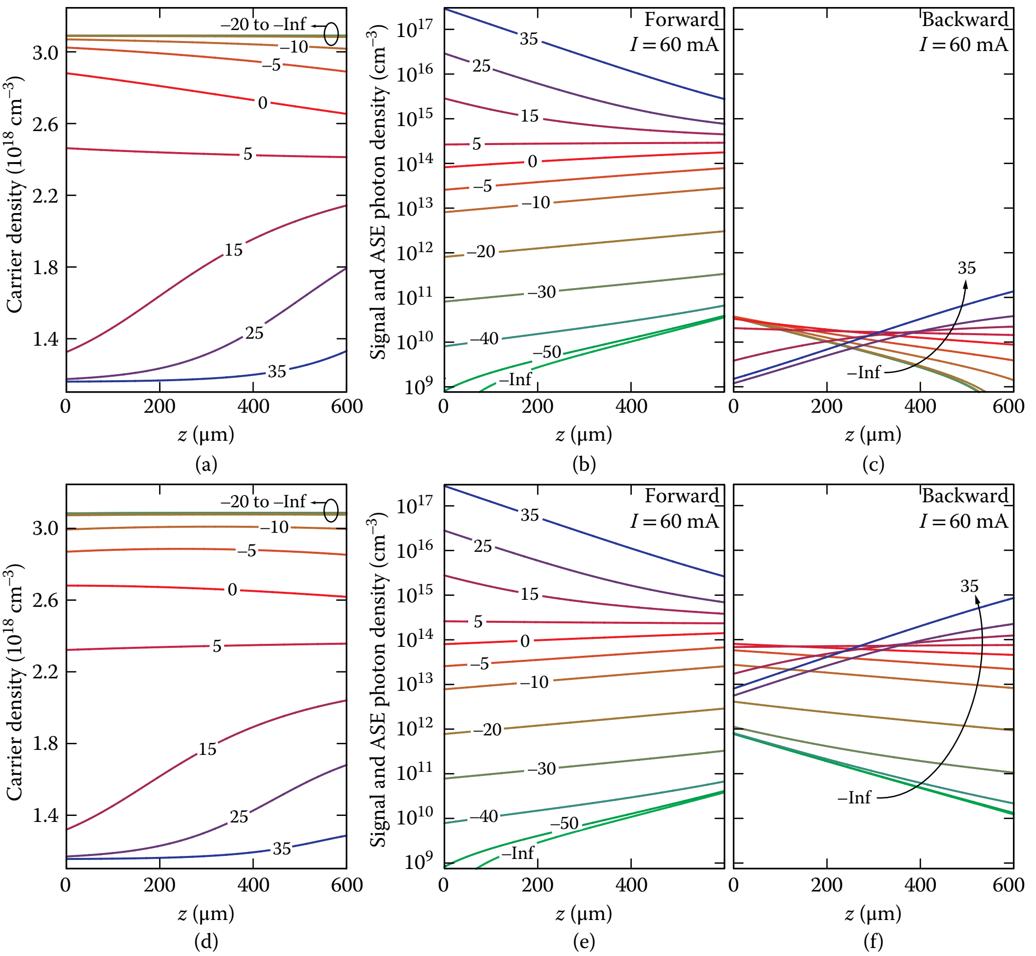

FIGURE 21.12 Spatial distribution of (a, d) carrier density, and total photon density (signal and amplified spontaneous emission [ASE]) for (b, e) forward and (c, f) backward propagation for different input signal optical powers (given in dBm) in the case of (a) through (c) traveling-wave semiconductor optical amplifier (TW-SOA), and (d) through (f) reflective (R)-SOA, both with the active region based on the tensile-strained quantum wells, which are strain-compensated by the compressively strained barriers.

for moderate P_0, between −20 and 5 dBm, in comparison to TW-SOA. The carrier density is more severely depleted closer to the front facet, by the amplified $S_{-}(z)$, as shown in Figure 21.11d, and has a maximum close to the rear facet, caused by the interplay of the counterpropagating signals.

Spatial distributions of carrier and photon densities for MQW-based SOAs, as shown in Figure 21.12, resemble the ones shown for bulk SOAs, as shown in Figure 21.11, and same qualitative analysis can be applied. The main difference comes from lower carrier density, and material gain, due to the polarization-insensitive design and lower bias current. This leads to the more uniform carrier spatial distribution, as shown in Figure 21.12c and d, and somewhat lower device gain, which can be inferred from the values of the output photon densities, at $z = L$ for TW-SOA, and $z = 0$ for R-SOA.

21.5.3.2.2 Steady-State Device Gain

One of the most valuable figures-of-merit for SOA is its steady-state device (transmission) gain. As defined in earlier section, it is the ratio of the output and input optical powers, or photon densities. Figures 21.13 and 21.14 show the dependence of device gain on operating conditions, i.e., bias current I, and input optical power P_0, for bulk, and MQW active region types, respectively, for both TW- and R-SOA.

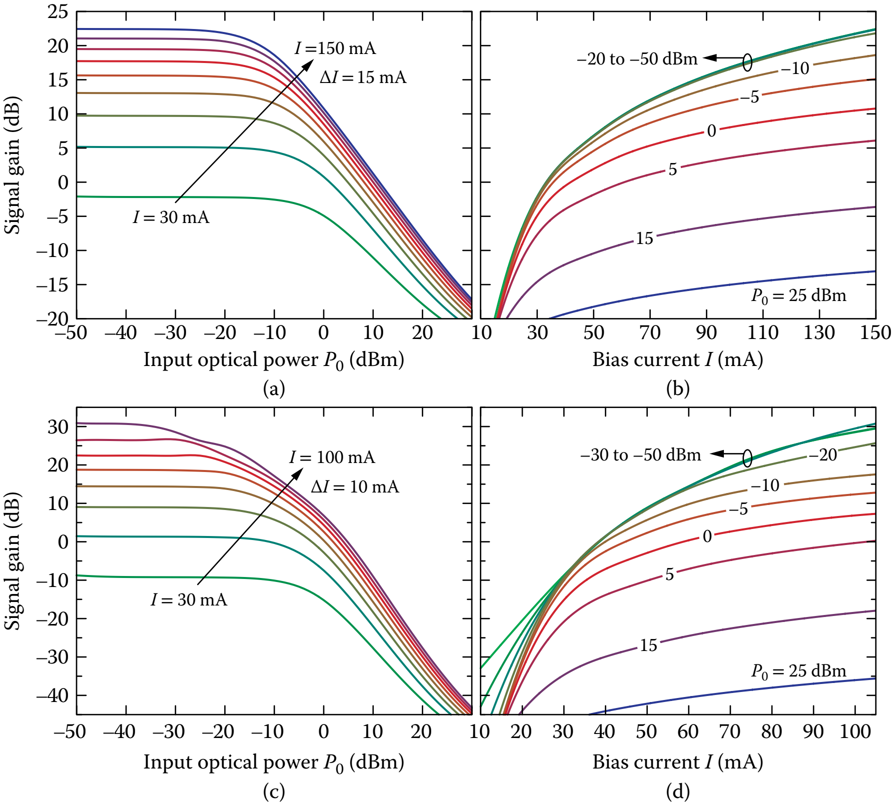

FIGURE 21.13 Device (transmission) gain for bulk active region versus (a), (c) input optical power, and (b), (d) bias current, for (a), (b) traveling-wave semiconductor optical amplifier (TW-SOA), and (c), (d) reflective (R)-SOA.

Figure 21.13 shows that the increase in bias current leads to the higher gain in both SOA types since more carriers are available to provide signal amplification, whereas the increase in P_0 leads to the gain decrease due to excessive carrier consumption. For low to moderate P_0, up to approximately −10 dBm, the device gain does not change significantly with input power and is limited by the length of the active region that is responsible for amplification. Additionally, R-SOA exhibits higher gain, Figure 21.13c and d in comparison with TW-SOA, Figure 21.13a and b, for bias currents beyond 50 mA. In contrast, for the currents below 50 mA, the gain is lower in R-SOA compared with TW-SOA. This comes from double signal propagation through the active region in the case of R-SOA, which emphasizes either amplification, when carrier density is high, or attenuation, when n is low. The maximum operating current of SOA is limited either by maximum bias current density, which provides long-term stable operation, or by the threshold for stimulated emission. In the latter case, the threshold material gain g_{th} can be determined from (Coldren et al., 2012)

$$\Gamma g_{th} - \left(K_0 + \Gamma K_1 n_{th}\right) = \frac{1}{2L} \ln \frac{1}{R_1 R_2}. \tag{21.93}$$

Having the value for g_{th}, it is possible to determine n_{th}, and using Equation 21.71, the corresponding threshold current value. Since the product of the two reflectivities is higher for R-SOA than for TW-SOA, the g_{th} will be lower, and, therefore, the current threshold value will also be lower.

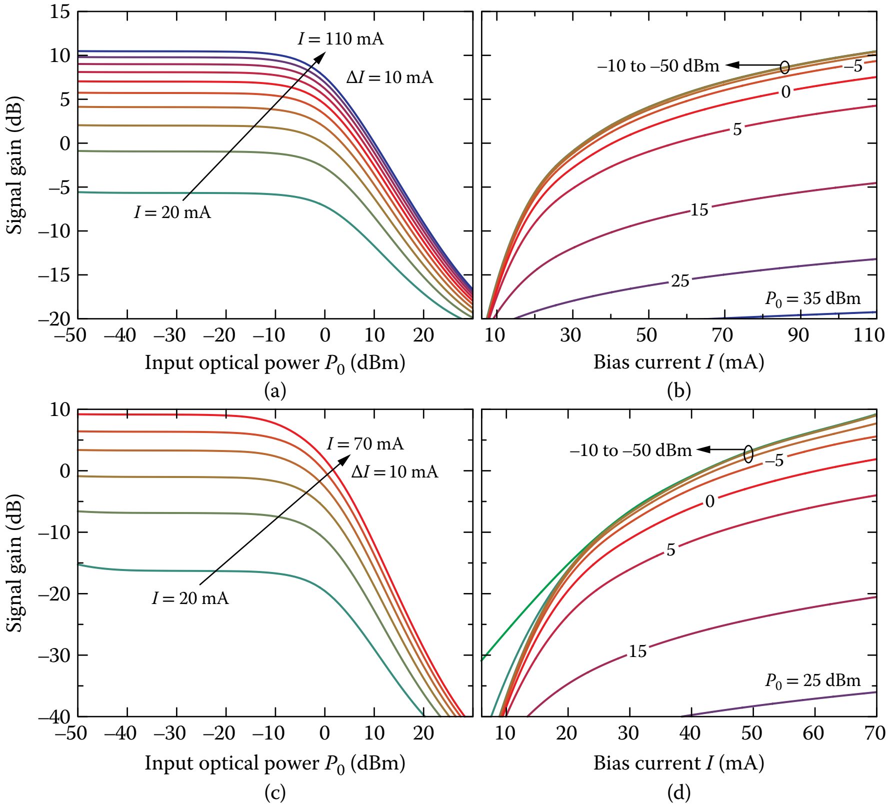

FIGURE 21.14 Device (transmission) gain for the multiple quantum well (MQW) active region versus (a), (c) input optical power, and (b), (d) bias current, for (a), (b) traveling-wave semiconductor optical amplifier (TW-SOA), and (c), (d) reflective (R)-SOA.

An interesting feature in the R-SOA's gain dependence on input optical power can be observed for high bias currents, as shown in Figure 21.13c. As the saturation regime of operation approaches, when the gain begins to decrease, an overshoot in device gain is visible. This effect has already been reported (Schrenk, 2011; Totović et al., 2013) and can be explained by the trade-off between a sudden decrease in the spontaneous emission and ASE with the decrease of carrier density and the corresponding relatively slow decrease in the material gain at the signal wavelength (Totović et al., 2013).

Figure 21.14 shows that MQW SOA provides somewhat lower gain in comparison with bulk, for the same operating conditions. This can be attributed to the lower modal gain, coming from lower confinement factor at the signal central frequency, as shown in Figure 21.4, which is a consequence of the polarization-insensitive design. Nevertheless, qualitatively, the two active regions give similar results, where the device gain increases with bias current increase. For low input optical powers, gain does not vary with P_0, and as the input optical power increases and carrier consumption becomes prominent, the device enters the saturation regime, and gain begins to decrease.

21.5.4 Case Study: Steady-State Semianalytical Model

When simulation time and computational resources are the priority, another approach can be used in SOA analysis. The main underlying idea of the semianalytical approach is to harvest the insightfulness of analytical methods and the versatility of numerical methods to reach a fast and computationally efficient model.

It essentially relies on carefully chosen approximations that can reduce the model complexity but still keep the accuracy at as high a level as possible. Since the carrier density usually does not vary significantly across the active region, it is common practice to model it as a constant, or a piecewise constant function. This approximation is extensively used in TMM, and, as previously discussed, presents the basis for many different SOA models. Choosing a fixed value for $n(z)$ simplifies TW equations to the point where an analytical solution can be found, either in closed form, e.g., Equation 21.64, or in the form of a transcendental equation. The carrier density's spatial distribution can also be approximated by a linear function, but this approach may give an analytical solution for photon densities only when nonlinear gain suppression is neglected (Totović et al., 2014).

Unlike carrier density, signal and noise photon densities can vary up to several orders of magnitude during the propagation from one SOA facet to the other. This implies that small variations in n can build up to significant changes in signal and noise, and special attention is required in selecting the adequate carrier density value. For example, choosing the value at the front or rear facet, $n_0 = n(z = 0)$ or $n_L = n(z = L)$, respectively, can significantly over- or underestimate material gain and spontaneous emission rate and lead to noticeable error in the output photon density, and, consequently, device gain. In order to alleviate this discrepancy, an average value of these two carrier densities can be chosen, $\bar{n} = (n_0 + n_L)/2$, and thus the error caused by neglecting the spatial dependence of n can be partially compensated.

The requirements for increased model efficiency can be met by yet another model approximation, where the signal and noise spectral dependences are neglected and the total spontaneous emission and signal are assigned to a single wavelength corresponding to signal peak, providing model analysis in terms of photon densities rather than spectral photon densities. Since no spectral analysis is present, TW equations written with respect to signal and noise can be wrapped up into a single equation that accounts for both spontaneous and stimulated emission of photons. This equation can be derived as a sum of Equations 21.72 and 21.74, integrated over the whole spectrum, resulting in

$$\pm\frac{\mathrm{d}S_\pm}{\mathrm{d}z} = \left[\frac{\Gamma g}{1+\varepsilon\left(S_+ + S_-\right)} - \alpha_\mathrm{i}\right] S_\pm + \frac{1}{2v_\mathrm{g}}\Gamma\beta_\mathrm{sp}R_\mathrm{sp}, \tag{21.94}$$

where $S_\pm$ now stands for the photon density of the signal and noise combined, at the signal central frequency ω_0. All parameters that are dependent on carrier density and photon energy in Equation 21.94, namely, $\Gamma, g, \alpha_\mathrm{i}, v_\mathrm{g}$, and β_sp, are now replaced with the corresponding numerical dependencies on n, interpolated from the full spectral and carrier dependent model presented in Figures 21.2 and 21.4, for the energy of $\hbar\omega_0$. Additionally, for parameters that do not vary significantly with n, i.e., Γ, α_i, v_g, and β_sp, as shown in Figure 21.4, a fixed value can be used, interpolated for an average carrier density, n_av, between the transparency, n_tr, and maximum allowed value, n_max, given by Equation 21.88. The carrier density at transparency will depend only on material gain, and not on operating conditions, whereas the maximum allowed value for carrier density n_max will depend on the value of bias current. In order to choose the adequate value of n_av for parameter interpolation, it is useful to determine n_max for maximum allowed bias current I_max. The value of I_max can be calculated as $I_\mathrm{max} = J_\mathrm{max}WL$, for a cross-section area defined by the active region's width W and length L, given in Table 21.3, where J_max is the maximum allowed bias current density for the long-term stable operation, which is in the range of 25–35 kA/cm^2. Under the listed conditions, the chosen values for bulk and MQW-SOA are $n_\mathrm{av} = 2.5 \times 10^{18}$ cm^{-3} and $n_\mathrm{av} = 2.1 \times 10^{18}$ cm^{-3}, respectively. The interpolated values of Γ, v_g, β_sp, and additional parameters are listed in Table 21.4 for bulk and MQW at the signal central energy of $\hbar\omega_0 = 0.8$ eV.

If a simpler model is used, particularly if an analytical solution is sought, it proves to be impractical to use numerical dependencies of g and R_sp on n (Figure 21.2). Rather, numerical results can be fitted to analytical functions, which further simplifies calculation. The most common choice for $g(n)$ dependence is a linear one, $g(n) = \alpha(n - n_\mathrm{tr})$, where α is the differential gain (Thylén, 1988; Shtaif et al., 1998; Mørk et al., 1999). This approximation is justified if the bias current is low enough to prevent a significant increase in carrier

TABLE 21.4 Interpolated Parameter Values for Bulk and Multiple Quantum Well (MQW) Active Region at the Signal Central Energy $\hbar\omega_0 = 0.8$ eV and for the Average Carrier Density of $n_{av} = 2.5 \times 10^{18}$ cm^{-3} for Bulk and $n_{av} = 2.1 \times 10^{18}$ cm^{-3} for MQW

Symbol	Quantity	Bulk	MQW
Γ	Optical confinement factor	30.44%	21.62%
v_g	Group velocity	7.76×10^7 m/s	8.73×10^7 m/s
k_0	Wave vector	4.05×10^6 m^{-1}	4.05×10^6 m^{-1}
n_r	Index of refraction	3.660	3.597
Δn_r	Variation of index of refraction	0.071	7.44×10^{-4}
$n_{\text{eff},0}$	Effective index of refraction for zero carrier density	3.405	3.291
n_{eff}	Effective index of refraction	3.490	3.291
β_0	Wave propagation constant for zero carrier density	1.38×10^7 m^{-1}	1.33×10^7 m^{-1}
R_2	Highly reflective facet power reflectivity	0.3258	0.3192

All values given are for transverse electric (TE) polarization.

TABLE 21.5 Bulk and Multiple Quantum Well (MQW) Active Region Fitting Parameters at the Signal Central Energy $\hbar\omega_0 = 0.8$ eV for Material Gain and Spontaneous Emission Rate to the two-Parameter Logarithmic and Second-Degree Polynomial Function of Carrier Density, Respectively

Symbol	Quantity	Bulk	MQW
g_0	Material gain fitting parameter	742.182 cm^{-1}	669.205 cm^{-1}
n_{tr}	Carrier density at transparency	1.38×10^{18} cm^{-3}	1.15×10^{18} cm^{-3}
B_0	Spontaneous emission fitting parameter	-8.375×10^{25} cm^{-3}/s	-1.351×10^{26} cm^{-3}/s
B_1	Spontaneous emission fitting parameter	1.344×10^8 s^{-1}	1.975×10^8 s^{-1}
B_2	Spontaneous emission fitting parameter	2.790×10^{-11} cm^3/s	2.146×10^{-11} cm^3/s

density. However, a more suitable model relies on a two-parameter (g_0, n_{tr}) logarithmic dependence (Coldren et al., 2012), which provides gain saturation with carrier density increase, $g(n) = g_0 \ln(n/n_{tr})$, where g_0 is the material gain fitting parameter and n_{tr} is the carrier density at transparency. It should be noted that, although the two-parameter logarithmic gain does provide reasonably good results, for more linear-like dependencies of gain on carrier density, such as for bulk materials, another model may be employed, which includes a third parameter, n_s. This model, $g(n) = g_0 \ln[(n + n_s)/(n_{tr} + n_s)]$, prevents infinite gain value for zero carrier densities, and in the limiting case of $n_s \to 0$ reduces to the purely logarithmic model, whereas for $n_s \to \infty$ reduces to purely linear model (Coldren et al., 2012). The model used in this case study is a two-parameter logarithmic gain since it fits well on numeric results.

The radiative spontaneous recombination rate is usually modeled via the quadratic function (Chu and Ghafouri-Shiraz, 1994; Melo and Petermann, 2008). Although this function fits actual dependence quite well, a more detailed model would include a second-degree polynomial function, $R_{sp}(n) = B_0 + B_1 n + B_2 n^2$, where B_0, B_1, and B_2 are the spontaneous emission rate fitting parameters. Table 21.5 shows a list of fitting parameters at wavelength $\lambda = 1.55$ μm ($\hbar\omega_0 = 0.8$ eV), for active regions based on the unstrained bulk $\text{In}_{0.53}\text{Ga}_{0.47}\text{As}$, and the MQW consisting of six coupled 0.13% tensile-strained $\text{In}_{0.516}\text{Ga}_{0.484}\text{As}$ quantum wells, which are strain-compensated by the $\text{In}_{0.9}\text{Ga}_{0.1}\text{As}_{0.3}\text{P}_{0.7}$ 0.26% compressively strained barriers.

In a steady-state analysis, the input signal carries no information encoded in its amplitude or phase, so the phase equation may be omitted from the model, in attempting to reduce the model's complexity. This simplification is additionally supported by the fact that the carrier diffusion will wash out the spatial grating in the carrier density produced by the interference between two counterpropagating optical fields.

For all antireflective facets, residual reflectivity can be neglected and equated with zero. Since the noise power is usually several orders of magnitude lower than the signal power, zero reflectivity implies that in the case of TW-SOA, the signal can be assumed to travel only once through the active region in the forward direction. On the other hand, in the case of R-SOA, the signal will pass through the active region twice, forward and backward, as a consequence of reflection at the rear facet. In other words, no multiple reflections are present, and the cavity does not exhibit resonant behavior. The boundary conditions for the signal at the front and rear facets are $S_+(0) = S_0$ and $S_-(L) = R_2 S_+(L)$, respectively, where S_0 is the input signal photon density. Depending on the SOA type, reflectivity of the rear facet can have either some finite value, for R-SOA, or it can be zero, for TW-SOA, which essentially simplifies the boundary condition to $S_-(L) = 0$.

The steady-state carrier density rate equation can be derived from Equations 21.71, 21.75, and 21.76, under the previously listed assumptions:

$$\frac{I}{qV} - \left(An + R_{\text{sp}} + Cn^3\right) - \frac{v_g g\left(S_+ + S_-\right)}{1 + \varepsilon\left(S_+ + S_-\right)} = 0. \tag{21.95}$$

This equation can be used for R-SOA modeling as is, whereas in the case of TW-SOA, it can be simplified by neglecting the backward-propagating noise contribution and setting the photon density of the backward-propagating signal to zero ($S_- = 0$). The system of coupled equations given by Equations 21.94 and 21.95 cannot be solved analytically unless the approximation regarding the carrier density's spatial distribution is introduced. Different approximations require different analytical treatments and implementations, which are further discussed.

21.5.4.1 The Fundamentals of the Semianalytical Models

The starting point of semianalytical treatment is replacement of the carrier density spatial distribution with a fixed value, equal to the arithmetic mean of the carrier density values at the edges of the SOA structure, or the edges of its sections, namely, $n(z) = \bar{n} = (n_0 + n_L)/2$. These carrier densities are deduced by solving the carrier rate Equation 21.95, where photon density distributions are expressed as functions of the fixed carrier density $\bar{n}$. In other words, once the analytical dependence of $S_\pm(\bar{n}, z) = S_\pm(n_0, n_L, z)$ is determined, it can be substituted in Equation 21.95 at $z = 0$ and $z = L$, which results in a system of two coupled transcendental equations written with respect to n_0 and n_L. The difference between these two carrier density equations comes from the spontaneous emission term $R_{sp}(n)$ and material gain $g(n)$, which for $z = 0$ depend on n_0, and for $z = L$ depend on n_L. Solving these equations provides the numerical value of $\bar{n}$, which is then returned to $S_\pm(\bar{n}, z)$, and the output photon density can be evaluated.

The same method can be applied to an SOA section of length $\Delta z = L/p$, given in Figure 21.15, where p is the number of analyzed sections, and the method can be generalized to the piecewise constant carrier density spatial distribution. The advantage of this approach over the TMM is the choice of the kth section carrier density value, $\bar{n}_k$, as the mean value between the carrier densities at the section interfaces, $\bar{n}_k = (n_{k-1} + n_k)/2$. In this manner, a higher degree of accuracy is provided for a smaller number of sections, compared to the choice of carrier density at the edge of a section.

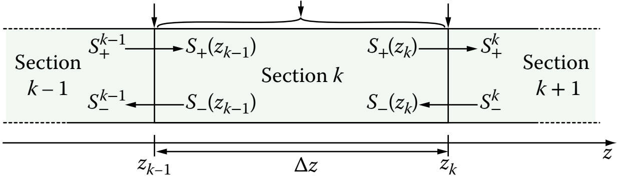

FIGURE 21.15 Schematic representation of the kth section in the segmented semiconductor optical amplifier structure with the relevant carrier and photon densities.

Assuming that the carrier density has a known, fixed value $\bar{n}_k$ at the kth section of an R-SOA, Equation 21.94 needs to be solved analytically for both propagation directions, with initial conditions imposed by the photon densities entering the kth section, which can be determined by solving Equation 21.94 at section $k-1$ for forward, and $k+1$ for backward propagation. However, the analytical solution of Equation 21.94 cannot be obtained for R-SOA without additional approximations, due to the nonlinear coupling of S_+ and S_-. In the case of TW-SOA, only the forward-propagating photon density S_+ is included in Equation 21.94, providing an analytical solution and the corresponding initial conditions for all sections along TW-SOA.

21.5.4.2 Approximate Solutions of Counterpropagating Photon Density Distributions and Implementation of the Semianalytical Algorithm

In order to derive the photon density spatial distributions, S_+ and S_-, corresponding to R-SOA, the system of Equation 21.94 needs to be decoupled, which can be done in two ways.

First, the nonlinear gain suppression can be neglected by setting $\varepsilon = 0$, which results in a linear decoupled system with respect to S_+ and S_-:

$$\pm\frac{\mathrm{d}S_\pm}{\mathrm{d}z} = \left(\Gamma g - \alpha_\mathrm{i}\right) S_\pm + \frac{1}{2v_\mathrm{g}}\Gamma\beta_\mathrm{sp}R_\mathrm{sp}. \tag{21.96}$$

This assumption greatly simplifies the system, and, for the bias currents and input optical powers that are not too high, it does not degrade the model accuracy significantly. The solution of Equation 21.96 for each section can be found in closed analytical form, corresponding to the matrix form (Equation 21.70) used in description of noise by TMM:

$$S_+^k = S_+^{k-1}G_k + \sigma_\mathrm{sp}^k\left(G_k - 1\right)/\ln G_k, \tag{21.97}$$

$$S_-^{k-1} = S_-^k G_k + \sigma_\mathrm{sp}^k\left(G_k - 1\right)/\ln G_k, \tag{21.98}$$

where $G_k = G(\bar{n}_k) = \exp\{[\Gamma g(\bar{n}_k) - \alpha_\mathrm{i}(\bar{n}_k)]\Delta z\}$ is the single-pass gain of the kth section and $\sigma_\mathrm{sp}^k = \sigma_\mathrm{sp}(\bar{n}_k) = 1/(2v_\mathrm{g})\Gamma\beta_\mathrm{sp}R_\mathrm{sp}(\bar{n}_k)\Delta z$ is the single-pass generated spontaneous emission within the kth section. Due to the cascading nature of sections, the output photon density of the $(k-1)$th section, $S_+^{k-1} = S_+(z_{k-1})$, is the input photon density of the kth one for forward propagation, whereas for backward propagation, the output photon density of the $(k+1)$th section, $S_-^k = S_-(z_k)$, is the input photon density of the kth one, as shown in Figure 21.15. This chaining, along with the form of Equations 21.97 and 21.98, suggests that the photon densities at section interfaces are calculated by recursion. The base cases in a recursive method for forward and backward propagation are defined by the boundary conditions at the front $(k=1)$ and rear $(k=p)$ facets, respectively, $S_+^0 = S_0$ and $S_-^p = R_2S_+^p$. The forward-propagating signal exiting the kth section will depend on carrier densities of all preceding sections, $S_+^k = S_+(z_k, \bar{n}_1, \ldots, \bar{n}_k) = S_+(z_k, n_0, \ldots, n_k)$, whereas the backward-propagating signal will depend on carrier densities in all sections, $S_-^k = S_-(z_k, \bar{n}_1, \ldots, \bar{n}_p) = S_-(z_k, n_0, \ldots, n_p)$, due to the imposed initial condition at the rear facet, which assumes reflection of $S_+(z_p, n_0, \ldots, n_p)$. These analytical expressions can now be returned to the carrier rate Equation 21.95 at each section interface located at z_k

$$f_k = 0 = \frac{I}{qV} - \left[An_k + R_\mathrm{sp}\left(n_k\right) + Cn_k^3\right] - v_\mathrm{g}g\left(n_k\right)\left[S_+\left(z_k, n_0, \ldots, n_k\right) + S_-\left(z_k, n_0, \ldots, n_p\right)\right], \tag{21.99}$$

which forms a system of $p+1$ transcendental equations, all of which are dependent on $p+1$ carrier densities, from n_0 to n_p. This system cannot be solved analytically, so a numerical procedure is required. An example of such a procedure, given by Totović et al. (2014), relies on numerically assisted elimination of variables, where, in an iterative approach, the range of carrier densities in which the solution n_k is expected to be found is narrowed simultaneously for all k from 0 to p. The initial range for carrier densities at all interfaces is bounded by the carrier density at transparency, n_{tr}, and the maximum carrier density, $n_{\max}$, limited by the available current (Equation 21.88). In each iteration step, the corresponding range of each n_k is reduced to one fifth of its previous size by the appropriate algorithm, still including the solution n_k. After a predefined number of iteration steps, the values for n_k can be determined by evaluating the RHS of the system (Equation 21.99) for the carrier densities in the narrowed ranges, giving a function $f_k(n)$, and subsequent interpolation of the function $f_k(n)$ in search for n_k which returns 0, i.e., the LHS value of Equation 21.99. Usually, four iteration steps suffice for the error coming from neglected gain suppression to prevail over the error coming from the iteration process. Having the values for carrier densities at all interfaces, it is possible to evaluate the photon densities at each z_k using Equations 21.97 and 21.98, and subsequently determine the device gain. Since this model treats the propagation of the signal and ASE noise combined through Equation 21.96, or more generally Equation 21.94, the device gain is defined as the ratio of the output signal power, along with the total ASE noise, and the input signal power. This definition implies that in the limiting case of zero input signal, the device gain will asymptotically approach infinity due to division by zero.

Another approach that can be used for the decoupling of Equation 21.94 with respect to $S_\pm(z,n)$ is to assume that the opposite-propagating photon density is spatially independent, i.e., $S_\mp(z,n) = S_\mp^{\mathrm{cst}}(n)$. Unlike the carrier density, which varies modestly across the active region, photon density exhibits exponential increase or decrease from one section edge to the other, so a choice of geometric mean is a more suitable one, which gives $S_\mp^{\mathrm{cst},k}(n) = [S_\mp^{k-1}(n)S_\mp^{k}(n)]^{1/2}$. The term $1 + \varepsilon(S_+ + S_-)$ in Equation 21.94, which is responsible for equation coupling, can now be replaced with $1 + \varepsilon(S_\pm + S_\mp^{\mathrm{cst}})$, or, more generally, with a sum of the spatially independent, and spatially dependent functions, $\theta_\pm + \varepsilon S_\pm$, where $\theta_\pm = 1 + \varepsilon S_\mp^{\mathrm{cst}}$. In the case of TW-SOA, no backward-propagating signal exists and $\theta_\pm = 1$. Equation 21.94 now reads

$$\pm\frac{\mathrm{d}S_\pm}{\mathrm{d}z} = \left(\frac{\Gamma g}{\theta_\pm + \varepsilon S_\pm} - \alpha_{\mathrm{i}}\right) S_\pm + \frac{1}{2v_{\mathrm{g}}}\Gamma\beta_{\mathrm{sp}}R_{\mathrm{sp}}, \tag{21.100}$$

and its solution for the kth section can be found in the implicit form from the transcendental equation

$$2\alpha_{\mathrm{i}}^{k}\Delta z = \left(\frac{1}{T_\pm^k} - 1\right)\ln\left|\frac{\theta_\pm^k + \varepsilon S_\pm^{\mathrm{out},k} - \left(1 - T_\pm^k\right)/\mu_\pm^k}{\theta_\pm^k + \varepsilon S_\pm^{\mathrm{in},k} - \left(1 - T_\pm^k\right)/\mu_\pm^k}\right| - \left(\frac{1}{T_\pm^k} + 1\right)\ln\left|\frac{\theta_\pm^k + \varepsilon S_\pm^{\mathrm{out},k} - \left(1 + T_\pm^k\right)/\mu_\pm^k}{\theta_\pm^k + \varepsilon S_\pm^{\mathrm{in},k} - \left(1 + T_\pm^k\right)/\mu_\pm^k}\right|, \tag{21.101}$$

where the auxiliary parameters $\mu_\pm^k$ and $T_\pm^k$ are defined as follows:

$$\mu_\pm^k = \frac{2\alpha_{\mathrm{i}}^k}{\Gamma g_k + \alpha_{\mathrm{i}}^k\theta_\pm^k + \varepsilon\Gamma\beta_{\mathrm{sp}}R_{\mathrm{sp}}^k\Big/\left(2v_{\mathrm{g}}\right)}, \tag{21.102}$$

$$\left(T_\pm^k\right)^2 = 1 - \left(\mu_\pm^k\right)^2\Gamma g_k\theta_\pm^k\Big/\alpha_{\mathrm{i}}^k. \tag{21.103}$$

In Equation 21.101, $S_\pm^{\mathrm{in},k}$ and $S_\pm^{\mathrm{out},k}$ denote the input and output photon densities into and from the kth section, respectively. For forward propagation, $S_+^{\mathrm{in},k} = S_+^{k-1}$ and $S_+^{\mathrm{out},k} = S_+^{k}$, whereas in the case of backward propagation, $S_-^{\mathrm{in},k} = S_-^{k}$ and $S_-^{\mathrm{out},k} = S_-^{k-1}$, according to Figure 21.15. Equation 21.101 is solved with respect to $S_\pm^{\mathrm{out},k}$ recursively, using the previously determined $S_\pm^{\mathrm{in},k}$, with the base cases in a recursive method defined by the boundary conditions in sections $k = 1$ and $k = p$, for forward and backward propagation, respectively. Just as in the previous model, where the nonlinear gain suppression was neglected, the solutions of Equation 21.101 will depend either on carrier densities in all preceding sections for forward propagation, $S_+^{\mathrm{out},k} = S_+(z_k, \bar{n}_1, \dots, \bar{n}_k) = S_+(z_k, n_0, \dots, n_k)$, or on all carrier densities in the case of backward propagation, $S_-^{\mathrm{out},k} = S_-(z_{k-1}, \bar{n}_1, \dots, \bar{n}_p) = S_-(z_{k-1}, n_0, \dots, n_p)$. Substituting these dependencies into the carrier rate Equation 21.95 at each section interface, z_k, gives the system of $p + 1$ transcendental equations:

$$f_k = 0 = \frac{I}{qV} - \left[An_k + R_{\mathrm{sp}}\left(n_k\right) + Cn_k^3\right] - \frac{v_g g\left(n_k\right)\left[S_+\left(z_k, n_0, \ldots, n_k\right) + S_-\left(z_k, n_0, \ldots, n_p\right)\right]}{1 + \varepsilon\left[S_+\left(z_k, n_0, \ldots, n_k\right) + S_-\left(z_k, n_0, \ldots, n_p\right)\right]}. \quad (21.104)$$

Unlike the previous model, for $\varepsilon = 0$, where the photon density dependencies on n_k could be expressed in closed analytical form, the solutions are now given in implicit form (Equation 21.101), which essentially requires a numerical method. Moreover, in order to employ a numerical method, the values for carrier densities in all sections need to be known. This raises the need for a self-consistent numerical approach in solving the system given by Equations 21.101 and 21.104. The numerical method should comprise two distinct steps. First, the IGVs need to be generated for carrier and photon densities at all section interfaces, which is done using the model for $\varepsilon = 0$. Next, an iterative procedure is used, where carrier and photon densities are alternately calculated, and carrier densities are subsequently updated based on the values from the current and previous iteration steps until the predefined tolerance is satisfied. The maximum relative error between two consecutive iteration steps, δ, is calculated as the maximum relative error for all monitored variables, at all interfaces, i.e., $\delta = \max\{\delta(n_k), \delta(S_+^k), \delta(S_-^k)\}$, and the tolerance is chosen to be $\delta_{\max} = 10^{-6}$. The updating of n_k is done using a set of weight coefficients with a sum of unity for the current and previous iteration steps, $\{w_i, w_{i-1}\} = \{0.1, 0.9\}$. The weight coefficients are chosen such that they give balance between the stability and speed of convergence, and usually no more than 100 iteration steps are required for the procedure to reach a self-consistent solution. It should be noted that due to the nature of the algorithm, the system of equations given by Equation 21.104 is not coupled since $S_+(z_k, n_0, \ldots, n_k)$ and $S_-(z_k, n_0, \ldots, n_p)$ are calculated for the carrier values from the previous iteration step and can be treated as parameters. In other words, the current iteration variable n_k is included in Equation 21.104 through the spontaneous emission terms and material gain.

It has been shown by Totović et al. (2014) that depending on the number of chosen sections and the level of approximation, the semianalytical model can be up to two orders of magnitude faster in comparison to the numerical model based on SCNM. Meanwhile, the maximum absolute mismatch in the device gain calculated by the numerical and semianalytical models does not exceed 1.6 dB even for only one section, and neglected nonlinear gain suppression, whereas this mismatch drops to a maximum of 0.11 dB for three sections with included gain suppression for a bulk R-SOA.

21.5.5 Case Study: Dynamic Propagation Model

When the input signal carries information encoded either in its amplitude, or phase, or both, a dynamic approach in SOA modeling is required. The same model needs to be applied for modulation or remodulation purposes, when the bias current is time dependent. The most general dynamic model, suitable for both large- and small-signal modulation, includes spatiotemporal and spectral dependency of both forward- and backward-propagating signals and noise, given by Equations 21.50 through 21.52, and, depending on the active region type, one or several equations describing spatiotemporal carrier density distribution. For bulk SOA, carrier density evolution can be described by Equation 21.49, for the MQW active region by Equations 21.54 and 21.55, and for the QD-SOA by Equations 21.57 through 21.59. Due to the ampleness and complexity of three-dimensional (3D) mesh (time-space-spectrum) implementation in the numerical algorithms, whenever the input signal is spectrally narrow, it is common practice to simplify the model and perform the analysis for photon densities and not their spectral distributions. Similar to Section 21.5.4, material gain and spontaneous emission rate can be approximated with the two-parameter logarithmic and second-order polynomial function, respectively, $g(n) = g_0 \ln(n/n_{\mathrm{tr}})$ and $R_{\mathrm{sp}}(n) = B_0 + B_1 n + B_2 n^2$, where the fitting parameters are given in Table 21.5 for the bulk and MQW active region, at the signal central wavelength of 1.55 μm. All other parameters, which are dependent on photon energy and carrier density, can be approximated by the corresponding fixed values given in Table 21.4, interpolated for the photon energy of $\hbar\omega_0 = 0.8$ eV and an average carrier density n_{av}, which depends on the active region type. Under these assumptions, the signal can be described by the equation similar to Equation 21.23, with the addition of nonlinear gain suppression:

$$\pm\frac{\partial S_\pm}{\partial z} + \frac{1}{v_{\mathrm{g}}}\frac{\partial S_\pm}{\partial t} = \left(\frac{\Gamma g}{1+\varepsilon S_\Sigma} - \alpha_{\mathrm{i}}\right) S_\pm. \tag{21.105}$$

The phase evolution for both propagating directions is given by Equation 21.51:

$$\pm\frac{\partial \varphi_\pm}{\partial z} + \frac{1}{v_{\mathrm{g}}}\frac{\partial \varphi_\pm}{\partial t} = \frac{k_0 \Gamma \Delta n_r}{1+\varepsilon S_\Sigma}. \tag{21.106}$$

ASE noise is treated with a separate equation, resembling Equation 21.105, with the addition of the spontaneous emission rate contribution:

$$\pm\frac{\partial A_\pm}{\partial z} + \frac{1}{v_{\mathrm{g}}}\frac{\partial A_\pm}{\partial t} = \left(\frac{\Gamma g}{1+\varepsilon S_\Sigma} - \alpha_{\mathrm{i}}\right) A_\pm + \frac{1}{2v_{\mathrm{g}}}\Gamma\beta_{\mathrm{sp}}R_{\mathrm{sp}}. \tag{21.107}$$

It should be noted that by using Equation 21.107, spectral dependence of ASE is neglected and all noise photons are treated at the single frequency. Boundary conditions are defined by the input signal, described by its photon density $S_0(t)$ and phase $\varphi_0(t)$, and front and rear facet reflectivities, R_1 and R_2, respectively. For antireflective facets, zero reflectivity can be assumed, whereas for the highly reflective ones, the reflectivity coefficient can be calculated as $R_2 = (n_{\mathrm{r}} - 1)^2/(n_{\mathrm{r}} + 1)^2$, if no reflective layer is placed. At the front facet, which is antireflective, the boundary conditions read $S_+(0) = S_0, \varphi_+(0) = \varphi_0, A_+(0) = 0$, and for the rear facet, which can be either highly- or antireflective, $S_-(L) = R_2 S_+(L), \varphi_-(L) = \varphi_+(L) + \pi$, and $A_-(L) = R_2 A_+(L)$. In the case of TW-SOA, rear facet reflectivity R_2 will be zero, and no backward-propagating signal will exist. However, since the noise is generated within the SOA, with equal probability of photon traveling in any direction, backward-propagating noise will exist, both for TW- and R-SOA.

Carrier density distribution is described by Equation 21.49, where the current I can be time dependent:

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{I}{qV} - \left(An + R_{\mathrm{sp}} + Cn^3\right) - \frac{v_{\mathrm{g}} g S_\Sigma}{1+\varepsilon S_\Sigma}. \tag{21.108}$$

In Equations 21.105 through 21.108, S_Σ stands for the total photon density in the SOA's active region, including both signal and noise, $S_\Sigma = S_+ + S_- + A_+ + A_-$.

The system given by Equations 21.105 through 21.108 cannot be analytically solved, and several numerical approaches are described in Section 21.5.2. Although TMM is widely used due to its simplicity, coarse segmentation along the longitudinal axis might lead to an error in calculating the photon density distribution. Moreover, this error can be accumulated during matrix multiplication and can be even more pronounced when two counterpropagating signals exist.

21.5.5.1 Upwind Scheme Numerical Implementation

In order to mitigate potential errors, a first-order upwind scheme numerical method based on FDM can be developed, where the space and time axis are treated as quasi-continuous through fine segmentation. After choosing the number of points along the longitudinal axis, P, which define the section length, $\Delta z = L/(P-1)$, segmentation of the temporal axis is done, such that $\Delta t \leq \Delta z/v_{\mathrm{g}}$, according to the Courant–Friedrichs–Lewy stability condition. Depending on the length of the analyzed time interval, T, the number of points along the temporal axis is determined as $Q = \lceil T/\Delta t \rceil + 1$. All derivatives in Equations 21.105 through 21.108 are replaced with finite differences, such that for temporal derivatives forward differences are used:

$$\frac{\mathrm{d}f}{\mathrm{d}t} \approx \frac{f\left(t_{j+1}\right) - f\left(t_j\right)}{\Delta t}, \tag{21.109}$$

where f is any time-dependent variable, i.e., $S_\pm, \varphi_\pm, A_\pm, n$, and for spatial derivatives, the choice is made based on the propagation direction. For forward propagation

$$\frac{\mathrm{d}f_+}{\mathrm{d}z} \approx \frac{f_+\left(z_i\right) - f_+\left(z_{i-1}\right)}{\Delta z}, \tag{21.110}$$

where f_+ denotes any of the following variables S_+, φ_+, A_+, whereas for backward propagation

$$\frac{\mathrm{d}f_-}{\mathrm{d}z} \approx \frac{f_-\left(z_{i+1}\right) - f_-\left(z_i\right)}{\Delta z}, \tag{21.111}$$

where f_- denotes any of the following variables: S_-, φ_-, A_-. Using Equations 21.109 through 21.111, a set of coupled partial differential equations describing signal and noise propagation along the SOA, Equations 21.105 through 21.107, can be transformed into the set of coupled linear algebraic equations, for forward

$$f_+\left(z_i, t_{j+1}\right) = f_+\left(z_i, t_j\right) + \Delta t v_\mathrm{g}\left[F_+\left(z_i, t_j\right) - \frac{f_+\left(z_i, t_j\right) - f_+\left(z_{i-1}, t_j\right)}{\Delta z}\right], \tag{21.112}$$

and backward propagation

$$f_-\left(z_i, t_{j+1}\right) = f_-\left(z_i, t_j\right) + \Delta t v_\mathrm{g}\left[F_-\left(z_i, t_j\right) + \frac{f_-\left(z_{i+1}, t_j\right) - f_-\left(z_i, t_j\right)}{\Delta z}\right], \tag{21.113}$$

where $f_\pm$ stands for any variable $S_\pm, \varphi_\pm$, or $A_\pm$, whereas $F_\pm$ stands for the RHS of the corresponding equation evaluated at point (z_i, t_j) in the 2D spatiotemporal mesh. For carrier density equation, the transformation yields

$$n\left(z_i, t_{j+1}\right) = n\left(z_i, t_j\right) + \Delta t F\left(z_i, t_j\right), \tag{21.114}$$

where F stands for the RHS of Equation 21.108, evaluated at point (z_i, t_j) in the 2D spatiotemporal mesh. Forward differences for temporal derivatives enable calculation of all variables in the next point in time, t_{j+1}, based on the values from the current one t_j, as shown in Equations 21.112 through 21.114, and illustrated in Figure 21.16.

The numerical implementation of the discretized system (Equations 21.112 through 21.114) essentially requires two distinctive iteration processes: one for the temporal and another for spatial evolution. For every point j along the temporal axis, spatial distribution of carrier density for the next temporal point $(j + 1)$ is determined using Equation 21.114, which is followed by simulation of forward and subsequently

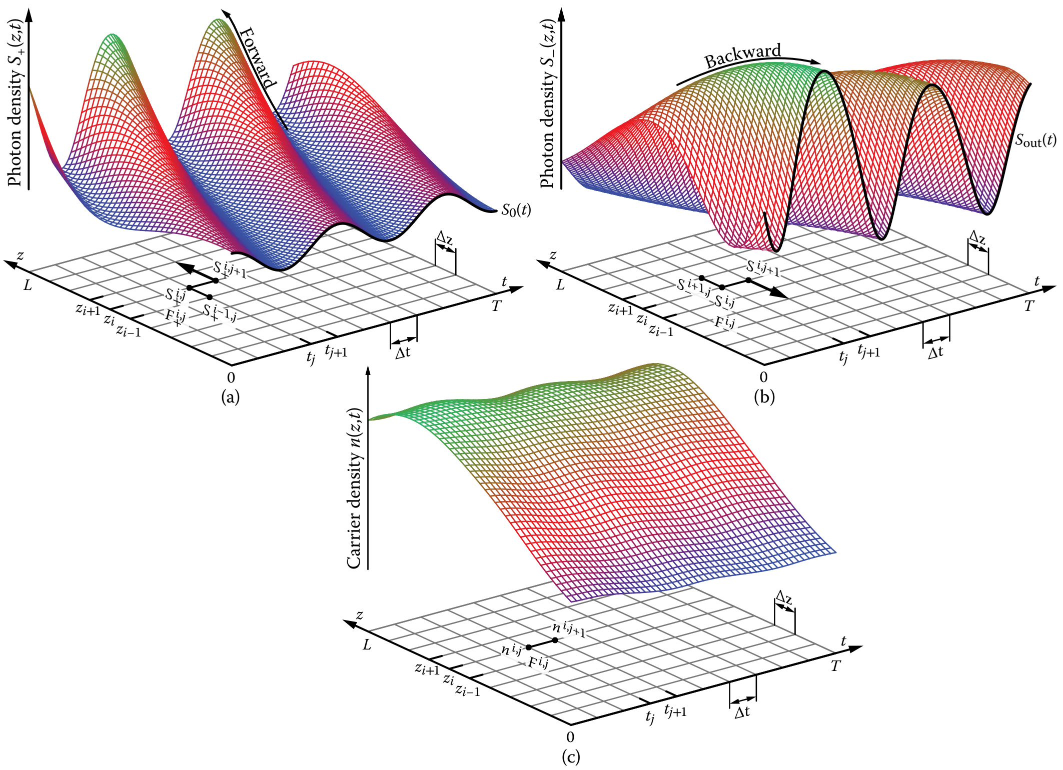

FIGURE 21.16 Illustration of two-dimensional (2D) spatiotemporal mesh with denoted relevant points for calculation of (a) forward- and (b) backward-propagating signal photon densities by upwind finite differences scheme, and (c) carrier densities by the forward finite differences method. The same upwind scheme can be applied to the phase, or noise photon density calculation. The example includes spatiotemporal distribution for (a) forward signal, (b) backward signal, and (c) carrier density.

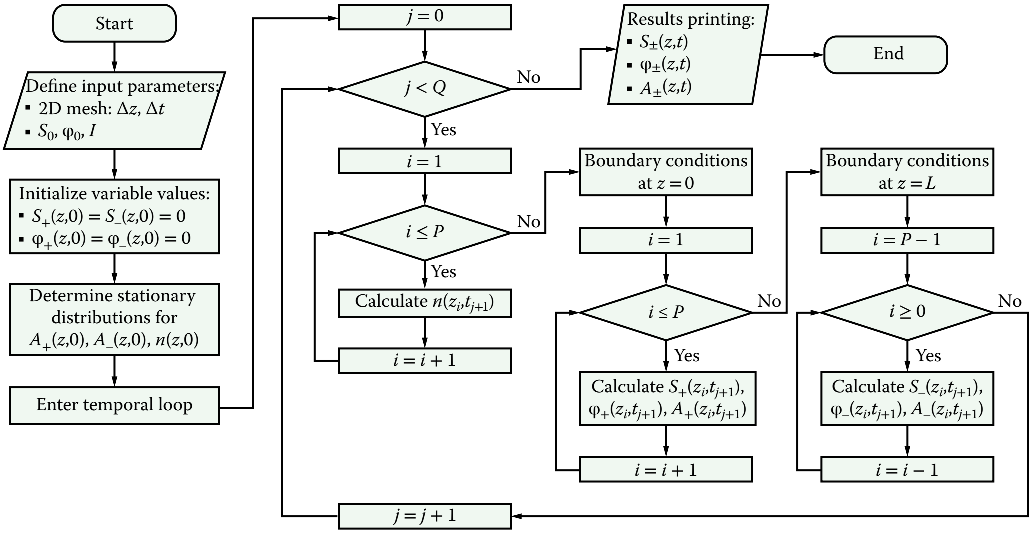
backward propagation of signal and noise along the SOA's active region using Equations 21.112 and 21.113. This process is repeated until the end of the temporal axis is reached, incrementing j by one, up to Q. Since the results in the $(j + 1)$th point in time are dependent on the values from the previous jth point, initial conditions for spatial distributions of all variables are required (for $j = 0$), in order to start the iteration process over time by calculating the values in the point $j = 1$. Initial values will depend on the assumed SOA state before the initialization of the simulation. If no input signal is present before $t = 0$, it can be assumed that both $S_\pm(z, 0)$ and $\varphi_\pm(z, 0)$ are zero. The noise will exist regardless of the signal's presence, so stationary distributions can be assumed for $A_\pm(z, 0)$. Based on these values, using Equation 21.108, stationary distribution for carrier density can also be determined and associated with $n(z, 0)$. Within the nested loop, for a fixed j, system (Equations 21.112 through 21.114) is solved for every point z_i, from 1 to P for forward-propagation, and P − 1 to 0 for backward propagation. The algorithm is summarized in the flowchart given in Figure 21.17.

21.5.6 Case Study: TMW Small-Signal Model

A very valuable figure-of-merit in using SOA for modulation purposes is its electro-optical (E/O) small-signal −3dB modulation bandwidth Ω_{3dB}. It is defined as the frequency of the modulation signal, i.e., electric current, for which the output SOA small signal, i.e., photon density or optical power, drops



Start
Define input parameters:
▪ 2D mesh: Δz, Δt
▪ S_0, φ_0, I
Initialize variable values:
▪ $S_+(z,0) = S_-(z,0) = 0$
▪ $\varphi_+(z,0) = \varphi_-(z,0) = 0$
Determine stationary distributions for $A_+(z,0)$, $A_-(z,0)$, $n(z,0)$
Enter temporal loop
$j = 0$
$j < Q$
No

$i = i - 1$

FIGURE 21.17 Flowchart of the upwind finite differences algorithm for the calculation of carrier and photon density spatiotemporal distributions, for both signal and noise.

to the half of its zero-frequency value. Knowing the influence of different structural and material parameters, as well as operating conditions, on $\Omega_{3\text{dB}}$, provides the means for optimization of the modulation response and increasing the bandwidth. Under the assumption that the input signal is spectrally narrow, the analysis is based on photon densities for forward and backward propagation, which include both signal and noise. The TW equations have the form similar to Equation 21.105, with the addition of the term describing spontaneous emission, as in Equation 21.107:

$$\pm\frac{\partial S_\pm}{\partial z} + \frac{1}{v_\text{g}}\frac{\partial S_\pm}{\partial t} = \left(\frac{\Gamma g}{1+\varepsilon S_\Sigma} - \alpha_\text{i}\right) S_\pm + \frac{1}{2v_\text{g}}\Gamma\beta_\text{sp}R_\text{sp}, \tag{21.115}$$

where $S_\Sigma = S_+ + S_-$. Since the intensity modulation is of interest, the analysis of the signal phase is not necessary. The carrier rate equation has the same form as Equation 21.108:

$$\frac{\text{d}n}{\text{d}t} = \frac{J}{qH} - \left(An + R_\text{sp} + Cn^3\right) - \frac{v_\text{g} g S_\Sigma}{1+\varepsilon S_\Sigma}, \tag{21.116}$$

where current density $J = I/(WL)$ is used instead of current I. This choice stems from the fact that modulation current I depends on device length, and the current density proves to be a more suitable parameter for benchmarking the performance of SOAs with different active region lengths. Generally, bias current density will consist of the stationary component and a small signal, which will, through Equation 21.116, lead to the carrier density modulation, and consequently to modulation of all carrier-dependent parameters, namely, g, R_sp, α_i, and $S_\pm$. From this point onward, all stationary values will be denoted by an overline, whereas all small-signals will be prefixed with Δ.

For the stationary value of bias current density, $\bar{J}$, all temporal derivatives will diminish from Equations 21.115 and 21.116, and the system will reduce to its steady-state form, given by Equations 21.94 and 21.95. In order to determine the steady-state values of $\bar{n}$ and $\bar{S}_\pm$, any of the previously discussed methods for steady-state analysis, given in Sections 21.5.1, 21.5.3, and 21.5.4, can be used. It is assumed that the CW input signal enters the device at the front facet, giving $S_+(z = 0, t) = \bar{S}_+(z = 0) = S_0$. The boundary condition for the backward-propagating signal at the rear facet is given by $S_-(z = L, t) = R_2 S_+(z = L, t)$, where R_2 can have either a finite value, for R-SOA, or it can be zero, for TW-SOA.

The typical approach in small-signal analysis is to assume that the small-signal values are approximately lower by an order of magnitude or more, in comparison to the stationary values, and can be treated as perturbation. This assumption enables linearization of the system given by Equations 21.115 and 21.116 with respect to the small-signal quantities. As discussed in Section 21.4.3.5, bias current cannot instantaneously reach a uniform spatial distribution across the electrode and should be treated as a harmonic TMW with finite velocity, v_e. Moreover, due to reflection at the end of microstrip electrode, the microwave will propagate in both directions with respect to the longitudinal axis (Totović et al., 2015). This model becomes very important for the frequencies exceeding $v_e/(2\pi L)$, when an entire electric pulse is accommodated in the SOA's active region. A general model of the small-signal bias current density with sinusoidal waveform, defined by the spatially variable voltage across the electrode, can be written in the following form based on Equation 21.63:

$$\begin{aligned} J(z,t) &= \bar{J} + \Delta J(z)\exp(i\Omega t) \\ &= \bar{J} + \Delta J_{\mathrm{F}}(z)\exp\left[i\left(\Omega t - \beta_e z\right)\right] + \Delta J_{\mathrm{B}}(z)\exp\left[i\left(\Omega t + \beta_e z\right)\right], \end{aligned} \tag{21.117}$$

where $\Delta J(z)$ is the total small-signal bias current density spatial distribution, comprising both forward (F)- and backward (B)-propagating microwaves, $\Omega = 2\pi f$ is the angular frequency, with f being the frequency of the TMW, and β_e is the microwave propagation constant.

21.5.6.1 Derivation of the Small-Signal Model

Modulation of the bias current density leads to the modulation of carrier density n, and all carrier-dependent parameters, g, R_{sp}, α_i, and $S_\pm$, commonly denoted ξ, which will also have sinusoidal form

$$\begin{aligned} \xi(z,t) &= \bar{\xi}(z) + \Delta\xi(z)\exp(i\Omega t) \\ &= \bar{\xi}(z) + \Delta\xi_{\mathrm{F}}(z)\exp\left[i\left(\Omega t - \beta_e z\right)\right] + \Delta\xi_{\mathrm{B}}(z)\exp\left[i\left(\Omega t + \beta_e z\right)\right], \end{aligned} \tag{21.118}$$

where $\Delta\xi(z)$ is the total small-signal spatial distribution of the corresponding quantities. For known dependencies of material gain, and spontaneous emission rate, on carrier density, $g(n) = g_0 \ln(n/n_{tr})$, and $R_{sp}(n) = B_0 + B_1 n + B_2 n^2$, respectively, it is possible to express small-signal values of $\Delta g^{\mathrm{F/B}}$ and $\Delta R_{sp}^{\mathrm{F/B}}$ via $\Delta n^{\mathrm{F/B}}$ using the first derivatives of the corresponding functions, evaluated for the steady-state carrier density. This gives

$$\Delta g^{\mathrm{F/B}} = \left(\mathrm{d}g/\mathrm{d}n\right)\Big|_{n=\bar{n}} \Delta n^{\mathrm{F/B}} = \left(g_0/\bar{n}\right)\Delta n^{\mathrm{F/B}}, \tag{21.119}$$

$$\Delta R_{sp}^{\mathrm{F/B}} = \left(\mathrm{d}R_{sp}/\mathrm{d}n\right)\Big|_{n=\bar{n}} \Delta n^{\mathrm{F/B}} = \left(B_1 + 2B_2\bar{n}\right)\Delta n^{\mathrm{F/B}}. \tag{21.120}$$

Substituting Equations 21.117 through 21.120 into Equation 21.116, and separating the stationary, and small signals, gives a system comprising a steady-state rate equation, given by Equation 21.95, and small-signal equations for forward and backward TMW propagation. In order to linearize the small-signal equations, two approximations are required. The first one is related to the term describing the stimulated emission in Equation 21.116, namely, $v_g g S_\Sigma/(1 + \varepsilon S_\Sigma)$, which is nonlinear due to the presence of the small-signal photon densities both in numerator and denominator. The function

$$\left(1 + \varepsilon S_\Sigma\right)^{-1} = \left[1 + \varepsilon\bar{S}_\Sigma + \varepsilon\left(\Delta S_+^{\mathrm{F}} + \Delta S_-^{\mathrm{F}}\right)e^{i(\Omega t - \beta_e z)} + \varepsilon\left(\Delta S_+^{\mathrm{B}} + \Delta S_-^{\mathrm{B}}\right)e^{i(\Omega t + \beta_e z)}\right]^{-1} \tag{21.121}$$

can be rephrased as

$$\left(1+\varepsilon S_\Sigma\right)^{-1}=\frac{1}{1+\varepsilon\bar{S}_\Sigma}\left[1+\frac{\varepsilon\left(\Delta S_+^{\mathrm{F}}+\Delta S_-^{\mathrm{F}}\right)}{1+\varepsilon\bar{S}_\Sigma}e^{i(\Omega t-\beta_{\mathrm{e}}z)}+\frac{\varepsilon\left(\Delta S_+^{\mathrm{B}}+\Delta S_-^{\mathrm{B}}\right)}{1+\varepsilon\bar{S}_\Sigma}e^{i(\Omega t+\beta_{\mathrm{e}}z)}\right]^{-1}. \tag{21.122}$$

The second term in the product of the RHS of Equation 21.122 can be treated as $(1+x)^{-1}$, where $x \ll 1$, and therefore approximated with $1-x$, which leads to

$$\left(1+\varepsilon S_\Sigma\right)^{-1}\approx\frac{1}{1+\varepsilon\bar{S}_\Sigma}-\frac{\varepsilon\left(\Delta S_+^{\mathrm{F}}+\Delta S_-^{\mathrm{F}}\right)}{\left(1+\varepsilon\bar{S}_\Sigma\right)^2}e^{i(\Omega t-\beta_{\mathrm{e}}z)}-\frac{\varepsilon\left(\Delta S_+^{\mathrm{B}}+\Delta S_-^{\mathrm{B}}\right)}{\left(1+\varepsilon\bar{S}_\Sigma\right)^2}e^{i(\Omega t+\beta_{\mathrm{e}}z)}. \tag{21.123}$$

The following step in linearization is applying the first-order approximation, i.e., neglecting of all small-signal terms of the order higher than one. This gives the following system of small-signal rate equations for forward and backward TMW propagation

$$i\Omega\Delta n^{\mathrm{F/B}}=\frac{\Delta J^{\mathrm{F/B}}}{qH}-\left(A+B_1+2B_2\bar{n}+3C\bar{n}^2\right)\Delta n^{\mathrm{F/B}}-\left[\frac{g_0}{\bar{n}}\frac{v_{\mathrm{g}}\bar{S}_\Sigma}{1+\varepsilon\bar{S}_\Sigma}\Delta n^{\mathrm{F/B}}+v_{\mathrm{g}}\frac{g_{\mathrm{eff}}}{\Gamma}\left(\Delta S_+^{\mathrm{F/B}}+\Delta S_-^{\mathrm{F/B}}\right)\right], \tag{21.124}$$

where $g_{\mathrm{eff}}=\Gamma\bar{g}/(1+\varepsilon\bar{S}_\Sigma)^2$. The previous system can be solved with respect to the small-signal carrier densities resulting from forward (F)- and backward (B)-propagating microwaves:

$$\Delta n^{\mathrm{F/B}}=\frac{\Delta J^{\mathrm{F/B}}/(qH)-v_{\mathrm{g}}g_{\mathrm{eff}}\left(\Delta S_+^{\mathrm{F/B}}+\Delta S_-^{\mathrm{F/B}}\right)/\Gamma}{A+B_1+2B_2\bar{n}+3C\bar{n}^2+\dfrac{g_0}{\bar{n}}\dfrac{v_{\mathrm{g}}\bar{S}_\Sigma}{1+\varepsilon\bar{S}_\Sigma}+i\Omega}. \tag{21.125}$$

Substituting Equations 21.118 through 21.120 and Equation 21.125 into Equation 21.115, followed by the linearization process, leads to the system of two steady-state TW equations given by Equation 21.94, and four small-signal TW equations written with respect to the small-signal photon densities propagating in any of the two directions (denoted by subscript sign $\Delta S_\pm$) and resulting from any of the microwave propagation directions (denoted by the superscript $\Delta S^{\mathrm{F/B}}$):

$$\pm\frac{\mathrm{d}\Delta S_\pm^{\mathrm{F}}}{\mathrm{d}z}=\frac{\Gamma\gamma_\pm}{qHv_{\mathrm{g}}}\Delta J_{\mathrm{F}}-\left(\varepsilon\bar{S}_\pm+\gamma_\pm\right)g_{\mathrm{eff}}\Delta S_\mp^{\mathrm{F}}+\left[g_{\mathrm{eff}}\left(1+\varepsilon\bar{S}_\mp-\gamma_\pm\right)-\bar{\alpha}_{\mathrm{i}}-i\left(\frac{\Omega}{v_{\mathrm{g}}}\mp\beta_{\mathrm{e}}\right)\right]\Delta S_\pm^{\mathrm{F}}, \tag{21.126}$$

$$\pm\frac{\mathrm{d}\Delta S_\pm^{\mathrm{B}}}{\mathrm{d}z}=\frac{\Gamma\gamma_\pm}{qHv_{\mathrm{g}}}\Delta J_{\mathrm{B}}-\left(\varepsilon\bar{S}_\pm+\gamma_\pm\right)g_{\mathrm{eff}}\Delta S_\mp^{\mathrm{B}}+\left[g_{\mathrm{eff}}\left(1+\varepsilon\bar{S}_\mp-\gamma_\pm\right)-\bar{\alpha}_{\mathrm{i}}-i\left(\frac{\Omega}{v_{\mathrm{g}}}\pm\beta_{\mathrm{e}}\right)\right]\Delta S_\pm^{\mathrm{B}}, \tag{21.127}$$

where

$$\gamma_\pm=\frac{v_{\mathrm{g}}\left(\dfrac{g_0/\bar{n}}{1+\varepsilon\bar{S}_\Sigma}-K_1\right)\bar{S}_\pm+\dfrac{1}{2}\beta_{\mathrm{sp}}\left(B_1+2B_2\bar{n}\right)}{A+B_1+2B_2\bar{n}+3C\bar{n}^2+\dfrac{g_0}{\bar{n}}\dfrac{v_{\mathrm{g}}\bar{S}_\Sigma}{1+\varepsilon\bar{S}_\Sigma}+i\Omega}. \tag{21.128}$$

The γ-parameter is dimensionless, complex, and spatially and frequency dependent. It is responsible for frequency dependence of small-signal photon density distributions and their sensitivity to the frequency change for all other parameters fixed. In the case of zero frequency, $\gamma_\pm$ becomes purely real, whereas for high frequencies, such as the ones close to the modulation bandwidth and beyond, its imaginary part becomes dominant over the real one.

Since Equations 21.126 and 21.127 are derived from Equation 21.115, the boundary conditions for small-signal equations are inherited from the ones corresponding to Equation 21.115. The input signal is assumed to be CW, so $\Delta S_+^{\mathrm{F/B}}(0) = 0$. At the rear facet, the boundary conditions are conditioned by the power reflectivity coefficient, $\Delta S_-^{\mathrm{F/B}}(L) = R_2 \Delta S_+^{\mathrm{F/B}}(L)$.

21.5.6.2 Numerical Implementation

In order to determine the −3dB bandwidth, $f_{3\mathrm{dB}} = \Omega_{3\mathrm{dB}}/(2\pi)$, it is necessary to calculate the output small-signal photon density for a range of modulation frequencies, $\Delta S_{\mathrm{out}}(\Omega)$, and determine the one for which the condition $|\Delta S_{\mathrm{out}}(\Omega_{3\mathrm{dB}})/\Delta S_{\mathrm{out}}(0)| = 1/2$ is satisfied. In the case of TW-SOA, the output signal will be recorded at the rear facet, $\Delta S_{\mathrm{out}} = \Delta S_+(L) = \Delta S_+^{\mathrm{F}}(L)\exp(-i\beta_e L) + \Delta S_+^{\mathrm{B}}(L)\exp(i\beta_e L)$, whereas for R-SOA, at the front facet, $\Delta S_{\mathrm{out}} = \Delta S_-(0) = \Delta S_-^{\mathrm{F}}(0) + \Delta S_-^{\mathrm{B}}(0)$. These signals can be found by solving the boundary value problem given by Equations 21.126 and 21.127. In the case of an R-SOA, this system comprises four coupled differential equations of the first order, with functional coefficients, and can be solved using any of the available numerical algorithms for boundary value problems, e.g., the FDM that implements the three-stage Lobatto IIIA formula (Hairer and Wanner, 1996). For a TW-SOA, backward-propagating signals can be neglected due to zero power reflectivity, and very low contribution of the spontaneous emission, so the system reduces to two noncoupled equations which can be solved with numerical integration.

Prior to solving system of Equations 21.126 and 21.127, it is necessary to calculate spatial distributions of the steady-state variables, $\bar{n}$ and $\bar{S}_\pm$, and auxiliary parameters, g_{eff} and $\gamma_\pm$. As previously discussed, steady-state values can be calculated by any of the models presented in earlier sections.

After the output small-signal variables are calculated, the −3dB bandwidth can be determined by interpolating the function $|\Delta S_{\mathrm{out}}(\Omega)/\Delta S_{\mathrm{out}}(0)|$ in search of the value $\Omega_{3\mathrm{dB}}$ which gives 1/2 as a solution. For rare, special cases, $\Omega_{3\mathrm{dB}}$ might be found in analytical form. In order to do this, usually a significant number of approximations is required, and the resulting analytical expression might be very complex (Antonelli et al., 2015), or the expression has a simpler form, but is valid under limited conditions.

21.5.6.3 Results and Discussion

Implementing the algorithm described in the previous pages provides the dependence of −3dB bandwidth, $f_{3\mathrm{dB}}$, on the operating conditions, given in Figure 21.18.

The analysis is done for the microwave velocity of $v_e = 4.6\times10^7$ m/s (Tauber et al., 1994), and under the assumption that the load and characteristic impedances of the transmission line, Z_{L} and Z_{C}, respectively, are matched, which results in the microwave reflection coefficient $\Gamma_{\mathrm{L}} = (Z_{\mathrm{L}} - Z_{\mathrm{C}})/(Z_{\mathrm{L}} + Z_{\mathrm{C}}) = 0$. The small signal bias current density, ΔJ, is assumed to be equal to $0.1\bar{J}$.

Comparing the two SOA types, TW-SOA, Figure 21.18a and b, and R-SOA, Figure 21.18c and d, it can be concluded that, not only does the R-SOA provide higher bandwidths, but it does so for a much wider range of input optical powers. Both SOA types exhibit an increase in $f_{3\mathrm{dB}}$ with the increase of steady-state bias current density, but the behavior with P_0 variation differs significantly. In the case of TW-SOA, the bandwidth generally increases with the increase of P_0, reaching its maximum for deep saturation, and input optical powers between 20 and 25 dBm. Contrarily, R-SOA shows two maxima, providing the choice between two operation regimes, one for the low input optical powers and high device gain, and one for the deep saturation. It should be noted that −3dB bandwidth significantly depends on device length (Totović et al., 2015), which can be optimized to achieve maximum values of $f_{3\mathrm{dB}}$. Aside from changes in values of $f_{3\mathrm{dB}}$ with the length variation, the prominence of low- and high-power maxima in R-SOA can also be

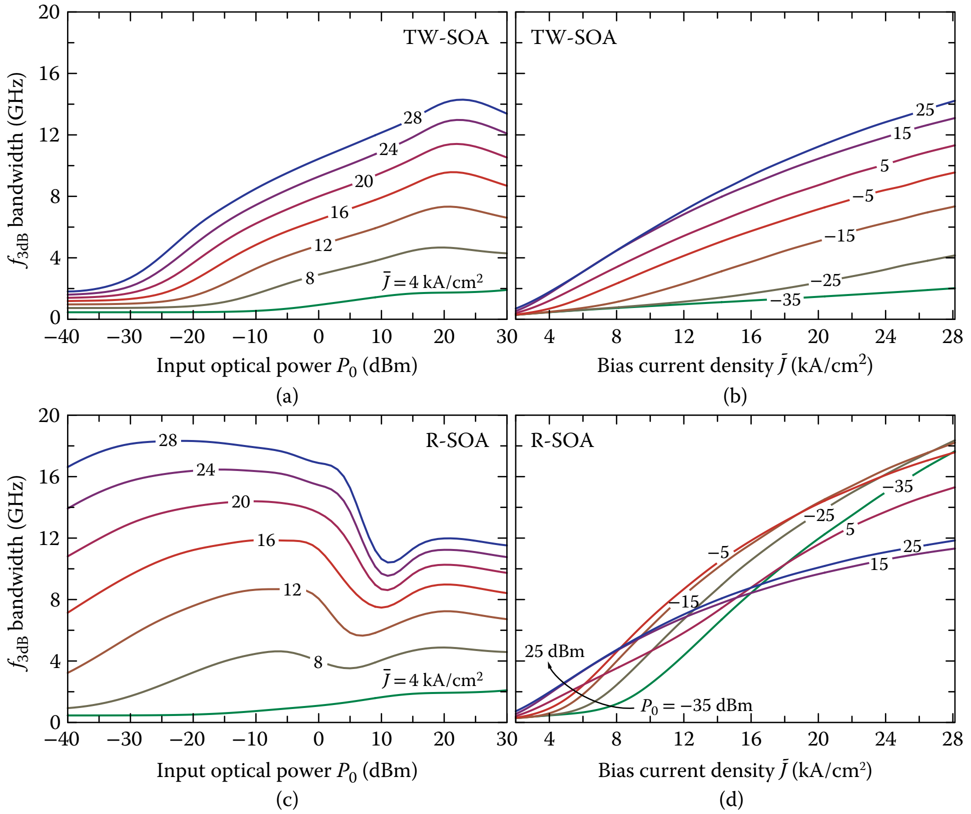

FIGURE 21.18 Bandwidth dependence on (a, c) the continuous wave (CW) input optical power P_0 (dBm) and (b, d) the bias current density $\bar{J}$ (kA/cm^2) for (a), (b) traveling-wave semiconductor optical amplifier (TW-SOA), and (c), (d) reflective (R)-SOA in the case of L = 800 μm.

interchanged. It should be noted that calculated bandwidth is intrinsic, and that inclusion of parasitic effects of the supporting circuit may modify the modulation response.

21.5.7 Case Study: Small-Signal Model for Transparent SOA

Transparent SOA has been repeatedly analyzed as a characteristic example of operating conditions under which the analytical expression for −3dB E/O bandwidth may be obtained (Mørk et al., 1999; Antonelli et al., 2015; Totović et al., 2016). By transparency, it is assumed that the steady-state modal gain is equal to the loss of the amplifier cavity, $\Gamma\bar{g} = \bar{\alpha}_i$, and therefore the steady-state photon density remains unchanged during its propagation. However, even under these circumstances, an analytical expression cannot be obtained without a number of approximations which simplify the system.

21.5.7.1 Framework for the Small-Signal Analysis

In this case study, the expressions will be derived under the following assumptions (Totović et al., 2016):

1. Nonlinear gain suppression is neglected, $\varepsilon\bar{S}_\Sigma \ll 1$.
2. Contribution of ASE noise to the signal is neglected, $\beta_{sp} = 0$.
3. Carrier loss due to the spontaneous emission is modeled via carrier lifetime, τ_s.

4. Current is assumed to reach uniform distribution along the electrode instantaneously, i.e., small-signal current density is assumed to be spatially independent, $\Delta J(z) = \Delta J$.

Within this framework, the system of equations governing signal and carrier dynamics can be derived from Equations 21.115 and 21.116, and reads

$$\pm\frac{\partial S_\pm}{\partial z} + \frac{1}{v_\mathrm{g}}\frac{\partial S_\pm}{\partial t} = \left(\Gamma g - \alpha_\mathrm{i}\right) S_\pm, \tag{21.129}$$

$$\frac{\mathrm{d}n}{\mathrm{d}t} = \frac{J}{qH} - \frac{n}{\tau_\mathrm{s}} - v_\mathrm{g} g S_\Sigma. \tag{21.130}$$

Assuming that the bias current has the general form given by Equation 21.117, $J(z,t) = J(t) = \bar{J} + \Delta J \exp(i\Omega t)$, the system (Equations 21.129 and 21.130) can be decoupled to the steady-state and small-signal equations. After linearization, small-signal carrier density has the form similar to Equation 21.125:

$$\Delta n = \frac{\Delta J/(qH) - v_\mathrm{g}\bar{g}\left(\Delta S_+ + \Delta S_-\right)}{1/\tau_\mathrm{s} + v_\mathrm{g} g_0/\bar{n} \cdot \bar{S}_\Sigma + i\Omega}, \tag{21.131}$$

and the system of equations written with respect to small-signal photon densities reads

$$\pm\frac{\mathrm{d}\Delta S_\pm}{\mathrm{d}z} = \frac{\Gamma\gamma_\pm}{qHv_\mathrm{g}}\Delta J + \left(\Gamma\bar{g} - \bar{\alpha}_\mathrm{i} - i\frac{\Omega}{v_\mathrm{g}}\right)\Delta S_\pm - \Gamma\bar{g}\gamma_\pm\left(\Delta S_\pm + \Delta S_\mp\right), \tag{21.132}$$

where

$$\gamma_\pm = \frac{v_\mathrm{g}\left(g_0/\bar{n} - K_1\right)}{1/\tau_s + v_\mathrm{g} g_0/\bar{n} \cdot \bar{S}_\Sigma + i\Omega}\bar{S}_\pm \tag{21.133}$$

has a meaning similar to the γ-parameter defined by Equation 21.128. Although the system given by Equation 21.132 is analytically solvable, the complexity of the solution undermines its benefit, and prevents us from determining the analytical solution for $\Omega_{3\mathrm{dB}}$.

21.5.7.2 Employing the Transparency Condition

Choosing the transparency as the operating regime defines the steady-state values of carrier and photon densities. From the condition $\Gamma\bar{g} = \bar{\alpha}_\mathrm{i}$, the value for carrier density can be determined:

$$\bar{n} = -\frac{g_0}{K_1} W_L\left[-\frac{K_1 n_\mathrm{tr}}{g_0}\exp\left(\frac{K_0}{\Gamma g_0}\right)\right], \tag{21.134}$$

where $W_\mathrm{L}(x)$ stands for the Lambert W (product-logarithm) function. Introducing the transparency condition in the steady-state form of Equation 21.129 results in $\mathrm{d}S_\pm/\mathrm{d}z = 0$, meaning that the steady-state photon density is not spatially dependent and is defined by the boundary conditions. For both TW- and R-SOA, the forward-propagating steady-state photon density $\bar{S}_+$ will be equal to the input photon density S_0, whereas the backward-propagating photon density will either be zero, for TW-SOA, or $\bar{S}_- = R_2\bar{S}_+ = R_2 S_0$, for R-SOA. Substituting $\bar{S}_\pm$ in the steady-state form of Equation 21.130 gives correlation between the stationary bias current density and the input photon density, for which the transparency condition is met:

$$S_0 = \frac{1}{v_\mathrm{g} g_0 \ln\left(\bar{n}/n_\mathrm{tr}\right)\left(1 + R_2\right)}\left(\frac{\bar{J}}{qH} - \frac{\bar{n}}{\tau_\mathrm{s}}\right). \tag{21.135}$$

Aside from the maximum value of bias current density, dictated by the long-term stable SOA operation, Equation 21.135 gives a limit for the minimal value of $\bar{J}_{\mathrm{min}} = qH\bar{n}/\tau_{\mathrm{s}}$ since the input photon density cannot be negative.

Introducing the transparency condition in Equation 21.132 gives

$$\pm\frac{\mathrm{d}\Delta S_{\pm}}{\mathrm{d}z} = \frac{\Gamma\gamma_{\pm}}{qHv_{\mathrm{g}}}\Delta J - i\frac{\Omega}{v_{\mathrm{g}}}\Delta S_{\pm} - \Gamma\bar{g}\gamma_{\pm}\left(\Delta S_{\pm} + \Delta S_{\mp}\right). \tag{21.136}$$

Moreover, having a fixed value for $\bar{n}$ reduces the γ-parameter to a spatially independent value, meaning that Equation 21.136 is the system of differential equations of the first order with fixed coefficients. The output small-signal photon density of TW-SOA has the following form

$$\Delta S_{+}(L) = \frac{\Gamma}{qHv_{\mathrm{g}}}\Delta J\frac{\gamma_{+}}{\Gamma\bar{g}\gamma_{+} + i\Omega/v_{\mathrm{g}}}\left\{1 - \exp\left[-\left(\Gamma\bar{g}\gamma_{+} + i\frac{\Omega}{v_{\mathrm{g}}}\right)L\right]\right\}, \tag{21.137}$$

whereas the output small-signal photon density of an R-SOA reads

$$\Delta S_{-}(0) = 2R_2\frac{\Gamma\gamma_{+}}{qHv_{\mathrm{g}}}\Delta J \times \left\{\frac{1+3R_2}{2}\Gamma\bar{g}\gamma_{+} + i\frac{\Omega}{v_{\mathrm{g}}} + \sqrt{\left(\frac{1-R_2}{2}\Gamma\bar{g}\gamma_{+}\right)^2 + \left[\left(1+R_2\right)\Gamma\bar{g}\gamma_{+} + i\frac{\Omega}{v_{\mathrm{g}}}\right] i\frac{\Omega}{v_{\mathrm{g}}}}\right.$$
$$\left.\times \coth\left[L\sqrt{\left(\frac{1-R_2}{2}\Gamma\bar{g}\gamma_{+}\right)^2 + \left[\left(1+R_2\right)\Gamma\bar{g}\gamma_{+} + i\frac{\Omega}{v_{\mathrm{g}}}\right] i\frac{\Omega}{v_{\mathrm{g}}}}\right]\right\}^{-1}. \tag{21.138}$$

21.5.7.3 Analytical Formulae for Modulation Bandwidth

As previously discussed, the γ-parameter influences the SOA's small-signal modulation response through its dependence on Ω. For zero frequency, $\gamma_{\pm}$ becomes purely real, whereas for high frequencies, close to $\Omega_{3\mathrm{dB}}$ and beyond, it can be approximated with purely imaginary parameter

$$\gamma_{\pm}\big|_{\Omega\to\Omega_{3\mathrm{dB}}} \approx v_{\mathrm{g}}\left(g_0/\bar{n} - K_1\right)\bar{S}_{\pm}\Big/(i\Omega). \tag{21.139}$$

In addition, during the derivation of the analytical expression for $\Omega_{3\mathrm{dB}}$, all trigonometric functions that are encountered, namely $\sin(x)$ for $x \to 0$ in case of TW-SOA and $\coth(x)$ for $x \to 0$ in the case of R-SOA, are approximated by the first term of their respective Maclaurin series expansion, $\sin(x) \approx x$ and $\coth(x) \approx 1/x$, respectively. This leads to the simpler form of Equations 21.137 and 21.138 in the vicinity of $\Omega_{3\mathrm{dB}}$. For TW-SOA, the output small-signal photon density is

$$\left|\Delta S_{+}(L)\right|\big|_{\Omega\to\Omega_{3\mathrm{dB}}} \approx \frac{\Gamma\Delta J}{qH}\left(\frac{g_0}{\bar{n}} - K_1\right)L\frac{S_0}{\Omega}, \tag{21.140}$$

and for R-SOA

$$\left|\Delta S_{-}(0)\right|\big|_{\Omega\to\Omega_{3\mathrm{dB}}} \approx 2R_2\frac{\Gamma\Delta J}{qH}\left(\frac{g_0}{\bar{n}} - K_1\right)L\frac{S_0}{\Omega}. \tag{21.141}$$

Finally, from the condition $|\Delta S_{\mathrm{out}}(\Omega_{3\mathrm{dB}})/\Delta S_{\mathrm{out}}(0)| = 1/2$, the −3dB bandwidth can be found, under the transparency regime. For TW-SOA, it is given by

$$\Omega_{3\mathrm{dB}} = \Gamma g_0 \ln \frac{\bar{n}}{n_{\mathrm{tr}}} L v_{\mathrm{g}} \left(\frac{g_0}{\bar{n}} - K_1 \right) S_0 \left\{ 1 + \coth \left[\Gamma g_0 \ln \frac{\bar{n}}{n_{\mathrm{tr}}} \frac{L}{2} \frac{v_{\mathrm{g}} \left(g_0/\bar{n} - K_1 \right) S_0}{1/\tau_{\mathrm{s}} + v_{\mathrm{g}} g_0/\bar{n} \cdot S_0} \right] \right\}, \qquad (21.142)$$

and for R-SOA it has the form

$$\Omega_{3\mathrm{dB}} = 2 \left[\frac{1}{\tau_{\mathrm{s}}} + v_{\mathrm{g}} \frac{g_0}{\bar{n}} \left(1 + R_2 \right) S_0 \right] + \left(1 + 3R_2 \right) \Gamma g_0 \ln \frac{\bar{n}}{n_{\mathrm{tr}}} L v_{\mathrm{g}} \left(\frac{g_0}{\bar{n}} - K_1 \right) S_0. \qquad (21.143)$$

21.6 Conclusion

SOAs have been extensively studied ever since WDM networks became widely adopted. In order to enable massive deployment of optical access networks, optical technologies, including SOAs, have expanded toward the lower levels of network hierarchy, aiming to relieve first/last mile bottleneck. Due to their versatility, SOAs are the key components in many of these levels. R-SOA has recently become one of the most promising candidates for the next-generation wavelength division multiplexed passive optical networks (WDM-PONs), representing the new Fiber-to-the-Home paradigm. Moreover, it is on its way to become a crucial component in Worldwide Interoperability for Microwave Access (WiMAX) and Wireless-Fidelity (Wi-Fi) Radio-over-Fiber (RoF) access network architecture. TW- and R-SOAs are devices of choice for many nonlinear applications, including those related to FWM, wavelength conversion, and all optical signal processing in general.

The choice of the SOA type for a specific purpose does not necessarily require better overall performance but usually better performance in one or several aspects. Therefore, both TW- and R-SOA have found their applications. However, optimization of the devices themselves, as well as the system as a whole, should always be performed in order for the SOAs to reach their full potential. The optimization of the device includes the choice of material, device geometry, and operating conditions, whereas the system analysis involves many more aspects that need to be addressed. This process requires an elaborate, but efficient SOA model, which accounts for all relevant effects. In Section 21.5, various models have been presented for both the steady-state and dynamic operating regimes. All models are built starting from the rate equations describing SOA dynamics, which can include multiple levels of approximation, as discussed in Section 21.4. The basic model recognizes only the essential processes present in the SOAs, i.e., carrier injection, stimulated and spontaneous recombination, and signal amplification. More realistic models comprise additional effects, such as wideband ASE noise, carrier transport, nonlinear gain suppression, temperature effects, and distributed bias current, all of which are discussed in detail. Moreover, in order for the model to accurately represent the SOA's performance, a detailed analysis of the optical properties of materials used for the active region and the waveguide geometry should be performed, which can be done using the models presented in Section 21.3. This includes calculation of the full spectral profile of material gain, radiative spontaneous recombination rate, refractive index variation, and optical confinement factor, among other parameters.

For SOA optimization in the steady-state operating regime, the wideband model, based on the self-consistent iterative method, given in Section 21.5.3, can provide detailed results, but does consume a significant amount of computational resources. This method is mainly designed for the characterization and optimization of the device itself. On the other hand, for quick assessment of the SOA's performance, especially in more complex network architectures, the semi-analytical model, presented in Section 21.5.4, proves to be time and resource efficient, at the expense of somewhat decreased precision. In the dynamic operating regime, the upwind scheme finite difference model can be used, as shown in Section 21.5.5, which is transparent to the modulation type, and designed to support even advanced modulation formats. For SOAs used in direct E/O modulation, −3dB bandwidth is a good indicator of the SOAs' performance, and can be determined and optimized based on the detailed numerical model given in Section 21.5.6. When resources are limited, and the SOA operates in the transparency regime, simple analytical solutions, derived in Section 21.5.7, can be used for the same purpose.

The overview of various steady-state and dynamic models, as well as the case studies presented, provides insight into the methods for numerically accurate and efficient simulations of standalone and system-embedded SOAs. These methods can help in the development of computational tools which can be used for the optimization of SOA design based on the dependence of its performance on technological parameters and operating conditions. It should be noted that advanced SOA models, which deal with nonlinear effects, are usually built upon the models which simulate standard SOA amplification regime.

22.1 Introduction

In recent years, the pervasive extension of semiconductor-based laser sources has been reaching application domains, such as lidar, material processing, metrology, and frequency doubling, where other laser sources are still prevalent because of the concurrent requirements of high power, high spectral purity, and high-beam quality. Two slightly different semiconductor devices are already in use for some of these applications: tapered laser diodes (Walpole, 1996; Wenzel et al., 2003; Sumpf et al., 2009) and master-oscillator power-amplifiers (MOPAs) (O'Brien et al., 1993; Spreemann et al., 2009). A tapered MOPA consists of either a distributed Bragg reflector laser or a distributed feedback laser acting as the master oscillator (MO) and a tapered semiconductor optical amplifier (SOA) acting as the power amplifier. Both hybrid and integrated MOPAs are of great interest. In a hybrid MOPA, the MO and the SOA are coupled through additional optics (Schwertfeger et al., 2011) with the advantage of separate fabrication of the components but at the expense of a more complex set-up. The integrated MOPAs have the advantages of reduced total size but the drawback of possible optical coupling between sections (Vilera et al., 2015).

The schematic of a typical tapered SOA is shown in Figure 22.1a. It is composed of a straight and narrow index-guided section used to filter the input beam and convert it into a single spatial mode, and a gain-guided tapered section where the beam is amplified while preserving its shape. The tapered SOA of an integrated MOPA does not include an index-guided section since the MO provides a single spatial mode to the tapered section. Cross-sectional views of the index and gain-guided sections are shown in Figure 22.1b. The index-guided section is typically a ridge waveguide (RW) structure in which the etched regions (filled with an isolator) provide lateral optical confinement. In the tapered gain-guided section, the injection area is defined by a proton-implanted region.

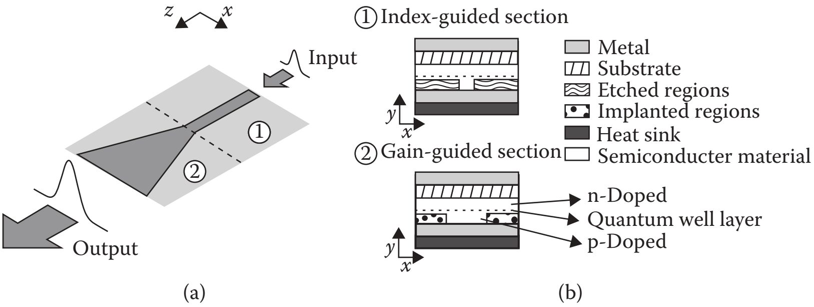

FIGURE 22.1 (a) Schematic planar view of a typical tapered SOA, consisting of a straight and narrow index-guided section and a gain-guided tapered section. (b) Cross-sectional views of the index-guided section (1) and the gain-guided section (2).

The characteristics of the output beam of a tapered SOA are very similar to those of tapered lasers which have been studied in detail by simulations and experiments (Williams et al., 1999; Sujecki et al., 2003; Borruel et al., 2004) and are reviewed in Volume 2 of this book (Chapter 28) (Esquivias et al., 2017). In brief, the single spatial mode of the RW section is launched into the tapered region where it suffers simultaneously diffraction, gain guiding, and index guiding (or antiguiding) due to the carrier and temperature dependencies of the semiconductor refractive index. The full taper angle α_{tap} is usually designed to match the free diffraction angle at $1/e^2$ (Borruel et al., 2008), and therefore it depends on the RW width and the lateral index step. At low power, the beam is strongly astigmatic: the virtual source in the lateral axis (x-axis) is located approximately at a distance from the output facet given by the taper section length divided by the effective index n_{eff}, while the virtual source in the vertical axis (y-axis) is at the output facet. The far-field (FF) pattern is almost Gaussian in both axes and much narrower in the lateral axis. However, when the output power increases, the beam quality degrades due to the combined effects of carrier and thermal lensing, as shown in Section 22.4.

The optimization of the tapered SOA's geometry and epitaxial design is a key point to improve the performance of these devices. The complex interaction between the semiconductor media and the optical field makes it extremely difficult to advance meaningful predictions of the behavior of a specific design by means of simple analytical calculations. Such difficulties together with the complex and costly fabrication process make necessary the use of complete numerical simulation tools to help the analysis and design of tapered SOAs to be used in hybrid or integrated MOPAs. Different numerical models, with different degrees of complexity, have been proposed and used to predict the behavior of tapered SOAs. In the case of the straight SOAs used in communications, the main emphasis has been placed on analyzing the dynamic response and the role of the amplified spontaneous emission in the noise characteristics (Razaghi et al., 2009; Connelly, 2001, and references therein). In contrast, in the case of high-power tapered SOAs the main performance characteristics are the maximum output power and the beam properties, and therefore steady-state models including thermal equations have been employed (Lang et al., 1993; Lai and Lin, 1998; Tijero et al., 2015).

In Section 22.2, we present a review of the different modeling approaches that can be applied to tapered SOAs; in Section 22.3, we explain the implementation of our numerical model; and in Section 22.4 we present as an example the results of the simulations of a 1.5-μm tapered SOA, including the analysis of the influence of some selected design parameters on the device performance. The Section 22.5 summary concludes the chapter.

22.2 Modeling Approaches

There are many options for the modeling approaches needed to simulate tapered SOAs. The proper choice depends on the degree of numerical complexity and on the performance characteristics of interest. In this section, we review the most common approaches, explain the main differences between them, and refer the interested reader to the most important references for a detailed accounts. We will also use references corresponding to tapered lasers and laser diodes in general, as most of the modeling approaches for high-power SOAs are equally appropriate for high-power semiconductor lasers.

One of the main characteristics of tapered SOAs and lasers compared with other semiconductor devices is the nonuniformity of the photon, carrier, and temperature profiles along the longitudinal (z-axis) and the lateral directions. This leads to the need to solve the coupled equations in at least two dimensions and to use and using some approximation to solve the equations in the vertical direction separately.

22.2.1 Carrier Transport Models

The main role of a carrier transport model is to provide the 2D carrier density distribution along the active region, which is needed to calculate the main material parameters affecting the optical wave propagation (optical gain and losses and refractive index variation), as well as to calculate the local heat sources required by the thermal model. But, in turn, the knowledge of the local photon density and the temperature distribution is needed for solving the electrical equations, and therefore iterative schemes are usually applied (see Section 22.3). The external input is the applied voltage (V_0), rather than the total current (I), which is the usual input in experiments. In the RW section, the current flow spreads out of the nominal contact width. Furthermore, the local current density depends not only on the applied voltage but also on the local temperature and stimulated recombination, and hence on the local photon density, which is strongly dependent on the lateral and longitudinal position. In consequence, the current density J is not uniform, but depends on the position in the x–z plane, $J = J(x, z)$.

Most of the published tapered SOA models make use of the unipolar approximation assuming that the electron (n) and hole (p) densities in the active layer are identical (Lang et al., 1993; Lai and Lin, 1998; Spreemann et al., 2009). Under this approximation, which is also very common in laser diode models, the carrier density in the active layer $N(x, z)$ can be calculated using the simple rate equation:

$$\frac{\mathrm{d}N(x,z)}{\mathrm{d}t} = \frac{J(x,z)}{qd_{\mathrm{act}}} - R(N) - R_{\mathrm{stim}}(N,S) + D_{\mathrm{eff}}\nabla^2_{x,z}N(x,z), \tag{22.1}$$

where q is the elementary charge, d_{act} the active layer thickness, $R(N)$ the carrier recombination rate including nonradiative and spontaneous recombination, and $R_{\mathrm{stim}}(N, S)$ the stimulated recombination rate, which depends on the local photon density $S(x, z)$. Finally, finally, $D_{\mathrm{eff}}\nabla^2_{x,z}N(x, z)$ accounts for carrier diffusion in the longitudinal and lateral directions and is perhaps the most important consideration. In this expression, D_{eff} is an effective diffusion coefficient accounting for both the carrier diffusion and the current spreading. The local current density $J(x, z)$ can be expressed in terms of the applied voltage, the contact (and/or p-layer) resistivity, and the junction voltage $V_J(x, z)$, which in turn depends on the carrier density. Details on this formulation can be found in Lai and Lin (1998).

The unipolar approximation is a simple way to reduce the complexity of the carrier transport model and provides very reasonable results, but the p–n junction is essentially a bipolar device, thus requiring the solution of the complete semiconductor drift–diffusion equations. These equations can be expressed in terms of three unknown variables, the electrostatic potential (ϕ) and the electron (n) and hole (p) concentrations. In the steady state, the equations are (Selberherr, 1984)

$$\nabla\left\{\varepsilon_S\nabla\varphi\right) + q\left\{p - n + C_i\right) = 0 \tag{22.2}$$

$$\nabla\mathbf{j_n} - q\left\{R(n,p) + R_{\mathrm{stim}}(n,p,S)\right) = 0 \tag{22.3}$$

$$\nabla\mathbf{j_p} + q\left\{R(n,p) + R_{\mathrm{stim}}(n,p,S)\right) = 0, \tag{22.4}$$

where ε_S is the static dielectric constant, C_i is the charged impurity density (ionized donor density minus ionized acceptor density), and j_n (j_p) is the electron (hole) current density. The current densities can be expressed as a function of the local variables ϕ, n, p, and temperature (T) using as local parameters the electron and hole mobilities and thermal diffusivities.

The carrier transport models often consider the capture and escape of carriers into and out of the quantum wells (QWs) (Nagarajan et al., 1992). This effect is well known in high-speed lasers, and it also influences the steady-state emission properties. When the carrier capture time is not negligible, there is an accumulation of carriers in the confinement layers that can result in a reduction of the efficiency (Borruel et al., 2003). In the case of unipolar models using rate equations, the carrier capture/escape processes are modeled by solving a second equation for the unconfined carriers. In the case of bipolar models of laser diodes using the complete semiconductor equations, different approaches have been proposed (Borruel et al., 2003; Grote et al., 2005), but as far as we know the importance of these effects in the modeling of SOAs has not been analyzed.

Bipolar carrier transport models require also appropriate boundary conditions at the metal–semiconductor contacts (Selberherr, 1984) and at the abrupt heterojunctions, where thermionic emission or tunneling-assisted thermionic emission should be considered instead of the standard drift–diffusion equations.

22.2.2 Optical Models

All optical models start from Maxwell equations and a description of the material susceptibility in the frequency or time domain, leading to optical wave equations, which have to be solved numerically. There are two main types of models: those solving the equations in the time domain, usually known as traveling-wave models (TWM), and frequency domain models. TWM provide dynamic solutions as well as spectral properties, and are appropriate for pulse propagation, beam filamentation, transient phenomena, and multifrequency devices. Frequency domain models are much simpler to implement and are useful for steady-state studies where the overall behavior of the device can be described in terms of a single frequency.

The beam propagation method (BPM) (Van Roey et al., 1981) is the most commonly used frequency domain method for the field propagation in waveguide optoelectronic and fiber devices, thanks to its low computational time demand. BPM calculates the propagation along the longitudinal direction of the steady-state transverse field, verifying the Helmholtz equation:

$$\nabla^2 \vec{E}(x,y,z) + \tilde{n}^2(x,y,z) k_0^2 \vec{E}(x,y,z) = 0, \tag{22.5}$$

where $\vec{E}(x,y,z)$ is the complex optical field vector, $\tilde{n}(x,y,z)$ is the complex refractive index, and k_0 is the wavenumber in vacuum.

In order to obtain a solution for the Helmholtz equation, the scalar approximation is commonly used in the study of tapered lasers and amplifiers (Sujecki et al., 2003; Lang et al., 1993). This approximation ignores the vectorial nature of the field, assuming continuity of the field and its derivatives through the dielectric interfaces. The approximation implies that the optical polarization remains unchanged along the device. The effective refractive index approximation is used to decrease the computational complexity of the BPM (Buus, 1982). It consists of solving Equation 22.5 for the vertical axis at every lateral position, taking into account the existence of etched regions and considering only a real index vertical profile (passive approximation). This leads to an effective index lateral profile and a vertical distribution of the optical mode $f(y)$. The effective index profile is used for the beam propagation and the function $f(y)$ is usually assumed to be independent of the longitudinal and lateral positions. In this way, the original 3D problem becomes a 2D problem in the x–z plane.

Dynamical TWMs naturally incorporate the spatial effects and the multifrequency character of the field, with the geometry of the device being incorporated through the boundary conditions for the waves. Although TWMs have long been applied to study laser physics (Lugiato and Narducci, 1985), application to semiconductor media requires a proper description in the time domain of the spectral dependence of the gain and the index changes due to the injected carriers. TWMs are based on making the slowly varying amplitude approximation or paraxial approximation of the electric fields. Under this approximation, the equations for the electric field of the optical wave can be written as

$$-\frac{i}{2k_0}\frac{\partial^2 E_\pm}{\partial x^2} \pm \frac{\partial E_\pm}{\partial z} + \frac{1}{v_g}\frac{\partial E_\pm}{\partial t} = f(E_+, E_-, P_+, P_-), \tag{22.6}$$

where $E_\pm$ are the complex counter propagating electric fields, v_g is the group velocity, and the function f contains different terms describing the relationship of the field with the dielectric polarization ($P_\pm$) that includes gain, internal losses, Bragg couplings, etc. Several approaches have been used to solve Equation 22.6, including finite-difference time-domain (Fischer et al., 1996) and Fourier split-step methods (Spreemann et al., 2009; Pérez-Serrano et al., 2013). Although TWMs have been applied mainly for describing laser dynamics, they have also been applied to tapered SOAs (Balsamo et al., 1996) and for the analysis of coupled cavity effects in tapered MOPAs (Spreemann et al., 2009; Pérez-Serrano et al., 2013).

22.2.3 Thermal Models

The temperature distribution along the complete device is a relevant variable in the simulation of a tapered SOA due to the dependence of the gain and refractive index on the local temperature. The 3D steady-state heat equation is expressed as

$$\nabla(\kappa\nabla T) + w(x, y, z) = 0, \tag{22.7}$$

where κ is the temperature-dependent thermal conductivity and $w(x, y, z)$ the local density of heat sources. This term usually includes Joule, nonradiative recombination, and free-carrier absorption heat sources. A complete description, based on a rigorous thermodynamic approach (Wachutka, 1990), can be found in Bandelow et al. (2005). Two heat sources are usually not included in most of the laser and amplifier models due to the difficulties in the quantification of their local distribution. These are the sources of heat arising from the energy lost by the scattered stimulated photons and by the spontaneously emitted photons that do not leave the device. After a photon recycling process, their energy ends up in heat transferred to the lattice somewhere in the device. To account for this effect, as well as for other uncertainties in the expressions and parameters for the local heat sources, an additional excess power P_{exc} shall be included (Borruel et al., 2002). The amount of this power is calculated from the energy conservation expression:

$$P_{\mathrm{exc}} = IV_0 - (P_{\mathrm{out}} - P_{\mathrm{in}}) - \int w(x, y, z)\mathrm{d}V, \tag{22.8}$$

where P_{out} and P_{in} are the output and input powers, respectively, and the integration extends over the entire device volume. After determining P_{exc}, the corresponding heat source w_{exc} is either distributed uniformly over the whole device or weighted according to the different absorption properties of the epitaxial layers.

Thermal equations should be solved taking into account the boundary conditions imposed by the thermal properties and the geometry of the mount and submount and the heatsink temperature.

22.2.4 Material Properties

22.2.4.1 Material Susceptibility

There are different options to describe the interaction between the gain medium and the optical field. The simplest approach, which is usually employed in rate equation models, is to consider a logarithmic or linear dependence of the material gain on the carrier density, together with a constant value for the linewidth enhancement factor (LEF) (Lai and Lin, 1998). The gain spectra can be taken as Lorentzian (Spreemann et al., 2009), although the most sophisticated models include a complete solution of the band dispersion equations to calculate the material gain as a function of the local carrier densities, the wavelength, and the temperature. A complete microscopic 8×8 $\mathbf{k}{\cdot}\mathbf{p}$ model for the semiconductor band structure implies a large computational effort and even a more simplified 4×4 valence band mixing model results in a high computation time when repeated locally. Additionally, most of the input parameters for the complete models are not well known. For these reasons, some modeling approaches perform initial complete or semicomplete band structure calculations and either (1) use a parabolic band model previously fitted to the results of the complete model (Borruel et al., 2004), (2) use curve fits to a more sophisticated model (Mariojouls et al., 2000), or (3) use precalculated look-up tables (Koch et al., 2005).

The refractive index's dependence on the wavelength, carrier density, and temperature can also be calculated using complete microscopic approaches (Koch et al., 2005) and then again using look-up tables to decrease the computational cost. A simpler approach is to neglect the wavelength dependence of the index and to use simple expressions for the carrier and temperature dependencies, i.e.,

$$\delta\tilde{n} = \delta\tilde{n}_T + \delta\tilde{n}_N, \tag{22.9}$$

where $\delta\tilde{n}$ is the variation of the active layer index with respect to its reference value at the heatsink temperature and without injection, $\delta\tilde{n}_T$ is the thermally induced variation, and $\delta\tilde{n}_N$ is the carrier contribution to the variation. $\delta\tilde{n}_T$ is usually considered a linear function of the local temperature increase while $\delta\tilde{n}_N$ can be considered either as dependent on the carrier density (Connelly, 2001; Borruel et al., 2004) or it is calculated from the gain variations using a constant LEF (Lang et al., 1993; Mariojouls et al., 2000).

Full space-time models require a good description of the material complex susceptibility, which has been done in different ways: at microscopic level (Gehrig and Hess, 2001), by using multiple Lorentzians fitted either to experiments or to microscopic calculations (Moloney et al., 1997), and by a convolution integral (Javaloyes and Balle, 2010).

22.2.4.2 Carrier Recombination

The unipolar models typically use a polynomial approximation for the carrier recombination rate in Equation 22.1, which can be given by

$$R(n) = An + Bn^2 + Cn^3, \tag{22.10}$$

where A, B, and C are the coefficients corresponding to nonradiative trap recombination, spontaneous recombination, and Auger recombination, respectively. It is important to remark that even in this simple description, the dependence of the coefficients on temperature, especially the dependence of C, should be taken into account. Some other polynomial approaches have also been employed (Connelly, 2001). The more complete bipolar models use the complete Shockley–Read–Hall (SRH) recombination expression for the nonradiative trap recombination and the electron and hole Auger recombination rates and calculate the spontaneous recombination rate from the complete energy band description by using the same approach used for the optical gain.

22.2.4.3 Internal Losses Coefficient

The internal absorption losses have a dramatic effect on the amplifier performance, and therefore the coefficient accounting for them, α_{in}, is an extremely important parameter for the simulation. It can be taken as a constant value to be estimated from experiments in broad area lasers, or it can be considered the result of two contributions: the scattering losses α_{scat}, and the losses due to different mechanism of photon absorption by free carriers, the so-called free-carrier absorption losses α_{fc}. In the approaches that solve the electrical equations in the vertical direction (Borruel et al., 2004; Grote et al., 2005), α_{fc} is locally calculated taking into account the carrier and photon distribution by

$$\alpha_{\mathrm{fc}}(x,z) = \int\limits_{L_y} \left[\kappa_n n(x,y,z) + \kappa_p p(x,y,z)\right] S(x,y,z)\mathrm{d}y, \tag{22.11}$$

where L_y is the thickness of the epilayer structure, and $\kappa_n(\kappa_p)$ is the electron (hole) free carrier absorption cross section. In most materials, the main contribution to α_{fc} arises from the hole term due to the mechanism of intervalence band absorption.

The most sophisticated amplifier models, especially those solving the complete electro-thermal-optical semiconductor equations, require many additional material parameters such as carrier mobilities, bandgap narrowing coefficients, energy band parameters, thermoelectric powers, thermal conductivities, etc.

22.3 Model Implementation

22.3.1 Overview of Solution Procedure

In this section, we describe the implementation of HAROLD 4.0, the model and code that we have developed for the simulation of tapered SOAs. Our approach is based on a previous model for tapered lasers (Borruel et al., 2004; Sujecki et al., 2003). The original algorithm has been modified slightly and a part of it has been rewritten in order to consider a single pass amplifier instead of a resonant cavity. HAROLD 4.0 solves self-consistently the steady-state partial differential equations describing the electrical, thermal, and optical behavior of a tapered SOA. The simulator includes a 3D electrical solver for the Poisson and continuity equations (Equations 22.2 through 22.4) coupled to a 3D thermal solver for the heat-flow equation (Equation 22.7). The thermal solver uses the local heat sources provided by the electrical solution. On the optical side, a wide-angle finite-difference beam propagation method (WA-FDBPM) (Hadley, 1992), under the effective index approximation, is used to propagate the optical field in the x–z plane. The optical solution is not fully 3D, as the vertical direction and the x–z plane are solved separately, and therefore the complete model is considered as quasi-3D.

Due to the large number of variables and iteration loops involved in the model, an important point is how to initialize the solution. In order to provide a good initial guess to the quasi-3D algorithm, a 1D laser simulator (Harold, 2001) is used for the initialization of the electrical, thermal, and optical variables. Although the 1D laser simulator was not designed for amplifiers, it provides useful initial guess values for the electrothermal variables as well as some inputs for the quasi-3D algorithm such as the applied voltage V_0 and the optical field modal profile in the vertical direction $f(y)$. The 1D simulator requires the electrical, thermal, and optical properties of all the device materials. The user introduces a target bias current and the 1D simulator solves the electrothermal and optical equations for an equivalent broad area laser having the same electrical injection area as the tapered SOA. The 1D simulator provides V_0, as well as an initialization for the vertical distribution of the electrostatic potential, the electron and hole concentrations, and the temperature. The power, wavelength, and lateral profile of the input optical field are provided by the user as inputs for the algorithm. The input optical field is symmetric and therefore only one half of the device is considered in the simulations.

The main flow of the quasi-3D algorithm is shown in Figure 22.2. It includes the following steps: (1) the 1D simulator provides V_0 and $f(y)$, and initializes all unknown 2D variables according to the initial 1D solution for the target current; (2) the initial lateral optical field profile at the first longitudinal slice ($z_i = 1$) is either set by the user or calculated as the fundamental mode of the waveguide in the lateral direction; (3) A 2D electrical solver is applied to the first slice in the $x - y$ plane at $z_i = 1$. It provides a 2D map of the electrical variables (n, p, and φ) and of the Joule (w_{joule}), the nonradiative (w_{nr}), and the free-carrier (w_{fc}) heat sources. It also calculates the complex effective refractive index along the lateral axis

at $z_i = 1$, thus providing the gain and refractive index variation due to the carriers. (4) The calculated heat sources are used as inputs for a 2D thermal solver applied to the x–y plane at $z_i = 1$. It should be noted that the thermal and electrical meshes are different and therefore some interpolation between the meshes is used. The 2D thermal solver provides a map of the temperature in the x–y plane and the thermally induced refractive index variation. This 2D thermal solver is only applied in the first iteration in order to initialize the thermal solution. (5) The WA-FDBPM is used to propagate the optical field from $z_i = 1$ to $z_i = 2$ using a fine mesh in the x–z plane. It uses the gain and refractive index changes given by the electrothermal solvers in the previous step and takes into account the geometry of the device. (6) Steps (3)–(5) are repeated until the algorithm arrives to the output facet at $z_i = N$. At this point, the output power P_{out} is known and the excess power P_{exc} can be calculated. Then, a 3D thermal solver is applied allowing heat flow between the z-slices. (7) The process described in (3), (5), and (6) is repeated until convergence is reached and a stable optical field, as well as stable temperature, carrier, and current distributions are found.

In the following subsections, the solvers for the electrical, thermal, and optical equations are described in more detail.

22.3.2 Solver for Electrical Equations

The electrical equations are solved in the volume defined by the total thickness of the epitaxial layers, the amplifier length, and the chip width. The input for the equations is taken from material databases according to the epilayer structure. Etched and implanted regions are simulated by assuming negligible carrier mobility. The electrical equations are solved together with two capture–escape continuity equations for electrons and holes at each QW, taking into account the nonequilibrium condition between the confined carriers in the QWs and the unconfined carriers in the barriers. Nonradiative (SRH and Auger) and spontaneous recombination terms are included along the complete device, in addition to the stimulated recombination in the active region. The model also includes free carrier absorption and band gap renormalization with standard dependencies and appropriate parameters.

The material gain and spontaneous recombination rate in the QWs are calculated using the expressions in Coldren and Corzine (1995), considering simple parabolic bands and Lorentzian broadening to decrease the computational effort. The parameters for the gain calculations (energy levels, effective masses, and intraband relaxation time) were previously fitted to yield similar results to those of a more sophisticated gain model that takes into account the valence band mixing. The local material gain (or absorption) and carrier-induced refractive index changes are calculated at the wavelength of the input power for each point of the mesh, taking into account the local temperature and carrier concentrations. They are subsequently used as inputs for the optical solver.

The equations are discretized using a finite difference approach. Nonuniform, separate meshes are taken for the vertical and lateral directions. The denser regions in the vertical and lateral directions correspond to the QW and to the border of the implanted/etched areas, respectively. The lateral mesh depends on the longitudinal position and typically contains around 40 mesh points. We chose 100 μm for the x–y slice separation in the longitudinal direction, after making sure that the results in our structures were similar when decreasing the longitudinal mesh size. The core of the numerical procedure is a Newton–Raphson algorithm, which solves the coupled Equations 22.2 through 22.4 in 1D along the vertical direction. The algorithm considers at each mesh point the influence of the next neighbors in the lateral and longitudinal directions. The 1D solver scans iteratively the lateral direction until convergence, providing a 2D map of the electrical variables at the z-slice i, z_i. The electrical variables are used to calculate the heat sources needed by the thermal solver, while the computed gain (or absorption) and the carrier-induced refractive index changes will be used by the optical solver to propagate the electric field to the slice z_{i+1}. In the resolution of the z_{i+1} slice, the values of the electrical variables previously obtained for z_i and z_{i+2} are considered in order to account for the longitudinal current flow. Finally, when convergence of the whole algorithm is reached, a complete 3D map of the electrical variables (electrostatic potential and electron and hole densities), consistent with the photon and temperature distributions, is produced.

22.3.3 Solver for Optical Equations

As mentioned above, the shape of the field at the amplifier input ($z_i = 1$) is either provided by the user or obtained by solving the Helmholtz equation in the lateral direction making use of the effective index approximation. Then, the WA-FDBPM is applied to propagate the field along a longitudinal optical mesh, which is much denser than the electrothermal mesh. The method uses the modal complex index along the lateral axis provided by the electrothermal solution of the initial slice. The WA-FDBPM uses the (1,1) Padé approximant, allowing the propagation of the field a few degrees around the longitudinal direction (1°–6°). The propagation continues until reaching the next slice of the electrothermal mesh, where the electrical and thermal solvers update the modal complex index. In this way, the tapered section is considered a succession of rectangular slices with increasing width.

To complete the optical solution, perfectly matched layers (PML) (Huang et al., 1996) are used as boundary conditions. The PML method defines a lossy region to which the Helmholtz equation is mapped by an anisotropic complex transformation. The PML attenuates the lateral traveling waves ensuring that the field at the borders of the device in the lateral direction vanishes. Due to the lateral symmetry of the optical field, a zero derivative is applied as the boundary condition at $x = 0$.

22.3.4 Solver for Thermal Equations

The heat flow equation (Equation 22.7) is solved in a larger region and using a different mesh than those of the electrical solver. In addition to the epilayer, the substrate, the metal layers, and the heatsink are also considered in the thermal solution. The boundary conditions for the heat-flow equation in the case of a p-down mounted device are negligible heat flow at the n-metal and lateral chip external interfaces and uniform temperature at the bottom of the heatsink. Etched regions are thermally simulated by introducing the thermal conductivity of the planarization isolator.

As mentioned in Section 22.3.1, during the first iteration of the Quasi-3D algorithm, the 2D heat flow equation is solved at each x–y slice with the local heat sources obtained from the electrical solver. The 2D heat flow equation is discretized with a finite difference method, and the system of equations is solved by using a stabilized biconjugate gradient method. The calculated temperature distribution replaces the initialization values provided by the 1D laser simulator. Once the electro-optical solution process has reached, the output facet and the output power P_{out} has been calculated, the excess power P_{exc} is calculated using Equation 22.8, and the excess power heat source is distributed along the complete device volume. Then, a 3D thermal solver is applied. The 3D thermal solver is based on scanning the 2D solver along the longitudinal direction allowing the longitudinal heat flow between slices until reaching convergence. Successive iterations of the complete algorithm use this 3D thermal solver as indicated in Figure 22.2.

22.4 Simulation Example: 1.5-μm InGaAsP/InP Tapered Amplifier

As an illustrative example, in this section we analyze a typical 1.5-μm InGaAsP/InP tapered amplifier with the HAROLD 4.0 simulation tool. After a summary of the most relevant material, and geometrical and simulation parameters, we present the simulation results of a reference device and based on these results, we illustrate the potential of the simulation tools by analyzing the effect on the device performance of two important design parameters: the taper angle α and the confinement factor Γ. The analysis is presented here only for the sake of illustration, so we will present an overview of some interesting effects without a detailed analysis.

22.4.1 Device Geometry and Simulation Parameters

As a reference device, we have considered an SOA with an InGaAsP/InP multi-QW epitaxial structure similar to that of the MOPA reported in Faugeron et al. (2015). It features an asymmetric cladding structure especially conceived for shifting the broad vertical profile of the optical mode to the n-side of the diode, thus minimizing the overlapping with the highly absorbing p-doped layers. Table 22.1 provides the geometrical parameters of the device as well as a brief summary of the most influential material and device parameters used in the simulation. The taper angle has been selected so as to fit the calculated free diffraction angle assuming an index step $\Delta n_{\text{eff}} = 7 \times 10^{-3}$. We have considered a p-side down mounting configuration as more appropriate for the heat management required in a power device. For the Auger recombination

TABLE 22.1 Geometrical Parameters of the Reference SOA and Summary of the Most Relevant Material and Device Parameters Used in the Simulation

Symbol	Parameter	Value	Units
L_{RW}	Length of the ridge waveguide (RW) section	1	mm
W_{RW}	Width of the RW section	3.5	μm
L_{Tap}	Length of the taper section	2	mm
α_{tap}	Taper angle	7	°
Δn_{eff}	Effective index step of the RW section	7×10^{-3}	–
	Mounting configuration (p-up/p-down)	p-Down	–
T_{HS}	Heatsink temperature	18	°C
P_{in}	Input power	20	mW
Γ	Confinement factor	0.037	
α_{scat}	Scattering losses coefficient	0.5	cm^{-1}
$C_n(C_p)$	Electron (hole) Auger recombination coefficient	$8(8) \times 10^{-29}$	cm^6s^{-1}
k_e (k_h)	Electron (hole) free carrier absorption coefficient	$1(30) \times 10^{-18}$	cm^2
n_I	Differential refractive index coefficient	10^{-1}	$\text{cm}^{3/2}$

coefficients and the electron and hole free carrier absorption coefficients, we have used judicious values in the range of published values (Joindot and Beylat, 1993; Piprek et al., 2000). We have accounted for the dependence of the refractive index on the carrier density by means of a square root function with a coefficient n_1 (Borruel et al., 2004) such that it results in a value of about 5 for the LEF at the operating wavelength and carrier densities. The value used for the internal scattering losses together with the free-carrier absorption losses calculated using Equation 22.9 yield a total internal loss of approximately 8 cm^{-1} for a broad area laser with the same epitaxial structure.

22.4.2 Analysis of the Reference SOA

Figure 22.3 shows the simulated power–current (P–I) characteristics of the reference SOA together with the evolution of the electrical-to-optical conversion efficiency ($\eta_{\text{E-O}}$). For injection currents above a transparency level ($I \sim 1.3$ A) the device actually amplifies with an increasing conversion efficiency. The output power shows an approximately linear increase in the current range $4 < I < 9.5$ A. For higher injection levels, both the output power and the conversion efficiency start a saturation process.

The simulation provides the means to make a more in-depth analysis revealing details of the behavior of relevant variables inside the SOA. As an example, Figure 22.4 shows 3D plots of several magnitudes in the QW region for a relatively low injection current ($I = 4$ A). In the RW section, due to the index guiding, the profile of the photon density (Figure 22.4a) is narrow and stable, and shows an increase of the maximum along the longitudinal direction revealing the optical gain. The maximum drops and the profile broadens when the tapered region starts, and from there up to the output facet, the photon profile evolves smoothly. In this evolution, the maximum photon density increases and so does the profile width, following the evolution of the width of the tapered section. For this relatively low injection level, the electron density profile (Figure 22.4b) is almost flat inside the tapered section. In the RW section, the electron density profile is broader than the width of the section due to the current spreading (not shown). The maximum electron density in this section is lower than the density in the tapered section and decreases slightly along the longitudinal direction. Both effects are a consequence of a higher stimulated recombination ratio in the RW section. The hole density (not shown) is slightly different but shows a similar profile. The mutual dependence between carrier and photon densities is much more pronounced at high-injection levels as explained below. The temperature profile in the lateral direction (Figure 22.4c) reminds the injection profile showing higher values in the injected region and a fast variation at the edge of the region. In the RW section, the lateral profile shows a small dip at the cavity center, whereas in the tapered section, the temperature decreases smoothly from a maximum at the axis to a minimum at the edges of the injected region. In the noninjected regions, the lateral evolution is smooth and shows a slow decrease toward the edges of the chip. In the longitudinal direction, the temperature increases smoothly from the RW section to the output facet. This increase is slow in the RW section and faster in the taper section (see also Figure 22.5b). At

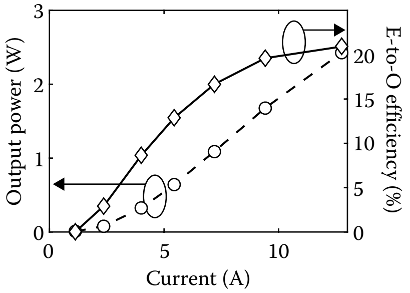

FIGURE 22.3 Power–current characteristics (circles) and electrical-to-optical conversion efficiency (diamonds) of the reference SOA.

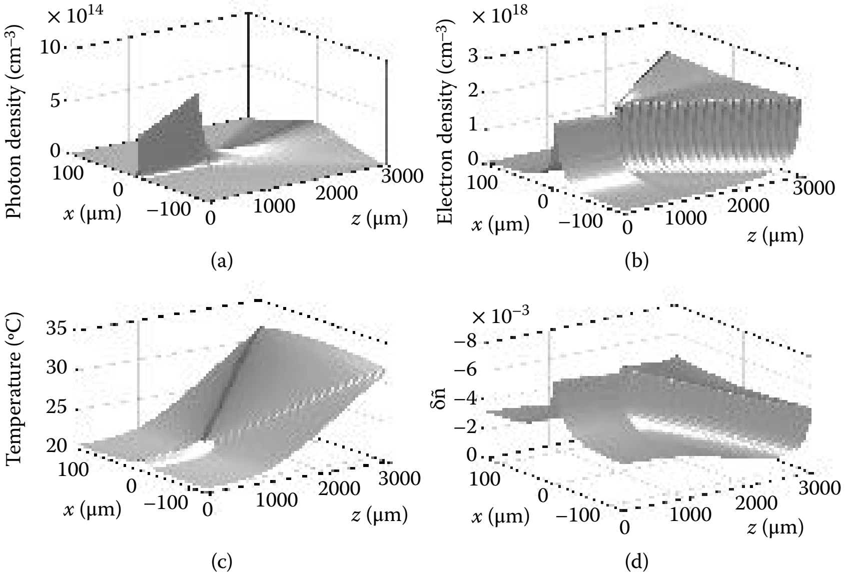

FIGURE 22.4 3D maps of the photon (a) and the averaged electron densities (b), the temperature (c), and the carrier and thermally induced refractive index change (d) in the active region of the reference SOA for an injection $I = 4$ A. The little "ripples" appearing at the edges of the tapered section in some plots are artifacts due to the discretization in the longitudinal direction.

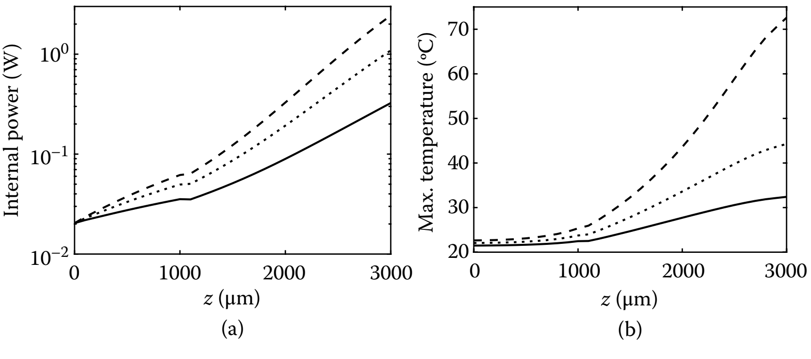

FIGURE 22.5 Evolution along the longitudinal direction of the internal optical power (a) and the maximum QW temperature (b), for different current values. $I = 4$ A (solid), $I = 7.2$ A (dotted), and $I = 12.7$ A (dashed).

this relatively low-injection level, the evolution of the longitudinal temperature profiles are similar in the injected and in the noninjected regions. Finally, Figure 22.4d shows a 3D map of the QW refractive index variation given by Equation 22.9. This variation is a balance between the positive thermal contribution and the negative contribution of the excess carrier density. Therefore the profile is similar to the electron density profile (Figure 22.4b) smoothly modified by the temperature profile (Figure 22.4c). This index variation is the way by which the density of carriers and the local temperature influence the photon density and, hence, the beam profile.

More insight into the evolution of the optical power along the SOA can be provided by plots such as the one in Figure 22.5a, where the internal optical power at each x–y slice is plotted along the longitudinal direction in a logarithmic scale. The evolution of the internal optical power can be described in terms of an effective optical gain g_{eff} by $P(z + \Delta z) = P(z)e^{g_{\text{eff}}\Delta z}$ and therefore g_{eff} is proportional to the slope of the curves in Figure 22.5a. In this description, g_{eff} corresponds to the difference between the modal gain and all the losses occurring in the beam propagation. For the low-injection level considered previously (4 A, solid line), the effective gain is relatively low and slightly decreasing in the RW section and much higher in the tapered section. This can be explained from the maps of photon and carrier densities in Figure 22.4a and b: for approximately the same carrier density in both sections, the photon density is much higher in the RW section and therefore the gain shows an increasing saturation effect which is absent in the tapered section where the photon density is much lower. In a transition region, just at the beginning of the tapered section, there is a dramatic drop of the gain corresponding to an increase of the losses due to the change in the guiding mechanism from index guiding to gain guiding. This drop is due to the poor overlapping of the mode and the injected region at the beginning of the tapered section since the external part of the mode expands to unpumped and, therefore, absorbing regions. In this device, in which the taper angle (and therefore the angle of the gain region) almost matches the free diffraction angle, the gain recovers soon after the transition. For higher-injection levels, Figure 22.5a shows a qualitatively similar behavior of the gain. In both sections, the gain is higher as corresponding to a higher carrier density and evidences some saturation at the end of each section corresponding to a high photon density in these regions.

To complete the overview picture of the longitudinal evolution of internal variables, Figure 22.5b shows the evolution of the maximum QW temperature for the same low-, intermediate-, and high-injection levels of Figure 22.5a. As expected, the QW temperature evolves similarly for the three injection levels, showing a faster increase in the taper section for the highest injection level.

More local details of the behavior of the photon and carrier densities when the injection increases are provided by Figure 22.6. Figure 22.6a shows the electron and photon density profiles along the lateral direction at the output facet of the device. The mutual dependence between carrier and photons pointed above for low injection is much more apparent at high-injection levels and can be explained as follows: The density of carriers injected at these levels is high on average. In comparison with the outer regions, the number of photons generated by stimulated recombination around the axis ($x = 0$) (where the optical mode reaches the maximum) is higher, and therefore the carrier density locally decreases. This is the well-known spatial hole burning (SHB) effect. Due to its negative dependence on the carrier density, the refractive index locally increases in the places more affected by the SHB effect, giving rise to a more abrupt index profile. In turn, the new index profile contributes to a higher confinement of the optical mode in the axial region in a feedback loop in which the local temperature also plays a role through the thermal dependence of the refractive index. As a consequence, the smooth profile of the optical beam at low injection undergoes a slight degradation when the injection increases as illustrated in Figure 22.6b, where the FF profiles at the three injection levels have been compared.

(b)

FIGURE 22.6 (a) Photon and electron density lateral profiles at the output facet for three injection levels. (b) The corresponding far field profiles. $I = 4$ A (solid), $I = 7.2$ A (dotted), and $I = 12.7$ A (dashed).

22.4.3 Effect of the Confinement Factor and Taper Angle

The confinement factor and the taper angle are two critical design parameters affecting the performance of a tapered SOA. In order to illustrate the capabilities of the simulation tools for the analysis of the influence of these parameters, we have compared the reference SOA ($\Gamma = 3.7\%$ and $\alpha = 7°$) with two devices: (1) an SOA which epitaxial design has been carefully modified so as to result in a confinement factor $\Gamma = 5.6\%$ without increasing the mode overlapping with the p-doped cladding (high Γ-SOA) and (2) a device with $\alpha = 3°$ and the same RW and tapered section lengths as the reference SOA (3°-SOA). Figure 22.7 shows a comparison of the *P–I* characteristics, and the conversion efficiency of the three devices. In comparison with the reference SOA, the high Γ-SOA has a lower transparency current, a higher slope of the *P–I* characteristics, and a higher conversion efficiency. Therefore, at the highest current its output power and conversion efficiency are significantly higher. This can be qualitatively understood just taking into account the higher mode overlapping with the active region. The 3°-SOA shows also a lower transparency current, a higher slope of the *P–I* characteristics, and a higher conversion efficiency. In this case, the explanation is the higher current density corresponding to the same current as a consequence of the lower area of the device.

Figure 22.8 shows the effective optical gain in the three devices at the highest injection level of around 13 A. Note that the output power of each device is different (see Figure 22.7a). In the RW section, the effective gain of the high Γ-SOA is only slightly higher than the effective gain of the reference SOA in spite of the higher value of Γ. The reason for this is the material gain saturation due to the high photon density in this section that makes the gain almost independent of Γ. The effective gain of the 3°-SOA in this RW section reaches higher values corresponding to the higher carrier injection. In the tapered section, the gain of the high Γ-SOA is clearly superior to that of the reference SOA as can be expected from its higher value of Γ. The difference is more apparent at the beginning of the section, where the photon densities are low, than at the end, where the photon densities (and hence the saturation) become high. The most revealing difference between the gain of the 3°-SOA and the other devices is in the transition region at the beginning of the taper section where the mismatch between the free diffraction angle and the taper angle in the 3°-SOA results in high losses evidenced as a low effective gain in this region.

The improved performance of the high Γ-SOA and the 3°-SOA in terms of output power and conversion efficiency is, however, at the expense of a much faster beam degradation as revealed by the evolution of the FF width and the beam propagation factor (M^2) plotted in Figure 22.9 (see [Esquivias et al., 2017] Chapter 28, Volume 2 of this book). In the case of the high Γ-SOA, the beam quality as revealed by M^2 progressively worsens, reaching high values at relatively low currents. In the case of the 3°-SOA, the degradation takes place at intermediate values of the current whereas the reference SOA keeps a relatively low value of M^2 up to a high-injection level.

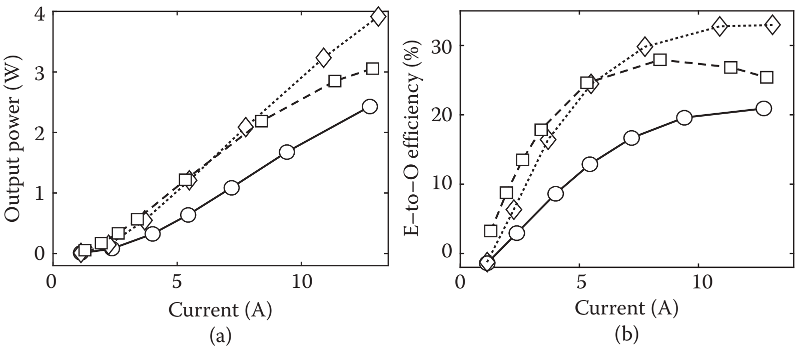

FIGURE 22.7 (a) *P–I* characteristics of the reference SOA (circles), the high Γ-SOA (diamonds), and the 3°-SOA (squares). (b) Their corresponding electrical-to-optical conversion efficiencies.

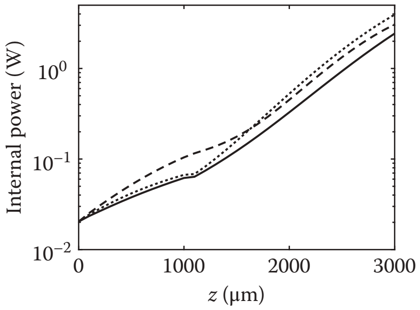

FIGURE 22.8 Evolution along the longitudinal direction of the internal optical power of the three devices at the highest injection ($I = 13$ A), showing the different effective gain (slope of the curves). Reference SOA (solid), high Γ-SOA (dotted), and 3°-SOA (dashed).

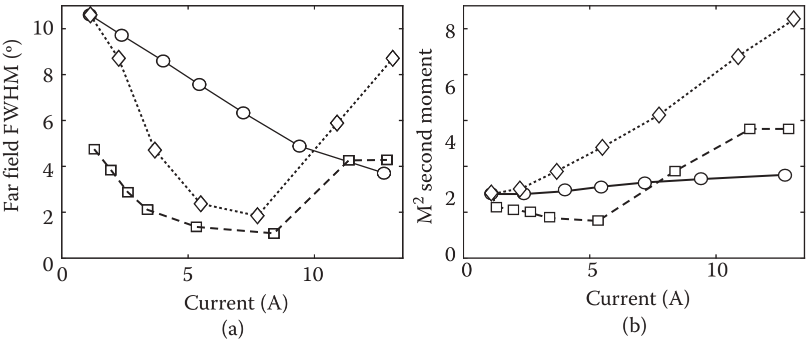

(a)

(b)

FIGURE 22.9 (a) Far field full width at half-maximum (FWHM) and (b) M^2 dependence on current for the three devices considered. Reference SOA (circles), high Γ-SOA (diamonds), and 3°-SOA (squares).

As mentioned above, more detailed information of the mechanism underlying beam degradation is brought by the plots in Figure 22.10a where the electron and photon density profiles at the output facet of the three devices are plotted for the highest injection level. The mutual dependence between carriers and photons described in Section 22.4.2 for the reference SOA is much more apparent for the high Γ- and the 3°-SOAs and results in deep holes in the axial region of the electron density profiles together with the corresponding narrow peaks in the photon density. As a consequence, the beam quality severely degrades, as revealed, for example, by the FF profiles plotted in Figure 22.10c and d in comparison with the profile of the reference SOA (Figure 22.10b).

The self-focusing is another manifestation of the beam degradation due to the interplay between carriers and photons. Figure 22.11 shows a comparison between the evolution of the beam profiles in the reference (Figure 22.11a and b) and the 3°-SOA (Figure 22.11c and d) for low- (Figure 22.11a and c) and high injection conditions (Figure 22.11b and d). In these plots, the photon density in each slice perpendicular to the longitudinal axis has been normalized to its maximum value in order to visualize the focusing. The white dashed lines show the borders of the injected region. In contrast with the virtually absent focusing of the beam in the reference SOA, Figure 22.11d shows a strong self-focusing in the 3°-SOA at high current. As a consequence, the slightly increasing astigmatism in the reference SOA when the injection increases (not shown) becomes abrupt and then drops down to negative values in the 3°-SOA.

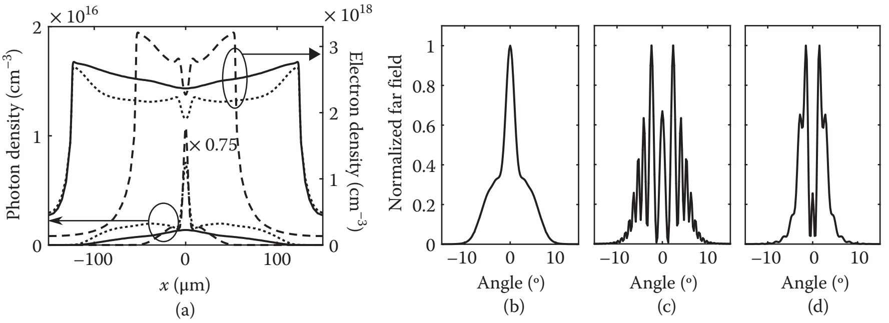

FIGURE 22.10 (a) Photon and electron density lateral profiles at the output facet at the highest injection level ($I = 13$A) for the three devices considered. Reference SOA (solid), high Γ-SOA (dotted), and 3°-SOA (dashed). For clarity, the photon density values of the 3°-SOA device (dashed) have been multiplied by 0.75. (b) through (d) Normalized far field profiles for the reference SOA, the high Γ-SOA, and the 3°-SOA, respectively.

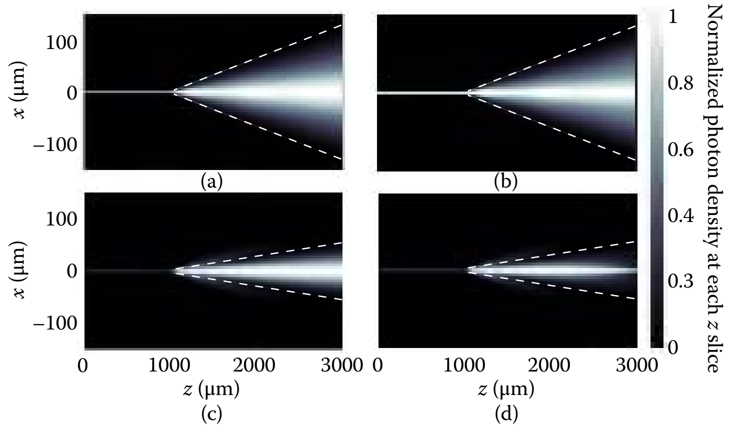

FIGURE 22.11 Maps of the normalized photon density of the reference SOA (top) and the 3°-SOA (bottom) under low-injection (left) and high-injection conditions (right). The white dashed lines show the borders of the injected region. For each value of the longitudinal coordinate z, the photon density was normalized to its maximum along the corresponding lateral x-axis.

22.5 Summary

We have presented an overview of the current state of the art in the modeling of high-power tapered SOAs. We have described the most relevant models used for the simulation of carrier transport, optical field, material properties, and temperature distribution in this type of devices. The particular geometry of tapered amplifiers makes difficult the reduction of the dimensionality of the problem, requiring relatively complex numerical models. The implementation of a steady-state quasi-3D model has been explained in detail, with emphasis on the interaction between the electrical, thermal, and optical solvers. For illustration, the model has been applied to a 1.5-μm tapered SOA, showing the relation between internal carrier and photon distributions and the external measurable characteristics. The influence of the optical confinement factor and the taper angle in the output power and beam quality has also been analyzed.

The main limitation of the steady-state single-frequency models is that they cannot be used to analyze the noise properties of the SOAs, as well as other complex nonlinear phenomena as cross-talk in wavelength division multiplexing applications. Two- or quasi-3D TWMs, coupled to bipolar carrier and thermal equations are the natural evolution of steady-state models to account for dynamical and spectral issues.

23.1 Introduction

The rapidly increasing need for telecommunications and data-streaming applications within our society still demands a deeper understanding of the physical processes behind this emerging technology. In the last decades, there have been many attempts to optimize the performance of optoelectronic devices by using innovative nanostructured semiconductor gain materials [1,2]. A lot of these innovative devices already have found their way into photonic applications [3,4]. In particular, the demand for faster and more energy-efficient data transfer set the trend to replace the well-established cable-based data transmission with energy efficient optical technologies [5]. As one example, optical amplifiers are needed in optical networks to raise the signal power level and compensate for the inevitable optical losses in glass–fiber connections. Semiconductor-based optical amplifiers (SOAs) are cheap, relatively easy to fabricate, and consume only little energy within an electric circuit. They are structurally similar to semiconductor laser devices, with the difference lying in the absence of an optical cavity (see Chapter 20 SOA Fundamentals).

In this chapter, we describe the modeling of optical amplifiers that contain semiconductor quantum dots (QDs) as active media. Those nearly zero-dimensional QD structures gained a lot of attention as the material of choice for highly energy-efficient and small-footprint optoelectronic devices [6]. The scattering mechanisms and the unique electronic structure of semiconductor QDs have been found to make such devices prime candidates for the implementation of next-generation optoelectronic applications and novel high-speed data transmission schemes. QDs are the final step in miniaturization of the optically active gain material and thus in the confinement of charge carriers below the de Broglie wavelength of electrons (a few nanometers). In addition to the modeling of the quantum-dot semiconductor optical amplifiers (QDSOAs) as active media described within this chapter, other QD-based optical devices such as QD laser and QD light-emitting diodes are treated separately in a different section of this book. Nevertheless, our microscopically based material model for the QDs can equally be used as the building block in laser devices [7,8].

Our main focus will be the characterization of both the performance and the special nonlinear features of QDSOAs that are induced by the low dimensional and thus highly confined QD gain medium. While linear amplification with a low noise figure is required, to ensure low distortion of the input signal for data transmission [9–11], nonlinear optical applications, such as four-wave-mixing [12–15] and cross-gain modulation [16–18] for wavelength conversion, as well as regenerative amplification, require a nonlinear response of the optical amplifier. QDSOAs generally have a high gain bandwidth due to the growth-induced inhomogeneity in the dot size and material composition. These fluctuations lead to an inhomogeneous broadening of the localized QDs states and consequently allow for a broadband amplification. Additionally, due to the coupling to a charge-carrier reservoir with charge-carrier scattering times in the picosecond range, ultrafast gain recovery [19–24] and nonlinear signal processing are possible [15,16,25]. The comparably slow dephasing time of the microscopic interband polarization in the localized QD states [26–28] allows the possibility to directly observe quantum-mechanical effects, such as Rabi oscillations [29–33] or self-induced transparency [34,35]. This could potentially open up new applications in the signal processing of ultra-short, ultra-strong optical pulses.

The optical amplifier devices we consider in this work are single-pass devices, where the optical signal coupled into one side of the waveguide structure is ideally passing exactly once across the device. Thus, the edge-emitting QDSOAs are longer than typical laser devices, in order to provide a long enough interaction time between optical signal and the active medium. The model used for the numeric simulations is based on a traveling-wave approach for the pulse propagation, using Maxwell's wave equation in the slowly varying amplitude and rotating wave approximation. The polarization of the active medium is modeled using microscopic considerations for the charge-carrier dynamics, i.e., the light–matter interaction is modeled on the basis of Maxwell–Bloch equations, taking into account the microscopic polarization of the QD medium.

The structure of the chapter is as follows. First, a delay-differential equation model for an efficient and accurate description of the electric field propagation through the QDSOA is presented (Section 23.2). Subsequently, the charge-carrier dynamics is described in the framework of microscopically calculated nonlinear charge-carrier scattering rates before our approach for a quantitative modeling of the amplified spontaneous emission (ASE) inside the QDSOA is discussed. In Section 23.3, we present exemplary results on the performance of the QDSOA, focusing on the unique properties of semiconductor QDs as active medium. After a static characterization of a chosen sample device, we discuss the ultrafast gain dynamics of QDSOAs, identifying the main timescales that determine its gain recovery. We then present results on the coherent propagation of strong optical pulses. The long dephasing time of QDs leads to strong signatures of the coherent interaction, leading to modifications in the pulse shape and the gain dynamics due to the appearance of Rabi oscillations. A brief conclusion is provided.

23.2 QD Semiconductor Optical Amplifier Model

QDSOAs differ from conventional devices in the choice of active medium. The charge-carrier dynamics in QDs can be very complex due to the localization of electrons within the QDs embedded in the surrounding quantum-well or bulk material. In this chapter, we, therefore, aim to describe the charge-carrier dynamics and derive a set of coupled differential equations for the electronic states involved. The strong nonlinearity of the resulting equations leads to important differences in the performance of QDSOAs when compared to conventional devices. It also opens up the possibility of novel applications, based on their ultrafast gain recovery for linear applications, or their broad gain spectrum for nonlinear or wavelength conversion applications.

In this section, we derive a QDSOA model, in which we focus on the unique dynamics of the QD gain medium. The wave equation used for the propagation of the light will be similar to conventional SOA models (see Chapter 20 on SOA fundamentals in this book). In other works, models without spatial resolution have been employed for the description of semiconductor amplifiers [17,36–38]. As soon as strong spatial inhomogeneities arise, such models are, however, bound to fail. On the other hand, numerically solving the partial differential equation for the electric field propagation along the waveguide axis is computationally very expensive[39]. We, therefore, develop a delay-differential equation model that combines spatial resolution and reasonable computation time. The light–matter interaction will be described within a Maxwell–Bloch framework, which couples the light propagation dynamics to the QD active medium.

In the following, we derive the electric field propagation equations and the material equations describing the active medium. Furthermore, we derive Boltzmann-like equations that govern the charge-carrier scattering dynamics within a quantum-dot-in-a-well system. Spontaneous emission will be included in a phenomenological way to yield stochastic differential equations.

23.2.1 Electric Field Propagation: Delay-Differential-Equation Model

In order to calculate the dynamics of the QDSOA device, we must solve the wave equation of the optical field inside the waveguide. Here we concentrate on narrow-area ridge waveguide structures where the propagation along the longitudinal axis (labeled z) dominates, and the transverse mode profile is assumed to be constant. The electric field is thus governed by the one-dimensional wave equation

$$\frac{\partial^2}{\partial t^2}\boldsymbol{\mathcal{E}}(\boldsymbol{r},t) - {c_0}^2\frac{\partial^2}{\partial z^2}\boldsymbol{\mathcal{E}}(\boldsymbol{r},t) = -\frac{1}{\varepsilon_0}\frac{\partial^2}{\partial t^2}\boldsymbol{\mathcal{P}}(\boldsymbol{r},t)\,, \tag{23.1}$$

where $\boldsymbol{\mathcal{E}}$ and $\boldsymbol{\mathcal{P}}$ denote the real electric field and polarization, respectively, and c_0 and ε_0 are the vacuum speed of light and dielectric constant, respectively. The field quantities are expanded in terms of plane waves,

$$\mathcal{E}(z,t) = \frac{1}{2}\left[E^+(z,t)e^{ikz} + E^-(z,t)e^{-ikz}\right]e^{-i\omega t} + \text{c.c.}\,, \tag{23.2}$$

where we have introduced the slowly varying field amplitudes $E^\pm$, describing the forward (+) and backward (−) propagating electric field. The wave number is given by k, and ω is the optical frequency of the reference frame. From Equation 23.1, we can derive the propagation equations for the electric field amplitudes within the slowly varying envelope approximation (SVEA), neglecting all but the lowest order of derivatives. The SVEA limits the description to field envelopes that change on time scales and lengths much larger than the respective optical period and wavelength, respectively. The propagation equation for the slowly varying field envelope is then written as

$$\left(\frac{\partial}{\partial t} \pm v_g\frac{\partial}{\partial z}\right)E_\pm(z,t) = \frac{i\omega\Gamma}{2\varepsilon_{\text{bg}}\varepsilon_0}P_\pm(z,t) =: S_\pm(z,t)\,, \tag{23.3}$$

with the group velocity $v_g \equiv \frac{c_0}{\sqrt{\varepsilon_{\text{bg}}}}$, with the background permittivity ε_{bg}. $P_\pm(z,t)$ is the macroscopic slowly varying polarization amplitude. The transverse optical confinement factor Γ is introduced phenomenologically to the above equation. It describes the overlap of the electric field mode with the active medium, integrated over the transverse (x and y) coordinates. We summarize the right-hand side in a general source term $S_\pm(z,t)$.

The numerical solution of the above partial differential equation using a finite-difference method requires a spatial discretization into very fine sections of length $v_g\text{d}t$, where $\text{d}t$ is the numerical time-step, in order to ensure numerical stability [41]. For common device lengths on the order of 1 mm, a high number of spatial discretization points is needed. The numerical integration, therefore, becomes very expensive in terms of computation time and memory requirements [42,43]. A more elegant approach is the formulation of the problem as a delay-differential equation system [40,44], which we do in the following.

The partial differential equation Equation 23.3 can be formally solved by integrating along its characteristic lines, given by

$$z = \pm v_g t + \mathrm{const}. \tag{23.4}$$

Expanding the total derivative $\frac{\mathrm{d}}{\mathrm{d}t} = \frac{\partial z}{\partial t}\frac{\partial}{\partial z} + \frac{\partial}{\partial t}$, we can thus write

$$\frac{\mathrm{d}}{\mathrm{d}t}E_\pm(z,t) = \left[\pm v_g \frac{\partial}{\partial z} + \frac{\partial}{\partial t}\right] E_\pm(z,t) = S_\pm(z,t)\,. \tag{23.5}$$

Now we describe the optical amplifier of length ℓ by a number of Z sections along the propagation axis, such that the distance between two discretization points is given by $\Delta z := \ell/Z$. Integrating Equation 23.5 over the time interval $\Delta t = \frac{\Delta z}{v_g}$ thus yields

$$\begin{aligned} E_\pm(z,t) &= E_\pm(z \mp \Delta z, t-\Delta t) + \int_{-\Delta t}^{0} \left[\frac{\mathrm{d}}{\mathrm{d}t}E_\pm\left(z \pm v_g\tau, t+\tau\right)\right]\mathrm{d}\tau' \\ &= E_\pm(z \mp \Delta z, t-\Delta t) + \int_{-\Delta t}^{0} S_\pm\left(z \pm v_g\tau, t+\tau\right)\mathrm{d}\tau \\ &\approx E_\pm(z \mp \Delta z, t-\Delta t) + \frac{\Delta t}{2}\Big[S_\pm(z,t) + S_\pm(z \mp \Delta z, t-\Delta t)\Big]. \end{aligned} \tag{23.6}$$

The integral over the source term was approximated by its values at the end points of the integration interval. This approximation is valid for negligible change of $S_\pm$ along the integration path, i.e., for a sufficiently small space discretization step. The electric field at time t now depends on the values of $E_\pm$, $S_\pm$ at time $t-\Delta t$, which introduces a time delay into the equations.

The electric field in each of the spatial sections along the amplifier device thus couples to the time-delayed electric field in the neighboring sections, with the time Δt describing the time needed for the electric field propagation along the length of one section [40,44]. The resulting discretization scheme is illustrated in Figure 23.1. The advantage of this approach is the decoupling of the time and space discretization steps, ensuring numerical stability even for $\Delta z \gg v_g \mathrm{d}t$. The temporal dynamics at each point within the amplifier device is usually much faster than the characteristic timescale over which a propagating pulse changes its shape. Thus, a reduced number of spatial discretization points can be chosen compared to the finite-difference method, which significantly improves the simulation efficiency. The implementation of the delay-differential equations, however, means that the history of the electric fields as well as the source terms must be saved over a time interval Δt.

23.2.2 Quantum-Dot-in-a-Well Material Equations

The amplifier active medium is composed of an ensemble of of semiconductor quantum dots. For InAs quantum dots grown in the Stranski–Krastanov (SK) mode by molecular beam epitaxy (MBE), their areal density is in the order of $2-5\times10^{10}$ cm^{-2} [45]. The considered QDs are assumed to have two optically active localized states. These are denoted by GS and ES, for the ground and first excited state, respectively, which are located within the bands of the surrounding quantum well, as sketched in Figure 23.2. The resulting energy structure is sketched in Figure 23.3.

FIGURE 23.1 Electric field propagation schemes: (a) Traditional time-domain traveling-wave integration scheme. The device is discretized into spatial sections with width dz, usually related to the numerical time step dt via the electric field group velocity d$z = v_g$dt. The field $E(z, t)$ is then determined from the field in neighboring discretization points at the previous time step $E(z \pm \mathrm{d}z, t - \mathrm{d}t)$. (b) The discretization into fewer spatial sections separated by Δz leads to a coupling to neighboring points with a time delay Δt. The time evolution in each section is still calculated with a time step dt, separating space and time discretization steps. (After J. Javaloyes and S. Balle, *Opt. Express*, 20, 8496–8502, 2012.)

FIGURE 23.3 Energy scheme of the considered dot-in-a-well (DWELL) structure. The QD ground states (GS) lie ΔE_b below the quantum-well (QW) band edge, with an energy spacing of Δ_b between GS and first excited state (ES).

Due to fluctuations in QD size and composition, their emission spectrum is inhomogeneously broadened around the central emission energy of $\approx$ 950 meV for InAs/InGaAs QDs. Typical inhomogeneous linewidths lie around 30 meV—higher than their homogeneous linewidth [27,46]. An accurate description of the QD medium, therefore, requires a separate treatment of quantum dots in dependence of their respective transition energy. Both the interaction with the optical field as well as the charge-carrier scattering dynamics are influenced by the transition and localization energies. A natural way to deal with the inhomogeneous broadening is, therefore, to distribute the whole QD ensemble into a number of subgroups, characterized by their optical transition energy. This procedure is illustrated in Figure 23.4. We label each subgroup by an index j and its respective mean transition energy $\hbar\omega^j$. We introduce the probability mass function $f(j)$ denoting the fraction of QDs within the jth subgroup. Following a Gaussian distribution with an FWHM of ΔE_{inh}, the distribution function $f(j)$ is then given by

$$f(j) = \frac{1}{\mathcal{N}} \exp\left(-4 \ln 2 \left[\frac{\hbar\omega^j - \langle \hbar\omega \rangle}{\Delta E_{\text{inh}}} \right]^2 \right), \tag{23.7}$$

with the normalization constant $\mathcal{N}$ chosen such that $\sum_j f(j) \overset{!}{=} 1$, calculated numerically. The inhomogeneous broadening of the optical spectrum is given by the sum of the individual single-particle state broadenings of electrons and holes (subscripts e and h, respectively),

$$\Delta E_{\text{inh}} = \Delta\varepsilon_e + \Delta\varepsilon_h\,, \tag{23.8}$$

where $\Delta\varepsilon_b$, $b \in \{e, h\}$ is the corresponding electron and hole state broadening. Only the total broadening ΔE_{inh} is experimentally readily accessible, e.g., by measurements of the QD luminescence spectra [47]. For the individual state broadening, we assume widths proportional to the localization energy of the given state:

$$\Delta\varepsilon_b = \Delta E_{\text{inh}} \frac{\Delta E_b}{\Delta E_e + \Delta E_h}\,. \tag{23.9}$$

We now proceed by deriving the dynamic equation for each of the QD subgroups within each amplifier section. In addition to the QD subgroup index j, we introduce the state index $m \in \{\text{GS}, \text{ES}\}$, distinguishing the charge carriers in the GS and first ES. The material dynamics are described within the Maxwell–Bloch approach [48], characterizing the QD active medium by their occupation probabilities ρ_m^j and the microscopic polarization amplitudes p_m^j. The microscopic polarization is induced by the electric field and describes the transition probability under emission of a photon, and thus couples the

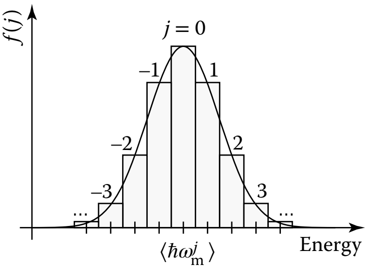

FIGURE 23.4 Illustration of the QD subgroups to model inhomogeneous broadening. The QDs are distributed into $j_{\max}$ subgroups, assumed to follow a Gaussian distribution around the mean transition energy $\langle \hbar\omega_m \rangle$. The probability mass function $f(j)$ gives the probability for a QD to be found in the jth subgroup.

charge-carrier equations to the light field. Similar to the electric field, we expand p^j_m in terms of forward and backward propagating amplitudes,

$$p^j_m(z,t) = \left[p^j_{m,+}(z,t)e^{ikz} + p^j_{m,-}(z,t)e^{-ikz}\right] e^{-i\omega t}. \tag{23.10}$$

We assume a coupling of the individual polarization amplitudes $p^j_{m,\pm}$ only to the corresponding co-propagating part of the electric field. This is the rotating wave approximation, neglecting terms oscillating with $e^{\pm 2ikz}$ and $e^{\pm 2i\omega t}$, which would appear in the coupling of counter-propagating polarization and field terms.

The Maxwell–Bloch equations of the QD active medium polarization amplitudes and occupation probabilities then read [49,50]

$$\frac{\mathrm{d}}{\mathrm{d}t}p^j_{m,\pm}(z,t) = -\left[i(\omega^j_m - \omega) + \frac{1}{\tau_2}\right] p^j_{m,\pm}(z,t) - i\frac{\mu_m}{2\hbar}\left(\rho^j_{e,m}(z,t) + \rho^j_{h,m}(z,t) - 1\right) E_\pm(z,t), \tag{23.11}$$

$$\begin{aligned}\frac{\mathrm{d}}{\mathrm{d}t}\rho^j_{b,m}(z,t) &= \frac{1}{\hbar}\mathrm{Im}\left[p^j_{m,+}(z,t)\mu^*_m E^*_+(z,t)\right] + \frac{1}{\hbar}\mathrm{Im}\left[p^j_{m,-}(z,t)\mu^*_m E^*_-(z,t)\right] \\ &\quad - W_m\rho^j_{e,m}(z,t)\rho^j_{h,m}(z,t) + \frac{\partial}{\partial t}\rho^j_{b,m}(z,t)\Big|_{\mathrm{sc}}.\end{aligned} \tag{23.12}$$

Here, we again denote the localized QD states by $m \in \{\mathrm{GS}, \mathrm{ES}\}$ and their subgroup index by j. The above equations describe the micoscopic polarization amplitudes in the reference frame of ω, whereas ω^j_m denotes the transition frequency of the respective optical transition. The polarization decays with the time constant τ_2. This dephasing time describes the loss of the quantum-mechanical coherence between different QDs due to scattering processes with other electrons or phonons. In semiconductors, these processes are usually in the order of a few tens of femtoseconds, due to the high density of charge carriers as potential scattering partners. The polarization is driven by the electric field $E_\pm(z,t)$ and the carrier inversion, with the interaction strength given by the transition dipole moment μ_m.

The QD charge-carrier dynamics is given by stimulated recombination induced by the microscopic polarization, and bimolecular spontaneous recombination with a rate W_m. The term $\frac{\partial}{\partial t}\rho^j_{b,m}(z,t)\Big|_{\mathrm{sc}}$ denotes charge-carrier scattering contributions, which we will address in the following section.

The above equations couple to the macroscopic light field via the macroscopic slowly varying polarization amplitudes $P_\pm(z,t)$. These are given by the macroscopic sum over the individual microscopic contributions:

$$P_\pm(z,t) = \frac{2N^{\mathrm{QD}}}{h^{\mathrm{QW}}} 2\sum_{j,m} \nu_m f(j)\mu^*_m p^j_{m,\pm}(z,t), \tag{23.13}$$

where N^{QD} is the areal QD density per quantum-well layer and h^{QW} the layer height. The sum $\sum_{j,m}\nu_m f(j)$ gives the sum over all QD subgroups and confined states, with ν_m the degeneracy (excluding spin) of the mth state and $f(j)$ the distribution function as defined in Equation 23.7. The macroscopic polarization couples back to the electric field equation as a source term, as shown in Equation 23.3:

$$\begin{aligned}\frac{\mathrm{d}}{\mathrm{d}t}E_\pm(z,t) = S_\pm(z,t) &= \frac{i\omega\Gamma}{2\varepsilon_{\mathrm{bg}}\varepsilon_0}P_\pm(z,t) \\ &= \frac{2N^{\mathrm{QD}}}{h^{\mathrm{QW}}}\frac{i\omega\Gamma}{\varepsilon_{\mathrm{bg}}\varepsilon_0}\sum_{j,m}\nu_m f(j)\mu^*_m p^j_{m,\pm}(z,t).\end{aligned} \tag{23.14}$$

It is tempting to identify a small-signal gain $g(z, t, \omega)$, as used in traditional rate equation models, from an earlier equation:

$$g(z, t, \omega) = \frac{i\omega\Gamma}{2\varepsilon_{\mathrm{bg}}\varepsilon_0} \frac{P_\pm(z, t)}{E_\pm(z, t)}. \tag{23.15}$$

However, the independent dynamics of the polarization would lead to a strongly varying (and even diverging) value of $g(z, t, \omega)$ in time. Nevertheless, in a static limit, by setting $\frac{\partial}{\partial t} p^j_m = 0$, the adiabatic small-signal gain can be calculated from Equation 23.11, which yields

$$g(z, t, \omega) = \frac{\hbar\omega\Gamma}{\varepsilon_0\varepsilon_{\mathrm{bg}} h^{\mathrm{QW}}} 2N^{\mathrm{QD}} \sum_{j,m} \nu_m f(j) \frac{\tau_2 |\mu_m|^2}{2\hbar^2} \frac{\left[\rho^j_{e,m}(z, t) + \rho^j_{h,m}(z, t) - 1\right]}{1 + [\tau_2(\omega - \omega^j_m)]^2}. \tag{23.16}$$

This expression, however, neglects the dynamics of the polarization, assuming it to follow the incident electric field instantaneously. For coherent interactions, such as Rabi oscillations discussed later in this chapter, the above equation, therefore, cannot be applied. Furthermore, Equation 23.16 is strictly valid only for a monochromatic electric field at a given frequency ω. When simulating broadband amplification, such as optical pulses, the full polarization dynamics must, therefore, be taken into account. For slowly varying and near-monochromatic electric field envelopes, such as encountered in lasers, the adiabatic elimination of the polarization equations is a valid and widely used approximation, and Equation 23.16 can be used to calculate the optical gain.

The Maxwell–Bloch equations only describe the optically active QD states. In order to describe the carrier dynamics in the surrounding charge-carrier reservoir, we model the quantum-well charge-carrier density w_b by a rate equation,

$$\frac{\mathrm{d}}{\mathrm{d}t} w_b(z, t) = \eta \frac{J}{e_0} - A^S \sqrt{w_e(z, t) w_h(z, t)} - B^S w_e(z, t) w_h(z, t) + \frac{\partial}{\partial t} w_b(z, t)\Big|_{\mathrm{sc}}, \tag{23.17}$$

with the pump current density J, the electron charge $-e_0$, and a pump current efficiency η accounting for losses in the surrounding semiconductor layers, as well as imperfect carrier injection into the active region, which is not modeled explicitly. Linear and bimolecular recombination rates in the reservoir are given by A^S and B^S, respectively, which are important to describe carrier losses over a wide range of currents. We neglect Auger recombination, as with typical values ($C = 10^{-28}\ \mathrm{cm}^6 \cdot \mathrm{s}^{-1}$) the losses are found to be dominated by A^S and B^S in the current ranges considered in this chapter. The term $\frac{\partial}{\partial t} w_b(z, t)\Big|_{\mathrm{sc}}$ accounts for scattering of charge carriers into the QD states, which is derived in the next section. The above equations are defined for each space discretization point along the amplifier device, allowing for a spatially inhomogeneous distribution of the charge-carrier distribution, as encountered in long amplifier devices [51,52].

23.2.3 QD Charge-Carrier Scattering

QDs differ from conventional quantum-well or bulk gain media in the presence of localized states and thus a strongly modified density of states. Electrically injected charge carriers reach the active region in high-energy states near the bulk material band edges. The optically active QD states must, therefore, be populated by means of scattering processes. While the charge-carrier distributions within the quasi-continuous bulk and quantum-well bands quickly thermalize due to electron–phonon interaction [53,54], an effective scattering of carriers into the QD states by scattering with phonons is limited due to the existence of the “phonon bottleneck”[55]. Instead, at elevated charge-carrier densities, Coulomb-mediated carrier-carrier scattering provides an ultrafast scattering mechanism between the QD states and the surrounding semiconductor material [56]. In the following, we derive expressions for the Coulomb scattering mechanism.

The starting point for calculating the carrier-carrier scattering is the many-body Hamiltonian in second quantization [49,57],

$$H_{\text{sys}} = H_{\text{kin}} + H_{\text{C}} = \sum_{\substack{a\\ s}} \varepsilon_a a^{\dagger}_{as} a_{as} + \frac{1}{2} \sum_{\substack{abcd\\ ss'}} W_{abcd}\, a^{\dagger}_{as} a^{\dagger}_{bs'} a_{cs'} a_{ds}\,, \tag{23.18}$$

where a_x, $a^{\dagger}_x$ are the electron annihilation and creation operators in the state x with the energy ε_x, respectively. The Hamiltonian consists of the kinetic (free-carrier) contribution H_{kin}, and the Coulomb-interaction Hamiltonian H_{C}, which includes the many-body interaction between the charge carriers in the semiconductor. In the sums, the labels a, b, c, d denote all possible electronic states, with s, s' denoting their spins. The occupation probability for a given state (ν, s) is given by

$$\rho_{\nu s} = \langle a^{\dagger}_{\nu s} a_{\nu s} \rangle\,. \tag{23.19}$$

The screened Coulomb interaction matrix element is given by

$$W_{abcd} = \iint \mathrm{d}^3 r\, \mathrm{d}^3 r'\ \phi^*_a(\boldsymbol{r})\phi^*_b(\boldsymbol{r}') \frac{e_0{}^2}{4\pi\varepsilon_0\varepsilon_{\text{bg}}} \frac{e^{-\kappa|\boldsymbol{r}-\boldsymbol{r}'|}}{|\boldsymbol{r}-\boldsymbol{r}'|} \phi_c(\boldsymbol{r}')\phi_d(\boldsymbol{r})\,, \tag{23.20}$$

with the single-particle wave functions $\phi_x(\boldsymbol{r})$, approximated as harmonic oscillator wave functions, which was shown to yield surprisingly accurate results [58]. The vacuum and background permittivity are given by ε_0 and ε_{bg}, respectively, and $-e_0$ is the electron charge. The screening wave number κ describes the screening of the Coulomb interaction potential by the surrounding charge-carrier plasma, which can be calculated in a self-consistent way [57,59,60]. Here, we implement the screening wave number in the static quasi-equilibrium limit as

$$\kappa = \frac{e_0{}^2}{2\varepsilon_0\varepsilon_{\text{bg}}} \sum b \frac{\partial w_b}{\partial E^{\text{eq}}_{\text{F},b}} = \frac{e_0{}^2}{2\varepsilon_0\varepsilon_{\text{bg}}} \sum_b D_b f(E^{\text{QW}}_{b,0}, E^{\text{eq}}_{\text{F},b}, k_B T^{\text{eq}})\,, \tag{23.21}$$

with the quasi-Fermi level $E^{\text{eq}}_{\text{F},b}$, quasi-equilibrium temperature T^{eq}, and 2D density of states D_b of the corresponding electron and hole plasma. Within the quasi-equilibrium approximation, the screening can be expressed by the occupation probability at the band edge, $E^{\text{QW}}_{b,0}$, increasing the screening of the Coulomb interaction with increasing charge-carrier density. The screening becomes very important at elevated charge-carrier densities where the unscreened Coulomb potential would greatly overestimate the interaction between the charge carriers.

An exact numeric solution to Heisenberg's equation of motion within the given problem is generally not possible. The Coulomb interaction Hamiltonian couples the dynamic evolution of n-operator expectation values to $n+2$-operator expectation values, leading to an infinite number of coupled differential equations. It is, therefore, necessary to apply further approximations. We truncate this infinite chain of dynamic equations by factorizing six-operator expectation values into factors of two-operator expectation values, i.e., occupation probabilities. The Coulomb matrix elements thus enter the dynamic equations in up to second order. First-order contributions lead to renormalization effects of the single-particle energies and polarization amplitudes due to the Coulomb interaction with surrounding charge carriers [59,61]. These effects do not lead to a net change in the charge-carrier distribution and are therefore neglected.

By applying the Markov approximation to the resulting equations of motion, the explicit time dependence of four-operator expectation values is discarded. Instead, a quasi-static dependence of these expectation values on the occupation probabilities is assumed, by setting their time derivative to zero in the adiabatic limit. The scattering processes are thus assumed to follow any changes in the charge-carrier distribution instantaneously. The scattering contribution to the charge-carrier states then yields a Boltzmann-type equation:

$$\frac{\partial}{\partial t}\rho_{\nu\sigma}\Big|_{\mathrm{sc}} = \frac{2\pi}{\hbar}\sum_{\substack{bcd\\ s'}}\mathrm{Re}\left[W_{\nu bcd}\left(W^{*}_{\nu bcd} - W^{*}_{\nu bdc}\right)\right]\delta(\varepsilon_{\nu} + \varepsilon_{b} - \varepsilon_{c} - \varepsilon_{d})$$
$$\times\left[(1-\rho_{\nu\sigma})(1-\rho_{bs'})\rho_{cs'}\rho_{d\sigma} - \rho_{\nu\sigma}\rho_{bs'}(1-\rho_{cs'})(1-\rho_{d\sigma})\right], \tag{23.22}$$

which describes the Coulomb scattering in the second-order Born–Markov approximation [23,62–64]. The summation terms in Equation 23.22 describe the simultaneous scattering between states $d \leftrightarrow \nu$ and $c \leftrightarrow b$. The delta function ensures energy conservation, such that the total energy of the final states equals that of the initial states. The Coulomb scattering is thus revealed to be of Auger-type, requiring the simultaneous scattering of two electrons, with no net change in the total charge-carrier energy. The individual scattering processes are proportional to the occupation probabilities in the initial states c, d and proportional to the probability to find vacant final states ν, b, accounting for Pauli blocking. The second term in the sum in Equation 23.22 describes the reverse scattering processes, with electrons scattering out of the states ν, b.

Equation 23.22 can be written in the form of a Boltzmann equation for the occupation probability $\rho(t)$ of any given state in the system,

$$\frac{\partial}{\partial t}\rho(t)\Big|_{\mathrm{sc}} = S^{\mathrm{in}}[1-\rho(t)] - S^{\mathrm{out}}\rho(t), \tag{23.23}$$

combining the summation terms into an in-scattering rate S^{in} and a corresponding out-scattering rate S^{out}. These rates are calculated from the sums in Equation 23.22, which include all possible individual scattering processes. An exact treatment of the scattering dynamics within the second-order Born–Markov approximation would still require the dynamic tracking of the complete charge-carrier distribution, making numerical treatment difficult. Fortunately, the given QD-quantum-well system allows the distinction between qualitatively different scattering processes in order to break up the sums in Equation 23.22 into different parts which can be handled more easily.

For the dot-in-a-well (DWELL) structures considered in this chapter, two general classes of charge-carrier scattering processes can be distinguished: the capture of a quantum-well electron into a confined QD state, and the intradot electron relaxation, each with their respective inverse escape processes. This is illustrated in Figure 23.5a and b, respectively. The accompanying Auger-electron can involve either quantum-well states only, or transitions between quantum-well and other QD states. Note that depending on the involved energy differences, not all of these scattering channels are possible. For example, in the depicted case of the intra-dot relaxation in Figure 23.5b, the Auger transition in the valence band from the quantum well to the GS is not possible, as it would violate energy conservation. The possible scattering processes contributing to the total scattering rate thus strongly depend on the exact energy scheme of the QD-quantum-well system. Note that throughout this work impact ionization and Auger-assisted recombination, i.e., the direct scattering between conduction and valence bands, is not considered.

Following the earlier discussion, the scattering dynamics of the localized QD states are rewritten in the electron–hole picture as

$$\frac{\partial\rho_{b,\mathrm{GS}}}{\partial t}\Big|_{sc} = S^{\mathrm{cap,in}}_{b,\mathrm{GS}}(\{\rho_{\mathrm{QW}}\})(1-\rho_{b,\mathrm{GS}}) - S^{\mathrm{cap,out}}_{b,\mathrm{GS}}(\{\rho_{\mathrm{QW}}\})\rho_{b,\mathrm{GS}}$$
$$+ S^{\mathrm{rel,in}}_{b,\mathrm{GS}}(\{\rho_{\mathrm{QW}}\})\rho_{b,\mathrm{ES}}(1-\rho_{b,\mathrm{GS}}) - S^{\mathrm{rel,out}}_{b,\mathrm{GS}}(\{\rho_{\mathrm{QW}}\})(1-\rho_{b,\mathrm{ES}})\rho_{b,\mathrm{GS}}, \tag{23.24}$$

$$\frac{\partial\rho_{b,\mathrm{ES}}}{\partial t}\Big|_{sc} = S^{\mathrm{cap,in}}_{b,\mathrm{ES}}(\{\rho_{\mathrm{QW}}\})(1-\rho_{b,\mathrm{ES}}) - S^{\mathrm{cap,out}}_{b,\mathrm{ES}}(\{\rho_{\mathrm{QW}}\})\rho_{b,\mathrm{ES}}$$
$$+ S^{\mathrm{rel,in}}_{b,\mathrm{ES}}(\{\rho_{\mathrm{QW}}\})\rho_{b,\mathrm{GS}}(1-\rho_{b,\mathrm{ES}}) - S^{\mathrm{rel,out}}_{b,\mathrm{ES}}(\{\rho_{\mathrm{QW}}\})(1-\rho_{b,\mathrm{GS}})\rho_{b,\mathrm{ES}}. \tag{23.25}$$

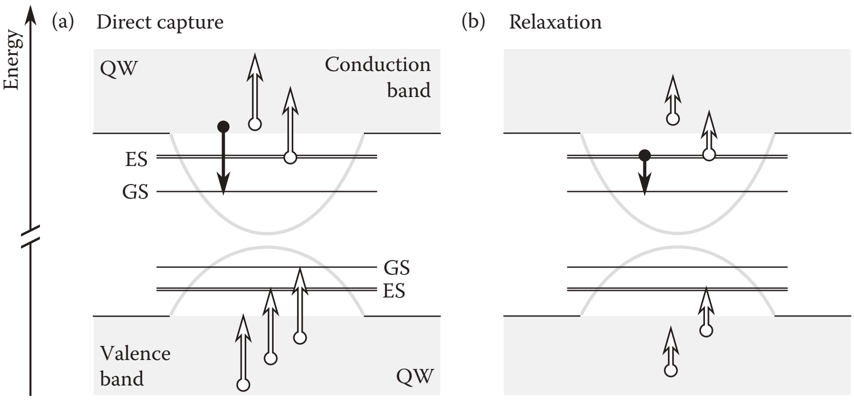

FIGURE 23.5 Possible scattering channels in quantum-dot (QD) quantum-well (QW) systems. (a) Direct capture into the QD ground state (GS). (b) Intradot relaxation from excited state (ES) to GS. The electron scattering process considered is shown by the black arrow, with the white arrows denoting the possible Auger processes. For all processes shown, the corresponding reverse scattering is also possible. Not shown is the direct capture into the QD ES, analogous to (a).

Here, ρ_b denotes either electron or hole occupation probabilities for $b \in \{e, h\}$. The scattering rates $S^{\text{cap,in}}$ denote the direct capture of quantum-well electrons into the QD states, $S^{\text{rel,in}}$ the intradot relaxation between the QD states, with S^{out} the scattering rate of the respective reverse processes. We can relate the relaxation processes of the ES to the corresponding GS terms,

$$S^{\text{rel,in}}_{b,\text{ES}}(\{\rho_{\text{QW}}\}) = -\frac{1}{2} S^{\text{rel,out}}_{b,\text{GS}}(\{\rho_{\text{QW}}\}), \tag{23.26}$$

$$S^{\text{rel,out}}_{b,\text{ES}}(\{\rho_{\text{QW}}\}) = -\frac{1}{2} S^{\text{rel,in}}_{b,\text{GS}}(\{\rho_{\text{QW}}\}), \tag{23.27}$$

with a factor $\frac{1}{2}$ compared to the GS contribution, due to the twofold degeneracy of the ES. All scattering rates in the above equations depend on the whole quantum-well distribution in both bands, denoted by $\{\rho_{\text{QW}}\}$.

Thus far the derived scattering expressions only describe the dynamics of QD states and their interaction with the quantum-well charge carriers. The dynamics of quantum-well carriers can in principle be expressed by Equation 23.22 as well. However, this would require resolving all quantum-well states and tracking their population distribution in time, which greatly increases the dimensionality of the system state. This problem can be resolved by assuming a specific distribution of the carrier population within the quantum well.

The intraband scattering between quantum-well states is typically in the order of $\approx$ 100 fs [65–69]. As long as this scattering is faster than the charge-carrier exchange between the quantum well and QDs, the quantum well can be assumed to be in quasi-equilibrium with good accuracy:

$$\rho_{b,\text{QW}}(\varepsilon^{\text{2D}}_{b,\boldsymbol{k}}) \approx f(\varepsilon^{\text{2D}}_{b,\boldsymbol{k}}, E^{\text{eq}}_{\text{F},b}, T^{\text{eq}}) \equiv \left[1 + \exp\left(\frac{\varepsilon^{\text{2D}}_{b,\boldsymbol{k}} - E^{\text{eq}}_{\text{F},b}}{k_{\text{B}} T^{\text{eq}}}\right)\right]^{-1}, \tag{23.28}$$

with the corresponding single-particle energies $\varepsilon^{\text{2D}}_{b,\boldsymbol{k}}$ and the quasi-Fermi level $E^{\text{eq}}_{\text{F},b}$. From this quasi-Fermi distribution the 2D-charge-carrier density w_b in the quantum wells can be calculated by taking the density of states in the quantum well as

$$\mathcal{D}_b(E) = D_b \Theta(E - E^{\text{QW}}_{b,0}) = \frac{m^*_b}{\pi\hbar^2} \Theta(E - E^{\text{QW}}_{b,0}), \tag{23.29}$$

under the assumption that the quantum-well sub-band spacing is large enough that only the lowest sub-band needs to be taken into account. The energy $E^{\mathrm{QW}}_{b,0}$ is the corresponding quantum-well band edge and Θ is the Heaviside function. The quantum-well charge-carrier density can then be written as

$$\begin{aligned} w_b &= \frac{2}{A_{\mathrm{act}}} \sum_{\boldsymbol{k}^{2\mathrm{D}}} \left[1 + \exp\left(\frac{\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}} - E^{\mathrm{eq}}_{\mathrm{F},b}}{k_{\mathrm{B}} T^{\mathrm{eq}}} \right) \right]^{-1} \\ &= \int\limits_{-\infty}^{\infty} \mathrm{d}\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}}\, \mathcal{D}_b(\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}}) \left[1 + \exp\left(\frac{\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}} - E^{\mathrm{eq}}_{\mathrm{F},b}}{k_{\mathrm{B}} T^{\mathrm{eq}}} \right) \right]^{-1} \\ &= D_b k_{\mathrm{B}} T^{\mathrm{eq}} \log\left[1 + \exp\left(\frac{E^{\mathrm{eq}}_{\mathrm{F},b} - E^{\mathrm{QW}}_{b,0}}{k_{\mathrm{B}} T^{\mathrm{eq}}} \right) \right], \end{aligned} \tag{23.30}$$

where the sum over all quantum-well $\boldsymbol{k}$-states was expressed as the integral over the charge-carrier energy. A_{act} is the active region in-plane area, with the factor 2 accounting for spin degeneracy. By inverting the above expression, the quasi-Fermi level $E^{\mathrm{eq}}_{\mathrm{F},b}$ can be expressed in terms of the charge-carrier density in the quantum well,

$$E^{\mathrm{eq}}_{\mathrm{F},b} = E^{\mathrm{QW}}_{b,0} + k_{\mathrm{B}} T^{\mathrm{eq}} \log\left[\exp\left(\frac{w_b}{D_b k_{\mathrm{B}} T^{\mathrm{eq}}} \right) - 1 \right]. \tag{23.31}$$

Thus, the quantum-well charge-carrier population can be expressed as a function of the carrier density and the quasi-equilibrium temperature:

$$\rho_{b,\mathrm{QW}}(\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}}) \equiv \rho_{b,\mathrm{QW}}(\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}}, w_b, T^{\mathrm{eq}}) = \left[1 + \exp\left(\frac{\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}} - E^{\mathrm{eq}}_{\mathrm{F},b}(w_b, T^{\mathrm{eq}})}{k_{\mathrm{B}} T^{\mathrm{eq}}} \right) \right]^{-1}. \tag{23.32}$$

By entering this relation into the expressions for the scattering rates Equation 23.22, also the individual scattering rates can be expressed as functions of only the 2D charge-carrier densities w_b and their quasi-equilibrium temperature T^{eq}, eliminating the need to keep track of the microscopic carrier population distribution.

Furthermore, it is now possible to relate the in- and out-scattering rates of a given scattering process to each other [70,71]. The out-scattering contribution in Equation 23.22 is equivalent to the in-scattering contribution under the replacement $\rho \to 1 - \rho$, which for the quantum well in quasi-equilibrium can be expressed as

$$1 - \rho_{\mathrm{QW}}(\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}}) = \rho_{\mathrm{QW}}(\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}}) \exp\left(\frac{\varepsilon^{2\mathrm{D}}_{b,\boldsymbol{k}} - E^{\mathrm{eq}}_{\mathrm{F},b}(w_b, T^{\mathrm{eq}})}{k_{\mathrm{B}} T^{\mathrm{eq}}} \right). \tag{23.33}$$

For the QD scattering processes the out-scattering rates can thus be written as [72]:

$$S^{\mathrm{cap,out}}_{b,m}(w_e, w_h, T^{\mathrm{eq}}) = S^{\mathrm{cap,in}}_{b,m}(w_e, w_h, T^{\mathrm{eq}}) \exp\left(\frac{\varepsilon^{\mathrm{QD}}_{b,m} - E^{\mathrm{eq}}_{\mathrm{F},b}}{k_{\mathrm{B}} T^{\mathrm{eq}}} \right) \tag{23.34}$$

$$S_b^{\text{rel,out}}(w_e, w_h, T^{\text{eq}}) = S_b^{\text{rel,in}}(w_e, w_h, T^{\text{eq}}) \exp\left(\frac{\varepsilon_{b,\text{GS}}^{\text{QD}} - \varepsilon_{b,\text{ES}}^{\text{QD}}}{k_{\text{B}} T^{\text{eq}}}\right), \tag{23.35}$$

where $\varepsilon_{b,m}^{\text{QD}}$ denotes the energy of the localized QD state, with $m \in \{\text{GS}, \text{ES}\}$ distinguishing between GS and ES. The out-scattering of charge carriers thus becomes more probable at elevated charge-carrier temperatures [73,74]. Note that in the derivation of above expressions, only a quasi-equilibrium within the quantum well must be assumed without making assumptions about the QD occupations. Equations 23.34 and 23.35 are therefore also valid in nonequilibrium situations between QD and quantum well.

The resulting scattering contribution to the dynamics of the QD occupation probability is, therefore, written as

$$\begin{aligned} \left.\frac{\partial \rho_{b,\text{GS}}^{j}(z,t)}{\partial t}\right|_{\text{sc}} &= S_{b,\text{GS}}^{\text{cap,in}}\left[1 - \rho_{b,\text{GS}}^{j}\right] - S_{b,\text{GS}}^{\text{cap,out}} \rho_{b,\text{GS}}^{j} \\ &\quad + S_b^{\text{rel,in}} \rho_{b,\text{ES}}^{j}\left[1 - \rho_{b,\text{GS}}^{j}\right] - S_b^{\text{rel,out}} \rho_{b,\text{GS}}^{j}\left[1 - \rho_{b,\text{ES}}^{j}\right] \end{aligned} \tag{23.36}$$

$$\begin{aligned} \left.\frac{\partial \rho_{b,\text{ES}}^{j}(z,t)}{\partial t}\right|_{\text{sc}} &= S_{b,\text{ES}}^{\text{cap,in}}\left[1 - \rho_{b,\text{ES}}^{j}\right] - S_{b,\text{ES}}^{\text{cap,out}} \rho_{b,\text{ES}}^{j} \\ &\quad - \frac{1}{2}\left\{S_b^{\text{rel,in}} \rho_{b,\text{ES}}^{j}\left[1 - \rho_{b,\text{GS}}^{j}\right] - S_b^{\text{rel,out}} \rho_{b,\text{GS}}^{j}\left[1 - \rho_{b,\text{ES}}^{j}\right]\right\}. \end{aligned} \tag{23.37}$$

The scattering contribution to the quantum-well equations can be calculated from charge-carrier number conservation. It is simply given by the total charge-carrier density captured in the QD states:

$$\left.\frac{\partial}{\partial t} w_b(z,t)\right|_{\text{sc}} = -2N^{\text{QD}} \sum_{j,m} \nu_m f(j) \left(S_{b,m}^{\text{cap,in}}(z,t)\left[1 - \rho_{b,m}^{j}(z,t)\right] - S_{b,m}^{\text{cap,out}}(z,t) \rho_{b,m}^{j}(z,t)\right). \tag{23.38}$$

23.2.4 Fit Functions for Scattering Rates

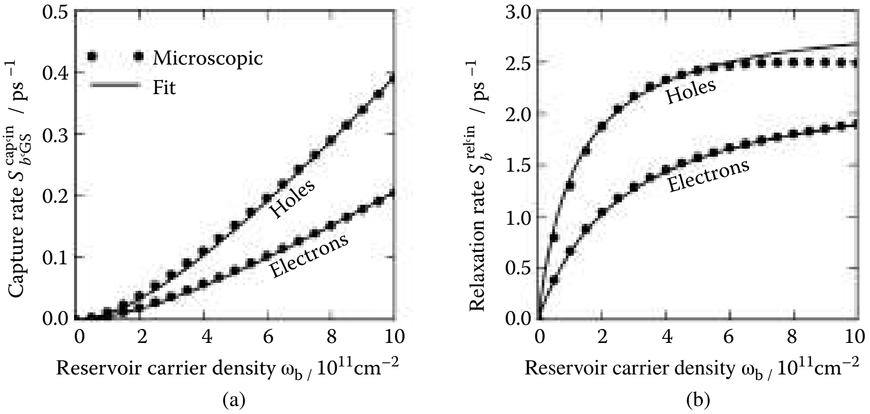
The microscopic calculation of the QD charge-carrier scattering rates requires a summation over all possible electronic states in the DWELL system, and such a calculation is, therefore, quite expensive in terms of computation time. While the scattering rates can be implemented by means of lookup tables, having a simpler analytic expression would be advantageous.

A first look at the scattering rates in dependence of the reservoir densities w_b reveals for the capture rates a quadratic increase at low densities, and a transition to nearly linear increase at higher values of w_b. The relaxation rates, on the other hand, show a linear increase at first and subsequent saturation. This is depicted in Figure 23.6 (circles). Taking these characteristics into account, we fit the scattering rates, using the following functions

$$S_{b,m}^{\text{cap,in}}(w_b) = \frac{A {w_b}^2}{B + w_b} \tag{23.39}$$

$$S_{b,m}^{\text{rel,in}}(w_b) = \frac{C w_b}{D + w_b}. \tag{23.40}$$

The corresponding out-scattering rates are calculated via Equations 23.34 and 23.35. Table 23.1 gives the fitting parameters extracted from the microscopically calculated rates. The comparison shown in Figure 23.6 shows good agreement between the microscopically calculated rates and the fit functions. For high reservoir carrier densities the fits show a slight deviation, especially pronounced in the hole



(a)

(b)

FIGURE 23.6 Fits of the quantum-dot scattering rates. Shown are (a) the ground-state direct-capture and (b) the intradot relaxation rate for electrons and holes, in dependence of the electron reservoir density w_b at $T = 300$ K. The microscopically calculated rates (circles) are shown together with the simple fit functions (lines). The fit parameters are given in Table 23.1.

TABLE 23.1 Fitting Parameters for the Scattering Rates

	Electrons		Holes	
	GS	ES	GS	ES
A (10^{-11}cm^2·ns^{-1})	32	54	60	79
B (10^{11}cm^{-2})	5.6	2.9	5.3	2.1
C (ns^{-1})	2400		3000	
D (10^{11}cm^{-2})	2.7		1.2	

Confinement energies: $\Delta E_e = 95$ meV, $\Delta_e = 60$ meV,
$\Delta E_h = 50$ meV, $\Delta_h = 25$ meV.

relaxation rate. These values, however, correspond to very strong electrical pumping. For currents typically used in these devices, the fit functions presented are in very good agreement with the microscopic calculations.

The relatively simple expressions extracted from the fits to the microscopically calculated scattering rates show that the common approach of capture rates which are directly proportional to the reservoir charge-carrier density [17,75] should even yield quantitatively acceptable results. The saturation of the intradot relaxation rates at elevated carrier densities suggests the use of constant relaxation rates when simple QD models are desired. Nevertheless, when the accurate description of dynamics over a large range of operating conditions is required, the microscopic description of the QD scattering should be preferred.

23.2.5 Modeling of Spontaneous Emission

The spontaneous emission created in optical amplifier devices will be subject to stimulated amplification when emitted along the propagation axis. This ASE can reach significant optical power levels and is important for the device characteristics and performance. Apart from adding an optical noise background to the device output, it can often become strong enough to influence the charge-carrier dynamics [76–78]. These effects will deteriorate the device performance and the optical signal quality.

A consistent description of the ASE is important. In general there exist two appropriate modeling approaches: the deterministic description of the ASE power spectral density in the frequency space [17,79] and the stochastic description in timedomain [43,78]. Here, we will employ the stochastic description, which simplifies the inclusion of time-varying input signals.

We, therefore, phenomenologically add an additional source term on the right-hand side of Equation 23.5, modeling the stochastic spontaneous emission added to the propagating electric field:

$$\frac{\mathrm{d}}{\mathrm{d}t}E_{\pm}(z,t') = S_{\pm}(z,t') + S_{\pm}^{\mathrm{sp}}(z,t')\,. \tag{23.41}$$

The electric field propagation along the one space-discretization section is again determined by integration of Equation 23.41 over the interval Δz:

$$E_{\pm}(z,t) \approx E_{\pm}(z \mp \Delta z, t-\Delta t) + \frac{\Delta t}{2}\left[S_{\pm}(z,t) + S_{\pm}(z \mp \Delta z, t-\Delta t)\right] + \int_{-\Delta t}^{0} S_{\pm}^{\mathrm{sp}}\left(z \pm v_g\tau, t+\tau\right)\mathrm{d}\tau\,. \tag{23.42}$$

The spontaneous emission source term must account for all optical transitions in the inhomogeneously broadened QD ensemble. Let $\eta_m^j(z,t)$ describe the spontaneous emission contribution of the jth subgroup of the mth localized state. We write for the electric field spontaneously added to the propagating field along Δz:

$$\int_{-\Delta t}^{0} S_{\pm}^{\mathrm{sp}}\left(z \pm v_g\tau, t+\tau\right)\mathrm{d}\tau \equiv \sum_{m,j} \eta_m^j(z,t)\,. \tag{23.43}$$

The spontaneous emission of an optical transition has a finite linewidth given by its homogeneous broadening. The homogeneous linewidth of a given transition is directly linked to the dephasing time τ_2 of the microscopic polarization, with the linewidth simply given by $2\tau_2^{-1}$. In order to correctly implement the spectral properties of the ASE, the spontaneously emitted field $\eta_m^j(z,t)$ must, therefore, have the correct linewidth and center frequency. It is thus not possible to describe the spontaneous emission by white noise, which would produce a flat noise spectrum; it must instead be modeled using colored noise. We implement this colored noise by two-dimensional Ornstein–Uhlenbeck processes [80], which describe quantities which are driven by white noise but relax with a given rate γ toward zero. This relaxation rate leads to a finite “memory” of the process, which translates into a finite spectral width around a center frequency. The time evolution of each of the respective noise signals is modeled by the following stochastic differential equation:

$$\frac{\mathrm{d}}{\mathrm{d}t}\eta_m^j(z,t) = -(i\omega_m^j + \gamma)\eta_m^j(z,t) + \sqrt{D_{\mathrm{sp},m}^j(z,t)}\,\tilde{\xi}_m^j(z,t)\,, \tag{23.44}$$

where $\tilde{\xi}(z,t)$ is a complex Gaussian white noise process, which is δ-correlated both in z and t. The relaxation rate of η_m^j is given by γ, and its center frequency by ω_m^j. The noise signal then fulfills the following properties [80]:

$$\langle \mathrm{Re}\,\eta_m^j(z,t)\rangle = \langle \mathrm{Im}\,\eta_m^j(z,t)\rangle = 0 \tag{23.45}$$

$$\langle |\eta_m^j(z,t)|^2\rangle = \frac{D_{\mathrm{sp},m}^j(z,t)}{\gamma} \tag{23.46}$$

$$\langle \eta_m^j(z,t)\eta_m^{j\,*}(z',t+\tau)\rangle \approx \frac{D_{\mathrm{sp},m}^j(z,t)}{\gamma}e^{-\gamma|\tau|}e^{i\omega_m^j\tau}\delta_{z,z'}\,. \tag{23.47}$$

Equation 23.47 is valid only under the assumption of a slowly varying noise amplitude $\partial_t D_{\mathrm{sp}}(z,t) \ll \gamma$, such that within one correlation time γ^{-1} the spontaneous emission amplitude can be assumed as constant. We can use the Wiener–Khinchin-theorem [81] this relation can be used to calculate the power spectrum $\mathcal{S}_{\eta_m^j}(z,\omega)$ of $\eta_m^j(z,t)$:

$$\mathcal{S}_{\eta_m^j}(z,\omega) = \frac{1}{2\pi}\int_{-\infty}^{\infty} \langle \eta_m^j(z,t)\eta_m^{j\,*}(z,t+\tau)\rangle e^{-i\omega\tau}\mathrm{d}\tau \tag{23.48}$$

$$= \frac{D_{\mathrm{sp},m}^j(z)}{\pi}\frac{1}{(\omega_m^j-\omega)^2+\gamma^2}, \tag{23.49}$$

which yields a Lorentzian line shape with a FWHM of 2γ. We thus identify $\gamma = (\tau_2)^{-1}$, such that the noise linewidth equals the homogeneous linewidth of the QD transitions.

Using the noise correlation properties, the average power that is added to the electric field by the noise can be calculated. Combining Equations 23.42 and 23.43 and summarizing the deterministic source terms in a combined variable, $\widetilde{S}_{\pm}^{\mathrm{stim}}$, yields for the electric field:

$$E_{\pm}(z,t) = E_{\pm}(z\mp\Delta z, t-\Delta t) + \widetilde{S}_{\pm}^{\mathrm{stim}}(z,t) + \sum_{m,j}\eta_m^j(z,t) \tag{23.50}$$

$$\left\langle\left|E_{\pm}(z,t)\right|^2\right\rangle = \left|E_{\pm}(z\mp\Delta z,t-\Delta t)+\widetilde{S}_{\pm}^{\mathrm{stim}}(z,t)\right|^2 + \sum_{m,j}\left\langle\left|\eta_m^j(z,t)\right|^2\right\rangle$$

$$= \left|E_{\pm}(z\mp\Delta z,t-\Delta t)+\widetilde{S}_{\pm}^{\mathrm{stim}}(z,t)\right|^2 + \sum_{m,j}\tau_2 D_{\mathrm{sp},m}^j(z,t), \tag{23.51}$$

where we have used the zero mean property, $\langle\eta_m^j\rangle = 0$. On average, the spontaneous emission thus increases the squared modulus of the electric field along one space discretization step during the propagation time Δt by $\sum_{m,j}\tau_2 D_{\mathrm{sp},m}^j(z,t)$. Or, written in terms of a time derivative,

$$\frac{\partial}{\partial t}|E_{\pm}(z,t)|^2\Big|_{\mathrm{sp}} = \frac{\tau_2}{\Delta t}\sum_{m,j} D_{\mathrm{sp},m}^j(z,t). \tag{23.52}$$

In the photon picture, the average change of the electric field energy density due to the spontaneous emission can be calculated:

$$\frac{\partial}{\partial t}u(z,t)\Big|_{\mathrm{sp}} = \frac{\varepsilon_{\mathrm{bg}}\varepsilon_0}{2}\frac{\partial}{\partial t}|E_{\pm}(z,t)|^2\Big|_{\mathrm{sp}}$$

$$= \beta\frac{2N^{\mathrm{QD}}\Gamma}{h^{\mathrm{QW}}}\sum_{m,j}\nu_m f(j)\hbar\omega_m^j W_m \rho_{\mathrm{e},m}^j(z,t)\rho_{\mathrm{h},m}^j(z,t). \tag{23.53}$$

Here we model spontaneous emission by bimolecular recombination processes, given by the sum over all QD states. The spontaneous emission ratio β gives the fraction of photons spontaneously emitted into the waveguide mode. Comparing Equations 23.52 and 23.53 yields for the individual noise strengths

$$D_{\mathrm{sp},m}^j(z,t) = \frac{\Delta t}{\tau_2}\frac{2\beta\Gamma\hbar\omega_m^j 2N^{\mathrm{QD}}}{\varepsilon_{\mathrm{bg}}\varepsilon_0 h^{\mathrm{QW}}}\nu_m f(j)\frac{1}{2}\left[R_{\mathrm{sp},m}^j(z,t)+R_{\mathrm{sp},m}^j(z\mp\Delta z,t-\Delta t)\right], \tag{23.54}$$

where the average of the spontaneous emission rate at the endpoints of the integration interval $[z, z \mp \Delta z]$ was taken, defined by

$$R^{j}_{\mathrm{sp},m}(z,t) := W_m \varrho^{j}_{\mathrm{e},m}(z,t)\varrho^{j}_{\mathrm{h},m}(z,t)\,. \tag{23.55}$$

The spontaneous emission noise thus depends on the optical frequency and on the occupation of the individual QD subgroups. The resulting propagation equation for the electric field is thus given by

$$E_{\pm}(z,t) \approx E_{\pm}(z \mp \Delta z, t - \Delta t) + \frac{\Delta t}{2}\Big[S_{\pm}(z,t) + S_{\pm}(z \mp \Delta z, t - \Delta t)\Big] + \sum_{m,j} \eta^{j}_{m}(z,t)\,. \tag{23.56}$$

23.3 Application Examples

The QDSOA model derived in the previous section will now be applied to an exemplary device. We implement Equations 23.11 through 23.17, which describe the active medium dynamics, along with Equation 23.56 to describe the electric field propagation including spontaneous emission noise. The charge-carrier scattering is described within the full microscopic framework as described in Equations 23.36 through 23.38, with the individual scattering rates depending on the reservoir carrier densities as well as the device temperature.

In this section we will at first investigate the static characteristics of the amplifier, focusing on the unique properties of the QD active medium. We thus calculate the pump-current dependent-gain spectra for the sample device, along with ASE spectra. Our modeling approach allows for a characterization over a large range of pump currents, accounting for the changing carrier dynamics by the nonlinear scattering rates. We analyze the performance of the QDSOA for optical signals centered on either the GS or ES energies, exploiting the broad gain spectrum due to the different localized states. Subsequently, we characterize the dynamic gain recovery after perturbation of the gain medium by a strong pulse. The gain recovery dynamics provide an important insight into the ultrafast amplification capabilities of an amplifier. Furthermore, we show how the internal charge-carrier dynamics imprint their signature onto the gain dynamics. The last part of this section addresses the phenomenon of coherent pulse-shaping by Rabi oscillations in QDSOAs, enabled by the comparably long dephasing time of the interband polarization. The interaction of ultrashort pulses with the QD gain medium, therefore, leads to strong modifications of the pulse shape. These modifications differ from classical descriptions and can be very complex due to the individual dynamics of QDs within the inhomogeneous ensemble.

23.3.1 Static Characterization of the QDSOA

In linear amplification applications, the device performance of SOAs is generally limited by two competing effects. On the one hand, the maximum achievable optical output power is limited by the charge carriers available for stimulated emission. The gain of the amplifier will, therefore, decrease when the optical power becomes too large. This effect is known as gain saturation. On the other hand, a too small optical signal will significantly reduce the signal-to-noise ratio, as the spontaneous emission background will dominate the output. Noise effects thus play an important role in the amplification of optical data signals [82,83]. A strong noise background will negatively impact the signal quality by distorting the corresponding optical output, and potentially corrupting the transmitted data stream. It is, therefore, important to investigate the ASE and gain of a given amplifier device to assess its suitability in a given application.

We implement the previously derived QD amplifier model to simulate the static characteristics of a specific device. We solve the delay-differential equation system using the simple forward-Euler method. The Gaussian white noise for implementing the spontaneous emission is generated by the Box–Muller algorithm [84]. For each spatial section of the amplifier device, we save a history array containing $\Delta t/\mathrm{d}t$

entries (up to Δt before the current time t) of the electric field $E_{\pm}(z, t)$, the field source term $S_{\pm}(z, t)$, and the spontaneous emission rate $R^{j}_{\mathrm{sp},m}(z, t)$.

The modeled amplifier is a 3-mm-long DWELL structure, consisting of ten 5-nm-thick InGaAs quantum wells, each embedding a density of $3 \times 10^{10}\,\mathrm{cm}^{-2}$ InAs QDs with a shallow-etched, 4-μ-wide ridge waveguide. Refer to Figure 23.3 for an illustration of the modeled energy structure. The device parameters that will be used here and in the following sections are given in Table 23.2, unless otherwise noted.

Additional phenomenological dependencies of the dephasing time and the device temperature on the applied pump current are included to account for heating effects as well as carrier-induced dephasing. We assume a temperature that increases linearly with the applied current,

$$T_{\ell}(j) = 295\,\mathrm{K} + \frac{j}{14}\frac{\mathrm{K}}{\mathrm{mA}}. \tag{23.57}$$

The increase in temperature significantly alters the detailed balance relationship, Equations 23.34 and 23.35, which determines the out-scattering rates out of the localized QD states. This, in turn, determines the quasi-equilibrium distribution that is reached in the steady state. Furthermore, the dephasing time of the QD interband polarization is known to decrease under strong excitation and with temperature [27,28]. We thus introduce a current-dependent dephasing time,

$$\tau_2(j) = \frac{\tau_2^0}{1 + \frac{j}{300\,\mathrm{mA}}}, \tag{23.58}$$

TABLE 23.2 Model Parameters Used in the Simulations, unless Otherwise Stated.

Symbol	Value	Meaning
N^{QD}	$3 \times 10^{10}\,\mathrm{cm}^{-2}$	QD density per layer
a_L	10	Number of layers
h^{QW}	5 nm	QW layer height
w_{wg}	4μ	Waveguide width
n_{bg}	3.77	Background index
ΔE_{inh}	30 meV	QD inhomogeneous broadening FWHM
η	0.4	Current injection efficiency
A^S	$0.7\,\mathrm{ns}^{-1}$	QW linear recombination rate
B^S	$50\,\mathrm{nm}^2\,\mathrm{ns}^{-1}$	QW bimolecular recombination rate
W_m	$1\,\mathrm{ns}^{-1}$	QD spontaneous recombination rate
β	3.5×10^{-4}	Spontaneous emission ratio
$\langle\hbar\omega_{\mathrm{GS}}\rangle$	963 meV (1288 nm)	QD GS center emission
$\langle\hbar\omega_{\mathrm{ES}}\rangle$	1048 meV (1183 nm)	QD ES center emission
μ_m	$0.6\,\mathrm{nm}\,e_0$	QD transition dipole moment
τ_2	$200\,\mathrm{fs} \times \left(1 + \frac{j}{300\,\mathrm{mA}}\right)^{-1}$	QD polarization dephasing time
T_{ℓ}	$295\,\mathrm{K} + \frac{j}{14}\frac{\mathrm{K}}{\mathrm{mA}}$	Lattice temperature
Γ	0.045	Geometric confinement factor
$\Delta E_e (\Delta E_h)$	95 meV (50 meV)	Electron (hole) QD GS localization energy
$\Delta_e (\Delta_h)$	60 meV (25 meV)	Electron (hole) QD GS–ES energy spacing
Z	31	Number of space discretization steps
dt	1 fs	Numeric time step

QW, quantum well; QD, quantum dot; GS, ground state; ES, excited state; FWHM, full-width half maximum.

where τ_2^0 denotes the corresponding dephasing time at $j = 0$. The above effects lead to broadening and subsequent decrease of the optical gain at high pump currents, as frequently observed in experiments [85]. Note that the dephasing time can in principle be calculated from microscopic scattering processes similar to the formalism presented in Section 23.2.3. A rigorous treatment of these effects, however, requires microscopic approaches that go beyond the employed Born–Markov approximation [86–90], which are beyond the scope of this chapter.

With the above additions, we calculate the key characteristics of the amplifier device, starting with the small-signal optical gain spectrum. The small-signal gain $G(\omega)$ is calculated from the stationary QD distribution (i.e., without a disturbing optical signal) via

$$G(\omega) = \exp\left[\frac{2}{v_g}\int_0^{\ell} g(z,t,\omega)\,\mathrm{d}z\right], \tag{23.59}$$

with the instantaneous amplitude gain

$$g(z,t,\omega) = \frac{\hbar\omega\Gamma}{\varepsilon_0\varepsilon_{\mathrm{bg}}h^{\mathrm{QW}}}2N^{\mathrm{QD}}\sum_{j,m}\nu_m f(j)\frac{\tau_2|\mu_m|^2}{2\hbar^2}\frac{\left[\rho^j_{e,m}(z,t)+\rho^j_{h,m}(z,t)-1\right]}{1+[\tau_2(\omega-\omega^j_m)]^2} \tag{23.60}$$

determined from the steady-state solution to Equation 23.11. The resulting spectra are shown in Figure 23.7a, clearly showing the GS gain peak around 1300 nm, which saturates and decreases for higher pump currents, at which the ES gain becomes dominant. We plot the optical gain at the GS and ES transitions, at $\lambda = 1288$ nm and $\lambda = 1183$ nm, respectively, under the dependence of the pump current, shown in Figure 23.7b.

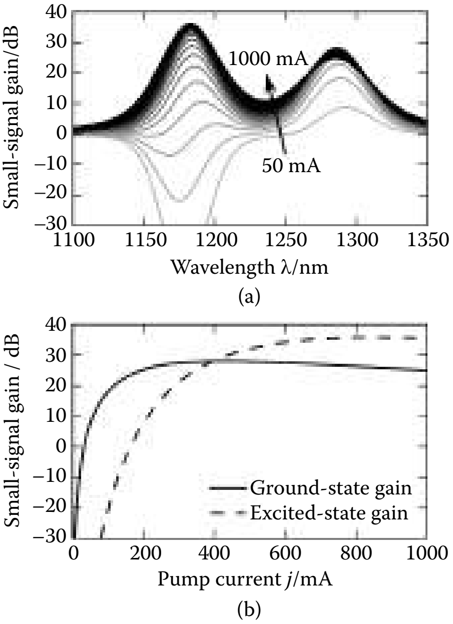


FIGURE 23.7 (a) Static gain spectra of the quantum dot semiconductor optical amplifier device for increasing pump currents up to $j = 1000$ mA in steps of 50 mA. (b) Small-signal gain at the ground (solid) and excited state (dashed) wavelengths ($\lambda_{\mathrm{GS}} = 1288$ nm, $\lambda_{\mathrm{ES}} = 1183$ nm) under the dependence of the pump current.

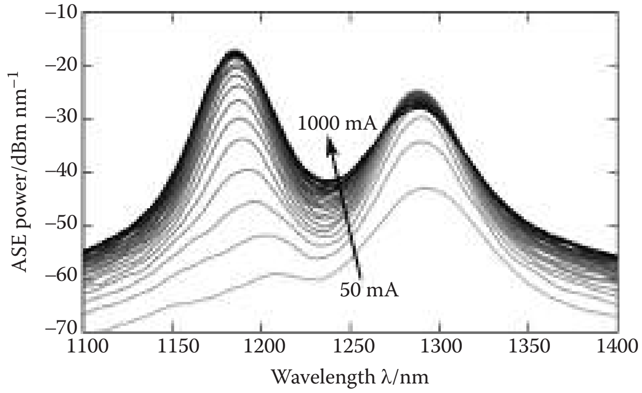

FIGURE 23.8 Simulated amplified spontaneous emission (ASE) spectra for increasing pump currents up to $j = 1000$ mA in steps of 50 mA.

Additionally, we can calculate the ASE spectra, shown in Figure 23.8. These are calculated by direct integration of the dynamic equations and subsequent Fourier transform of the electric field time series at the output facets. The resulting spectra can be used for a direct quantitative comparison with experimental data. The output power at the corresponding end facets is related to the electric field via

$$P_{\pm}^{\text{out}} = A_{\text{beam}} \frac{\varepsilon_0 n_{\text{bg}} c_0}{2} |E_{\pm}^{\text{out}}|^2 , \tag{23.61}$$

where $A_{\text{beam}} = \frac{a_L h^{\text{QW}} w_{\text{wg}}}{\Gamma}$ is the beam area in the waveguide and $E_{\pm}^{\text{out}} = \left\{E_+(\ell), E_-(0)\right\}$ denotes the forward- and back-propagating electric fields at their respective end facets. The ASE spectra mimic the qualitative behavior of the gain spectra, with clearly distinguishable GS and ES peaks and a saturation for strong pump currents (see Figure 23.8, where increasing gray levels indicate higher pump current). In addition, an initial blueshift of the emission peaks is visible especially for the ES emission. This is due to state filling, i.e., the shift of the quasi-Fermi levels toward higher energies with increasing carrier densities. At low currents, only the lowest energy states are occupied by charge carriers, and only with increasing current can the higher lying energy states be filled. In the model, this is accounted for by the detailed balance relation between the in- and out-scattering rates (Equations 23.34 and 23.35), which ensures the relaxation toward a quasi-Fermi distribution in the steady state. The quasi-Fermi level shifts toward higher energies with increasing reservoir carrier density, thus leading to a higher occupation in higher energy states.

When an optical signal of significant power is amplified by the gain medium, its charge-carrier distribution can be substantially perturbed. This leads to a power-dependent response of the device and thus induces nonlinearities. In order to quantify this response, we simulate the amplifier under the injection of a constant optical input signal with varying power. As we have seen previously, the existence of localized QD states makes it possible for the amplifier to work on GS and ES wavelengths. We will, therefore, investigate the device performance under amplification of signals at either of the two corresponding wavelengths. We put in an electric field at the input facet as

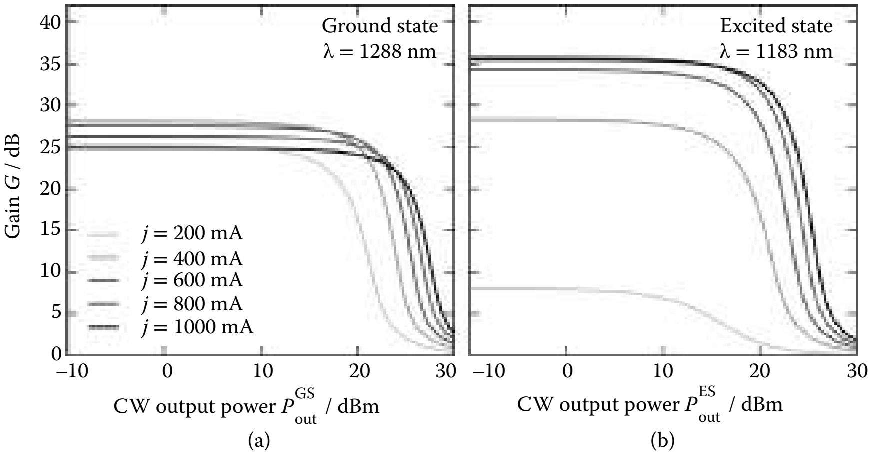
$$E_+(0, t) = E_{\text{in}}^{m} e^{-i(\langle\omega^m\rangle - \omega)t} , \tag{23.62}$$

with the frequency detuning $(\langle\omega^m\rangle - \omega)$ $(m \in \{\text{GS}, \text{ES}\})$ of the input signal relative to the carrier frequency chosen to yield signals centered on the energy of either QD state. After the propagation of the signal through the amplifier device and after a steady state is reached, we can simply evaluate the power-dependent device gain by the power ratio

$$G = \frac{|E_+(\ell, t)|^2}{|E_+(0, t)|^2} . \tag{23.63}$$

Figure 23.9a shows the GS gain in dependence on the achievable optical output power for different pump currents. The small-signal gain, i.e., at low input powers, shows the behavior that we have seen before in Figure 23.7, with a saturation and subsequent decrease of the gain for increasing current. In the linear amplification regime, for lower optical power, the gain is flat. Under these small-signal conditions, the optical power is not strong enough to perturb the gain medium appreciably. Once the optical power becomes large enough, the nonlinear or gain saturation regime is reached [10,11,79]. In Figure 23.9, the onset of the GS saturation regime increases from 18 dBm output power at $j = 200$ mA to 25 dBm at $j = 1000$ mA. Here, the number of charge carriers injected into the optically active QD states is not sufficient to replenish the QD states that are depleted by the signal, and the optical gain thus gradually decreases.

A general trend toward higher achievable output power with increasing current and corresponding shift of the nonlinear regime toward higher optical power can be observed both in the GS and ES (see Figure 23.9a and b). This is a direct consequence of the increased in-scattering rates and the higher reservoir charge-carrier density [10]. The faster and more efficient refilling of the QD states after depletion by the optical signal shifts the saturation regime toward higher power. The ES shows a transition to the nonlinear gain regime at lower optical power than the GS, as shown in Figure 23.9b. This can be understood by the weaker confinement of the QD ES relative to the reservoir, which increases the sensitivity of the ES occupation to changes in the reservoir charge-carrier density. Nevertheless, the ES allows a high gain and a sufficiently high saturation power to allow for its application in optical communication networks. Furthermore, the ultra-broad gain bandwidth of QDSOAs could be exploited for a simultaneous amplification of data signals with wide wavelength spacing. The low cross-talk between the GS and ES transitions makes an error-free amplification of two suitable data signals possible, as was recently shown [91].



(a) (b)

23.3.2 Gain Recovery Dynamics in QDSOAs

We now wish to characterize the dynamic performance of the modeled QD semiconductor amplifier. When optical amplifiers are used in optical data signal transmission, e.g., for propagation loss compensation, their dynamics must be fast enough to follow the signal symbol rate in order to minimize patterning effects and reduce transmission errors, as detailed in Chapter 25 on patterning effects. In experimental setups the gain recovery dynamics can be characterized by observing the time evolution of the optical gain after a perturbation of the active medium. This is commonly done in a pump-probe setup [19,92–94]. The principle is as follows: A strong and temporally narrow optical pump pulse is injected into the waveguide and depletes charge carriers during its amplification. A weaker probe pulse injected with a time delay $\Delta t_{\mathrm{p-p}}$ with respect to the pump pulse then experiences a different gain, depending on the perturbation of the carrier distribution after this delay time. By repeating the measurement for a range of $\Delta t_{\mathrm{p-p}}$ and measuring the probe pulse intensity, the time evolution of the gain after propagation of the pump pulse can be extracted experimentally.

The gain-recovery dynamics is obtained from the QDSOA model by simulating the amplifier in a pump-probe experiment. The perturbation of the gain medium is induced by a strong Gaussian pump pulse injected into the input facet at $z = 0$:

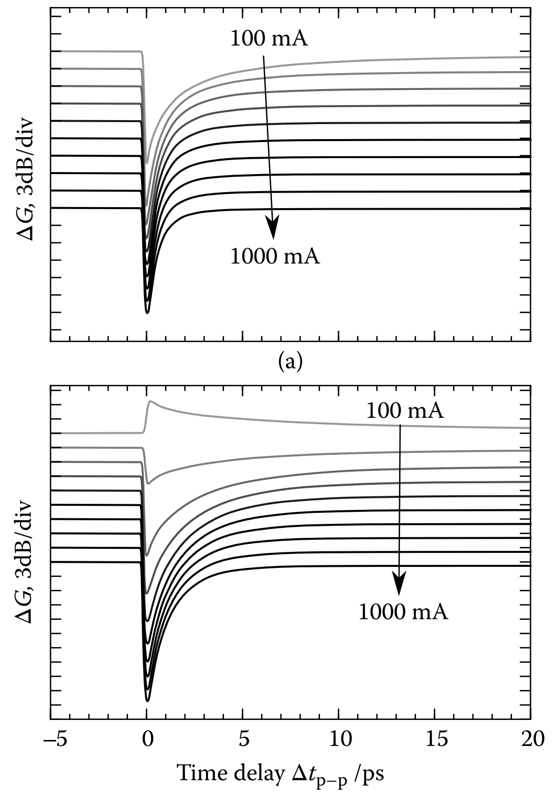
$$E_{+}(0,t) = E_{\mathrm{in}} \exp\left[-4\ln 2\left(\frac{t-t_0}{\Delta_{\mathrm{FWHM}}}\right)^2\right] e^{-i\delta\omega t}, \tag{23.64}$$

with an input amplitude E_{in}, arrival time t_0, and pulse width Δ_{FWHM}. We additionally allow for a detuning $\delta\omega$ of the pump pulse with respect to the chosen optical reference frequency which we can use to tune the pump wavelength. In order to probe the gain after the pump pulse has passed the active medium, the probe pulse does not have to be modeled explicitly. Instead, we can directly calculate the gain that the probe would experience along the device:

$$G(\Delta t_{\mathrm{p-p}},\omega) = \exp\left[\frac{2}{v_g}\int_0^{\ell} g\left(z, t_0 + \Delta t_{\mathrm{p-p}} + \frac{z}{v_g}, \omega\right) \mathrm{d}z\right]. \tag{23.65}$$

Here, we used the instantaneous amplitude gain, as defined in Equation 23.60, integrated along the device in a copropagating frame with a delay time $\Delta t_{\mathrm{p-p}}$ relative to the pump pulse. Note that in pump-probe experiments the temporal resolution is limited by the temporal width of the probe pulse. Measuring the integrated probe pulse power averages the extracted gain over the pulse profile.

As an example, we simulate the amplifier under the influence of a pump pulse with a width of $\Delta_{\mathrm{FWHM}} = 300$ fs and a pulse energy of 1 pJ, centered on the GS gain peak. In Figure 23.10a the resulting gain recovery curves are shown in dependence of the pump current. Here, we show the gain difference ΔG with respect to the unperturbed case. A strong initial reduction in gain can be observed due to the depletion of charge carriers by the pump pulse, with a subsequent recovery toward the unperturbed value on a picosecond timescale. This fast recovery is the signature of the charge-carrier refilling by carrier scattering, which as a consequence is strongly current-dependent and mimics the current dependence of the scattering rates. Pump-probe gain recovery measurements can, therefore, be used to extract effective charge-carrier scattering timescales of the active QD medium [95]. In addition to the GS performance, we take a look at the dynamics of the ES gain in Figure 23.10b. Here, for $j = 100$ mA, the pump-pulse induces an initial increase of the gain, as seen in the initially increasing light gray curve. At this current, the ES is below transparency, and the pump pulse is absorbed, which increases the inversion and thus the gain. For higher pump currents (increasing gray levels in Figure 23.10) the dynamics follows the same trends as the GS, albeit with a slower recovery. Here again the less efficient carrier refilling of the ES becomes apparent. The intricate scattering



(b)

FIGURE 23.10 Gain recovery after perturbation with a strong pump pulse at $\Delta t_{\text{p}-\text{p}} = 0$. (a) Ground-state gain after excitation at the ground-state wavelength centered at $\lambda = 1288$ nm, and (b) excited-state gain after excitation at the excited-state wavelength centered at $\lambda = 1183$ nm. The current was increased from $j = 100$ mA to $j = 1000$ mA in steps of 100 mA. Shown is the gain difference with respect to the unperturbed case, with individual curves shifted vertically by 3 dB for improved readability.

dynamics between the different QD and reservoir states in the active medium, therefore, directly affects the performance of QD optical amplifiers, emphasizing the importance of its accurate modeling, as described in Section 23.2.3.

With the QDSOA model at hand, we can take a closer look at the dynamics of the QD gain medium. The gain recovery can be seen to consist of three main components, i.e., it can be fitted very accurately by a triexponential recovery, as shown in Figure 23.11a. Here, we do not show the fit for $t \lesssim 0.1$ ps as for small times the pulse is still interacting with the medium, which the fit cannot describe. We can attribute the three time constants to the intradot relaxation, being the fastest component, the charge-carrier capture from the reservoir, and a slow recovery of the whole system, governed mainly by the reservoir carrier lifetime. An experimental determination of the individual timescales, however, is usually difficult due to their narrow separation. This is already evident from the three effective timescales that determine the gain recovery. In principle, we would expect at least seven different timescales: GS and ES capture rates and intradot relaxation for both electrons and holes, along with the recovery of the reservoir. The three extracted timescales must, therefore, be interpreted as effective values.

Our model also allows us to analyze the charge-carrier dynamics within the gain medium directly, which is not possible within the experimental setup. We thus evaluate the variation of the carrier occupation in

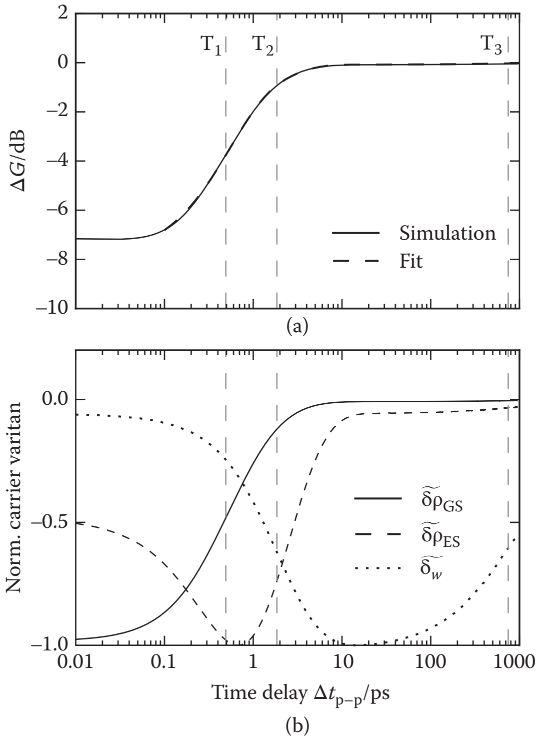


FIGURE 23.11 (a) Fit to the gain recovery after a perturbation of the ground state at $j = 500$ mA. The three characteristic timescales, $\tau_1 = 0.49$ ps, $\tau_2 = 1.8$ ps, $\tau_3 = 750$ ps, correspond to the intradot relaxation, charge-carrier capture, and reservoir refilling, respectively. (b) Time evolution of the normalized carrier variations with respect to their respective steady-state values in the GS, ES, and reservoir states.

the QD GS and ES as well as in the reservoir states at the output facet, by defining a normalized carrier variation,

$$\widetilde{\delta\rho}_m(t) = \frac{\sum_b \left[\rho_{b,m}(t) - \rho^0_{b,m}\right]}{\max\left|\sum_b \left[\rho_{b,m}(t) - \rho^0_{b,m}\right]\right|}, \tag{23.66}$$

where ρ^0_m denotes the corresponding QD occupation in the unperturbed steady state. A similar expression for the reservoir density variation, $\widetilde{\delta w}$, can be written down. During the perturbation the normalized variations reach their minimum value of −1 and during recovery slowly grow back to a value of zero. The variations of the GS, ES, and reservoir carriers are plotted in Figure 23.11b, as solid, dashed, and dotted lines, respectively. We can clearly observe the three qualitative steps in the recovery of the gain medium we discussed earlier. The GS occupation is minimal right after the pulse has passed the device. On a timescale close to τ_1, the GS starts a fast recovery under a reduction of the ES occupation, illustrating the intradot relaxation from the ES states to the GS. These relaxation processes dominate the ultrafast gain recovery of QDSOAs. The ES then starts to recover with a timescale $\approx \tau_2$ due to charge-carrier capture from the reservoir, which is subsequently depleted. The timescale τ_3 then constitutes the recovery time of the reservoir, which equilibrates the whole system again.

For the modeled device, the two fast timescales of the GS gain recovery decrease from $\tau_1 = 1.4$ ps, $\tau_2 = 7.5$ ps at a current of 100 mA to $\tau_1 = 0.43$ ps, $\tau_2 = 1.2$ ps at $j = 1000$ mA (not shown here). Together with the increasing saturation power at higher currents, a high operating current could be seen as optimal for high-power ultrafast applications. However, the saturation and decrease of the optical gain at elevated pump currents limits the range of possible operating conditions.

23.3.3 Rabi Oscillations in QD Semiconductor Amplifiers

When the quantum-mechanic phase is maintained over macroscopically accessible timescales, coherent effects can induce phenomena that significantly differ from classical predictions. The precondition for this is a sufficiently long dephasing time of the quantum-mechanic coherence. The comparably long lifetime of the interband polarization in semiconductor QDs makes them promising candidates for applications in quantum-optics [96]. Recently, coherent pulse propagation in macroscopic semiconductor devices has been observed in quantum-cascade lasers [97] and quantum-dash [30] and QD semiconductor amplifiers [32], relying on ultrashort, strong optical pulses. It is important to note that in the experiments using optical amplifiers, the measurements were performed at room temperature, opening up possible future quantum-coherent applications using uncooled devices.

In this section, we present a theoretical description of Rabi oscillations induced by ultrashort pulses in a QDSOA at room temperature [32]. Rabi oscillations denote a periodic exchange of energy between the optical field and the active medium, which leads to characteristic modifications of the optical pulse traveling through the amplifier device. The principle of Rabi oscillations can be derived from the dynamic equation for a single QD subgroup:

$$\frac{\partial}{\partial t}p_m^j(z,t) = -\left[i(\omega_m^j - \omega) + \frac{1}{\tau_2}\right]p_m^j - i\frac{\mu_m}{2\hbar}\left(\rho_{e,m}^j + \rho_{h,m}^j - 1\right)E(z,t), \tag{23.67}$$

$$\frac{\partial}{\partial t}\rho_{b,m}^j(z,t) = \frac{1}{\hbar}\mathrm{Im}\left[p_m^j\mu_m^* E^*(z,t)\right] - W_m\rho_{e,m}^j\rho_{h,m}^j + \left.\frac{\partial}{\partial t}\rho_{b,m}^j\right|_{\mathrm{sc}}. \tag{23.68}$$

We reduce the above equations by introducing the inversion $d = (\rho_{e,m}^j + \rho_{h,m}^j - 1)$ and neglecting losses. We also limit ourselves to a resonant excitation, i.e., $\omega = \omega_m^j$:

$$\frac{\partial}{\partial t}p_m^j(z,t) = -i\frac{\mu_m}{2\hbar}d(z,t)E(z,t), \tag{23.69}$$

$$\frac{\partial}{\partial t}d(z,t) = \frac{2}{\hbar}\mathrm{Im}\left[\mu_m^* E^*(z,t)p_m^j(z,t)\right]. \tag{23.70}$$

For an initial inversion of d_0 and zero polarization, the above equations have the solution

$$p_m^j(z,t) = -\frac{i}{2}\sin\Theta(z,t), \tag{23.71}$$

$$d(z,t) = d_0\cos\Theta(z,t), \tag{23.72}$$

with the pulse area defined as

$$\Theta(z,t) = \int_{-\infty}^{t}\frac{\mu_{\mathrm{GS}}}{2\hbar}\left|E(z,t')\right|\mathrm{d}t'. \tag{23.73}$$

Equation 23.72 shows that, with a proper choice of the pulse area, it is possible, e.g., to invert the charge-carrier distribution by choosing $\Theta = \pi$. When choosing $\Theta = n2\pi, n \in \mathbb{N}$, i.e., integer multiples of 2π, the system returns to its initial state after the exciting pulse has passed through. This important property shows that the coherent interaction between the optical field and the active material is a reversible process, as long as the polarization dephasing time is much larger than the pulse width. In most cases, however, this condition is not strictly fulfilled, leading to an additional damping of the Rabi oscillations[48].

We now apply our QD amplifier model to the amplification of strong optical pulses. We use the same pulse width of 300 fs as in the previous section, but with higher input amplitudes and we evaluate the output pulse shape as well as the integrated optical gain, as defined in Equation 23.65. For different input pulse areas Θ, the field amplitude at the output facet is shown in Figure 23.12a. At a small pulse area $\Theta = 0.1\pi$ (23 fJ pulse energy, light gray line) the pulse retains its Gaussian shape during propagation. For increasing pulse energies (darker lines in Figure 23.12), a pronounced shoulder at the leading edge of the pulse appears and the pulse shape noticeable diverts from its original Gaussian envelope. For $\Theta = 2\pi$ a pronounced dip in amplitude is visible, and a second dip appears for $\Theta = 5\pi$ (black line), where a complex pulse shape is obtained. A look into the dynamics of the optical gain, shown in Figure 23.12b, reveals a strong decrease in gain after injection of the optical pulse, as already seen in the previous section. For strong pulses, the gain exhibits oscillations and intermittently becomes negative, i.e., absorbing (see black line in Figure 23.12). This is a clear indication of the occurrence of Rabi oscillations, i.e., the coherent interaction between the microscopic polarization and the inversion. For an incoherent interaction, i.e., neglecting the coherent dynamics of the polarization, the optical gain cannot be reduced below transparency in optically pumped media. The coherent dynamics thus imprints a clear signature onto the QD amplifier behavior, which can differ strongly from conventional expectations.

We take a closer look at the dynamics of the amplifier under the amplification of strong pulses in Figure 23.13. The dynamics of the microscopic polarization and the carrier occupation across the inhomogeneously broadened QD GS at the output facet are visualized as gray scale values in Figure 23.13b and c, respectively. The optical pulse can be seen to induce a complex response of the gain medium. The QD

subgroups within the ensemble which are resonant to the pulse (detuning of 0 meV), exhibit pronounced Rabi oscillations visible in both the polarization and inversion. The outer subgroups show this behavior to a lesser extent but with a different temporal profile. The resulting macroscopic polarization that drives the pulse is a superposition of the individual microscopic polarization amplitudes across the whole QD ensemble (see Equation 23.13). The response of the gain medium to such strong optical pulses can, therefore, be very complex and go beyond what a simple two-level system would predict. This underlines the importance of taking both homogeneous as well as inhomogeneous effects into account when modeling light–matter interaction in QD devices in the high-power and ultrafast regime.

23.4 Conclusion

In this chapter, we have presented a model for QDSOAs that takes into account the intricate scattering dynamics between the localized QD states and the surrounding carrier reservoir states. The Coulomb scattering, which dominates the carrier dynamics, can be microscopically calculated to yield Boltzmann-like terms describing the charge-carrier scattering, which can be implemented numerically in terms of lookup tables, or approximated by simplified fit functions. The description of the electric field propagation along the device is modeled using a delay-differential equation approach, which allows a separation of numeric time step and spatial discretization length for an efficient integration algorithm.

The complex charge-carrier dynamics determine both the static and dynamic behavior of QDSOAs and is responsible for their ultrafast gain recovery. An accurate modeling of these dynamics is, therefore, necessary for a quantitatively accurate description of these optoelectronic devices. The simulations of an exemplary QDSOA device show that the signature of the internal charge-carrier dynamics can be directly seen in dynamic gain recovery measurements. The strong pump-current dependence of the scattering timescales lead to the existence of optimal operating conditions when either high gain or ultrafast gain recovery is desired. The long dephasing time of QDs compared to other semiconductor materials leads to a macroscopically accessible measurement of quantum-coherence manifesting itself in the break-up of ultrashort strong optical pulses, even at room temperature. The induced Rabi oscillations lead to a complex response of the QD gain medium which requires a detailed modeling of the polarization dynamics across the inhomogeneously broadened QD ensemble. The thoroughly nonclassical response of the QD medium to ultrashort pulses due to long-lived coherence might pave the way to novel quantum-optical devices using semiconductor QDs as the medium of choice.

24.1 Introduction

The growing demand for telecommunications services continues to push optical transmission rates beyond 10 G-symbols/s and to use more efficient modulation formats (e.g., quadrature phase shift keying [QPSK], differential QPSK [DQPSK]) to cope with the ever-increasing demand for bandwidth. The growing demand for bandwidth is also driving a move to perform high bandwidth signal processing functions directly in the optical domain. All-optical signal processing generally requires nonlinear optical functionality. Semiconductor optical amplifiers (SOAs) are attractive for such functions because of their strong nonlinear optical response. Optical signal processing applications that employ SOAs include wavelength conversion, phase conjugation, optical switching, Boolean logic functions, all-optical recovery, and all-optical demultiplexing. SOAs offer large bandwidth, ease of integration, compactness, low power consumption, electrical pumping/control, and potentially low cost. Interest in SOAs continues to grow as photonic integrated circuit (PIC) integration densities continue to increase, with applications in signal leveling and signal regeneration or integration with electronics as optical interconnects for high-speed cross-chip communications. SOAs are also useful in electrically reconfigurable optical switching/routing networks (Williams et al., 2008). For these applications, however, SOAs may introduce nonlinear signal impairments that adversely affect system performance, and these impairments must be managed.

This chapter focuses on the numerical modeling and simulation of carrier plasma–induced nonlinear optical phenomena in SOAs. The chapter starts with a brief description of nonlinear processes in SOAs and their applications. We then discuss SOA modeling, paying particular attention to challenges encountered in the modeling and simulation of nonlinear effects. An efficient optical model based on a one-dimensional (1D) bidirectional traveling wave algorithm is then presented. The optical model is coupled to the semiconductor material through light–matter interactions. The electrical properties are simulated using a simplified 1D (unipolar) electrical model, which only takes into account the dynamics of the total carrier density in the active medium. The unipolar model assumes flat quasi-Fermi levels and charge neutrality in order to remove the additional computational complexity associated with the use of a self-consistent bipolar electrical model with band bending (due to charge imbalance in the well). Nevertheless, while a bipolar model will certainly improve the overall accuracy of the model, the focus of this work was the development and demonstration of an efficient model for the nonlinear optical response. For this purpose, the simplicity of the unipolar model is an advantage.

The material polarization is represented by an effective susceptibility that self-consistently includes the carrier-induced perturbations of the net optical gain and refractive index spectra, both of which are functions of the optical field. No particular functional dependence on the optical field is assumed. This allows a general representation of the light–matter interaction under quasi-equilibrium conditions, which is applicable for all optical intensity levels. The most widely used power series expansion of the polarization is usually implemented with a single nonlinear term, which is only applicable when the optical intensity is sufficiently weak. The gain and spontaneous emission spectra are calculated using the band structure details of the semiconductor. These spectra were appropriately broadened to account for the spectral broadening of the carrier energies in the bands due to carrier lifetime dependent dephasing and various scattering events. The refractive index spectrum is obtained from the broadened gain spectrum using a nonlinear Kramers–Kronig transformation.

The need to perform simulations in the time domain poses a particular challenge for the inclusion of the frequency-dependent complex material polarization (i.e., gain and refractive index dispersion) and spontaneous emission spectra. We use recursive digital filter functions to accurately represent the spectrally dependent material quantities in the time-domain simulation. This method captures the asymmetric nature of the spectral material response and can also be used to incorporate frequency responses obtained from experimental measurements as well as complicated responses that cannot easily be represented analytically. The use of spatiotemporal filter coefficients ensures that physical effects such as spatial-hole burning and spectral changes in the gain caused by band-filling and bandgap renormalization effects are correctly included. A further advantage of the recursive filter method is that the filter coefficients can be obtained offline from the main simulation engine and tabulated, improving the computational efficiency and minimizing the resources required by the simulations. The refractive index spectra are also represented more accurately than approaches using a constant linewidth enhancement factor (at best a small-signal representation of the Kramers–Kronig relation, which ignores the spectral dependence of the index changes).

The chapter concludes with a case study exploring carrier density modulation (CDM) caused by optical wave beating in SOAs. We use the time-domain model developed to obtain an understanding of wave mixing processes in SOAs and the dependence of CDM on different operating parameters. The simulation results are compared with experimental results from a commercial buried heterostructure (BH) 1550 nm InGaAs multiple quantum well (MQW)-SOA made by the Centre for Integrated Photonics (SOA-NL-OEC-1550).

24.2 Review of Nonlinear Phenomena in SOAs and Applications

Nonlinear optical processes occur when the complex dielectric response of the material depends on the strength of the optical field passing through the medium (Boyd, 2007). When an optical wave interacts with the semiconductor gain medium, there is a shift in the carriers of the gain medium, resulting in a field-induced dipole moment that becomes the source of an electromagnetic field at the microscopic level. This interaction between the optical field and the material is through the induced macroscopic material polarization (the polarization term in the wave equation; see Section 24.4.1). This macroscopic polarization is the sum of the distinct microscopic polarizations

$$P(\vec{r}, t) = \frac{2}{V_k} \sum_k d_{\text{cv}}(k) p(k, \vec{r}, t), \tag{24.1}$$

where V_k is the normalized volume, $d_{\text{cv}}(k)$ is the optical dipole matrix element, and p is the interband polarization. k, $\vec{r}$, and t are the electron wave vector, position vector, and time, respectively. The random high-speed temporal fluctuations of the microscopic dipole elements are eliminated by spatial averaging over the incoherent dipole ensemble. Only coherent (i.e., externally driven) fluctuations remain and their response can be described with a macroscopic polarization (Jackson, 1975). This induced macroscopic polarization, $\tilde{P}^{\pm}$, is a frequency-dependent quantity that is a function of the total optical field, $\tilde{E}$, interacting with the medium via the time-varying carrier distributions. In the frequency domain, the polarization is related to the total electric field by

$$\tilde{P}^{\pm}(\omega, N, \tilde{E}) = \varepsilon_0 \chi_{\text{eff}}(\omega, N, \tilde{E}) \tilde{E}^{\pm}, \tag{24.2}$$

where $\tilde{P}(\omega)$ and $\tilde{E}(\omega)$ are the Fourier transforms of $P(t)$ and $E(t)$, respectively, and ω is the angular frequency. N is the total carrier density in the active region. The effective susceptibility, χ_{eff} takes into account all processes, both linear and nonlinear. No particular functional dependence on the optical field is assumed in Equation 24.2. When the optical field is small, the polarization can be expanded into a power series of the optical field and the effective susceptibility is

$$\chi_{\text{eff}} = \sum_n \chi^{(n+1)} \tilde{E}^n \; : \; n = 0, 1, 2 \ldots \tag{24.3}$$

At low optical intensities, the optical properties of the material tend to behave in a linear manner. However, as the optical intensity increases, the strong nonlinear response, which results from the interaction between strong optical signals and the gain medium, can manifest itself as self- and cross-gain modulation (SGM/XGM), self-, and cross-phase modulation (SPM/XPM), and wave mixing. SOAs are optoelectronic devices whose behavior is governed by the material properties of the amplifying medium and the light propagation through it. These are strongly coupled and influenced by the operating conditions, e.g., input power levels, pumping current and form of the input. The nonlinear processes arise because of the dynamics of the excited carrier populations (and their distributions in real and momentum space) as the material interacts with the optical radiation. These nonlinear phenomena are detrimental to applications that rely on device linearity but can be exploited for optical signal processing and other applications requiring all-optical functionality.

CDM, carrier heating (CH), and spectral hole burning (SHB) are the most important processes giving rise to nonlinear optical phenomena in semiconductor devices.

24.2.1 Carrier Density Modulation

CDM is a coherent interband process that results from the dependence of the stimulated carrier recombination rate on the optical intensity. Stimulated emission and absorption processes, and to some extent the (amplified) spontaneous emission process, modify the total carrier densities in the gain medium, leading to changes in the total gain spectrum and the refractive index of the semiconductor material. A strong optical input signal will increase the stimulated emission rate and decrease the carrier density in the active material. This reduces the gain and perturbs the refractive index, which affect the propagation of both the perturbing signal and other co-/counterpropagating signals. This is the basis for effects such as SGM, XGM, SPM and XGM. When at least two waves distinguishable in frequency, polarization, or wave vector propagate through the SOA, wave beating can excite the material by modulating the carrier density. This modulation in turn creates dynamic gain and index gratings, which are responsible for creating new frequency components.

24.2.2 Carrier Heating

Carrier heating (CH) results from modulation of the carrier energy distributions in the valence and/or conduction bands (sub-bands for quantum wells [QWs] and wires). CH is caused by processes that increase the temperatures of the carrier distributions relative to the lattice temperature, including carrier injection, stimulated emission, and free carrier absorption (FCA). Carrier injection adds high energy ("hot") carriers to the carrier plasma, while stimulated emission removes "cold" carriers close to the band edge. FCA transfers energy from photons to carriers, moving them to higher energies within the bands. Such carriers quickly thermalize and transfer energy to other carriers by carrier–carrier scattering, thereby increasing the plasma energy density or temperature (Uskov et al., 1994).

24.2.3 Spectral Hole Burning

SHB is also a form of modulation of the energy distributions of the carriers within the valence and/or conduction bands (or sub-bands for QWs and wires). While CH perturbs the entire carrier plasma, the plasma can usually still be described with a quasi-equilibrium distribution with an increased plasma temperature. SHB, on the other hand, is an energetically localized perturbation of the plasma, which cannot be described with a quasi-equilibrium distribution. SHB occurs when carriers in the states supporting stimulated recombination are consumed faster than they are replenished by intraband scattering. This creates a spectral hole in the intraband carrier distribution relative to the corresponding thermal carrier distribution.

In contrast to CDM, CH, and SHB are intraband processes. SHB is due to changes in the carrier distribution away from Fermi–Dirac distributions and is responsible for gain saturation. (The gain compression coefficient, frequently used to describe gain saturation at high power, is a manifestation of SHB.) CH results in a Fermi–Dirac distribution that has a higher temperature than that of the lattice. CDM, CH, and SBH all create perturbations that result in the modulation of the gain/absorption and refractive index spectra, whose dynamics also create spatiotemporal index and gain gratings that can diffract waves propagating in the medium to generate new frequency components. Although the gain and index gratings caused by CDM are larger, CH and SHB contribute to the nonlinear optical response. CDM dominates up to frequencies limited by the carrier replenishment rate. CH and SHB are important at higher frequencies, but CDM remains important.

24.2.4 Other Nonlinear Effects

Other processes, e.g., optical Kerr effect, two-photon absorption (TPA), and second harmonic generation (SHG), also contribute to the nonlinear optical response, but their contribution is smaller compared to that of CDM and CH, and are neglected in this work. The inclusion of the Kerr effect in simulations is complicated by the lack of causality. TPA is a multiphoton process that is resonantly enhanced for photon energies of the order of half the bandgap of the semiconductor material. Instantaneous coherent processes like the optical Kerr effect, TPA and SHG are not discussed further here, but are important for some applications (e.g., all-optical gates) at high optical power densities. The reader is referred to Boyd (2007) or other texts on nonlinear optics for more information.

24.2.5 Summary of Important Nonlinear Applications

Optical nonlinearities cause signal impairments in linear applications, but have been exploited to great benefit in the field of functional photonics. SOA nonlinearities are used for all-optical signal processing to eliminate the need for optical–electrical–optical (OEO) conversion in communication networks. Processing tasks such as demultiplexing, clock recovery, regeneration, and routing can be undertaken entirely in the optical domain at higher speeds than are possible with electronics (Manning et al., 1997). One of the key applications of nonlinear processes in SOAs is wavelength conversion.

Wavelength converters increase the flexibility and performance of all-optical networks based on wavelength division multiplexing (WDM) (Kovačević and Acampora, 1995). All-optical wavelength converters are essential for coping with increasing data rates. They increase the network performance by reducing the effects of lightpath blocking due to the wavelength continuity constraints in optical packet and optical circuit switching networks. Of the different approaches to all-optical wavelength conversion, SOA-based wavelength converters have attracted the greatest interest because of their compactness, easy integration, and strong nonlinear response. Different approaches have been used for SOA-based wavelength conversion, including XGM, XPM, and four-wave mixing (FWM). FWM is the most flexible approach because it has a large extinction ratio and retains the phase information of the carrier signal, making it bitrate independent and intrinsically transparent to modulation format (a useful attribute in optical networks). FWM-based SOA wavelength converters also have the potential for processing ultra-high speed analog and digital signals using ultrafast processes like SHB and CH. Spectral inversion also occurs during the FWM-conversion process. FWM-converted signals with inverted spectral distribution have been used for dispersion compensation by positioning a nonlinear SOA at the center of the link (Yanhua et al., 2003).

Another important application of nonlinear processes in SOA is optical performance monitoring in optical networks. The increasing complexity of optical networks and the emergence of new types of traffic and data protocols have rendered digital signal monitoring in the electronic domain impractical (Dlubek, 2008). As a result, optical signal monitoring methods that measure the analogue parameters in the optical domain are required for transparent optical networks. Optical sampling using FWM in SOAs has been used to generate signal histograms for bit error rate (BER) estimation (Dlubek, 2008).

24.3 Challenges in Modeling Nonlinear Effects

SOA modeling is a sophisticated subject due to the number and complexity of processes that take place simultaneously in the device. The dynamic nature of optical nonlinearities requires the use of time-domain models. Time-domain simulations are needed to determine the carrier densities (i.e., drift-diffusion, generation/recombination effects, etc.), whereas the calculation of the complex index needs to be done in the frequency domain. Optical propagation can be done in the frequency domain, but spatiotemporal carrier density (and complex index) variations make time-domain models more tractable.

The challenge for time-domain simulations is the inclusion of the frequency-dependent complex material polarization (gain and refractive index dispersion). Several attempts have been made to include dispersion in time-domain simulations: single-pole Lorentzian filter (Pratt and Carroll, 2000), finite impulse filter (FIR) theory (Jones et al., 1995; Toptchiyski et al., 1999), a first-order (Durhuus et al., 1992) and a second-order (Das et al., 2000) Taylor series expansion about the gain peak wavelength with constant coefficients. The second-order Taylor series expansion and the Lorentzian profile are both inadequate for the asymmetric material gain spectrum. Furthermore, the use of constant filter coefficients is inadequate for representing carrier-induced shifts in the gain spectrum. Other approaches include the spectrum slicing technique (SSM) (Park et al., 2005) and effective Bloch equations (EBE). The SSM method can handle the asymmetric gain spectrum, but is not suited to modeling nonlinear interactions (Park et al., 2005). The EBE fits the gain and refractive index spectra using a series of Lorentzians. A single Lorentzian is used in Ning et al. (1997), which is only useful for signals with a very narrow spectrum. Accurate implementation for high bandwidth signals requires the inclusion of more Lorentzian terms, making the model computationally intensive.

24.4 Improved Modeling of Nonlinear Phenomena in SOAs

The theoretical model described here is applied to an MQW SOA fabricated with a BH (Figure 24.1). The operation of the SOA depends on the interaction of the optical waves with the material. Processes such as optical gain, optical absorption, and changes in the refractive index must be appropriately coupled to the optical model in order to develop numerical models that accurately represent the operation of the actual device. This section describes the different components of a coupled optoelectronic simulation tool for nonlinear SOAs.

24.4.1 Optical Model

The optical field propagation in the SOA active region is described by Maxwell's equations

$$\nabla \times \nabla \times \vec{\mathbf{E}} + \frac{n^2}{c^2}\frac{\partial^2 \vec{\mathbf{E}}}{\partial t^2} = -\frac{1}{\varepsilon_0 c^2}\left(\frac{\partial^2 \vec{\mathbf{P}}}{\partial t^2} + \frac{\partial \vec{\mathbf{j}}}{\partial t}\right), \tag{24.4}$$

where n is the refractive index of the unexcited material (background index), c is the speed of light in vacuum, ε_0 is the free-space permittivity, $\vec{\mathbf{P}}(x, y, z, t)$ is the macroscopic polarization of the medium, and $\vec{\mathbf{j}}(x, y, z, t)$ is the current density. It is assumed that the SOA is designed to support only the fundamental mode with a transverse field distribution $U(x, y)$, which is assumed to be wavelength independent and normalized such that $\int\int |U(x, y)|^2 \,\mathrm{d}x\mathrm{d}y = 1$. For simplicity, all effective and modal parameters (e.g., the transverse confinement factor) are assumed to have been obtained at this point, so that only the longitudinal spatial direction needs to be considered. The strong waveguiding of the BHs further confines the optical field in the transverse directions beyond the vertical confinement of the separate confinement heterostructure (SCH) (Agrawal and Dutta, 1986).

The variation of the injection current with respect to time is very small compared to that of the optical fields, so it is justifiable to assume

$$\frac{\partial j}{\partial t} = \frac{\partial(\sigma E)}{\partial t} \approx 0. \tag{24.5}$$

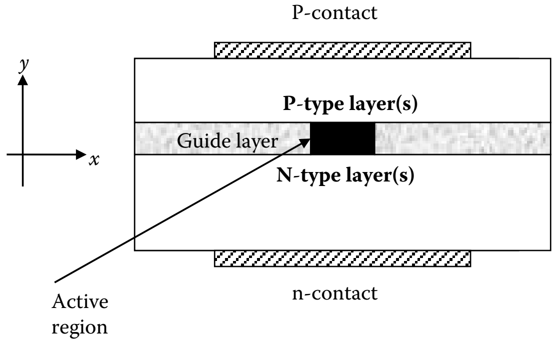

FIGURE 24.1 Schematic of a buried heterostructure (BH) semiconductor optical amplifier (SOA).

An alternative way of looking at this assumption is that optical fields are not usually generated directly by free currents and charges (Liu, 2005). Under these assumptions, the wave equations take the same form as those in a medium free of sources. The assumption in Equation 24.5 is plausible at optical frequencies, but this term may contribute in nonlinear optical beat-frequency devices, e.g., microwave and terahertz (THz) devices. This assumption is also not *a priori* valid for plasmonic devices (i.e., metals). For a straight and symmetric waveguide, the fields can be assumed to remain linearly polarized during propagation through the device. For a single polarization component, this implies that $\nabla \cdot \vec{\mathbf{E}} = \nabla \cdot \vec{\mathbf{P}} = 0$ and the left-hand side of Equation 24.1 is $\nabla \times \nabla \times \vec{\mathbf{E}} = \nabla \left(\nabla \cdot \vec{\mathbf{E}}\right) - \nabla^2 \vec{\mathbf{E}} = -\nabla^2 \vec{\mathbf{E}}$, so the scalar wave equation can be used.

Zero facet reflectivities are the target in traveling-wave SOAs. However, facets with antireflection (AR) coatings still exhibit residual reflectivities, which can result in the formation of an optical cavity with longitudinal resonances. Only real amplitude reflection coefficients are considered in this work. Although any wave reflected at the facet may initially be small, it will be amplified as it back-propagates along the waveguide such that it is not negligible compared to the forward field. Thus, reflected fields contribute to carrier depletion, gain compression, and refractive index change in the active medium. This affects the amplification, pulse shape, and phase of the output field. Reflected fields can also give rise to delayed replicas or echoes of the bits, which act as noise. Fields generated by ASE may also be nonnegligible compared to forward travelling fields. In the general case, the total optical field is comprised of both backward and forward propagating fields. Counterpropagating fields are also used deliberately in some applications relying on XGM and/or XPM.

Dropping the vector nature and using the slowly varying envelope approximation, the total optical field in the active region can be written as

$$E(x,y,z,t) = \frac{1}{2} U(x,y) \left\{ \psi^{+}(z,t) \exp\left[i(\omega t - kz)\right] + \psi^{-}(z,t) \exp\left[i(\omega t + kz)\right] + c.c. \right\}. \tag{24.6}$$

Taking into account that multiple signals may be input into the SOA, this can be rewritten as

$$E(x,y,z,t) = U(x,y) \sum_{q} \left\{ \psi_q^{+}(z,t) \exp\left[i\left(\omega_q t - k_q z\right)\right] + \psi_q^{-}(z,t) \exp\left[i\left(\omega_q t + k_q z\right)\right] + c.c. \right\}, \tag{24.7}$$

where $\lambda_q = \frac{c}{f_q}$ is the center wavelength of the qth signal and $\omega_q = 2\pi f_q$. From Equations 24.6 and 24.7, the total forward and backward slowly varying components are

$$\psi^{+}(z,t) = \sum_{q} \psi_q^{+}(z,t) \exp\left\{ i\left[\left(\omega_q - \omega_{\text{ref}}\right)t - \left(k_q - k_{\text{ref}}\right)z\right]\right\} + c.c. \tag{24.8}$$

$$\psi^{-}(z,t) = \sum_{q} \psi_q^{-}(z,t) \exp\left\{ i\left[\left(\omega_q - \omega_{\text{ref}}\right)t + \left(k_q - k_{\text{ref}}\right)z\right]\right\} + c.c., \tag{24.9}$$

where $k_{\text{ref}} = \frac{n\omega_{\text{ref}}}{c}$ is the optical propagation constant in the longitudinal direction and ω_{ref} is a reference frequency for the baseband transformation of all the signals propagating through the active medium. $\psi^{+}(z,t)$ and $\psi^{-}(z,t)$ are the forward and backward propagating complex envelopes of the optical field. The induced polarization can be written in a similar form as the field

$$\mathrm{P}(x,y,z,t) = \frac{1}{2} U(x,y) \left\{ P^{+}(z,t) \exp\left[i(\omega t - kz)\right] + P^{-}(z,t) \exp\left[i(\omega t + kz)\right] + c.c \right\}, \tag{24.10}$$

where $P^{+}(z,t)$ and $P^{-}(z,t)$ are the slowly varying forward and backward propagating complex polarizations. Substitution of Equations 24.7 and 24.10 into the scalar version of the wave Equation 24.4 and applying the slowly varying envelope approximation (SVEA) and paraxial approximation leads to the following propagation equations

$$\frac{n}{c}\frac{\partial \psi^{\pm}}{\partial t} \pm \frac{\partial \psi^{\pm}}{\partial z} = i\frac{\Gamma_{xy}k_{\mathrm{ref}}}{2\varepsilon_0 n^2}P^{\pm} + \psi^{\pm}_{\mathrm{sp}}(z,t), \tag{24.11}$$

which are subject to the boundary conditions

$$\psi^{+}(0,t) = \sqrt{R_1}\psi^{-}(0,t) + \sqrt{1-R_1}\psi_{\mathrm{in}1}(0,t) \tag{24.12}$$

$$\psi^{-}(L,t) = \sqrt{R_2}\psi^{+}(L,t) + \sqrt{1-R_2}\psi_{\mathrm{in}2}(L,t), \tag{24.13}$$

where $\psi_{\mathrm{in}1}(0,t)$ and $\psi_{\mathrm{in}2}(L,t)$ are optical inputs injected through the end facets. These facets have power reflectivities R_1 and R_{21}, respectively. The last term in Equation 24.11 is the local spontaneous noise contribution to the total propagating field. For simplicity, k_{ref} is referred to as k from here onward.

The transverse confinement factor, Γ_{xy}, in 24.11 is given by

$$\Gamma_{xy} = \frac{\int_{-w/2}^{w/2}\int_{-d/2}^{d/2}\left|U(x,y)\right|^2 \mathrm{d}y\mathrm{d}x}{\int_{-\infty}^{\infty}\int_{-\infty}^{\infty}\left|U(x,y)\right|^2 \mathrm{d}y\mathrm{d}x}, \tag{24.14}$$

where w and d are the active region width and thickness, respectively.

24.4.2 Electrical Model

The carrier dynamics are calculated using a simplified 1D carrier density model based on the evolution of the total carrier density in the active region (White et al., 1998)

$$\frac{\partial N(z,t)}{\partial t} = \frac{\eta J(z,t)}{ed} - \gamma_{\mathrm{nr}}(N)N - \frac{i\Gamma_{xy}}{4\hbar}\left\{\left(\psi^{+}\right)\left(P^{+}\right)^{*} + \left(\psi^{-}\right)\left(P^{-}\right)^{*} - c.c.\right\}, \tag{24.15}$$

where J is the total injected current density, e is the electron charge, γ_{nr} represents nonradiative recombination (generally carrier dependent), and η is the current injection efficiency. Carrier diffusion effects have been neglected in Equation 24.15 since the longitudinal electrical mesh spacing is larger than the carrier diffusion length. Thus, the total current density is only due to the external source from the electrodes. The current density from the external source is determined as in Dai et al. (1997)

$$J_{ext}(z,t) = \frac{V_{bias} - V_{jcn}(z,t)}{r_{\mathrm{s}}}, \tag{24.16}$$

where r_{s} is the series resistance (in units of $\Omega\mathrm{m}^{-2}$) of the p- and n-layers on either side of the active region and the p- and n-contact resistance. V_{jcn} is the voltage drop across the active layer (p–n junction) and relates to the difference between the two quasi-Fermi levels as

$$V_{jcn}(z,t) = \frac{E_{\mathrm{F}n}(z,t) - E_{\mathrm{F}p}(z,t)}{e}, \tag{24.17}$$

where $E_{\mathrm{F}n}$ and $E_{\mathrm{F}p}$ are the electron and hole quasi-Fermi levels, respectively. The quasi-Fermi levels are calculated within the gain model under the commonly used assumption of charge neutrality. While charge neutrality is a valid assumption in bulk material, it may not be a valid assumption for QWs, especially at high current pumping levels. A significant charge imbalance in the QW may strongly affect the optical properties of the surrounding optical guiding layers (SCH layers) and the entire waveguide due to the carriers injected into the region (Tolstikhin, 2000). Nevertheless, charge neutrality is assumed in order to use the unipolar model to simplify the analysis, which should be acceptable for moderate injection currents. $E_{\mathrm{F}n}$ and $E_{\mathrm{F}p}$ are estimated using the Joyce–Dixon approximation (Joyce and Dixon, 1977)

$$E_{\mathrm{F}n,p} = k_{\mathrm{B}}T\left[\ln\left(\frac{N}{N_{c,v}}\right) + \frac{1}{2}\left(\frac{N}{N_{c,v}}\right) + \frac{1}{24}\left(\frac{N}{N_{c,v}}\right)^2 - 0.0000347\left(\frac{N}{N_{c,v}}\right)^3\right], \tag{24.18}$$

where N_c and N_v are the effective densities of states for electrons and holes, k_{B} is the Boltzmann constant, and T is the temperature. The nonradiative processes considered in Equation 24.15 are Shockley–Read–Hall (SRH) and Auger recombination. The recombination rates are calculated under the charge neutrality condition.

24.4.3 Light–Matter Interactions

The interaction between light and the semiconductor gain medium is represented by the material (interband) polarization through an effective susceptibility (Equation 24.2). A general description of the polarization that is applicable for all levels of optical intensity is necessary. The effective susceptibility consists of the carrier-dependent changes in net gain and refractive index, both of which are functions of the optical field

$$\chi_{\mathrm{eff}}\left(\omega, N, \tilde{E}\right) = -\frac{1}{k}\left\{i\left[g_{net}\left(\omega, N, \tilde{E}\right) - \left(\frac{1-\Gamma_{xy}}{\Gamma_{xy}}\right)\alpha_{conf}\right] + k\Delta n\left(\omega, N, \tilde{E}\right)\right\}, \tag{24.19}$$

where α_{conf} represents the optical losses in the confinement regions. α_{conf} is needed because $1 - \Gamma_{xy}$ of the optical energy is located in the confinement layers outside the gain material. Equation 24.19 allows the induced nonlinear polarization to be described in a general fashion, without any assumptions based on its functional dependence on the optical field. This approach is more straightforward and physically robust than the common truncated series expansion of the polarization based on Equation 24.3. With this representation, the band structure is taken account of through the determination of the gain and refractive index changes.

To complete the analysis, a model is required for the material gain, spontaneous emission, and refractive index spectra. A parabolic model is used for the conduction band, while the valence band structure is calculated using a four-band **k·p**-model (Vurgaftman et al., 2001). The gain and spontaneous emission rates are obtained using Equations 24.20 and 24.21, respectively (Zory, 1993),

$$g(\hbar\omega) = \frac{1}{\hbar\omega}\frac{\bar{n}_{\mathrm{g}}\pi e^2\hbar}{n^2 c\varepsilon_0 m_0^2}\sum_{ic=iv}\left|M_{\mathrm{T}}\right|^2\rho_{\mathrm{red}}^{mD}\left(f_n - f_p\right) \tag{24.20}$$

$$R_{\mathrm{sp}}(\hbar\omega) = \frac{1}{\hbar\omega}\frac{\pi e^2\hbar}{n^2\varepsilon_0 m_0^2}\sum_{ic=iv}\left|M_{\mathrm{avg}}\right|^2\rho_{\mathrm{red}}^{mD}f_n\left(1 - f_p\right) \tag{24.21}$$

$$\left|M_{\mathrm{avg}}\right|^2 = \frac{1}{3}\sum_{\substack{\text{all 3}\\\text{polarizations}}}\left|M_{\mathrm{T}}\right|^2. \tag{24.22}$$

$f_{n,p}(E)$ is a Fermi–Dirac distribution function and gives the occupational probability of the electron of energy state E. ρ_{red}^{mD} is the reduced density of states, with $m = 2$ for QW material, and $m = 3$ for bulk.

$\left|M_T\right|^2$ is the transition matrix element and determines the probability and hence strength of interaction between the states at energy E_e and E_h in the presence of an electromagnetic field.

Carrier lifetime dependent dephasing and intraband scattering processes (carrier–carrier, carrier–phonon, etc.) broaden the range of energy states that may participate in the optical transitions. This energy broadening is taken into account phenomenologically by directly broadening the optical spectra (Zory, 1993). Instead of broadening the gain spectrum directly, the spontaneous emission spectrum was broadened using a hyperbolic secant lineshape function (Lim et al., 2007)

$$L\left(E_{eh} - \hbar\omega\right) = \frac{\tau_{in}}{\hbar\pi} \sec h \left(\frac{E_{eh} - \hbar\omega}{\hbar/\tau_{in}}\right), \tag{24.23}$$

where τ_{in} is the intraband relaxation time mainly due to scattering processes, and E_{eh} is the transition energy. The gain spectrum is obtained from the broadened spontaneous emission spectrum, $R_{sp,broad}(\hbar\omega)$, through

$$g(\hbar\omega) = \frac{1}{(\hbar\omega)^2} \frac{3\pi^2\hbar^3c^2}{2\bar{n}^2} R_{sp,broad}(\hbar\omega) \left[1 - \exp\left(\frac{\hbar\omega - \Delta E_F}{k_B T}\right)\right]. \tag{24.24}$$

The form of Equation 24.24 ensures that the gain passes through zero exactly at the quasi-Fermi level separation ΔE_F.

Gain compression due to SHB is included phenomenologically by introducing a constant gain compression factor, ε_{shb}

$$g(\hbar\omega) = \frac{g(N, T)}{1 + \varepsilon_{shb} S(\hbar\omega)}, \tag{24.25}$$

where $S(\hbar\omega)$ is the density of photons with energy $\hbar\omega$.

The carrier-induced changes in the refractive index spectrum are calculated from the changes in the gain/absorption spectrum through the nonlinear Kramers–Kronig relations (Hutchings et al., 1992) to ensure that the absorption and index changes are self-consistent. This is expressed as

$$\Delta n(\hbar\omega; \xi) = -\frac{c}{2\pi\omega} \int_{-\infty}^{\infty} \frac{\Delta g(\hbar\omega\prime; \xi)}{\omega' - \omega} d\omega', \tag{24.26}$$

where ξ is the external excitation, e.g., an electromagnetic field or temperature. This form is appropriate for different nonlinear processes, e.g., self-action effects (nonlinear refraction) and cascaded processes (Boyd, 2007). In this work, the carrier-induced changes in the gain/absorption spectrum only include band-filling effects and bandgap renormalization, but CH and SHB effects can also be included.

24.4.4 Inclusion of Material Dispersion in the Time-Domain Model

The challenge for time-domain simulations is the inclusion of the frequency-dependent complex material polarization (i.e., gain and refractive index dispersion). In this work, recursive digital filters are used to accurately represent the spectrally dependent material quantities in the time-domain model (Kaunga-Nyirenda et al., 2010). The most general linear digital filter takes a sequence of input points and produces a sequence of output points by the following difference equation (Smith, 2002):

$$y[n] = a_0 x[n] + a_1 x[n-1] + a_2 x[n-2] + \cdots + b_1 y[n-1] + b_2 y[n-2] + \ldots, \tag{24.27}$$

where n is the time index, and $x[]$ and $y[]$ represent the input and output, respectively. The a's and b's that define the filter are called recursive coefficients, with $b_0 \equiv 1$ corresponding to the sample being calculated.

Digital filtering allows the computation of long convolution integrals of two functions in the time domain for discretely sampled signals. The optimization of the filter coefficients involves the fast Fourier transform. Hence, it can be argued that the overhead incurred in obtaining the filter coefficients at every spatial point and time step is much larger than Fourier transforming the field and multiplying by the frequency dependent quantities directly, followed by inverse Fourier transforming back into the time domain. This computational overhead is, however, avoided by obtaining the filter coefficients offline from the main simulation and storing them in tables. For a given set of parameters (e.g., carrier density and temperature), the gain and refractive index changes can be calculated and the filter coefficients obtained for each case and stored in tables. The filter coefficients can then be retrieved during simulation with negligible additional computational burden. This approach is not possible with the direct energy–time transformation approach, which must be done during the simulation.

Figure 24.2 shows the fitted gain and refractive index spectra for an eight-pole filter after applying the filter to an impulse input and taking the Fourier transform of the resulting impulse response. A good fit is observed between the filter response and the desired response. The number of poles is dictated by the index spectrum, which has a sharp turning point and is less smooth than the gain spectrum. The number of poles for the filters for both spectra has to be the same for ease of implementation in the field update equation. Therefore, the number of poles chosen was one that gave a satisfactory fit for the index spectral profile, i.e., 8 (Figure 24.2).

This method accurately captures the asymmetric spectral response of the material polarization (Figure 24.2) and can be used to incorporate frequency responses from experimental measurements as well as complicated responses, not easily represented analytically. The use of spatiotemporal filter coefficients allows correct inclusion of spatial-hole burning and shifts of the gain spectrum due to band-filling and bandgap renormalization.

24.4.5 Numerical Implementation

The optical propagation (Equation 24.11) and carrier density (Equation 24.15) are coupled through the material Equations 24.19 through 24.21. These two equations are solved self-consistently by dividing the active region into small enough (shorter than the diffusion length) sections, such that quantities can be considered constant within each section. The field propagation equations are marched in time using the Lax differencing scheme, which allows use of a larger time step than is allowed by the explicit differencing scheme. The stability condition of the Lax differencing scheme is given by the Courant condition $(c\Delta t/n\Delta z) \leq 1$ (Press et al., 2002). The carrier density equation is integrated using a fourth-order Runga–Kutta method. All carrier-dependent quantities are estimated at the midpoint of each section, while the optical fields are evaluated at the section boundaries (Kaunga-Nyirenda et al., 2010). This ensures that the photons traveling to the right and to the left in a particular section both interact with the same carrier-related quantities (Wong and Carroll, 1987).

24.5 Case Study: FWM

FWM studies in nonlinear media have focused largely on the optical characteristics of mixing processes and experimental observations in the optical domain (Agrawal, 1988; Mukai and Saitoh, 1990; Uskov et al., 1994; Darwish et al., 1996; Gong et al., 2004), with emphasis mainly on the issue of conversion efficiency (Mukai and Saitoh, 1990). Very little attention has been paid to the characteristics of wave mixing in the electrical domain. Electrical measurements have been reported before for semiconductor laser diodes (SLDs) and a simplified model based on frequency modulation was presented in Nietzke et al. (1989). Although the operational characteristics of SLDs and SOAs are different, the material physics is the same, so that CDM and resulting wave mixing have their origins in the same physical processes. The carrier density is usually clamped to its threshold value in SLDs, limiting the modulation depth. On the other hand,

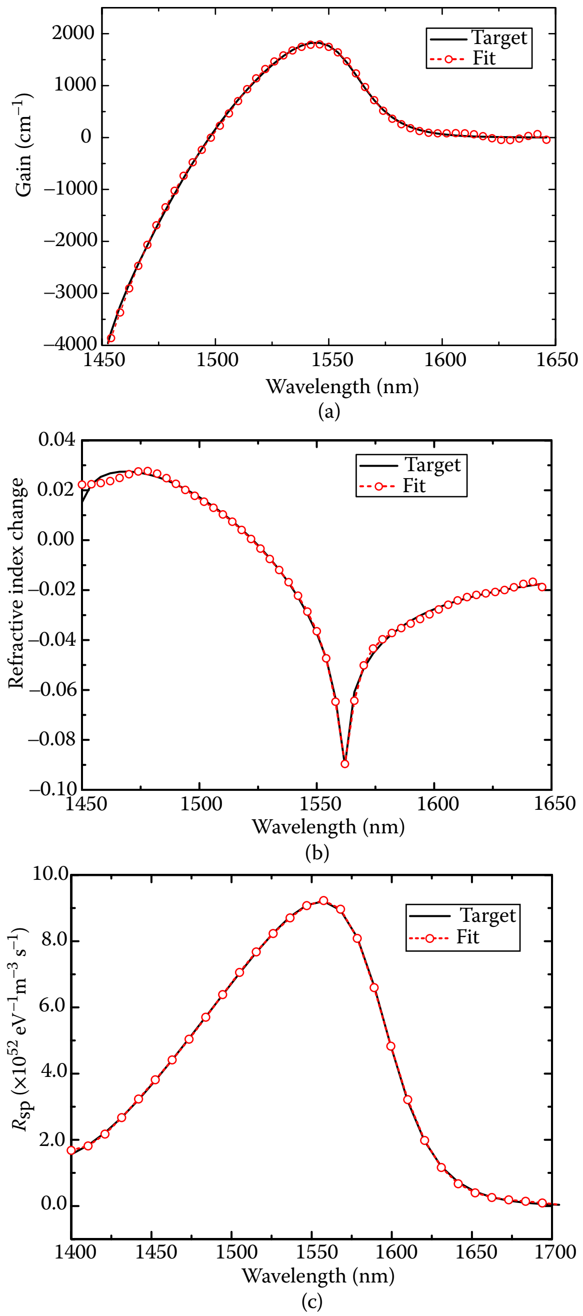

FIGURE 24.2 Fits for (a) gain spectrum, (b) refractive index change, and (c) spontaneous emission rate using recursive filters. The solid lines are the spectral quantity to be fitted, while the dotted lines are fits using the recursive filter. Number of poles for the filter is 8. Fits are obtained from the impulse responses of the filters.

large carrier density excursions are common in SOAs. In SLDs, the presence of strong optical feedback (i.e., large reflections at the facets) complicates the carrier density dynamics by introducing relaxation oscillations (Nietzke et al., 1989). A proper understanding of the characteristics of CDM is, therefore, likely to be stronger and clearer with SOAs (Dlubek et al., 2010). The model developed in Section 24.4 is used to study the characteristics of CDM over different operating conditions. No *a priori* assumptions are made about the existence or form of the CDM—it is obtained directly from the physics.

24.5.1 CDM Characteristics

The CDM characteristics in wave mixing in SOAs are studied using the model developed earlier. The input to the SOA is of the form

$$E_{\text{in}}(0,t) = \left\{ \psi_{\text{p}}(0,t) + \psi_{\text{s}}(0,t)\exp\left(-j\Omega t\right) \right\} \exp\left(-j\omega_{\text{ref}}t\right), \tag{24.28}$$

where $\Omega = 2\pi f_{\text{d}}$ and $f_{\text{d}} = \left|f_{\text{p}} - f_{\text{s}}\right|$ is the detuning frequency between the inputs (referred to as pump and probe). The pump and probe laser frequencies are $f_{\text{p}} = \omega_{\text{p}}/2\pi$ and $f_{\text{s}} = \omega_{\text{s}}/2\pi$, respectively. The time dependence of the pump and probe slowly varying fields is a general form and allows the use of modulated input signals. The input (Equation 24.28) enters through the boundary conditions (Equations 24.12 and 24.13).

The parameters used in the simulations are given in Table 24.1.

Indium gallium arsenide (InGaAs) was used as the active material for the quantum wells. The barrier material was strained InGaAs (−0.67% strain) (Kelly et al., 1996). This matches the material system for the device used in the experiments reported in Dlubek et al. (2010). The indium composition in the InGaAs active material was taken to be 0.62. This reproduced the device characteristics as reported in its data sheet and Kelly et al. (1996). This device has a nonlinear geometry, (Figure 24.3) so an effective length with a

TABLE 24.1 Simulation Parameters Used in the Study of Wave Mixing

Symbol	Description	Value (Units)
L	SOA length	1.1 mm (Lealman, 2009)
W	SOA width	1.3 μm (Lealman, 2009)
D	SOA thickness	0.1 μm (Lealman, 2009)
Δz	Longitudinal grid spacing	10 μm
Γ_{xy}	Optical confinement factor	0.18 (Lealman, 2009)
R_1	Input facet reflectivity	0.05% (Kelly et al., 1996)
R_2	Output facet reflectivity	0.05% (Kelly et al., 1996)
α_{int}	Internal loss	$2.0\ \text{cm}^{-1}$
A	Linear gain coefficient	$2.0 \times 10^{-20}\ \text{m}^2$
N_0	Carrier density at transparency	$1.7521 \times 10^{24}\ \text{m}^{-3}$
τ_{s}	Effective carrier lifetime	0.7 ns
α_{LWEF}	Linewidth enhancement factor	−3
A	Linear radiative recombination coefficient	$1.0 \times 10^{7}\ \text{s}^{-1}$
B	Bimolecular recombination coefficient	$5.6 \times 10^{-16}\ \text{m}^3\text{s}^{-1}$
C	Auger recombination coefficient	$3.0 \times 10^{-41}\ \text{m}^6\text{s}^{-1}$
$\bar{n}_{\text{g}}$	Group index of refraction for the mode	3.6
n	Index of refraction of active region	3.3
H	Current injection efficiency	0.7
ε_{shb}	Gain compression factor	$5.0 \times 10^{-17}\ \text{cm}^3$
τ_{in}	Intraband relaxation time	0.2 ps

Note: Some phenomenological parameters (carrier density at transparency, linear gain coefficient, effective carrier lifetime, linewidth enhancement factor, internal loss) are required as input to Agrawal's truncated series approximation (TSA) model.

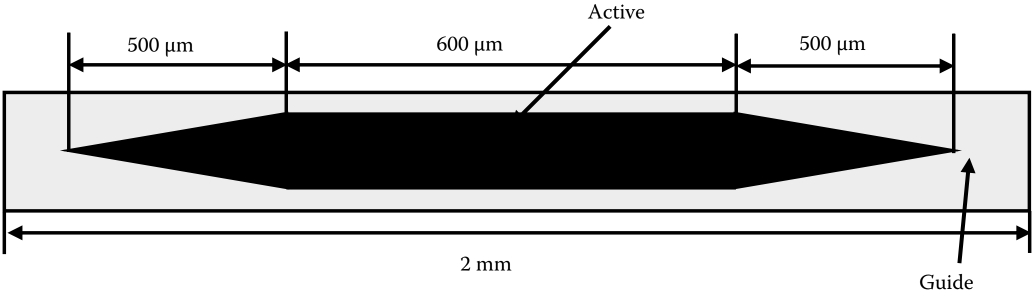

FIGURE 24.3 Sketch of the nonlinear geometry of a large spot semiconductor optical amplifier (SOA).

confinement factor equal to that of the untapered region was used in the simulations. All simulations were performed at 300 K. The carrier temperature was assumed to remain constant and equal to that of the lattice.

The CDM amplitude is obtained from the solution of the carrier density equation. A measurable quantity related to this is the variation in the injection current or voltage across the device, since the temporal fluctuations in the stimulated recombination rate result in temporal fluctuations in the current to resupply the carriers. The time series for the CDM amplitude is obtained at any spatial point along the longitudinal propagation direction as

$$\Delta N(z,t) = N(z,t) - N_{\text{SS}}(z)\,, \tag{24.29}$$

where N_{SS} is the carrier density determined by the carrier injection, nonradiative recombination, and the amplified spontaneous emission (ASE) rates in the absence of external optical injection. The spectrum of the CDM amplitude is obtained by taking the discrete Fourier transform of Equation 24.29. Modulation of the carrier density results in modulation of the quasi-Fermi levels—and hence of the voltage drop across the active region (Equation 24.17). The spectrum of the injection current comes from DFT of Equation 24.16, while that of the voltage from Equation 24.17.

Simulated input and output optical spectra (from discrete Fourier transforms of the optical wave time series), and carrier density spectra (from discrete Fourier transform of Equation 24.29) are shown in Figure 24.4. The detuning of the two input signals was 2 GHz and the bias voltage was adjusted so that the current was 150 mA. The CW input optical fields had power levels of −0.7 and −0.8 dBm, respectively. The reference frequency was taken as the average of the pump and probe frequencies. An identical CDM spectra to Figure 24.4c was obtained when the reference frequency coincided with the pump frequency, confirming that the CDM spectra do not depend on the choice of the reference frequency used for the slowly varying envelope approximation. For the rest of the results presented below, the reference frequency coincided with the frequency of the pump. Figure 24.4 shows that the carrier density pulsates at the detuning frequency (beat frequency) of the pump and probe. The central peak in the carrier density spectrum is the static carrier density. The carrier population pulsations observed in Figure 24.4 are consistent with the experimental results (Nietzke et al., 1989).

The earlier simulations were repeated but with one of the optical input signals increased from −0.8 dBm to +4.7 dBm. Smaller secondary peaks are now also observed in Figure 24.4c at the multiples of the detuning frequency and these are enhanced as one of the input powers is increased (Figure 24.5).

The higher-order components (small secondary peaks at multiples of the detuning frequency) in Figure 24.5 are due to beating between the newly generated FWM products and the input beams or to higher-order harmonics in the CDM due to the nonlinearity of the carrier equation. Nonlinearities in the carrier equation are caused by the carrier density-dependent carrier lifetime and the saturation of the stimulated recombination rate. The peaks at the detuning frequency disappeared in the carrier density

spectrum when one of the input signals was set to zero, confirming that the CDM is caused by the interaction of the input waves. This is consistent with the experimental results reported in (Dlubek et al., 2010). In addition to the primary peak, a weaker peak was observed in the measured CDM spectrum at twice the detuning frequency. This second harmonic had a bandwidth larger than the primary harmonic by a factor

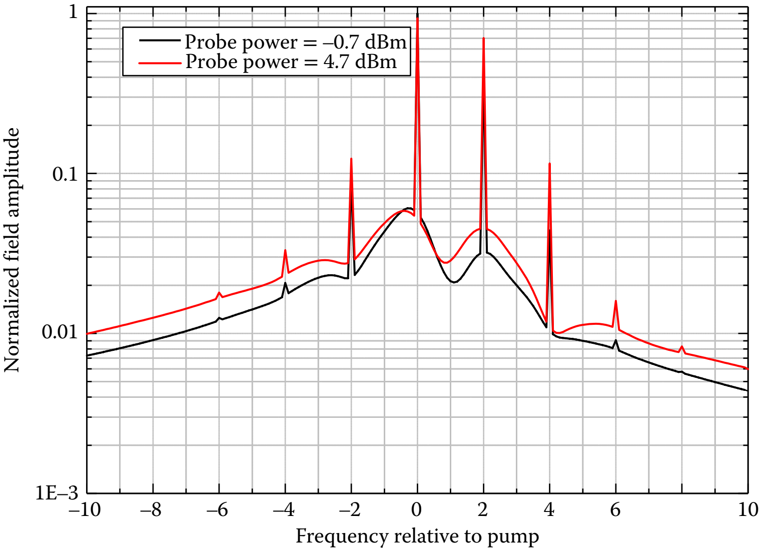

FIGURE 24.5 Optical spectra for the same parameters as in Figure 24.4 for two different probe powers. The pump signal is aligned to the reference signal, chosen around the gain peak.

of 1.5, indicating that it is the result of beating between the original waves and a new wave, which is itself broadened compared to the input waves.

24.5.2 Experimental Procedure for Measuring CDM

The experimental setup is shown in Figure 24.6 (Dlubek et al., 2010). The SOA used in the experiment was a nonlinear SOA from Centre of Integrated Photonics (CIP) (SOA-NL-OEC-1550 operating in 1550 nm region) with an active region consisting of InGaAs unstrained quantum wells and InGaAs barriers (Kelly et al., 1996). Two standard telecommunications diode lasers, LD1 and LD2, both a nominal wavelength of 1547.02 nm, were used as probe and pump, respectively. The frequency detuning between the two lasers was obtained by temperature tuning, so that it did not exceed 3 GHz (the bandwidth of the radio frequency (RF) spectrum analyzer). An optical spectrum analyzer was used to monitor the frequency detuning. A BiasT connector was used to uncouple the constant bias current to the SOA from the RF component from the device. Polarization controllers were used to adjust the polarization states of the interacting waves. Further experimental details are reported in Dlubek et al. (2010).

Before measuring the CDM spectrum, the reference beating spectrum of the two lasers (LD1 and LD2) was measured by heterodyning them on a standard 10 Gb/s photodetector. The 3 dB bandwidth of the heterodyne spectrum was ~40 MHz, suggesting that the laser linewidths were ~20 MHz. The spectral shape was approximately Lorentzian, as expected (Dlubek et al., 2010).

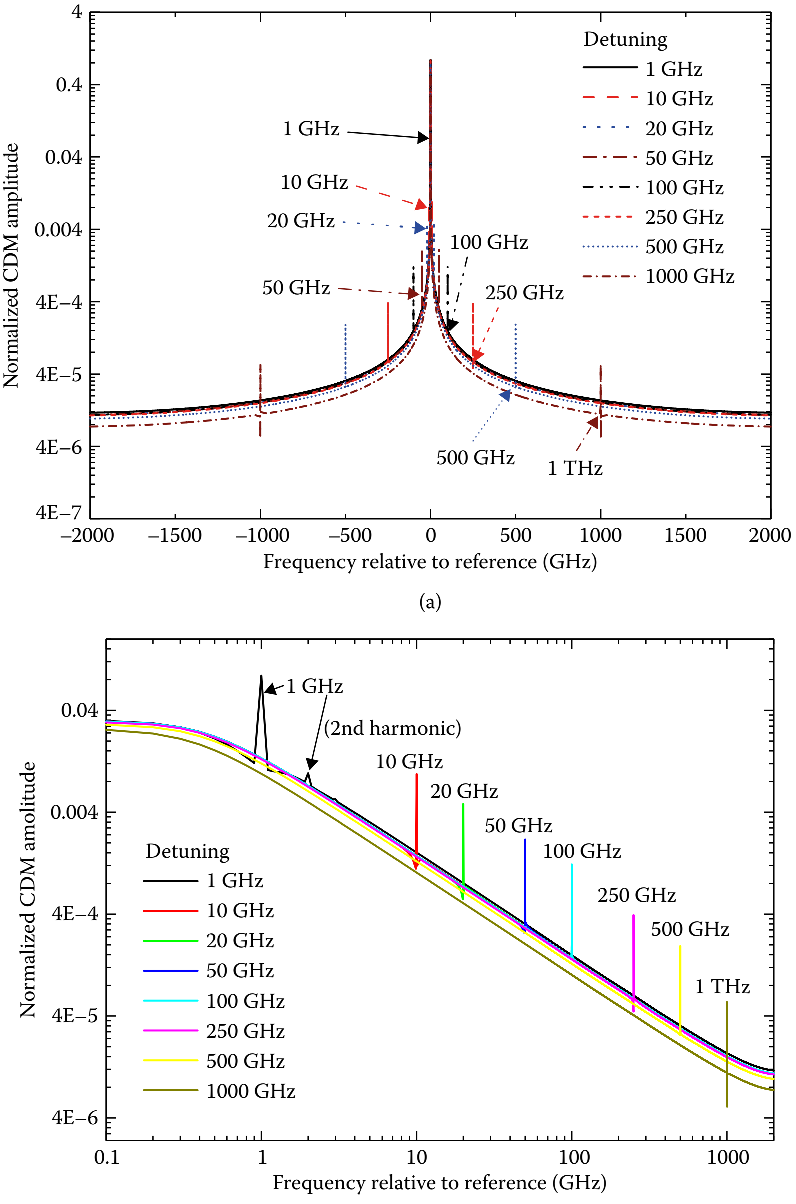
24.5.3 Dependence on Operating Conditions

The strength of interband effects depends on the rate of carrier replenishment into the active region. Thus, the CDM amplitude should decrease as the frequency detuning increases, since the carrier density cannot follow the fast oscillations of the stimulated emission rate. This was tested by simulating the FWM in the SOA for detuning frequencies up to 1 THz (by varying f_d in Equation 24.28), with all other parameters the same as in earlier simulations. Figure 24.7 shows the CDM spectra for different detunings. The peak at 2 GHz is a second harmonic for the 1 GHz detuning.

To obtain a clearer view of the frequency dependence of the CDM amplitude, the information in Figure 24.7 is extracted by obtaining the amplitude of the first harmonic (indicated against the detuning in Figure 24.7b) and plotting it against the detuning frequency (log scale), as shown in Figure 24.8. The CDM amplitude decreases sharply as the detuning frequency increases. The CDM amplitude at 1 THz is almost three orders of magnitude smaller than the value for a few GHz. The stimulated emission rate fluctuates at a much faster rate than the carriers injected into the active region. As a result, the carrier density cannot respond and the modulation efficiency decreases as the frequency detuning increases. Bream (2006) has also shown that the contribution of CDM to the refractive index perturbation is still significant even at frequencies well above the modulation bandwidths of the QW carrier distributions. As observed in Figure 24.8, although CDM continues to decrease with increasing detuning, it still contributes significantly to very fast nonlinear optical processes (even for detuning up to 1 THz) (Bream, 2006). Dynamic CH and SHB have not been taken into account in the model. It is interesting to note the similarity in the dependence of the CDM amplitude on detuning frequency and the dependence of amplitude of the conjugate signal on the detuning frequency observed in Figure 24.5a of Uskov et al. (1994). However, it is also worth noting that above 1 THz (~4 meV), acoustic phonon scattering should become relevant, while longitudinal optical (LO) phonon scattering should also be important above 9 THz. Thus, care is needed when extrapolating results to 1 THz and beyond, as other carrier scattering mechanisms can be resonantly excited.

Figure 24.9 shows the variation of the normalized CDM amplitude with bias current. The CDM in each case were normalized with respect to their maximum amplitude. As expected, the CDM amplitude increases with bias current. The detuning was adjusted to 1.23 GHz to match the experiments. In Agrawal's seminal paper on FWM (Agrawal, 1988), the carrier density rate equation is expressed as a power series involving the harmonics of the frequency detuning. The truncated series approximation (TSA1) curve in Figure 24.9 was calculated using Agrawal's model, where the power series is truncated at the first harmonic (Agrawal, 1988). The simulated and the experimental results both show that the CDM amplitude saturates as the bias current is increased further. Furthermore, a comparison of the experimental and simulated curves shows that the CDM approaches saturation at a faster rate in the experimental measurements than is observed in simulations. The CDM from measurements and truncated series assumption show the largest amplitude at 0 mA (experiment) and very close to 0 mA (TSA1).

The qualitative behavior is similar in both experiment and simulation. The model predicts the behavior of CDM better than the TSA1 in the gain region. At 0 mA, the rate of absorption is at its maximum and the net gain is equal to the absorption coefficient. The SOA behaves like an unbiased diode with an internal field and hence acts as a square-law detector. As the bias current increases from 0 mA toward transparency at around 35 mA, the rate of absorption decreases while the rate of emission increases. This results in an overall decrease in the net absorption and explains why the CDM amplitude decreases as the current increases from 0 mA toward transparency. Above transparency, the net gain increases. This leads to an increased rate of stimulated emission relative to absorption, which results in an increase in the CDM amplitude, saturating at about 150 mA. This is consistent with the measured gain-current dependence



(b)

FIGURE 24.7 Normalized CDM amplitude for different detunings (a) full spectra and (b) positive spectra (log scale).

shown in Figure 24.10. The discrepancy between simulations and experiments in the absorption region and low bias current above transparency (0–50 mA) in Figure 24.9 can be attributed to the use of the unipolar model and the effects of ASE. The *I*–*V* characteristics of a diode appear most nonlinear near zero bias. The unipolar model is based on the linear approximation of the current injection (Equations 24.16 and 24.17), which does not include the nonlinear *I*–*V* characteristics, hence in the deviation for currents between zero and transparency. Spontaneous emission, and the subsequent ASE, have not been included in the propagating field. The effects of ASE on carrier dynamics are more pronounced at low (electrical)

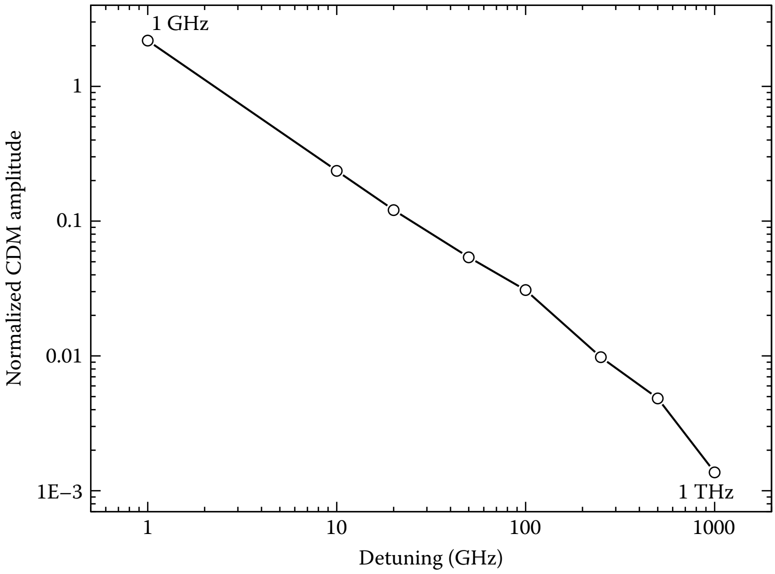


FIGURE 24.8 Normalized CDM amplitude at the first harmonic for different detunings (frequency in log scale).

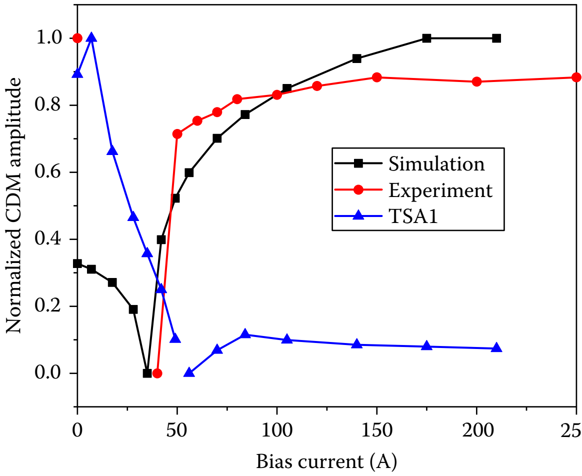

FIGURE 24.9 Normalized CDM amplitude at the first harmonic for different bias current, detuning 1.23 GHz, pump power −0.8 dBm, probe power −0.7 dBm. Truncated series approximation (TSA1) based on Agrawal's model (Agrawal, 1988), truncated at the first harmonic.

bias and optical input power level, since the rate of spontaneous emission can be comparable to the rate of stimulated emission.

The absence of experimental data points between 0 and approximately 50 mA in Figure 24.9 can be attributed to the low level of CDM, such that its amplitude was below the noise level. Although there is significant CDM in the absorption regime, it is not useful for many applications (apart from heterodyne detection, as discussed in Section 24.5.2) and both experiments and simulations confirm that there are no detectable/measurable optical mixing products.

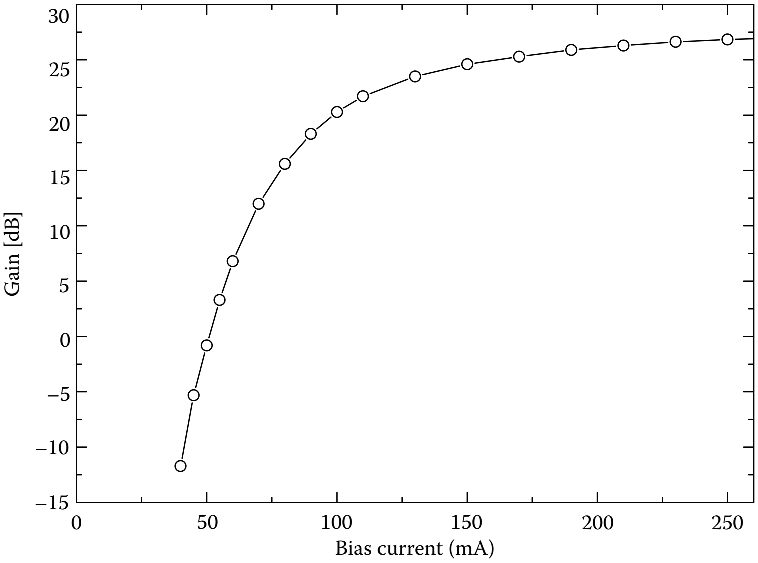

FIGURE 24.10 Measured small signal gain. Dependence on bias current for input power −28 dBm.

The effectiveness of CDM is expected to increase with input power, as the interaction between the different signals should be enhanced. As the optical power intensity increases in the active region, carrier depletion, and gain saturation effects should ultimately prevent any further increase in the CDM amplitude. (Signal distortion due to clipping as the carrier density approaches its transparency value should also create more signal components in the frequency spectrum.) Figure 24.11a and b show the simulated and measured CDM amplitude dependence on pump power for two probe powers (−0.8 dBm and +4.7 dBm). The detuning between the pump and probe was 1.23 GHz and the bias voltage was adjusted to give a bias current of 150 mA. The CDM amplitude increased with input power up to a point. The figures also reveal that the largest CDM is produced when the pump and probe signals have approximately equal power. This is a key result that cannot be determined from previous works, which rely on the assumption that the pump power is much larger than the probe power.

There is good qualitative agreement between simulation and experiment. However, there is some discrepancy in the amplitude of the CDM obtained using simulations and experiment, as shown in Figures 24.9 and 24.11. Apart from the limitations of the unipolar electrical and 1D traveling wave optical models, some of these differences are due to errors in the material parameters of the SOA, as these were not provided by the manufacturer. This discrepancy may also result from a lack of knowledge of the device's parasitic impedances and layer resistivities, which will also affect the RF signal measured at the device terminals (after the BiasT in Figure 24.6).

The normalized CDM amplitude is generally higher for the lower probe power (−0.8 dBm), as shown in Figure 24.12, where the dependence of the simulated CDM amplitude on the pump power is plotted for two probe powers (−0.8 dBm, +4.7 dBm). The other parameters are the same as those used in the simulations for Figure 24.11. When one beam is much weaker than the other, the CDM amplitude decreases as the beating is reduced due to carrier depletion and gain saturation by the strong beam.

24.6 Summary and Conclusions

We have developed a suitable time-domain model to investigate dynamic nonlinear optical effects in SOAs. The model takes into account the most important interband processes and minimizes the number of phenomenological parameters. This simulation tool was used to show how wave mixing processes manifest

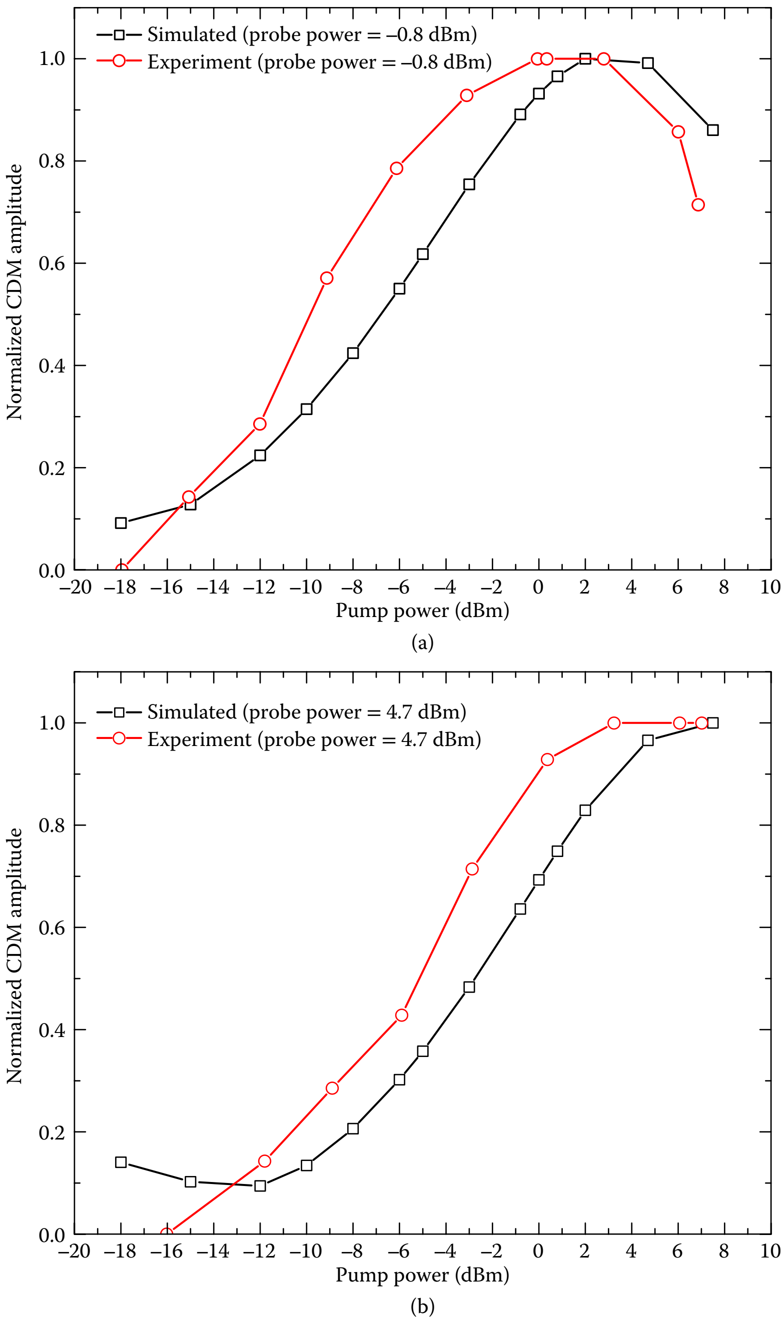

FIGURE 24.11 Normalized CDM amplitude dependence on pump power for different probe power levels: (a) probe power −0.8 dBm and (b) probe power +4.7 dBm. Detuning 1.23 GHz, bias current 150 mA.

themselves in SOAs, and discuss their impact on existing and potential applications. This is key to understanding and modeling nonlinear optical signal impairments. Furthermore, the knowledge obtained from these studies can be used in the design of new devices and/or for optimizing existing ones that rely on similar nonlinear optical effects, e.g., high-density PICs. The nonlinear phenomena are also accessible

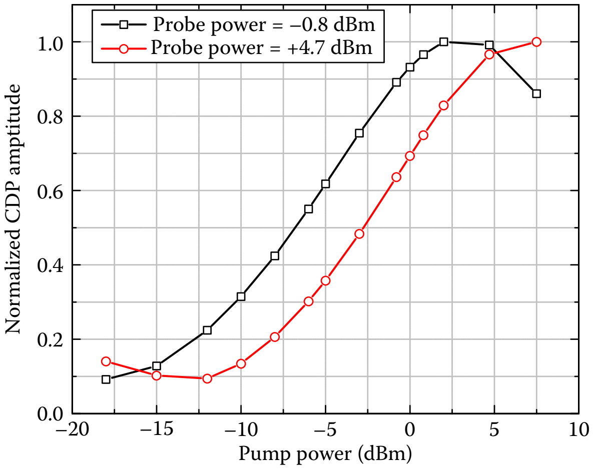

FIGURE 24.12 Simulated CDM amplitude (normalized) for two probe levels as in Figure 24.11a and b.

through electrical measurements, as well as through FWM and SHG measurements, providing additional opportunities for the validation of the simulation tool.

Other key outcomes of this work are the general description of the nonlinear polarization and the demonstration of the inclusion of nonlinear optical effects using the recursive filter functions. These can be used in more advanced tools, such as those with higher dimensionality (2D or 3D), those with a dynamic bipolar electrical model, and those with more accurate time domain-optical models (e.g., which properly include the spectral effects in the propagation and waveguiding). Finally, the general description of the nonlinear polarization means this approach can be readily adapted to include other contributions to the nonlinear polarization.

Acknowledgments

25.1 Introduction

Since their advent in the second half of the 1980s (O'Mahony, 1988), semiconductor optical amplifiers (SOAs) have evolved technologically to the point that they have become key elements for the development of optical communications circuits, systems, and networks. Due to their attractive features of low power consumption, compactness, broad gain bandwidth, and ability for integration with affordable cost, the multifunctional potential of SOAs has been exploited in data amplification (Zimmerman and Spiekman, 2004) and processing (Mørk et al., 2003) in the optical domain and, more recently, for data encoding as well (Udvary and Berceli, 2010).

Motivated by the widespread employment of SOAs and the concomitant need to assist their design and support the implementation of the diverse applications they are destined to serve, the purpose of this chapter is to present in a concise and comprehensible manner the basic processes which govern the dynamic behavior of SOAs. Furthermore, it aims at describing how these processes can theoretically be taken into account in order to model their impact on the SOA response. It is concerned with the significant phenomenon of the pattern effect which manifests when the SOA gain is modulated, either optically by a single data pulse train or electrically by digital information superimposed on the SOA current. More specifically, the chapter topics which are addressed with regard to the SOA dynamics are outlined as follows:

Section 25.2: SOA Dynamics Background—Types, physical origin, conditions for manifestation, and qualitative impact on SOA response.

Section 25.3: SOA Model Formulation—SOA gain dynamics modeling theoretical formulation and numerical/closed form solutions.

Section 25.4: SOA Model Simplification—Ways of simplification and implications.

Section 25.5: SOA Optical Gain Modulation—Characterization and implications.

Section 25.6: Pattern Effect I—Direct Optical Amplification: Performance limitations and methods for mitigation.

Section 25.7: SOA Electrical Gain Modulation—Characterization and implications.
Section 25.8: Pattern Effect II—Direct Current Modulation: Performance limitations and methods for mitigation.

25.2 SOA Dynamics Background

Figure 25.1a depicts the standard configuration of an SOA (Mørk et al., 2003). Light is coupled via one of the facets into an intrinsic region of semiconductor material, which is sandwiched between a hole-dominant, that is, p-doped, and electron-dominant, that is, n-doped, cladding layer of higher bandgap energy and slightly lower refractive index. This structure allows confinement of a large number of free carriers in a small active volume, which hence exhibit a large density. By forward biasing the heterojunction through the injection of an electric current being below the lasing threshold point, the population of the carriers can be sufficiently inverted so that optical gain is established at a rate that prevails absorption. Then when signal photons of suitable energy travel through the active area, they stimulate radiative recombinations of electrons and holes and are coherently (i.e., with the same polarization, frequency, and phase) amplified as they propagate along the formed waveguide and exit from the other side of the device. In order to avoid unwanted back reflections and oscillations inside the cavity, the reflectivity of the SOA facets is reduced to very low values of less than 1×10^{-5} using antireflection coatings, tilted waveguides and tapered waveguides (Connelly, 2002). These technological means allow us to achieve a single-pass controllable amplification as high as 30 dB and with ripples-free parabolic-like spectrum profile, which can extend from 1300 to 1600 nm by changing the chemical composition of III–V group semiconductor materials. In particular, in this chapter we consider InGaAsP/InP-based SOAs, which operate in the 1550 nm telecommunications window where the attenuation of signals transmitted via optical fibers is lowest.

When a lightwave beam of optical frequency ν is injected into an SOA with a photon energy, hν, being larger than the bandgap energy, $E_g = E_c$-E_v, which, as shown in Figure 25.1b, separates the conduction and valence bands having energy at their bottom and top E_c and E_v, respectively, it triggers through band-to-band transitions stimulated emission and depletes the pumped carriers (Diez, 2000; Vacondio, 2011).

The reduction in the density of the excited carriers has then two consequences. First, the produced gain is reduced up to the point where it becomes saturated. Second, a set of dynamic processes tend to

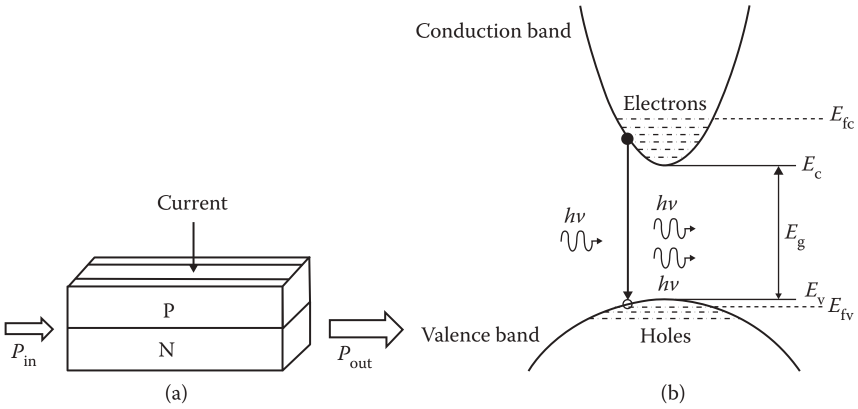

FIGURE 25.1 (a) Schematic representation of typical semiconductor optical amplifier (SOA) structure. (b) Simplified band diagram of semiconductor material. E_g, bandgap energy given by the difference between the energy at the bottom of the conduction band, E_c, and the energy at the top of the valence band, E_v; E_{fc}, quasi-Fermi level in the conduction band, and E_{fv}, quasi-Fermi level in the valence band.

bring the SOA gain back to its original level. These processes, which govern the SOA gain recovery, can be categorized in two cases of transitions (Occhi, 2002):

- Intraband transitions, which affect the distribution of carriers in the energy bands but leave the overall carrier concentrations unchanged. Varying the carrier density affects this distribution, which is further modified by spectral hole burning (SHB), free carrier absorption (FCA), carrier heating (CH), and carrier cooling.
- Interband transitions, which are related to the exchange of carriers between the energy bands and hence result in changes in the carrier density. These transitions are determined by electrical pumping, stimulated emission, absorption, spontaneous emission, nonradiative recombinations and two-photon absorption (TPA).

As electrons need not change band but are rearranged within the latter, the time constants of intraband transitions are much shorter than those of interband transitions. For this reason, the former are referred to as ultrafast effects. Given the time constants of these effects, they tend to be important compared with interband dynamics when the spectrum of the input signal is very wide, as in short pulse amplification, or when many channels are amplified in the context of wavelength division multiplexing (WDM) (Vacondio, 2011).

The SOA gain dynamics are directly coupled with those of free carriers (Occhi, 2002). Figure 25.2 qualitatively illustrates the temporal evolution of the free carrier distribution (energy versus density) in the conduction band (CB) of an SOA, which operates in the gain regime (Hall et al., 1994) subject to an ultrashort optical pulse that belongs to a time-varying signal (Occhi, 2002; Mørk et al., 2003; Wang, 2008). Prior to the pulse arrival, the carrier density within the CB is in quasi-equilibrium (Saleh and Teich, 1991), which occurs when the relaxation times for transitions within an energy band are much shorter than the relaxation time versus the other energy band. In this situation, the carrier distribution within the considered band is graphically shown in Figure 25.2a and is described by the product of the density of states, which is increased away from the band edge ($E = E_c$) at a rate that depends on the effective masses of electrons, with the probability that a given energy level, $E > E_c$, is occupied by an electron (Diez, 2000; Connelly, 2002). This probability is described by the Fermi function, $1/\left[\exp\left((E\text{-}E_{fc})/k_B T\right) + 1\right]$, where E_{fc} is the quasi-Fermi level, T is the temperature of the medium at thermal equilibrium and k_B is Boltzmann's constant (so that $k_B T$ defines the thermal energy, which equals 26 meV at $T = 300$ K). The position of the quasi-Fermi levels in the conduction and valence bands, E_{fc} and E_{fv}, respectively, is determined by the pumping rate (current injection), and if the latter is sufficiently large so that their separation exceeds the bandgap energy then the semiconductor medium provides gain and hence acts as an amplifier (Diez, 2000). Such a condition can be satisfied only if the quasi-Fermi levels lie, as shown in Figure 25.1, inside the conduction and valence bands, respectively, which for a semiconductor happens only under strong biasing (Vacondio, 2011). Note here that since the electrons and holes in the SOA are interrelated because of charge neutrality, it is sufficient to refer only to the conduction band (Schubert, 2004).

The natural quasi-equilibrium state is altered when pulses of duration in a subpicosecond timescale enter the SOA. This happens due to intraband effects which manifest according to the following phenomena: First, the induced stimulated emission responsible for signal amplification causes carriers to recombine around a narrow range of energies defined by pulse photon energy. This opens a hole in the carrier distribution, which is referred to as "SHB" and provokes a deviation from the normal Fermi distribution (Figure 25.2b). As a consequence, a localized reduction in the number of carriers at the transition energies occurs, while the total (electron/hole) carrier density within the band is reduced by the stimulated emission. For high-input pulse energies (>1 pJ) (Tang and Shore, 1998) TPA may also take place where, as the name implies, two photons are simultaneously absorbed and an electron is transferred from the valence band to a high energy level in the conduction band due to the high photon density in the active region (Hall et al., 1994; Mørk et al., 2003). In addition, a free carrier absorbs a photon and moves to a higher energy within the same band, according to the so-called FCA (Hall et al., 1994). After these effects have manifested on a timescale practically of few tens of femtoseconds (fs) (Diez, 2000) and the optical pulse has left

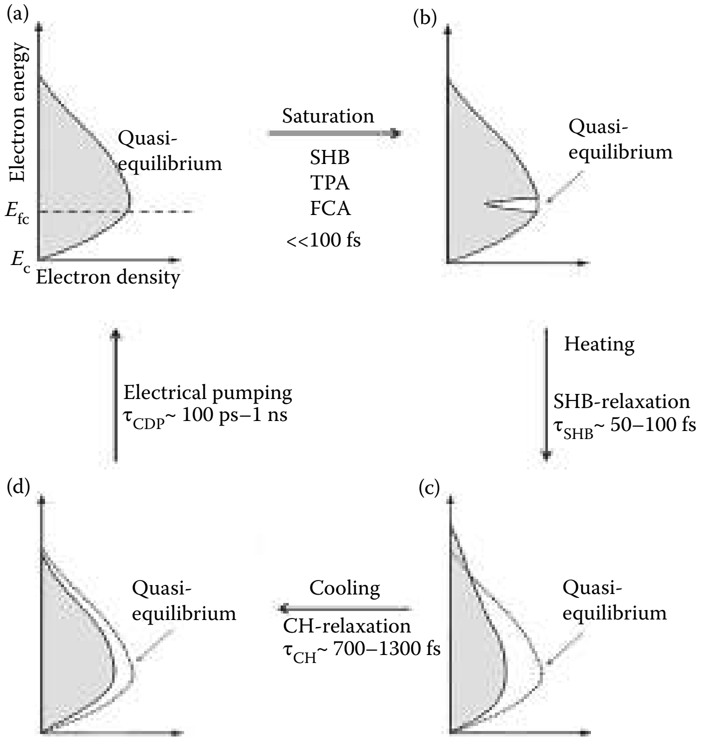

FIGURE 25.2 Evolution of carrier distribution induced in the conduction band (CB) of SOA by an ultrashort strong optical pulse. The shaded areas under the solid lines are proportional to the total carrier concentration in the CB (Wiesenfeld, 1996). The quasi-equilibrium is described by a Fermi distribution of quasi-Fermi level E_{fc}, which exceeds the minimum energy of the CB, E_c, in accordance with Figure 25.1b. SHB, spectral hole burning; CH, carrier heating; FCA, free carrier absorption; TPA, two-photon absorption, which occurs only for high pulse energies. The time constants values are typical for bulk SOAs, and may vary by more than a factor of two. (From Diez S, 2000, All-optical signal processing by gain-transparent semiconductor switches. PhD dissertation, Technical University of Berlin.)

the SOA, the Fermi distribution is restored via a process known as carrier–carrier scattering (Mørk et al., 2003), and the time required for this to happen is determined by the constant τ_{SHB}, which is known as SHB relaxation time, with values typically several tens of femtoseconds (50–100 fs). Since this parameter is finite, the governing SHB essentially sets the timescale during which the quasi-equilibrium Fermi distribution is established among the carriers in a band. Additionally, free carriers at energy levels lower than the average carrier density in the band are removed by stimulated emission or are transferred to higher levels due to the contribution of FCA and (possibly) TPA. As a result, the average carrier temperature is elevated and becomes higher than before the pulse arrival (Hall et al., 1994; Mørk et al., 2003). This transient increase of the electron and hole temperatures is called "CH" and impacts the carrier distribution (Figure 25.2c). The characteristic time, τ_{CH}, required for carriers to release their excess energy through phonon emission and cool down to the lattice temperature is of the order of several hundred femtoseconds (700–1300 fs). After this temperature relaxation time has elapsed, the starting Fermi distribution has been reestablished (Figure 25.2d), but the carrier density is still reduced compared to the stationary state (Figure 25.2a). Then the interband effect of carrier density pulsation (CDP) takes the lead and lasts between some hundreds of picoseconds and a few nanoseconds, depending on the dimensions and material of the active region as well as the SOA operating conditions. During this interval, which is defined by the respective time constant, τ_{CDP}, the carrier density, which had been decaying due to the stimulated emission, is increased again toward its original level owing to the resupply of electrons to the SOA via electrical pumping and the refilling of the respective bands. Finally, the carrier distribution is recovered to the quasi-equilibrium state (Figure 25.2a).

The distinctive evolution of the above processes can be conveniently viewed on the temporal profile of the SOA gain response, which is coupled to the carrier density. In practice, the SOA intraband and interband gain dynamics temporal characteristics and their dependence on operating parameters are directly disclosed by means of the pump-probe technique (Hall et al., 1994). This is a time-domain measurement technique where the SOA gain is perturbed by a strong optical pulse called "pump" and sampled at different delays, τ_{delay}, by a weak pulse called "probe," as illustrated in Figure 25.3a. The strong pump pulse drives the SOA under test into nonlinearity. The weak probe pulse cannot affect but instead experiences the altered SOA properties (Vallaitis, 2010). In order to capture the full extent of the SOA gain dynamics, the pulse repetition rate is of the order of several tens of MHz so that only one pump pulse at a time travels through the SOA and the gain of the latter is fully recovered before the arrival of the next pulse. Furthermore, ultrashort, that is, femtosecond-wide (Mørk et al., 2003) optical pulses are employed because their width determines the measurement's temporal resolution, which must be as high as possible to be able to extract the maximum information. A typical outcome of such measurement is graphically shown in Figure 25.3b, where the probe transmission has been plotted against the pump–probe delay, which is varied between a few ps to a few hundreds of ps (positive delay means that the pump precedes the probe pulse) [Occhi, 2002; Mørk et al., 2003; Wang, 2008; Vacondio, 2011]. The probe transmission is proportional to the SOA gain, so the curve monitors the SOA gain dynamic behavior.

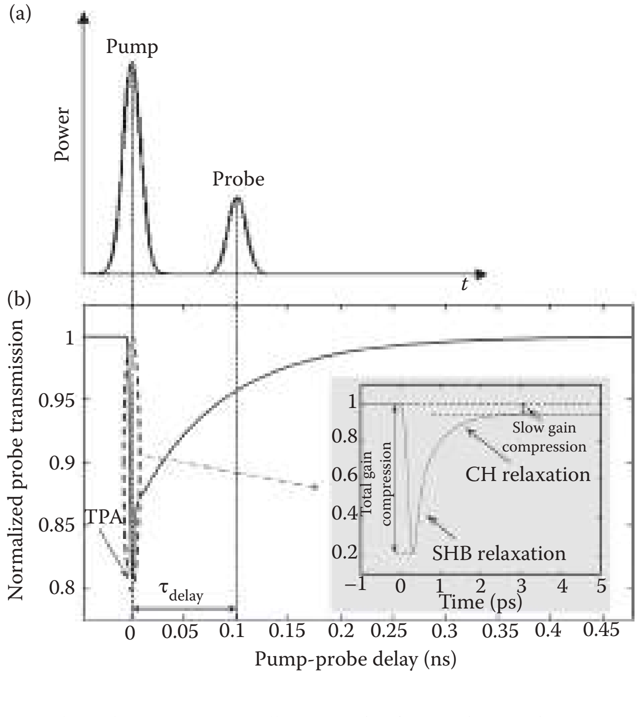

FIGURE 25.3 (a) Pump-probe technique. (From Vallaitis T., *Ultrafast Nonlinear Silicon Waveguides and Quantum Dot Semiconductor Optical Amplifiers*, Germany: Univ Karlsruhe, 2010.) (b) SOA typical evolution of (normalized) probe transmission as a function of pump–probe delay. The depicted curve does not represent exactly the defined SOA gain but rather its convolution with the pump and probe pulses. The timescale of the intraband gain dynamics is depicted in the zoomed-in inset. (From Occhi L, *Semiconductor optical amplifiers made of ridge waveguide bulk InGaAsP/InP: Experimental characterisation and numerical modelling of gain, phase, and noise, PhD dissertation*, Swiss Federal Institute of Technology in Zurich, 2002)

Initially, the pump pulse compresses the gain by an amount defined by the ratio of the unsaturated to the minimum level of the probe transmission, which occurs at the point where the carrier depletion is maximized by the pump peak power (Occhi, 2002). This gain compression is governed by SHB and (if enough photons are present in the SOA) TPA (Hall et al., 1994). Due to the finite resolution of the employed measurement technique (Hall et al., 1994), these ultrafast physical mechanisms are interpreted as instantaneous and thus overlap at zero time delay in the probe transmission (Schreieck, 2001). Afterward, the gain recovers within the interval required for the probe transmission to rise from 10% to 90% of the asymptotically approached maximum level. This recovery occurs according to the following separate processes. More specifically, in the first hundred femtoseconds timescale after the lowest compressed gain point SHB becomes the dominant nonlinear effect. Then CH takes over for a timescale of ~1 ps, which reestablishes the Fermi carrier distribution in the two energy bands. In the last time regime, the interband effects become pronounced and lead to slow gain compression defined by the unsaturated probe level, which is restored due to the applied electrical pumping, divided by the long-lasting probe transmission level (Occhi, 2002).

The impact of different SOA and signal operating conditions on the aforementioned gain dynamics has been investigated and assessed through experimental observations and numerical simulations. From the interpretation and analysis of the results obtained from both approaches, the following conclusions have been drawn (Occhi, 2002):

1. Both total and slow gain compression increase with the pump energy. For the total gain compression, this happens because the lattice temperature in the active region is elevated with higher pump energy. For the slow gain compression on the other hand, this variation is attributed to the reduction of the free carrier density as a by-product of the increased stimulated emission. Moreover, when the pulse energy is increased, it takes longer time for the gain compression associated with the intraband effects to recover.
2. The magnitudes of the two defined types of gain compression are affected differently by the width of the pump pulses. More specifically, the narrower the pump pulses, the larger the compression associated with the intraband effects. In contrast, the slow gain compression becomes smaller, even for input pulse energies higher than the SOA input saturation energy, for which the SOA gain is dropped by 3 dB against the small-signal gain. However, this is not possible for wider pulses, for example in the 100 ps range, since then the slow gain compression is much larger due to the much higher contribution of the interband effects to the SOA saturation.
3. Both gain compressions increase with current density because of the corresponding increase in gain. However, the fast gain recovery time behaves differently from the recovery time resulting from interband mechanisms. In fact, the former becomes longer for higher bias currents, while the latter is decreased.
4. The total gain compression is practically the same for all investigated device lengths in the case of an input energy equal to the SOA input saturation energy. The increase of the input energy beyond this point causes a larger gain reduction in longer SOAs, since their gain is higher compared to the shorter ones, and accordingly results in higher total gain compression. On the contrary, the fast gain recovery time is not influenced by the SOA longitudinal dimension. This finding does not hold too for the recovery time associated with the interband dynamics, since it decreases appreciably with the increase of the SOA length (Girardin et al., 1998).

25.3 SOA Model Formulation

Many theoretical treatments have been conducted aiming at explaining the operation, understanding the dynamics, predicting the behavior, evaluating the performance, and optimizing the working conditions of SOAs. For this purpose, both analytical and numerical models of different complexity level have been formulated. The more elaborate ones provide a thorough insight into what happens inside the SOA. This is done by microscopically describing the propagation of optical pulses and the change of the SOA carrier dynamics due to interaction with light. This approach provides extensive information at the expense of increased hardware and software resources. On the other hand, it is also practically desirable to maintain a good balance between mathematics and computer power. This can be achieved by viewing and treating the physical processes that manifest within an SOA from a phenomenological perspective (Toptchiyski, 2002).

The theoretical description of the operation of an SOA that is driven by a strong, ultrafast data pulse stream should be as realistic as possible while simultaneously being characterized by versatility and computational efficiency. In this effort, it is necessary to set the valid framework within which this task will be accomplished, which is based on the following key points. First, for SOA applications in which the employed pulse widths are below the critical value of 10 ps the influence of the intraband carrier processes on nonlinear gain compression is significant and must be included in the description of the SOA saturation under pulsed operation (Borri et al., 1999). Moreover, of the possible relevant phenomena, the effect of TPA can be disregarded because it becomes significant for pulses that are hundreds of femtoseconds wide and have energy larger than 1 pJ (Tang and Shore, 1998). In fact, in most cases of interest the width and energy of pulses launched into an SOA >0.1 ps and <1 pJ, respectively. For this reason, the main effects whose contribution is taken into account are CH and SHB. Second, the SOA small-signal gain, internal loss, and saturation energy are treated as wavelength independent parameters, since usually the spectral width of picosecond optical pulses is at least two orders of magnitude smaller than the gain bandwidth (Ning et al., 1997). The wavelength dependence of these SOA parameters must be taken into account when SOAs are employed for multichannel amplification (Jennen et al., 2001) or for nonlinear optical signal processing purposes, where more than one signal propagates and/or interacts within the active medium (Gutiérrez-Castrejón et al., 2000). The modeling approach that is usually adopted in this case is to approximate the spectral profile of the material gain coefficient per unit length with a parabolic function of wavelength, where the peak of the latter is a linear function of the carrier density (O'Mahony, 1988). The scope of this chapter, however, concerns single signal amplification and SOA linear applications, so high-order polynomial approximations of the gain spectrum would only increase the complexity of SOA modeling without offering essential information for the SOA performance. In addition to this reasoning, the central wavelength of the input signal launched into the SOA is assumed to be set at the peak of the SOA gain spectrum (in the vicinity of 1550 nm), which renders the modal gain (defined in Equation 25.2) independent of the wavelength. Third, the gain and group-velocity dispersion are neglected for pulse widths in the picosecond range and SOAs that are several hundreds of micrometers long (Agrawal and Olsson, 1989a; Tang and Shore, 1998). Fourth, the polarization of the input light is linear and preserved during propagation through the SOA, which is treated as a polarization independent element since the polarization sensitivity of practical devices is below 0.5 dB (Morito et al., 2003). Fifth, the residual facet reflectivities are practically negligible and cannot cause gain ripples, as enabled by the relevant technological evolution in the design and fabrication of SOAs devices (Zimmerman and Spiekman, 2004). Sixth, the SOA has the form of a traveling wave amplifier whose active region dimensions allow the support of only a single wave-guide, while it behaves as an isotropic device, which means that the susceptibility tensor is scalar (Gutiérrez-Castrejón et al., 2000).

The SOA response to an optical beam of electrical field $\vec{E}$ that propagates along the SOA largest dimension (that is, its length), which defines the z-axis in a Cartesian system of coordinates, is described by the carrier density rate equation (Tang and Shore, 1998)

$$\frac{\partial N}{\partial \tau} = \frac{I}{qV} - \frac{N}{\tau_{\text{carrier}}} - \frac{1}{\Gamma\sigma\hbar\omega}\frac{g\left|\vec{E}\right|^2}{1+\varepsilon\left|\vec{E}\right|^2}, \tag{25.1}$$

where $N = N(z, \tau)$ is the carrier density, I is the injection current, q is the electron charge, $V = wdL$ is the volume of the active region whose characteristic geometries have a cross section (wd) of the order of 1 μm^2 and a length (L) of 0.5 to 2 mm, τ_{carrier} is the carrier lifetime that is linked to the total recombination rate of carriers as specified in Gutiérrez-Castrejón and Duelk (2007), Γ is the confinement factor that accounts for the transverse character of the optical waves and the spread of the optical mode outside the active region of the amplifier (Agrawal and Olsson, 1989a), σ is the mode cross section ($= wd/\Gamma$), $\hbar$ is the reduced Planck's constant, ω is the angular frequency of the electromagnetic radiation, and ε is the gain compression factor, described right below in Equation 25.13. The parameter $g = g(z, \tau)$ stands for the modal gain that is assumed to vary linearly with N as

$$g = \Gamma a_N \left(N - N_{\mathrm{tr}}\right), \tag{25.2}$$

where a_N is the SOA differential gain and N_{tr} is the carrier density at transparency. Since, from Equation 25.2, $N = g/\Gamma a_N + N_{\mathrm{tr}}$, Equation 25.1 can be transformed, after some algebraic manipulations, into the following gain equation

$$\frac{\partial g}{\partial \tau} = \frac{g_{\mathrm{ss}} - g}{\tau_{\mathrm{carrier}}} - \frac{g\left|\vec{\mathrm{E}}\right|^2}{U_{\mathrm{sat}}\left(1 + \varepsilon\left|\vec{\mathrm{E}}\right|^2\right)}, \tag{25.3}$$

where $g_{\mathrm{ss}} = \Gamma a_N N_{tr}(I/I_{tr} - 1) = \frac{\ln(G_{\mathrm{ss}})}{L}$ is the coefficient of the nominal SOA small-signal power gain, G_{ss}, per unit length, $I_{\mathrm{tr}} = qVN_{\mathrm{tr}}/\tau_{\mathrm{carrier}}$ is the injected current required for transparency, and $U_{\mathrm{sat}} = \hbar\omega\sigma/a_N$ is the SOA intrinsic saturation energy, which for typical values $d = 250$ nm, $w = 2$ μm, $\Gamma = 0.48$ and $a_N = 3.3 \times 10^{-20}$ m^2 at an operating wavelength $\lambda = 1550$ nm is approximately 1 pJ. Alternatively, $U_{\mathrm{sat}} = P_{\mathrm{sat}}\tau_{\mathrm{carrier}}$, where P_{sat} is the saturation power of the SOA material, which in steady-state operation mode is approximately 0.7 times the SOA output saturation power (Connelly, 2002).

The dynamical evolution of an input light whose polarization is linear and maintained as it traverses the SOA obeys Maxwell's wave equation

$$\nabla^2\vec{\mathrm{E}} - \frac{1}{c^2}\left(n_b^2 + \chi\right)\frac{\partial^2\vec{\mathrm{E}}}{\partial\tau^2} = 0 \tag{25.4}$$

where c is the speed of light in vacuum, and $n_{\mathrm{b}}^2 \approx 1 + \Re\left\{\chi_0\right\}$ is the background refractive index, with $\Re\left\{\chi_0\right\}$ denoting the real part of the medium susceptibility in the absence of external pumping by current injection so that it accounts for material absorption (Schubert, 2004), while

$$\chi = -\frac{\bar{n}\,c}{\omega\Gamma}g\left(\frac{\iota}{1 + \varepsilon\left|\vec{\mathrm{E}}\right|^2} + \alpha_{\mathrm{CDP}} + \alpha_{\mathrm{CH}}\frac{\varepsilon\left|\vec{\mathrm{E}}\right|^2}{1 + \varepsilon\left|\vec{\mathrm{E}}\right|^2}\right) \tag{25.5}$$

is the susceptibility parameter (Gutiérrez-Castrejón et al., 2000), which represents the contribution of the charge carriers inside the active region, where $\bar{n}$ is the effective mode index, $\iota = \sqrt{-1}$ is the imaginary number, and the parameters α_{CDP} and α_{CH} are described below in Equation 25.22.

The electrical field of the linearly polarized light that is inserted in the SOA and propagates along its longitudinal axis, z, is $E(x, y, z, \tau) = \hat{x}\frac{1}{2}\mathrm{F}(x, y)\mathrm{A}(z, \tau)\exp\left[\iota(\beta z - \omega\tau)\right]$, where $\hat{x}$ is the polarization unit vector, $\mathrm{F}(x, y)$ is the transverse mode distribution, $A(z, \tau)$ is the complex envelope of the optical pulse and $\beta = \bar{n}\omega/c$ represents the propagation constant. According to the procedure in Tang and Shore (1998) and Gutiérrez-Castrejón et al. (2000), which is based on the slowly varying envelope approximation and the integration over the transverse dimensions, an equation that describes the propagation of the optical pulse in the SOA can be obtained from Equations 25.4 and 25.5

$$\frac{\partial\mathrm{A}(z, \tau)}{\partial z} + \frac{1}{\upsilon_{\mathrm{SOA}}}\frac{\partial\mathrm{A}(z, \tau)}{\partial\tau} = \frac{1}{2}\frac{g\mathrm{A}(z, \tau)}{1 + \varepsilon\left|\mathrm{A}\right|^2} - \frac{\iota}{2}\left[\alpha_{\mathrm{CDP}}g - \alpha_{\mathrm{CH}}\frac{\varepsilon g\left|\mathrm{A}\right|^2}{1 + \varepsilon\left|\mathrm{A}\right|^2}\right]\mathrm{A}(z, \tau). \tag{25.6}$$

This equation has actually been derived from semiclassical density-matrix equations by adiabatical approximation of the interband polarization dynamics (Mørk and Mecozzi, 1996).

The time measured in a static reference (laboratory) coordinate system, τ, is transformed into the local time t measured in a reference frame moving with the pulse at the group velocity inside the amplifier, υ_{SOA}:

$$t = \tau - \frac{z}{\upsilon_{\mathrm{SOA}}}. \tag{25.7}$$

Thus, in this moving coordinate system, the pulse is centered on $t = 0$ at every plane along the amplifier. According to Equation 25.7, the transformation of a general function $\mathrm{f}(z, \tau)$ to $\mathrm{f}(z, t)$ leads to the following expressions for the time and spatial derivatives (Jennen et al., 2001):

$$\frac{\partial \mathrm{f}(z,\tau)}{\partial \tau} = \frac{\partial \mathrm{f}(z,t)}{\partial t} \cdot \frac{\partial t}{\partial \tau} = \frac{\partial \mathrm{f}(z,t)}{\partial t} \tag{25.8}$$

$$\frac{\partial \mathrm{f}(z,\tau)}{\partial z} = \frac{\partial \mathrm{f}(z,t)}{\partial z} + \frac{\partial \mathrm{f}(z,t)}{\partial t} \cdot \frac{\partial t}{\partial z} = \frac{\partial \mathrm{f}(z,t)}{\partial z} - \frac{1}{\upsilon_{\mathrm{SOA}}} \cdot \frac{\partial \mathrm{f}(z,t)}{\partial t}. \tag{25.9}$$

Separating further “A” into amplitude and phase terms,

$$\mathrm{A} = \sqrt{\mathrm{Const} \times P}\exp(\iota\varphi) \Rightarrow P = |\mathrm{A}|^2 \big/ \mathrm{Const}. \tag{25.10}$$

“Const” is a normalization coefficient that relates the units between amplitude and power so that $\mathrm{A}(z, t)$ is expressed in units of $\mathrm{W}^{1/2}$, while $P = P(z, t)$ and $\varphi = \varphi(z, t)$ are the power and the phase of the traveling optical pulse, respectively. Applying Equations 25.8 and 25.9 together in Equation 25.6 and replacing in Equations 25.3 and 25.6 the squared modulus of the total electrical field, $|\vec{\mathrm{A}}|^2 = \vec{\mathrm{E}} \cdot \vec{\mathrm{E}}^* = |\mathrm{A}|^2$, where the symbol $*$ denotes the complex conjugate, the following set of partial coupled differential equations that govern the power, P, gain, g, and phase, φ, evolution of a strong optical signal that propagates and is amplified in an SOA is obtained (Tang and Shore, 1998)

$$\frac{\partial P(z,t)}{\partial z} = \frac{g(z,t)}{1 + \varepsilon P(z,t)} P(z,t) \tag{25.11}$$

$$\frac{\partial g(z,t)}{\partial t} = \frac{g_{\mathrm{ss}} - g(z,t)}{\tau_{\mathrm{carrier}}} - \frac{g(z,t)}{1 + \varepsilon P(z,t)} \frac{P(z,t)}{U_{\mathrm{sat}}} \tag{25.12}$$

$$\frac{\partial \varphi(z,t)}{\partial z} = -\frac{1}{2}\left[\alpha_{\mathrm{CDP}} g(z,t) - \alpha_{\mathrm{CH}} \frac{\varepsilon g(z,t) P(z,t)}{1 + \varepsilon P(z,t)}\right] \tag{25.13}$$

The term $\varepsilon = \varepsilon_{\mathrm{CH}} + \varepsilon_{\mathrm{SHB}}$ combines the contribution to the SOA gain compression from CH and SHB when these two effects are considered instantaneous. This assumption holds when the width of the launched optical pulses exceeds 1 ps, and is therefore valid under most practical situations encountered in optical communications. In this case, the impact of CH and SHB on the gain compression is taken into account through the term $1 + \varepsilon P$, where the factor εP is connected to a stationary carrier density above transparency, at which the SOA gain is unity and hence leaves intact a signal that passes through (Occhi, 2002; Wang, 2008).

Equations 25.11 and 25.12 form a system with unknowns the power and gain of the signal that perturbs the SOA nonlinear optical properties. This system cannot be solved in closed form, but only numerically. For this purpose, and in order to account for the spatial and temporal dependence denoted by the variables (z, t), L is divided into discrete segments, each of length $\Delta z = \frac{L}{m}$, as shown in Figure 25.4, while the pulses are sliced over their period, τ_{period}, at uniform intervals $\Delta t = \frac{\tau_{\mathrm{period}}}{k}$, where k is a non-zero integer so that their profile can be reconstructed at the output. Now, since the driving signal propagates through one amplifier segment during the sampling time, the space and time infinitesimal elements are linked to each

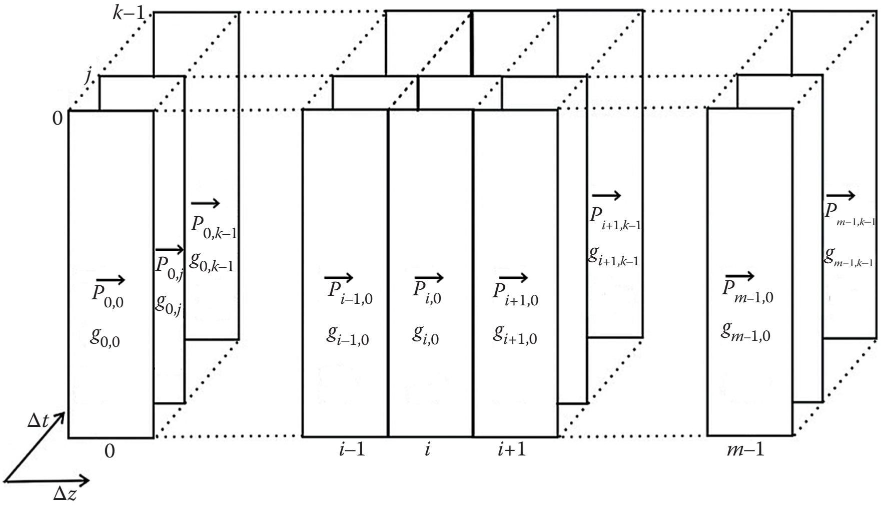

FIGURE 25.4 Dividing the SOA into discrete longitudinal (i) sections and calculating in each one of them the value of the signal power (P) and gain (g) for each sample of the pulse (j) based on the knowledge of the preceding value. This stepwise process is repeated in the formed spatio-temporal grid in an iterative manner until all required values are calculated.

other through $\Delta z = \upsilon_{\text{SOA}}\Delta t$ (Toptchiyski, 2002). The direct expansion gives

$$\Delta t = \frac{\Delta z}{\upsilon_{\text{SOA}}} = \frac{L}{m \cdot \upsilon_{\text{SOA}}} = \frac{\tau_{\text{transit}}}{m} = \frac{\tau_{\text{period}}}{k} \Rightarrow \frac{k}{m} = \frac{\tau_{\text{period}}}{\tau_{\text{transit}}}, \tag{25.14}$$

which means that the number k cannot be chosen independently from m. For example, if $\tau_{\text{period}} = 100$ ps and $\tau_{\text{transit}} = \frac{L}{\upsilon_{\text{SOA}}} = 12$ ps, the specific ratio equals 100:12. This means that the combination of k and m, or their selection, in order to satisfy this requirement, is not unique. Still, this task can be facilitated by taking into account that the number of the longitudinal sections must be larger than 10 (Wong and Blow, 2003). Otherwise, the SOA gain dynamics induced by the input lightwave signal are erroneously quantified. Thus, if $m = 120$, which is a more than sufficient value, then $k = 1000$. This pair allows obtaining a fairly accurate solution of the above equations with the use of simple first-order Euler differentiation. The latter is an efficient arithmetic method when studying in the time domain the nonlinear interactions between picosecond optical pulses whose envelope has a piecewise varying nature, as is the case for a Gaussian shape, and semiconductor active waveguide devices, provided that the sampling rate is high enough (Chi et al., 2001). More precisely, for each discrete space, i, and time section, j, the solution is expressed by

$$P_{\text{i}+1,j} = P_{i,j} + \Delta z \frac{\text{d}P}{\text{d}z}\bigg|_{i,j}, \quad \text{for} \quad i = 0,1,2,\ldots,m-1 \quad \text{and} \quad j = 0,1,2,\ldots,k-1 \tag{25.15}$$

$$g_{i,j+1} = g_{i,j} + \Delta t \frac{\text{d}g}{\text{d}t}\bigg|_{i,j}, \quad \text{for} \quad i = 0,1,2,\ldots,m-1 \quad \text{and} \quad j = 0,1,2,\ldots,k-1. \tag{25.16}$$

In other words, for an incoming signal traveling in the longitudinal direction measured from the left facet of the SOA, the knowledge of the values of $P(z,t)$ and $g(z,t)$ as well as of their derivatives (denoted by $|_{i,j}$) at a given step (i,j) of the algorithm, together with the fact that Equations 25.11 and 25.12 are essentially coupled in terms of the power and gain, allows us to calculate the next values $P(z + \Delta z, t)$ and $g(z, t + \Delta t)$ required at steps $(i + 1, j)$ and $(i, j + 1)$, respectively. This process is depicted in Figure 25.4 and is repeated in an iterative manner until all values are calculated in the spatio-temporal grid $i\,(\Delta z)\times j\,(\Delta t)$. For this purpose, it is necessary to define and apply the appropriate boundary and initial conditions. The setting of the boundary condition is straightforward since the profile of the launched optical power is expressed in analytical form depending on the particular pulse data format and shape. For example, for a return-to-zero on-off keying signal, the power of each temporal sample at the SOA input facet is given by (Pauer et al., 2001) $P_{0,j} = P(t) = \sum_n \left\{C_n\right\} p\left(j\Delta t - n\tau_{\text{period}}\right)$, where n is the number of bits contained in the data sequence length, the code $\left\{C_n\right\}$ is either "1" or "0" with equal probability ½, and $p(t)$ is the pulse shape. For Gaussian pulses (Agrawal and Olsson, 1989a), for example, $p(t) = P_{\text{peak}} \exp\left[-4\ln 2(t - \tau_{\text{period}}/2)^2/\tau_{\text{FWHM}}^2\right]$, where P_{peak} is the peak power and τ_{FWHM} is the full-width at half-maximum (FWHM), which occupies some fraction of the operating period that defines the duty cycle (Pauer et al., 2001). The setting of the initial condition, on the other hand, is more elaborate, since it requires considering the flow of the SOA gain dynamics change by the continuously arriving optical pulses (Tang et al., 2000). More specifically, in each distance segment of the SOA, the first temporal segment in the leading edge of the first arriving pulse experiences an unsaturated, small-signal gain, so that $g_{i,0}\left.\right|_1 = g_{\text{ss}}$. Then, by induction, in each distance segment, the first temporal segment in the leading edge of the following pulse, which reaches the SOA after τ_{period}, sees an initial, recovered gain given by $g_{i,0}\left.\right|_n = g_{\text{ss}} + \left(g_{i,k-1}\left.\right|_{n-1} - g_{\text{ss}}\right)\exp\left(-\frac{\tau_{\text{period}}}{\tau_{\text{carrier}}}\right)$, where $g_{i,k-1}\left.\right|_{n-1}$ is the gain perturbed by the last temporal segment in the trailing edge of the preceding pulse at the same distance segment.

Apart from this arithmetic procedure, other more elaborate techniques can also be employed for numerically solving modified-type nonlinear Schrödinger equations as Equation 25.6, such as the well-known fourth-order Runge-Kutta, or the finite-difference beam propagation method (FDBPM), where the central-difference approximation is applied in the time domain and trapezoidal integration is executed over the spatial section in an iterative manner (Razaghi et al., 2009). This method has enabled us to accurately acquire information for the SOA characteristics, which include the pulse shape, spectrum, and chirp, in the presence of the main ultrafast nonlinear phenomena that critically affect the SOA gain dynamics (Hosseini et al., 2011).

25.4 SOA Model Simplification

The model deployed for simulating the operation of an SOA has been formulated on the basis of the partial coupled differential Equations 25.11 through 25.13. These constitute a system which, due to the existence of the temporal and longitudinal variables, t and z, respectively, is two-dimensional (2D) so that its solution is rather cumbersome from a computational standpoint. However, if the SOA is treated as a "black box" characterized by its impulse response to any arbitrary input optical signal, the dependence on the spatial variable can be dropped and the problem can be reduced to a one-dimensional (1D) one described by an ordinary differential equation in which time is the only independent variable, enabling us to greatly simplify the computational complexity (Cassioli et al., 2000). This reduction is realized starting from the local changes of the carrier density distribution, which occur due to the interaction between the propagating field and the semiconductor material. These changes are the result of the intraband (CH and SHB) and interband (CDP) effects, while nonlinear processes with characteristic times shorter than SHB, such as TPA, are ignored because their effect is comparatively not significant. The gain and the refractive index of the semiconductor depend on these locally perturbed densities, so each local density distribution is associated with a distinct term that contributes to the total gain. The gain then can be expanded to the sum of the respective contributions of the three different physical processes considered. The temporal evolution of the three quantities is described by equal number of rate equations, which in turn depend on the photon density profile and therefore are coupled to the equation that describes the propagation of the field along the waveguide. The key thus for reducing the order of the modeling system to 1D is the integration of both sides of the partial differential equations over the entire SOA length. This transformation leads to the following compact expression for the total device gain (Cassioli et al., 2000)

$$G(t) = \exp[\mathrm{h}(t)], \tag{25.17}$$

where at each point of the pulse profile, $\mathrm{h}(z,t) = \int_0^z \frac{g(z',t)}{1+\varepsilon P(z',t)} dz'$ represents the power gain integrated over the length of the SOA, which hence is treated as a spatially concentrated device. This dimensionless coefficient incorporates the contribution of each mechanism that affects the SOA gain:

$$\mathrm{h}(t) = \mathrm{h}_{\mathrm{CDP}}(t) + \mathrm{h}_{\mathrm{CH}}(t) + \mathrm{h}_{\mathrm{SHB}}(t). \tag{25.18}$$

More specifically, $\mathrm{h}_{\mathrm{CDP}}$ represents the gain associated with the interband effects and its temporal evolution is described by the following first-order ordinary differential equation

$$\frac{\mathrm{dh}_{\mathrm{CDP}}}{\mathrm{d}t} = -\frac{\mathrm{h}_{\mathrm{CDP}}}{\tau_{\mathrm{carrier}}} - \frac{1}{P_{\mathrm{sat}}\tau_{\mathrm{carrier}}}\,[G(t)-1]\,P(t) + \frac{\ln G_{\mathrm{ss}}}{\tau_{\mathrm{carrier}}}. \tag{25.19}$$

h_{CH} is the gain associated with CH, which means that it describes the gain variation due to the mechanisms that heat up the carrier distribution in the conduction band, such as FCA and TPA, as well as due to changes of the carrier density. The relevant rate equation has the form

$$\frac{\mathrm{dh}_{\mathrm{CH}}}{\mathrm{d}t} = -\frac{\mathrm{h}_{\mathrm{CH}}}{\tau_{\mathrm{CH}}} - \frac{\varepsilon_{\mathrm{CH}}}{\tau_{\mathrm{CH}}}\,[G(t)-1]\,P(t) \tag{25.20}$$

where $\varepsilon_{\mathrm{CH}}$ is the CH nonlinear gain compression factor. The first term on the right-hand side characterizes the relaxation to the lattice temperature once the exciting pulse has left the SOA and before the arrival of the next pulse. The second term combines all the effects that heat-up the carrier distribution. The typical values of τ_{CH} for InGaAsP/InP-based SOAs with gain peak around 1.55 μm lie between 0.5 and 1 ps, while $\varepsilon_{\mathrm{CH}}$ is between 0.28×10^{-23} and 4.4×10^{-23} m^3 (Occhi, 2002).

Finally, the rate equation for the SHB contribution is

$$\frac{\mathrm{dh}_{\mathrm{SHB}}}{\mathrm{d}t} = -\frac{\mathrm{h}_{\mathrm{SHB}}}{\tau_{\mathrm{SHB}}} - \frac{\varepsilon_{\mathrm{SHB}}}{\tau_{\mathrm{SHB}}}\,[G(t)-1]\,P(t) - \frac{\mathrm{dh}_{\mathrm{CH}}}{\mathrm{d}t} - \frac{\mathrm{dh}_{\mathrm{CDP}}}{\mathrm{d}t}, \tag{25.21}$$

where $\varepsilon_{\mathrm{SHB}}$ is the SHB nonlinear gain compression factor. Reported values of τ_{SHB} in the conduction band for InGaAsP/InP-based SOAs with maximum gain centered around 1.55 μm are between 30 and 250 fs, while $\varepsilon_{\mathrm{SHB}}$ has been found to be between 0.14×10^{-23} and 1.7×10^{-23} m^3 (Occhi, 2002).

The above dynamic processes affect not only the gain properties but also the refractive index of the SOA within the active region (Wiesenfeld, 1996). This happens because the free carriers contribute substantially to the SOA optical susceptibility, which is complex in nature. The imaginary part of this parameter is related to the gain of the SOA, and the real part is related to the refractive index (Eiselt et al., 1995). The gain and refractive index variations are not independent but coupled via the Kramers–Kronig relationship, according to which the refractive index modulation can be calculated from the gain variation (Hutchings et al., 1992). However, this calculation requires us to integrate over the whole wavelength spectrum the gain coefficient, which means that the latter must be known for a wide range of optical frequencies. Furthermore, the specific integral must be solved numerically, which increases the model computational time significantly. A more convenient manner to describe the refractive index behavior relies on the alpha factor, also known as the Henry factor (Henry, 1982), which links the changes of the active layer refractive index to those of the gain when the carrier density is varied. The important benefit offered by the employment of this factor is that the refractive index dynamics are given directly by the gain dynamics and hence are quantified much faster than with the Kramers–Kronig relations. Moreover, the adoption of the alpha-factor approach is practically realizable since it links the gain and the phase variations associated with the changes of the refractive index, where both are directly measurable. The phase of the optical field at the SOA output can be expressed as a linear function of the same variables which describe the optical gain:

$$\varphi(t) = -0.5\,[\alpha_{\mathrm{CDP}}\mathrm{h}_{\mathrm{CDP}}(t) + \alpha_{\mathrm{CH}}\,\mathrm{h}_{\mathrm{CH}}(t) + \alpha_{\mathrm{SHB}}\,\mathrm{h}_{\mathrm{SHB}}(t)], \tag{25.22}$$

where α_{CDP}, α_{CH}, and α_{SHB} are the phase-amplitude coupling coefficients of CDP, CH, and SHB, respectively. Among these alpha factors, α_{CDP} is the traditional linewidth enhancement factor related to CDP, with typical values 3–12 (Agrawal and Olsson, 1989a). α_{CH} is the alpha factor associated with CH and varies especially near the band edge, where the depletion of cooler carriers takes place (Giller et al., 2006). However, usually signal photon energies influence carriers well inside the band and so, α_{CH} can be approximated by a constant with indicative values ranging between 1 and 4.5, as reported in the literature. Finally, α_{SHB} is the alpha factor linked to SHB and is nearly zero because SHB happens symmetrically around the central wavelength (Mecozzi and Mørk, 1997). Thus, the Kramers–Krönig integral over the whole spectrum is nearly zero and the change of the refractive index is very small near the peak wavelength.

Every phase variation at the SOA output is always accompanied by a certain amount of chirp (Agrawal and Olsson, 1989a). This is the instantaneous frequency deviation relative to the optical beam frequency, $\Delta\nu$, which is provoked because the phase, φ, of the amplified signal is not constant in time. Mathematically, it is given by

$$\Delta\nu(t) = -\frac{1}{2\pi}\frac{\partial\varphi}{\partial t}. \tag{25.23}$$

The set of rate Equations 25.19 through 25.21 for the h_j (j = CDP, CH, SHB) functions is numerically solved for a given optical power to the SOA input, $P(t)$, which is the only excitation of the system. Then, Equations 25.17, 25.22 and 25.23 give the overall power gain, phase variation, and chirp that the input signal experiences through the SOA, respectively. In this manner, results have been obtained for the temporal, spectral, and chirp profile of the amplified pulses (Hussain et al., 2010).

Equations 25.11 through 25.13 can be further combined and reduced for optical pulses going into the SOA, whose width exceeds the critical limit of 10 ps, above which the influence of the CH and the SHB effects is not significant (Borri et al., 1999). This means that in this case it is not necessary to take into account these intraband processes. Then, by following the algebraic steps detailed in Mecozzi and Mørk (1997), but setting, ε to null and $\mathrm{h}_{\mathrm{CDP}} \equiv \mathrm{h}(t)$, the differential equation for the SOA response is simplified to the well-known form that holds when the SOA gain saturation is caused only by the depletion of the carrier density due to stimulated emission (Agrawal and Olsson, 1989a)

$$\frac{\mathrm{dh}(t)}{\mathrm{d}t} = \frac{\ln(G_{\mathrm{ss}}) - \mathrm{h}(t)}{\tau_{\mathrm{carrier}}} - \frac{P(t)}{U_{\mathrm{sat}}}\left\{\exp\left[\mathrm{h}(t)\right] - 1\right\}. \tag{25.24}$$

This equation can be solved analytically, provided that the width of the launched optical pulses is much shorter than the SOA carrier lifetime. This condition holds in practice, since in real SOA devices, the values of the latter parameter are typically of the order of 100 ps and above. Thus, closed-form expressions can be obtained for the variation of the SOA gain in the rapid saturation and slow recovery regions. These expressions allow us to explicitly describe the pulse profile at the SOA output when this element is driven by multiple pulses of alternating binary content, as it happens in real optical networks that are based on optical time division multiplexing (OTDM) (Hamilton et al., 2002).

25.5 SOA Optical Gain Modulation

The influence of critical parameters, which include the SOA small-signal gain and carrier lifetime as well as the FWHM and energy of the input pulses, on the SOA output characteristics has been investigated and evaluated for the case where the change of the SOA gain dynamics is provoked by a 10-Gb/s data-modulated signal onto itself in the context of straightforward amplification (Zoiros et al., 2007). The results reveal that due to the continuous arrival of pulses, which cause the SOA saturation properties to be more strongly modified than for a single pulse, the requirements for the SOA small-signal gain and the input pulse energy are more stringent than those for the isolated pulse amplification studied elsewhere (Agrawal and Olsson, 1989a), while those for the FWHM and carrier lifetime are also tight but to a lesser extent. For example, Figure 25.5 shows that the SOA small-signal gain must be an order of magnitude lower than that for a single pulse or else the output pulse deviates from its normal symmetrical form (Zoiros et al., 2007). Moreover, Figure 25.6 shows that the pulse energy, U_{in}, must be a small fraction of the SOA saturation energy, U_{sat} (Zoiros et al., 2007). These trends together suggest that the SOA must be biased to operate in the low-saturation regime in order to preserve the shape of the input signal at the SOA exit. This condition essentially determines the dynamic range of the inserted optical signal, which is allowed for distortionless pulse amplification, and its validity is further supported by evidence given in Section 25.6. In contrast, when the focus is on the chirp and how it can be tailored in order to be exploited for pulse compression (Agrawal and Olsson, 1989b; Zoiros et al., 2005), the investigation that was conducted reveals that the

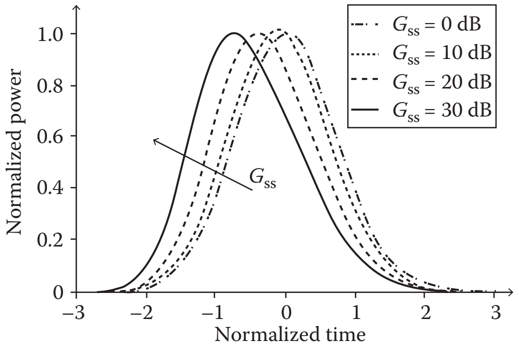

FIGURE 25.5 Shape of amplified pulses versus SOA small-signal gain, G_{ss}. The arrow indicates the G_{ss} direction of increase.

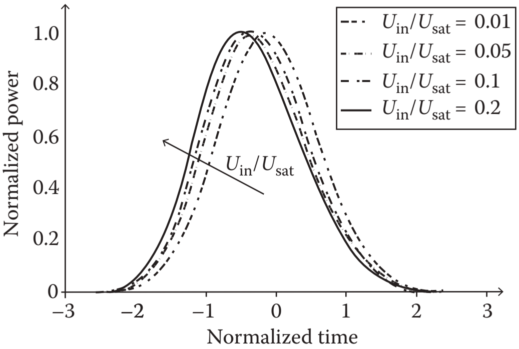

FIGURE 25.6 Shape of amplified pulses versus input pulse energy U_{in}, normalized to SOA saturation energy U_{sat}. The arrow indicates the $U_{\text{in}}/U_{\text{sat}}$ direction of increase.

SOA small-signal gain and the energy of the incoming pulses must be increased to such extent so that together they heavily saturate the SOA. Then, the reduction of the instantaneous phase shift (Ueno et al., 2002) and of the accompanying chirp due to the alternating bit pulses and the concomitant inability of the SOA to timely recover between them can be efficiently mitigated. In this case, the chirp acquires the form shown in Figure 25.7, which is the required one for the intended purpose (Agrawal and Olsson, 1989a; Zoiros et al., 2007). In fact, the linearly increasing part of the chirp curve in the time domain is situated in the center of the pulse where most of its power is contained, while the chirp magnitude is sufficiently enhanced. Therefore, if the SOA is operated according to these conditions, then it can be ensured that the amplified optical pulses exhibit an appropriate power and chirp profile.

On the other hand, if the FWHM is such that its difference from the pulses repetition interval is smaller than the SOA gain recovery time, then the strain imposed on the SOA gain dynamics is heavier. This happens because the SOA responds more slowly to the rapidly varying logical content of the wider pulses, which worsens the pattern effect described in the next section (Kim et al., 2007). In this demanding case, Equation 25.24 must obligatorily be solved by a numerical approach. This can be done in a stepwise manner by sampling the optical pulse over its period at discrete temporal intervals, approximating the time derivative by a finite difference and applying the appropriate initial conditions to account for the different gain at the beginning of each new bit depending on how it has been perturbed during the previous one (Botsiaris et al., 2007). The knowledge then of $\mathrm{h}(t)$ allows us to calculate the electric field of the amplified data, $E_{\mathrm{SOA}}(t) = E_{\mathrm{data}}(t)\exp\left[\frac{1}{2}\left(1 - j\alpha_{\mathrm{CDP}}\right)\mathrm{h}(t)\right]$, where, according to Equation 25.10, $|E_{\mathrm{SOA}}(t)|^2 = P_{\mathrm{SOA}}(t)$ and $|E_{\mathrm{data}}(t)|^2 = P(t)$ (Agrawal and Olsson, 1989a), as well as the chirp from $\Delta\nu(t) = -(1/4\pi)\left[\alpha_{\mathrm{CDP}}\mathrm{dh}(t)/\mathrm{d}t\mathrm{d}t\right]$, where the derivative of $\mathrm{h}(t)$ is directly taken from the right-hand of Equation 25.24. With this approach, the changes that are incurred on the amplified pulse trains and eye diagrams for different SOA saturation conditions can be correctly captured, as verified by comparison to experiments. For this purpose, the degree of pattern effect is modified by altering the maximum launched signal power and the SOA small-signal gain. Figure 25.8 depicts the amplified pulse patterns when the peak power of the marks successively drives the SOA into the low, medium, and deep saturation region, respectively. As the input peak power is progressively doubled, the peak amplitude fluctuations become more pronounced to an extent that depends on whether the marks are preceded either by one or more spaces or by other marks (Zoiros et al., 2008). In contrast, as the input peak power is decreased, these variations are smoothed and the associated pattern effect de-escalates. Similarly, when the SOA small-signal gain is halved, the peak amplitudes become less uneven, as illustrated by comparing Figure 25.9 to Figure 25.8c. The accurate reproduction of the form of the pattern effect which manifests on RZ pulses (Zoiros et al., 2009, 2010a,b), together with the good qualitative matching between the left- and right-hand sides of these figures, designates that the experimental trend for the SOA response is properly modeled. This also holds

for the respective eye diagrams shown in Figure 25.10. In this case, the asymmetric subenvelopes that occur for a high-input peak power in Figure 25.10c gradually disappear as this parameter is decreased, in Figure 25.10a and b, and the eye diagrams become more uniform, which is an improvement that can be monitored too in the simulated pseudo-eye diagrams obtained as detailed in Gutiérrez-Castrejón et al. (2001).

25.6 Pattern Effect I: Direct Optical Amplification

The distinctive properties of SOAs have revived interest for direct signal amplification purposes, which have traditionally been the primary target of SOAs (Connelly, 2002). As shown in Figure 25.11, the intention is to exploit SOAs as booster amplifiers to enhance the signal power before being launched into an optical link (Kim et al., 2003) as in-line amplifiers to compensate for transmission losses along the link (Boscolo et al., 2006) and as preamplifiers so that the received signal has sufficient power and can be correctly detected (Mynbaev and Scheiner, 2001; Singh, 2011).

In these applications, the profile of the output signal should ideally be an amplified replica of the input signal. In practice, the combination of the power and duration of the input data signal can be such that the SOA is heavily saturated. Concurrently, the SOA gain recovery time is finite with typical values of the order of few hundreds of picoseconds. Thus, in most practical cases, it exceeds the pulses repetition period, which scales inversely with the data rate. Under these driving conditions, the SOA gain is not perturbed in a regular fashion but according to the binary content of each bit slot. As can be schematically seen in Figure 25.12, if the SOA is excited by a train of distinguishable pulses, that is, "1" and "0," whose period, τ_{period}, is such that they arrive faster than the interval available for carrier replenishment, τ_{recovery}, then the gain variation is not uniform since it is dropped for a "1" and partially recovered for a "0" (Manning et al., 1997). This mode of operation has a negative impact on the SOA response, as it can be highlighted by means of the following representative scenarios which concern two "1"s which are separated by a "0." First, in case of a row of marks, the "1" which follows immediately after the "1" that has initially been inserted in the SOA and hence modified its optical properties from a higher level, suffers a reduced gain and this continues to happen for every subsequent "1" with respect to the preceding "1" until an equilibrium is reached or the sequence is broken by a "0." Second, in case of multiple "0"s, which allow the gain to rise substantially, the leading "1" experiences a higher gain than the trailing "1," given that the latter is preceded by only one "0," while it encounters a comparatively lower gain if there are continuous "1"s that prevent the gain from completely recovering. In either case, the amplified output suffers from peak-to-peak amplitude fluctuations, as can characteristically be seen in Figure 25.13.

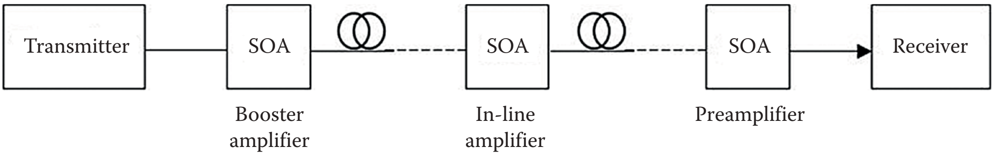

FIGURE 25.11 SOA direct amplification applications.

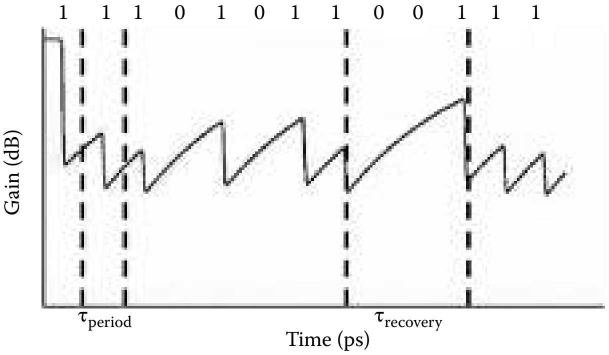

FIGURE 25.12 Evolution of SOA gain in response to data train input.

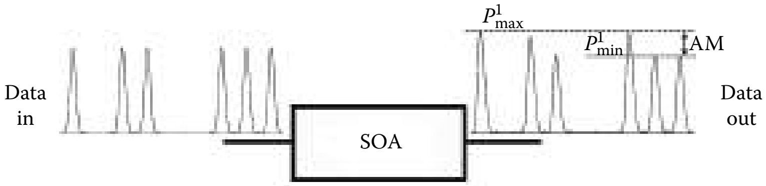

FIGURE 25.13 Data amplification in SOA and pattern-dependent output distortion, with amplitude modulation (AM) definition.

This undesirable phenomenon is called “pattern effect” (Manning et al., 1997) and constitutes a major obstacle in the effort to employ conventional SOAs in their classical role. This happens due to the significant deterioration of several metrics that characterize the quality of the amplified signal, which include the amplitude modulation (AM), the extinction ratio (ER), and the input power dynamic range (IPDR). The AM is defined as AM (dB) $= 10\log\left(P^1_{max}/P^1_{min}\right)$, where P^1_{max} and P^1_{min} are the maximum and minimum peak power of the marks in the amplified data stream, respectively (Figure 25.13). The AM quantifies the degree of uniformity of the marks and should be as low as possible but it is considered acceptable for lightwave telecommunications systems if it is lower than 1 dB (Zoiros et al., 2008). The ER is defined as $\mathrm{ER}\,(dB) = 10\log\left(P^1_{avg}/P^0_{avg}\right)$, where P^1_{avg} and P^0_{avg} are the average power of the marks and spaces in the amplified data stream, respectively (Figure 25.16). The ER quantifies how distinct the marks are from the spaces and it should be as high as possible but it is considered acceptable if it is well over 10 dB (Hinton et al., 2008). Finally, the IPDR is defined as the range where the Q-factor, which in the thermal noise limit, where the amplitude fluctuations due to the pattern effect act as noise variance on the marks, is defined as $\mathrm{Q} = P^1_{avg}/\sigma^1_{std}$, with σ^1_{std} being the standard deviation of the peak powers of the marks, is over six (Agrawal, 2002). The negative impact of the SOA pattern effect on these metrics has been investigated and evaluated and the main outcome is compiled and presented in the following in Figures 25.14 and 25.15 (Rizou et al., 2015a). In Figure 25.14, the SOA output suffers from intense peak amplitude fluctuations

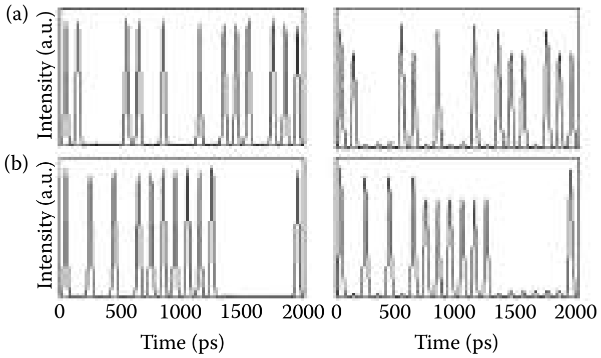

FIGURE 25.14 (a) SOA input data pattern with initial AM = 0.35 dB (left) and corresponding output (right). (b) SOA input data pattern which contains a string of consecutive “0”s (left) and corresponding output (right).

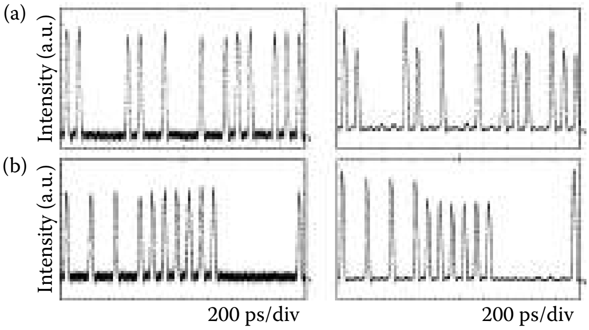

FIGURE 25.15 Corresponding experimental patterns of Figure 25.14.

both when the framed input data waveform has an initial AM = 0.35 dB (Figure 25.14a, left) or contains a string of consecutive “0”s (Figure 25.14b, left). In both cases, the AM level at the SOA exit is intolerable, as it amounts to AM = 1.3 dB (Figure 25.14, right). This behavior is comparable to the experimental one in Figure 25.15 with regard to pulse profile and amplitude wandering. Moreover, in Figure 25.16, the eye diagram at the SOA output is degenerated into secondary traces whose borders deviate from the principal one both in magnitude and shape, while the baseline defined by the spaces is less than 11 dB away from the average level of the marks (Rizou et al., 2013).

In Figure 25.17, on the other hand, the part of the chirp at the SOA output which is negative at the leading edge of each mark, that is, ‘red chirp’ (Agrawal and Olsson, 1989a), suffers from strong peak-to-peak excursions similar to those observed at the corresponding pulse positions, while the part of the chirp which is positive at the trailing edge of each mark, that is, ‘blue chirp’, exhibits a much weaker dependence than its red chirp counterpart. Physically, this happens because the red chirp is related to carrier depletion and gain compression, while the blue chirp is linked to carrier regeneration and gain recovery (Girault et al., 2008). This means that the magnitude of the induced chirp is proportional to the rate of change of the carrier concentration and subsequently of the gain. For this reason, it would be rationally expectable that the pattern effect due to the irregular gain variation would be imposed on both types of chirp. However, as can be seen in Figure 25.17, this holds almost exclusively for the red chirp, which exhibits strong peak fluctuations. For the blue chirp, in contrast, an increase in the peaks occurs only for successive “1”s, since then the carrier recombination rate is enhanced due to the weaker carrier depletion, but still this increase is so small that it is hardly noticed. This pronounced discrepancy in the pattern dependence is attributed to

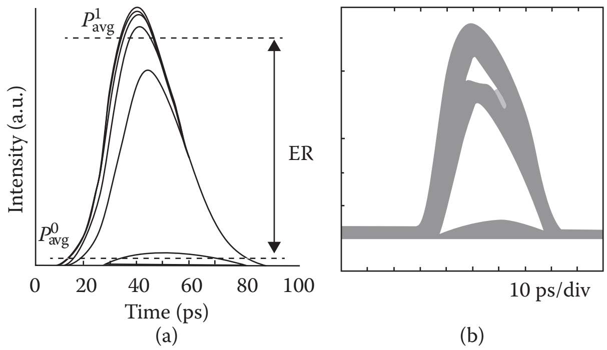

FIGURE 25.16 Theoretical (a) and experimental (b) eye diagrams at SOA output, with extinction ratio (ER) definition.

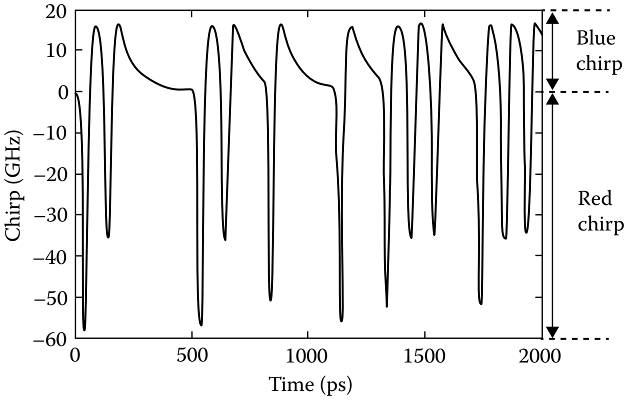

FIGURE 25.17 Chirp variation at SOA output.

the different timescale on which the two chirp phenomena take place. In fact, the carrier depletion and the accompanying phase increase in the leading edge of the pulse is somewhat faster compared to the much slower carrier replenishment and the concomitant phase decrease in its trailing edge, which gives rise to an approximately constant amount of blue chirp. Therefore, the explanation of the pattern effect can also be given in the frequency domain through the red chirp. For this purpose, its form in Figure 25.17 is correlated (Wang et al., 2007) with the corresponding gain change in Figure 25.18.

More specifically, the rising edge of the first "1" at the left-most edge of the pattern window acquires the largest red chirp among all the marks owing to the fact that, for the same energy, its gain is dropped from the maximum possible level, that is, that of the unsaturated state, and as a by-product the incurred gain difference is highest. Similarly, the next largest peak is that of the third "1," since it is preceded by a run of three "0"s. In contrast, the lower the carrier density, or equivalently the greater the extent of gain compression, the slower the additional carriers are depleted, thereby resulting in decreased gain variation and accordingly less red chirp, as it is the case for consecutive "1"s where the SOA cannot fully recover in between them. Finally, in Figure 25.19, the Q-factor is permissible only in saturation region A, where the SOA gain (inset) is reduced up to just 3 dB (Rizou et al., 2013). Thus, the IPDR cannot be extended to regions B and C, since the SOA pattern effect is aggravated as the gain is decreased by more than 3 and 6 dB, respectively. This limitation deteriorates the optical signal-to-noise ratio (OSNR), impedes the maximization of the output power and results in closer amplifier spacings. In order to combat all these pattern-induced

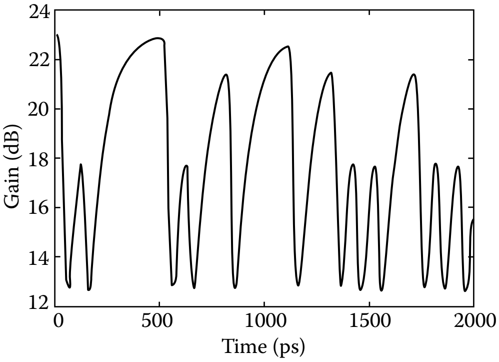

FIGURE 25.18 Instantaneous SOA gain variation.

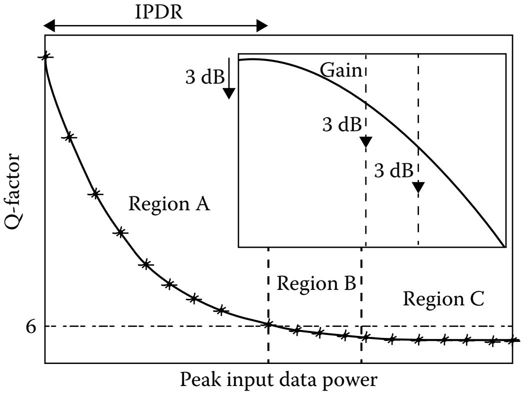

FIGURE 25.19 Variation of Q-factor and corresponding SOA gain (inset) versus peak input data power. The horizontal dotted line denotes the lower limit set for the Q-factor. Defined SOA saturation regions: A = low, B = medium, and C = deep.

performance degradations and restore the quality of the amplified signal, various methods have been proposed and employed. These methods involve intervening on the SOA design, material, and structure and applying sophisticated line coding and interferometric and filtering configurations (see relevant references in Rizou et al., 2013). However, this is a special subject that should be separately addressed elsewhere.

25.7 SOA Electrical Gain Modulation

In addition to straightforward amplification and all-optical signal processing, there has recently been intense research interest in SOAs for use as external modulators. The motivation behind this activity is to be able to provide both data amplification and modulation so as to overcome limitations imposed by other optical modulators (Udvary and Berceli, 2010) while enabling the implementation of various applications (see relevant references in Zoiros et al., 2015). The basic configuration that is exploited for this purpose is shown in Figure 25.20 (Rizou et al., 2015b). The SOA bias current, which is fixed at some point where the *P*–*I* curve is linear (Udvary and Berceli, 2010), is modulated by an electrical data signal. This modulation alters the SOA gain analogously, which is perceived by a lightwave beam of constant power over time (CW). In this manner, the SOA current modulation is mapped on the CW signal, which thus carries the original information that has now been converted into optical form. According to this physical process, an

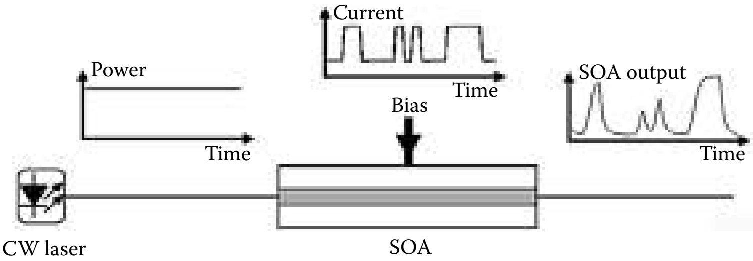

FIGURE 25.20 Basic configuration of directly modulated SOA.

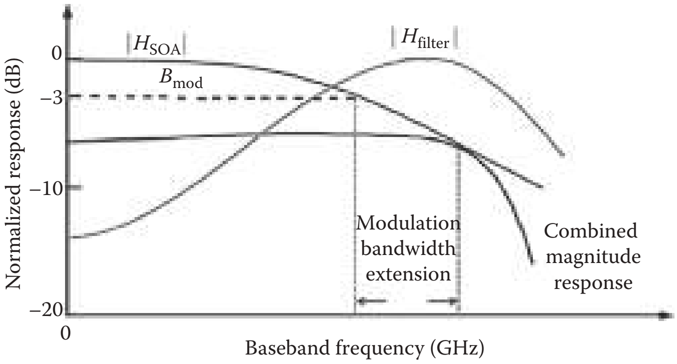

FIGURE 25.21 Schematic description of SOA electrical response characteristic $|H_{SOA}|$, transfer function of a filter $|H_{filter}|$ and the combined magnitude response.

exact copy of the applied electrical signal should be transferred at the SOA output. However, this does not happen when the SOA modulation bandwidth, B_{mod}, is smaller than the bandwidth that corresponds to the rate and format of the applied excitation, B_{exc}. More specifically, due to the SOA finite differential carrier lifetime, τ_d, B_{mod} is limited to the order of 1 GHz. In fact, the small-signal frequency response analysis procedure, where the SOA rate equations are linearized and solved analytically by assuming that there are only small perturbations around an operating point (König, 2014), reveals that B_{mod} scales inversely with τ_d according to $B_{mod} = 1/(2\pi\tau_d)$ and the SOA electrical response exhibits the low-pass filter characteristic qualitatively shown in Figure 25.21 (Wang, 2008). On the other hand, the latter parameter depends on the data format (Agrawal, 2002), and for non-return-to-zero (NRZ) pulses is $B_{exc} = B_{rep}/2$, where B_{rep} is the repetition rate. Thus, if B_{rep} is increased so that B_{exc} exceeds B_{mod}, the performance of the directly modulated SOA becomes progressively pattern-dependent and eventually poor.

25.8 Pattern Effect II: Direct Current Modulation

The characteristics of the encoded pulse stream are degraded as the rate of SOA direct modulation is increased due to the concomitant aggravation of the associated pattern effect. In fact, Figure 25.22 shows that with a five-fold increase from 1 Gb/s to 5 Gb/s the amplitude deviations between marks, between spaces, and between marks and spaces are intensified (compare left- to right-hand side). Moreover, the pseudo-eye diagram becomes asymmetrical due to the long rise and fall times and tends to close (compare left to right-hand side of Figure 25.23). Finally, the chirp suffers from analogous peak amplitude fluctuations and transient distortions (compare left to right-hand side of Figure 25.24). Nevertheless, these impairments can be mitigated and the SOA be directly modulated at an extended data rate than that enabled

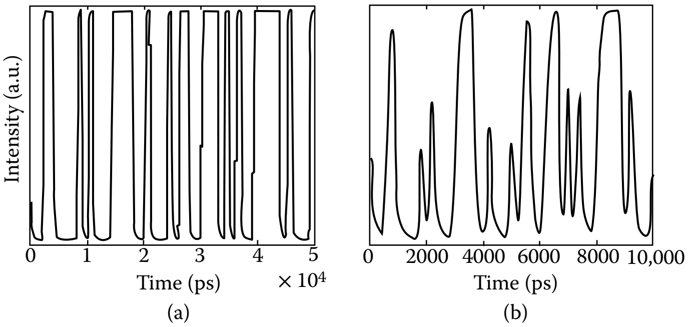

FIGURE 25.22 Encoded data pattern at directly modulated SOA output for (a) 1 Gb/s, (b) 5 Gb/s.

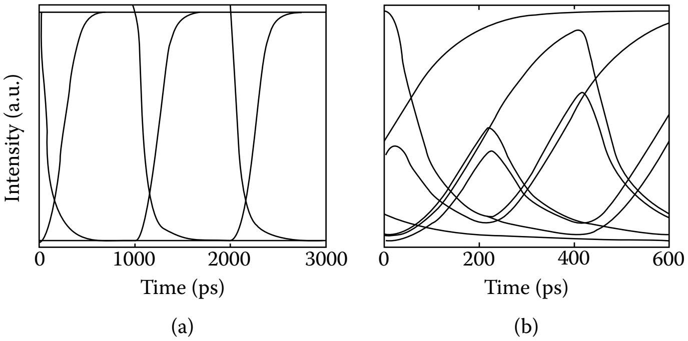

FIGURE 25.23 Pseudo-eye diagram of encoded signal at directly modulated SOA output for (a) 1 Gb/s, (b) 5 Gb/s.

by its limited modulation bandwidth by means of post optical notch filtering. This technique can be implemented with different technologies (see relevant references in Zoiros and Morel, 2014), which have in common the fact that they produce a filter characteristic whose slope is in the opposite direction to that of the SOA, as seen in Figure 25.21. This counteracts the SOA response and so the combined transfer function becomes independent of the direct modulation frequency for a wider range than for the SOA only. In this manner, the quality characteristics of the encoded signal at the directly modulated SOA output can be significantly improved so that they are appropriate for supporting the target applications.

Distributed feedback (DFB) laser, 661, 697
Dopant diffusion, 181
  active impurities, 183
  inactive impurities, 183
  interstitials, 182
  neutral impurities, 183
  vacancies, 181–182
Dopants
  dielectrically enhanced ionization energies of, 409–410
  nanowires, discrete nature of, 407–409
Doping, semiconductor nanowires
  continuous, homogeneous doping-related background charge, 406–407
  dielectrically enhanced ionization energies of dopants, 409–410
  random dopant fluctuations, 407–409
DOS, *see* Density of states
Dot-in-a-well (DWELL) structures, 719, 724
Drift-diffusion (DD)
  carrier transport, 39
  equations, for OLED, 478–480
  model, 58, 142, 546, 549, 551
    Boltzmann transport equation, 47–48
    energy balance, 46–47
    generation–recombination models, 48–49
  quantum-corrected, *see* Quantum-corrected drift-diffusion
Drift-diffusion one (DDM), 456–457
Drift-diffusion solver, random alloy fluctuation with, 568
Drude model, 644
DSMC, *see* Direct Simulation Monte Carlo scheme
Dual Pearson model, ion implantation, 180–181
Dynamic models, 659–660
Dynamic Monte Carlo, *see* Kinetic Monte Carlo method
Dynamic propagation model, 677–678
  upwind scheme numerical implementation, 678–680
Dynamics and pattern effects, SOA
  free carrier distribution, 773–774
  interband transitions, 773
  pump-probe technique, 775
  schematic representation of, 772
  and signal operating conditions, 776
Dynamic TW-SOA models, 656–657, 659–660

E

EAMs, *see* Electro-absorption modulators
EBE, *see* Effective Bloch equations
EBL region, *see* Electron-blocking layer region
ECDM, *see* Extended correlated disorder model
EET, *see* Electronic excitation (energy) transfer
EFA, *see* Envelope function approximation
Effective Bloch equations (EBE), 751–752
Effective diffusion coefficient, 699
Effective index method (EIM), 114, 115, 117
Effective-mass approximation, 92
EGDM, *see* Extended Gaussian disorder model
EIM, *see* Effective index method
Einstein coefficients, 82–84
Elasticity, linear, 239, 242, 542
Electrical equations, solver for, 704–705
Electrical gain modulation, 791–792
Electrical-to-optical conversion efficiency, 707
Electric field energy density, 730
Electric field envelope model, 643–645
Electric field propagation, 717–718, 719, 729
Electric potential distribution, in LED structure, 457
Electro-absorption modulators (EAMs), 283–285
Electrodes, OLED working principle, 474–475
Electroluminescence, of white OLED, 503–506
Electromagnetic environment role, 99–101
Electromechanical coupling
  light-emitting diodes, 454–456
  in wurtzite semiconductors, 239–240
Electron-blocking layer (EBL) region, 458, 504, 530, 561
Electron density, periodic, 5
Electron-electron interaction, 9, 15
Electron gas, drifted Gaussian distribution, 41
Electron-hole pair, 35, 141, 205–206, 271, 274, 315, 425, 504
Electron-hole recombination, for OLED, 484–485, 601
Electronic band, 634
  materials, 8–9
  structure, 5–7
  wurtzite InN, 25
Electronic coupling elements, for OLED, 488, 491
Electronic excitation (energy) transfer (EET), 485
Electronic materials, piezoelectricity in, 220–222
Electronic polarization, tunnel-junction light-emitting diodes, 527
Electronic structure, organic semiconductors, 194–196
Electronic transport in NW LED, 551
Electron orbital of fullerene cage, 197
Electron-photon interaction
  electromagnetic environment, 99–101
  light field, quantization of, 97–99
  solid-state system, 90–97
  in two-level system, 82–90
Electron quantum densities, 549, 550
Electrons, in valence bands, 138
Electron temperature, 41
Electron transporting layers (ETLs), 474
Emission
  layer, OLED working principle, 476–477
  spectrum
    influence of indium fluctuation on, 574–576
    shift, 561
  stimulated, 83
  wavelength, 4
Empirical pseudopotential method (EPM), 28–29, 254, 259–264
  spin-orbit coupling, 29–30
Empirical TB (ETB) model, 21, 22, 25, 26, 28
Empirical tight-binding (ETB) method, 20–26, 543, 548
  approach, 547–549
  Hamiltonian of periodic system, 20
  matrix elements, 23–24
  model, 21, 22, 25, 26
  Slater and Koster approach, 23
  spin-orbit coupling, 26–28
Empty lattice model, 5, 6
Energetic disorder, 486, 492, 493, 504
Energy balance (EB) model, Boltzmann transport equation, 45–47
Energy bands, in silicon, 138–139
Energy conservation expression, 701
Energy-dependent resonant scattering rate, GaN_xAs_{1-x} alloys, electron transport in, 298
Energy model, 142
Energy transfer, for OLED, 485
Energy-transport model, and numerical discretization, 146–152
Envelope-function approaches, 17–20
Envelope function approximation (EFA), 543, 545–547
Epitaxial coordinate system (ECS), of light-emitting diodes, 453
EPM, *see* Empirical pseudopotential method
Equilibrium equations, 565–566
Equilibrium Green's function (EGF) theory, 60
ER, *see* Extinction ratio
ETB, *see* Empirical tight-binding method
Ethene molecule, wave functions of, 195, 196
ETLs, *see* Electron transporting layers
Excitons, 214, 215
  for OLED, 479–480
Extended correlated disorder model (ECDM), 486, 493, 494
Extended Gaussian disorder model (EGDM), 486, 494, 497
Extended rate equation model, 652–656
Extended zone scheme, electron band structure, 6

External quantum efficiency (EQE), of light-emitting diodes, 452–453
Extinction ratio (ER), 284, 591, 625, 751, 788, 790

F

Fabry–Pérot resonators, 116
Fabry–Pérot SOA (FP-SOA), 613, 632
Far-field (FF) pattern, 698
FCA, *see* Free carrier absorption
FDBPM, *see* Finite-difference beam propagation method

FDCNWA-BPM, *see* Finite difference Crank–Nicolson wide angle beam propagation method
FDTDM, *see* Finite difference time domain method
Fermi–Dirac distribution function, 96, 208, 299, 569, 635, 636, 755
Fermi–Dirac integrals, 48, 656
Fermi distributions, 553, 774
Fermi's Golden Rule, 37, 45, 196
FF pattern, *see* Far-field pattern
Finite-box (FB) approach, 50
Finite charge-carrier densities, 481
Finite-difference beam propagation method (FDBPM), 781
Finite difference, Crank–Nicholson paraxial BPM algorithm (FDCNP-BPM), 120
Finite difference Crank–Nicolson wide angle beam propagation method (FDCNWA-BPM), 122
Finite difference method (FDM), 107
Finite-difference (FD) technique, 49–50
Finite difference time domain method (FDTDM), 117
Finite-element (FE) technique, 49–50
Finite impulse filter (FIR) theory, 751–752
Finite-impulse response (FIR) filter scheme, 660
First-principles molecular dynamics (FPMD), 199
Fit functions for scattering rates, 727–728
Fluctuation-dissipation theorem, 651
Foldy–Wouthuysen transformation, of Dirac equation, 26
Förster theory, 45
Fourier transform (FT), 424, 603, 628, 659, 734, 757, 760
Four-wave mixing (FWM)
  analytic model, 627–628
  CDM characteristics, 758–762
  efficiency, 628
  experimental procedure, CDM measurement, 762–763
  operating conditions, 763–766
  semiconductor laser diodes (SLDs), 757
FPMD, *see* First-principles molecular dynamics
Franck–Condon principle, 199
Free carrier absorption (FCA), 627, 750, 773–774
Free-carrier absorption losses, 702
Free-standing semiconductor NWs, 397
Fullerene, 196
  delocalized electron orbital of, 197
  electron-conducting, 202, 203
Full second-order piezoelectric tensor formalism, 229–232
"Fullwave" model, 659
Full width at half-maximum (FWHM), 576, 603, 624, 633, 711, 784
  of emission spectrum, 575
  pulse, 623
FWHM, *see* Full width at half-maximum
FWM, *see* Four-wave mixing

G

GaAs-based laser structure, 7–8, 252
GaAs-based 1.3-μm InGaNAs quantum well lasers theory, 269–270
  dilute nitride quantum well lasers theoretical model, 270–271
  nitrogen incorporation impact on
    band structure and gain of quantum wells, 271–277
    on carrier recombination, 277–281
GaAs-based 1.55-μm quantum well lasers, 281–283
GaAs/GaP core-shell NWs, 401
Gain and group-velocity dispersion, 777
Gain compression, 756, 776–777, 779, 782
Galliumarsenide (GaAs)/Aluminiumarsenide (AlAs) microcavity, 100
Gallium nitride (GaN) growth, gas phase reaction, 171, 172
GaN-based LEDs, efficiency droop IN, 524
GaN-based visible light-emitting diodes, 58
GaN NW, 403–405
$\text{GaN}_x\text{As}_{1-x}$
  bond lengths analysis in, 257
  CB structure in, 259
  composition-dependent band gap bowing in, 256
  electronic properties of, 265
  electronic structure analysis of, 257
  N-related localized states in, 257
  theoretical model of, 267
  unusual pressure dependence of, 257
$\text{GaN}_x\text{As}_{1-x}$ alloys, electron transport in
  Boltzmann (Fermi-Dirac) distribution, 299
  carrier distribution functions, 301–302
  energy-dependent resonant scattering rate, 298
  negative differential velocity, 296–297
  N-related localized states, 297–299
  quantitative analysis of, 300–301
  single-electron Monte Carlo model, 302–303
$\text{GaN}_x\text{As}_{1-x}\text{P}_x$
  bond lengths analysis in, 257
  electronic structure analysis of, 257

Gap materials, semiconductor band structure, 7–8
Gas, viscosity and thermal conductivity, 173
Gaussian broadening coefficient, 563
Gaussian disorder model (GDM), 486
  parametrization of, 491–493
Gaussian distribution, 720
  of energy levels, 486
  of states, 204–205
Gaussian noise process, 647
Gaussian random variable, 652
Gauss model, ion implantation, 179
Gauss's law, 104
GDM, *see* Gaussian disorder model
GEA, *see* Gradient expansion approximation
Gell–Mann and Low theorem, 59
Geminate recombination, electron, 214
Generalized gradient approximation (GGA), 14
Generation-recombination (GR)
  model, drift-diffusion, 48–49
  transitions, 48
Generation–recombination collision operator, 141
Genuine quantum approach, 58–59
  contour-ordered NEGF, 59–67
  self-energies
    boundary, 68–69
    scattering, 69–72
Geometry and epitaxial design, SLED, 591–592
Ge-Si core-shell nanowire (NW), 401
GGA, *see* Generalized gradient approximation
Gillespie algorithm, *see* Kinetic Monte Carlo method
Gradient expansion approximation (GEA), 13
Graphene, thermal properties
  numerical results, 160–163
  semiclassical description, 152–159
  simulation scheme, 159–160
Green LEDs, carrier transport in, 580–584
Green's function, 59, 60
  chronological and antichronological, 65
  with self-energies, 72
  two-particle, 64
  in weakly confined systems decay, 69
Green's theorem, 39
Green tunnel-junction LED, 535–538
Gummel's method, 215

H

Half-width at half maximum (HWHM), 603, 604
Hamiltonian matrix, 21, 266, 267
  element, ETB method, 24
Hamiltonian of solid-state system, 91
Hamiltonian of two-level system, 86–87
HAROLD 4.0, 703, 704, 706
Hartree–Fock approximation, 94–96
Hartree–Fock (HF) theory, 11, 14, 56
HD model, *see* Hydrodynamic model
Heat flow equation, 705
Heat transfer, in LED dice, 464–466
Heat transport
  macroscopic balance equation for, 142–144
  in semiconductor, 140
Heavy-hole (HH) band, 19, 262, 379, 461
Heisenberg equation
  motion, 56, 64, 86, 94
  polarization, 87
Heisenberg picture, two-level system in, 86–90
"HELLISH" devices, 284
Helmholtz equations, 593, 597, 640, 700
Henderson theorem, 491
Henyey–Greenstein scattering functions, 469
Heyd–Scuseria–Ernzerhof hybrid functional approach, 8, 16
HF theory, *see* Hartree–Fock theory
HH band sub-bands, 639
Highest occupied molecular orbital (HOMO), 203, 204, 207, 476, 505
Highly mismatched semiconductor alloys, 255
  conventional semiconductor alloy versus, 256
High-power SLED designs, 604–605
Hohenberg–Kohn theorem, for nondegenerate ground states, 9–10, 31
Hole/electron blocking layers, OLED working principle, 476
Hole transporting layer (HTL), 474
HOMO, *see* Highest occupied molecular orbital
Homogeneous Neumann boundary condition, 49
Homogeneous wave equation, 99
Hondros–Debye equation, 110, 112
Hopping matrix element, 23, 24
HSE, *see* Screened hybrid functional
HTL, *see* Hole transporting layer
Huawei Marine Networks, 631
HWHM, *see* Half-width at half maximum
Hybrid approaches, 487
Hybrid functionals approach, 14–16
"Hybrid" OLED, 503
Hydrodynamic (HD) model
  Boltzmann transport equation, 44–45
  nonstationary effects, 39
Hydrogen atom, 194

I

Ideal QW, 279, 333, 576, 580
Ideal R-SLED, 596–597
Ideal standard SLED, 596
IFD-BPM, *see* Improved finite-difference beam propagation model
IGVs, *see* Initial guess values

Impedance spectroscopy, OLED case studies, 496–498
Improved finite-difference beam propagation model (IFD-BPM), 660
Impurities, incomplete ionization of, 526–527
Impurity diffusion model, 181
Index guiding waveguides, 113
In-diffused waveguide, 114
Indium, composition distribution of the InGaNMQW, 174–176
Indium fluctuation
  on emission spectrum, influence of, 574–576
  influence of, 576
Indium gallium arsenide (InGaAs), 759
Infinite hierarchy problem, 94
In-fluctuation QW, 580
Infrared (IR) LEDs, 452, 453
InGaAs quantum dot (QD) lasers, development of, 252
InGaNAs/GaAs alloys, limitations of, 282
InGaN-based LEDs, 452, 462, 463, 467, 528
InGaN multiple quantum well growth stimulation, 174–178
(In)GaN$_x$As$_{1-x}$
  band structure calculation, 259–260
  CB structure of, 264
Initial guess values (IGVs), 665, 703
Inorganic semiconductors, 91
  band structure, 203, 204
  versus organic semiconductors, 193, 214
Input power dynamic range (IPDR), 788
Integrated MOPAs, 697, 698
Interface charges, tunnel-junction light-emitting diodes, 527
Internal losses coefficient, 702–703
Internal quantum efficiency (IQE), 560
  curves, 579
  droop behavior of, 578–580
  in LEDs, 232–233
Intervalence band absorption (IVBA), InGaNAs lasers, 283
Intraband transitions approximation, 92
Inverse Fourier transform, 659, 757
Inverse Monte Carlo, 491
Ion implant models, 178–179
  Gauss model, 179
  Pearson model, 179–180
    dual, 180–181
IPDR, *see* Input power dynamic range
IQE, *see* Internal quantum efficiency
Isolated nitrogen states, linear combination of, 264–269
Isotropic quadratic approximation, 138
I-V curve, 570–573, 576–578, 582, 583, 585

J

Jaynes–Cummings model, 98, 99
Jellium model, 92–93

K

Kinetic Monte Carlo (KMC) method, 482–483
Kinetic theory, 173
KMC lifetime simulations, 507, 509–511
KMC method, *see* Kinetic Monte Carlo method
Kohn–Sham equation, 9, 12, 13
Kohn–Sham theory, 10–14
k·p Hamiltonian, PW implementation, 423–424
k·p method for SP electronic structure, quantum dots, 421–423
k·p models, 52, 259–264
k·p theory, 17–20, 274, 422
Kramers–Kronig transformation, 748, 756, 783

L

Lagrange equation motion, 133
Lagrangian of crystal lattice, 133
Landé effective g factor, 267, 323
Langevin noise source, 651
Laser operation, 86, 315, 338
Lattice
  commensurability constraint, 384
  crystal, 129–131
Lattice-mismatched heteroepitaxy, 221
Lattice-mismatched heterostructures, 403, 404
Lattice temperature, 776
Layer transitionmetal dichalcogenides (TMDCs), 152
LCAO, *see* Linear combination of atomic orbitals
LCINS approach, *see* Linear combination of the isolated nitrogen states approach
LDA, *see* Local density approximation
LDOS, *see* Local density of states
Leaky mode, optical waveguide, 116
LEDs, *see* Light-emitting diodes
LEE, *see* Light extraction effiency
LEF, *See* Linewidth enhancement factor
Lennard–Jones potential model, simulation, 169
L-I characteristics of reflecting SLEDs, 593–597
Light conversion, by phosphor, 468–470
Light emission efficiency, light-emitting diodes, 462–463
Light-emitting devices, carrier transport and optical transition, 35
Light-emitting diode (LED) dice
  current spreading, heat transfer, and light extraction in, 464–466
    current crowding, 466–467
    surface recombination, 467

  phosphor-converted white light emission, 467–468
    light conversion by phosphor, 468–470
    white light characteristics, 468
Light-emitting diodes (LEDs), 35, 219
  carrier transport and recombination in, 453–454
    electromechanical coupling, 454–456
    light emission efficiency, 462–463
    recombination models, 458–461
    transport equations, 456–458
  fabrication of, 237
  family of, 452–453
  GaN-based visible, 58
  multiple quantum well, 174
  simulation of, 451
Light extraction efficiency (LEE), 462, 464
Light extraction, in LED dice, 464–466
Light-hole (LH) band, 19, 262, 321
Light–matter coupling, in semiconductor, 92
Light–matter interaction, 81, 86, 101, 154, 717, 748, 755–756
Light, quantization, 97–99
Linear amplification applications, 731
Linear chain, monoatomic and biatomic, 132
Linear combination of atomic orbitals (LCAO), 543
Linear combination of the isolated nitrogen states (LCINS) approach, 254, 265–269
Linear continuum elasticity theory, 399–400
Linear elasticity, 239, 242
Linear piezoelectric coefficients, of III-N semiconductors, 227–228
Linear piezoelectricity, electromechanical coupling with, 240–243
Linewidth enhancement factor (LEF), 615, 702, 748, 783
Lobatto IIIA formula, 684
Local density approximation (LDA), 8–9
  generalized gradient approximation approach, 14
  gradient expansion approximation approach, 13
  Hedin's GW approximation approach, 16
  hybrid functionals approach, 14–16
  Kohn–Sham theory and, 10–13
Local density of states (LDOS), 59, 552
Longitudinal waves, 131
Löwdin orbitals, 21, 22
Löwdin transformation, 21
Lowest unoccupied molecular orbital (LUMO), 203, 204, 207, 476
Luttinger–Kohn Hamiltonian, zinc-blende semiconductors, 366–368
Luttinger–Kohn perturbation theory, 51

M

Macroscopic balance equation, for heat transport, 142–144
Macroscopic evolution equation, closure of system of, 144–146
Macroscopic material polarization, 749
Many-body effects, non-Markovian gain model with, 387–389
Many-body perturbation theory (MBPT), 16
Marcus theory, 197
Martin–Schwinger hierarchy, 64
Master oscillator (MO), 697
Material gain, 634–636
Material parameters, sensitivity to geometrical and, 553–556
Material susceptibility, 701–702
Matsubara Green's function, 60, 289
Maximum entropy principle (MEP), 144–145
Maxwell–Bloch approach, 720
Maxwell–Bloch equations, 88, 716, 721, 722
Maxwell–Bloch framework, 717
Maxwell's equation, 35, 90, 103, 466, 752
Maxwell's wave equation, 716
MBPT, *see* Many-body perturbation theory
MEP, *see* Maximum entropy principle
Merz–Singh–Kollman scheme, 489
Metalorganic chemical vapor deposition (MOCVD), reactor simulation, 167–168
  chemical reaction, 170–172
  inGaN multiple quantum well growth stimulation, 174–178
  surface-gas reactions and film deposition, 172–173
  transport equation, 168–170
Method of moments (MOM), partial differential equation, 38
Microscopic Auger recombination processes, 461
Microscopic charge transport, in organic semiconductors, 196–199
Microscopic polarizations, 749
Mie theory, 468–469
Miller–Abrahams rates, 486
MO, *see* Master oscillator; Molecular orbital
Mobility
  OLED master equation, 481–482
  in organic semiconductors, 205–206
Model formulation, SOA
  carrier dynamics, 776–777
  finite-difference beam propagation method, 781
  linearly polarized light, electrical field, 778
  normalization coefficient, 779
  picosecond optical pulses, 780
  spatio-temporal grid, 780–781
  traveling wave amplifier, 777
Modeling nonlinear effects, challenges, 751–752

Modeling of surface states, 552–553
Model simplification, SOA, 781–783
Modified Euler method, 621
Modulation bandwidth, analytical formulae for, 687–688
Molecular dynamics (MD), organic semiconductors, 199–201
Molecular orbital (MO), 195
Møller–Plesset perturbation theory, 15
Monomolecular degradation, OLED, 507
Monte Carlo simulation technique, 37–38, 178, 287
Morphology simulations, in OLED, 490
Motion
  Heisenberg equation, 56, 86, 94
  Lagrange equation, 133
MQW SOA, 671
  carrier transport effects in, 653
M-shaped ASE spectra, flattening of, 602
M-shaped (Double-Humped) ASE spectra , SLEDs with, 601–602
Multiband effective mass approximation, 19
Multiband envelope function method, 19, 52
Multiband kxp method, *see* kxp perturbation theory
Multiband model, 635–636
Multiple quantum well (MQW), 633
  active region, 614
  carrier transport model for, 653–655
  InGaN, growth stimulation, 174–178
  LEDs, 462, 463
  model, effective mass approximation, 525–526
  structure, 374
Multi-QW NW heterostructures, 402–403

N

Nanocrystal quantum dots (NQD), configuration interaction Hamiltonian, 426–430
Nanorods, 397, 541
Nanoscale random alloy fluctuations, 571
Newton–Raphson algorithm, 705
Newton–Richardson approach, 49
Newton's method, 215
n-fold way algorithm, *see* Kinetic Monte Carlo method
n-GaN/i-InGaN/n-GaN structures, electron transport in, 569–573
n-GaN/InGaN/p-GaN tunnel-junction structures, 528–530
n-GaN/p-GaN tunnel-junction structures, 528–530
Nitride-based blue LED, 560
Nitride LEDs, 452, 453, 462
Nitride SQW LED structures, 463
Noise correlation properties, 730
Noise figure (NF), 652
Nondegenerate ground states, Hohenberg–Kohn theorem for, 9–10
Nonequilibrium Green's function (NEGF)
  algorithm, 72
  contour-ordered, 59–60
    Dyson's equation, 65, 67
    Schwinger–Keldysh contour, 63
    S-matrix operator, 61
  theory, 36, 59
Nonlinear gain suppression, 653, 675, 678
Nonlinear intraband processes, 624
Nonlinearities in III-N semiconductors, 228–229
Nonlinear phenomena in SOAs
  and applications
    bit error rate estimation, 751
    carrier density modulation, 749–750
    carrier heating, 750
    optical–electrical–optical conversion, 751
    optical Kerr effect, 750
    optical performance monitoring, 751
    second harmonic generation, 750
    spectral hole burning, 750
    two-photon absorption, 750
    wavelength conversion, 751
  improved modeling of
    dielectric response, 748–749
    electrical model, 754–755
    light–matter interactions, 755–756
    numerical implementation, 757
    optical model, 752–754
    time-domain model, material dispersion in, 756–757
Nonlinear piezoelectricity, electromechanical coupling with, 243–245
Non-Markovian gain model, with many-body effects, 387–389
Nonpolar orientations, in wurtzite semiconductors, 245
Nonradiative Auger recombination, 354, 453, 460–461, 560
Nonradiative decay, 500, 506
Nonradiative recombination, 461, 463, 760
Nonradiative recombination processes, in conventional InP-based lasers, 277
Nonradiative Shockley–Read–Hall (SRH) recombination, 458–459
Nonstationary effects, HD model, 39
Normalized filtering function, 650
Numerical discretization, energy-transport model and, 146–152

O

OED, *see* Oxidation enhanced diffusion
OFAs, *see* Optical fiber amplifiers
OLEDs, *see* Organic light-emitting diodes
One dimensional (1D) oxidation model, 184, 185
One-dimensional wave equation, 717

1.5-μ InGaAsP/InP tapered amplifier, 706–712
OPD, *see* Optical path length difference
OPLS, *see* Optimized potential for liquid simulations
Optical amplifier devices, 716–717
Optical anisotropy of semiconductor nanowires, 412–413
Optical Bloch equations, 88, 95
Optical–electrical–optical (OEO) conversion, 751
Optical emission spectra, 553, 554
Optical equations, solver for, 705
Optical fiber amplifiers (OFAs), 611, 612
Optical gain model, with many-body effects, 387–389
Optical gain modulation, SOA
  amplified data pulse trains, 785–786
  chirp magnitude, 785

    charge transport layers, 475–476
    electrodes, 474–475
    emission layer, 476–477
Organic materials, band structure, 203–205
Organic semiconductors, 191–193
  charge generation process in, 215
  device models for, 207
  electronic structure, 194–196
  inorganic semiconductors versus, 193, 214
  microscopic charge transport in, 196–199, 207
  mobility in, 205–206
  molecular dynamics, 199–201
  purity and doping, 201
Organic solar cell device models, 208
Ornstein–Uhlenbeck processes, 729
Oxidation enhanced diffusion (OED), 185
Oxidation model, 184–185

P

Partial differential equations (PDEs), 717
  energy, momentum, and density, 44
  infinite hierarchy of, 39
  method of moments, 38
Pauli exclusion principle, 160, 206, 483
PC-LEDs, *see* Phosphor-converted LEDs
PCW, *see* Photonic crystal waveguide
PDEs, *see* Partial differential equations
Pearson model, ion implantation, 179–180
Perfectly matched layers (PML), 705
Periodic electron density, 5
Perturbative approach, 487
Phonon(s), 70, 129
  crystal vibrations and, 131–136
  interactions of, 137
  momentum densities, 143
  transport equation, 136
Phonon–carrier interaction, 138–140
Phonon–electron scatterings, 139
Phosphide LEDs, 452, 453, 462

Phosphor-converted LEDs (PC-LEDs), 467–468
Phosphor-converted white light emission, 467–468
  light conversion by phosphor, 468–470
  white light characteristics, 468
Photon, 70, 81, 86, 141, 215
Photon densities for MQW-based SOAs, spatial distributions of, 669
Photon density model, 645–646
Photonic crystal (PC), 116
Photonic crystal waveguide (PCW), 116
Photonic integrated circuit (PIC) technology, 612
Photonics-based approach, 286
Photon momentum approximation, 92
Photon recycling process, 701
Picosecond optical pulses, 660, 777, 780
Piezoelectric coefficient, of wurtzite III-N semiconductors, 226
Piezoelectricity
  effect, 220
  in electronic materials, 220–222
  linear, electromechanical coupling with, 240–243
  nonlinear, electromechanical coupling with, 243–245
Piezoelectric polarization, 219, 382, 544, 567
  alloys, 239
  of semiconductor nanowires, 405–406
Piezoelectric tensor, 222–223
  formalism, full second-order, 229–232
  in zincblende crystals, 223
Planar heterostructures, 398, 402, 403, 405
Planck's law, 84
Plane wave (PW) implementation, **k**·**p** Hamiltonian and Coulomb integrals, 423–424
PLED, *see* Polymer LED
PML, *see* Perfectly matched layers
Poisson/drift-diffusion calculation, 547
Poisson effect, 403
Poisson–Schrödinger solver, 50

    III-N semiconductors, 233–236
    wurtzite crystals, 226
  strain-induced, 224–226
    wurtzite crystals, 225–226
    zincblende crystals, 224–225
Polarization-assisted tunneling effect, 523–524
Polarization controllers, 762
Polarization-dependent ASE output spectral density, 620
Polarization-induced electric field, 555
Polarization insensitivity, 636–642
Poly(3-hexylthiophene-2,5-diyl) (P3HT), 202
Polyaniline, 192, 194
Polymer LED (PLED), 473–474
P-orbitals, 195–196
Primitive cell, for two-dimensional lattice, 130, 131
PROCOM simulation, 167, 170
Propagators, 59
p-type doping, 476, 530
Pulse amplification analytic model, 623–626
Pulse photon energy, 773
Pump and probe, 622, 627–628, 759, 766
Pump peak power, 776
Pump-probe technique, 775

Q

QCSE, *see* Quantum-confined Stark effect
QDash, *see* Quantum dash
QDSOAs, *see* Quantum-dot semiconductor optical amplifiers
QD SOAs, carrier transport model for, 653–655
Quantization of light field, 97–99
Quantum-confined Stark effect (QCSE), 284–285, 405, 547
Quantum-corrected drift-diffusion, 50–52
  capture and escape process, 52–53
  coupling carrier transport model, 53–55
  semiconductor Bloch equation, 55–57
Quantum corrections, 50, 58, 549, 552
Quantum dash (QDash), 633
  SOAs, 615
Quantum disk nanowire light-emitting diodes
  EFA models, 545–547
  empirical tight-binding approach, 547–549
  light-emitting nanorod arrays, 541
  modeling of surface states, 552–553
  multiscale simulation approach, 542
  nanostructure based emerging electronic device, 541–542
  numerical methods, 542–543
  self-consistent calculations, 549–552
  sensitivity to geometrical and material parameters, 553–556
  strain maps, 543–545
  transport properties, 545
Quantum-dot charge-carrier
  dynamics, 721
  scattering, 722–727
Quantum-dot epi structures for SLEDs, 591
Quantum-dot ground-state dynamics, 741
Quantum-dot-in-a-well material equations, 718–722
Quantum dots (QDs), 397, 419–420, 550, 551, 615
  Cd-based chalcogenide QDs
    CdSe/CdTe CQDs, radiative lifetimes in, 437–438
    CdSe/CdTe Type II CQDs, absorption edge wavelength, 434–437

        CdSe QD arrays, charge carrier mobility, 442–443
        correlation energy, 438–441
        equivalent CdTe and CdTe/CdSe QD, absorption spectra, 441–442
    configuration interaction Hamiltonian for NQD, 426–430
    core/shell QD structure, 420–421
    dielectric confinement effect, 424–426
    k·p Hamiltonian and Coulomb integrals, PW implementation, 423–424
    k·p method, for SP electronic structure, 421–423
    materials, 633
    nanocrystal arrays, transport properties, 430–434
Quantum-dot scattering rates, 728
Quantum-dot semiconductor amplifiers, rabi oscillations in, 739–741
Quantum-dot semiconductor optical amplifiers (QDSOAs), 715–716, 716
    delay-differential-equation model, 717–718
    fit functions for scattering rates, 727–728
    gain recovery dynamics in, 736–739
    modeling of spontaneous emission, 728–731
    QD charge-carrier scattering, 722–727
    quantum-dot-in-a-well material equations, 718–722
    rabi oscillations in QD semiconductor amplifiers, 739–741
    static characterization of, 731–735
Quantum mechanical
    effects, 716
    electron, 549
    models, 543
Quantum model, 543
Quantum-well charge-carrier density, 722, 726
Quantum wells (QWs), 4, 19, 50, 365, 389–395, 397, 591, 759
    band structures
        bulk semiconductors, 366–370, 379–387
        of strained-layer QW, 371–376
    in Green LEDs, 582
    imperfect, 582–584
    influence of possible imperfection in, 580–584
    optical gain model with many-body effects, 387–389
    optical matrix elements, 377–378
Quasi-analytic static model, 615–617
Quasi-3D algorithm, 703, 704, 706
Quasi-Fermi distribution, 725
QWs, *see* Quantum wells

R

Rabi flops, 85
Rabi oscillations, 739, 740
    in QD semiconductor amplifiers, 739–741
Radial semiconductor NW heterostructures, 400–401
Radiation, blackbody, 82
Radiation mode, optical waveguide, 115
Radiative recombination, 459–460
Radiative spontaneous recombination, 634–636
    rate, 634, 673
Radiative stimulated recombination rate, 634
Random alloy
    approach, 548, 549
    fluctuation with drift-diffusion solver, 568
    modeling, 562–569
    unipolar transport for, 569–573
Random alloy distribution, 559–562, 563–564
    carrier transport in Green LEDs, 580–584
    MQW InGaN LED and comparison to traditional model, 573–580
    random alloy modeling, 562–569
    unipolar transport for random alloy system, 569–573
Random dopant fluctuations (RDFs), 407–409
Random indium fluctuations model, 582–584
Rate equations
    amplified spontaneous emission, 647–652
    basic, 642–647
    extended rate equation model, 652–656
Rayleigh–Ritz variation principle, 10
Ray tracing, in LED dice, 466
RDFs, *see* Random dopant fluctuations
Reactor simulation, MOCVD, 167–168
Reciprocal lattice, Wigner–Seitz cell of, 131
Recombination models, of light-emitting diodes, 458–461
Recombination rate for OLED, 479
Recombination reaction, 173
Rectangular dielectric waveguide, 113
Recursive coefficients, 756–757
Red/amber AlGaInP LEDs, 462, 467
Red LED structure, 462, 463
    near-field emission intensity distribution, 465, 466
Reduced zone scheme, electron band structure, 6
Reflecting SLEDs (R-SLEDs)
    design, 605
    L-I characteristics of, 593–597
Reflective semiconductor optical amplifier (RSOA), 614, 632–633
Refractive index, 105, 108, 110–113, 123, 591–592, 644, 700, 752
Refractive index variation, 634–636
Reorganization energy, for OLED, 487–488
Repeated zone scheme, electron band structure, 6
Residence-time algorithm, *see* Kinetic Monte Carlo method
Residual facet reflectivities, 777
Resonant energy transfer (RET), *see* Electronic excitation (energy) transfer
Resonant frequencies, 649
Rib-loaded optical waveguide, 114

Rotating wave approximation (RWA), 85, 716, 721
RSOA, *see* Reflective semiconductor optical amplifier
RWA, *see* Rotating wave approximation

S

Scattering self-energies, 69–72
SCGF approach, *see* Self-consistent Green's function approach
SCGF-LCINS approach, 293–294
SCH, *see* Separate confinement heterostructure
Scharfetter and Gummel-finite-box (SG-FB) scheme, 50
Scharfetter–Gummel scheme, 146, 149
Schrödinger equation, 8–13, 17, 19, 20, 634
  and emission rate, 568–569
Schrödinger picture, two-level system in, 84–86
Schrödinger's equation, in indefinite potential well, 194
Schwinger–Keldysh contour, 62, 63
SCNM, *see* Self-consistent numerical method
SCR, *see* Strong confinement regime

Renegade:
Adjective
‘Having rejected tradition: Unconventional.’
Merriam-Webster Dictionary

Acquiescence to tyranny is the death of the spirit

You may be 38 years old, as I happen to be. And one day, some great opportunity stands before you and calls you to stand up for some great principle, some great issue, some great cause. And you refuse to do it because you are afraid … You refuse to do it because you want to live longer … You're afraid that you will lose your job, or you are afraid that you will be criticised or that you will lose your popularity, or you're afraid that somebody will stab you, or shoot at you or bomb your house; so you refuse to take the stand.

Well, you may go on and live until you are 90, but you're just as dead at 38 as you would be at 90. And the cessation of breathing in your life is but the belated announcement of an earlier death of the spirit.

Martin Luther King

How the few control the many and always have – the many do whatever they're told

‘Forward, the Light Brigade!’
Was there a man dismayed?
Not though the soldier knew
Someone had blundered.
Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die.
Into the valley of Death
Rode the six hundred.

Cannon to right of them,
Cannon to left of them,
Cannon in front of them
Volleyed and thundered;
Stormed at with shot and shell,
Boldly they rode and well,
Into the jaws of Death,
Into the mouth of hell
Rode the six hundred

Alfred Lord Tennyson (1809-1892)

The mist is lifting slowly
I can see the way ahead
And I’ve left behind the empty streets
That once inspired my life
And the strength of the emotion
Is like thunder in the air
’Cos the promise that we made each other
Haunts me to the end

The secret of your beauty
And the mystery of your soul
I’ve been searching for in everyone I meet
And the times I’ve been mistaken
It’s impossible to say
And the grass is growing
Underneath our feet

The words that I remember
From my childhood still are true
That there’s none so blind
As those who will not see
And to those who lack the courage
And say it’s dangerous to try
Well they just don’t know
That love eternal will not be denied

I know you’re out there somewhere
Somewhere, somewhere
I know you’re out there somewhere

Somewhere you can hear my voice
I know I'll find you somehow
Somehow, somehow
I know I'll find you somehow
And somehow I'll return again to you

The Moody Blues

Are you a gutless wonder – or a Renegade Mind?

Monuments put from pen to paper,
Turns me into a gutless wonder,
And if you tolerate this,
Then your children will be next.
Gravity keeps my head down,
Or is it maybe shame ...

Manic Street Preachers

Rise like lions after slumber
In unvanquishable number.
Shake your chains to earth like dew
Which in sleep have fallen on you.
Ye are many – they are few.

Percy Shelley

CHAPTER ONE

I'm thinking' – Oh, but *are* you?

Think for yourself and let others enjoy the privilege of doing so too
Voltaire

French-born philosopher, mathematician and scientist René Descartes became famous for his statement in Latin in the 17th century which translates into English as: 'I think, therefore I am.'

On the face of it that is true. Thought reflects perception and perception leads to both behaviour and self-identity. In that sense 'we' are what we think. But who or what is doing the thinking and is thinking the only route to perception? Clearly, as we shall see, 'we' are not always the source of 'our' perception, indeed with regard to humanity as a whole this is rarely the case; and thinking is far from the only means of perception. Thought is the village idiot compared with other expressions of consciousness that we all have the potential to access and tap into. This has to be true when we *are* those other expressions of consciousness which are infinite in nature. We have forgotten this, or, more to the point, been manipulated to forget.

These are not just the esoteric musings of the navel. The whole foundation of human control and oppression is control of perception. Once perception is hijacked then so is behaviour which is dictated by perception. Collective perception becomes collective behaviour and collective behaviour is what we call human society. Perception is all and those behind human control know that which is why perception is the target 24/7 of the psychopathic manipulators that I call the Global Cult. They know that if they dictate perception they will dictate behaviour and collectively dictate the nature of human society. They are further aware that perception is formed from information received and if they control the circulation of information they will to a vast extent direct human behaviour. Censorship of information and opinion has become globally Nazi-like in recent years and never more blatantly than since the illusory 'virus pandemic' was triggered out of China in 2019 and across the world in 2020. Why have billions submitted to house arrest and accepted fascistic societies in a way they would have never believed possible? Those controlling the information spewing from government, mainstream media and Silicon Valley (all controlled by the same Global Cult networks) told them they were in danger from a 'deadly virus' and only by submitting to house arrest and conceding their most basic of freedoms could they and their families be protected. This monumental and provable lie became the *perception* of the billions and therefore the *behaviour* of the billions. In those few words you have the whole structure and modus operandi of human control. Fear is a perception – **F**alse **E**motion **A**ppearing **R**eal – and fear is the currency of control. In short … get them by the balls (or give them the impression that you have) and their hearts and minds will follow. Nothing grips the dangly bits and freezes the rear-end more comprehensively than fear.

World number 1

There are two 'worlds' in what appears to be one 'world' and the prime difference between them is knowledge. First we have the mass of human society in which the population is maintained in coldly-calculated ignorance through control of information and the 'education' (indoctrination) system. That's all you really need to control to enslave billions in a perceptual delusion in which what are perceived to be *their* thoughts and opinions are ever-repeated mantras that the system has been downloading all their lives through 'education', media, science, medicine, politics and academia in which the personnel and advocates are themselves overwhelmingly the perceptual products of the same repetition. Teachers and academics in general are processed by the same programming machine as everyone else, but unlike the great majority they never leave the ‘education’ program. It gripped them as students and continues to grip them as programmers of subsequent generations of students. The programmed become the programmers – the programmed programmers. The same can largely be said for scientists, doctors and politicians and not least because as the American writer Upton Sinclair said: ‘It is difficult to get a man to understand something when his salary depends upon his not understanding it.’ If your career and income depend on thinking the way the system demands then you will – bar a few free-minded exceptions – concede your mind to the Perceptual Mainframe that I call the Postage Stamp Consensus. This is a tiny band of perceived knowledge and possibility ‘taught’ (downloaded) in the schools and universities, pounded out by the mainstream media and on which all government policy is founded. Try thinking, and especially speaking and acting, outside of the ‘box’ of consensus and see what that does for your career in the Mainstream Everything which bullies, harasses, intimidates and ridicules the population into compliance. Here we have the simple structure which enslaves most of humanity in a perceptual prison cell for an entire lifetime and I’ll go deeper into this process shortly. Most of what humanity is taught as fact is nothing more than programmed belief. American science fiction author Frank Herbert was right when he said: ‘Belief can be manipulated. Only knowledge is dangerous.’ In the ‘Covid’ age belief is promoted and knowledge is censored. It was always so, but never to the extreme of today.

World number 2

A ‘number 2’ is slang for ‘doing a poo’ and how appropriate that is when this other ‘world’ is doing just that on humanity every minute of every day. World number 2 is a global network of secret societies and semi-secret groups dictating the direction of society via governments, corporations and authorities of every kind. I have spent more than 30 years uncovering and exposing this network that I call the Global Cult and knowing its agenda is what has made my books so accurate in predicting current and past events. Secret societies are secret for a reason. They want to keep their hoarded knowledge to themselves and their chosen initiates and to hide it from the population which they seek through ignorance to control and subdue. The whole foundation of the division between World 1 and World 2 is *knowledge*. What number 1 knows number 2 must not. Knowledge they have worked so hard to keep secret includes (a) the agenda to enslave humanity in a centrally-controlled global dictatorship, and (b) the nature of reality and life itself. The latter (b) must be suppressed to allow the former (a) to prevail as I shall be explaining. The way the Cult manipulates and interacts with the population can be likened to a spider's web. The 'spider' sits at the centre in the shadows and imposes its will through the web with each strand represented in World number 2 by a secret society, satanic or semi-secret group, and in World number 1 – the world of the seen – by governments, agencies of government, law enforcement, corporations, the banking system, media conglomerates and Silicon Valley (Fig 1 overleaf). The spider and the web connect and coordinate all these organisations to pursue the same global outcome while the population sees them as individual entities working randomly and independently. At the level of the web governments *are* the banking system *are* the corporations *are* the media *are* Silicon Valley *are* the World Health Organization working from their inner cores as one unit. Apparently unconnected countries, corporations, institutions, organisations and people are on the *same team* pursuing the same global outcome. Strands in the web immediately around the spider are the most secretive and exclusive secret societies and their membership is emphatically restricted to the Cult inner-circle emerging through the generations from particular bloodlines for reasons I will come to. At the core of the core you would get them in a single room. That's how many people are dictating the direction of human society and its transformation through the ‘Covid’ hoax and other means. As the web expands out from the spider we meet the secret societies that many people will be aware of – the Freemasons, Knights Templar, Knights of Malta, Opus Dei, the inner sanctum of the Jesuit Order, and such like. Note how many are connected to the Church of Rome and there is a reason for that. The Roman Church was established as a revamp, a rebranding, of the relocated ‘Church’ of Babylon and the Cult imposing global tyranny today can be tracked back to Babylon and Sumer in what is now Iraq.

Figure 1: The global web through which the few control the many. (Image Neil Hague.)

Inner levels of the web operate in the unseen away from the public eye and then we have what I call the cusp organisations located at the point where the hidden meets the seen. They include a series of satellite organisations answering to a secret society founded in London in the late 19th century called the Round Table and among them are the Royal Institute of International Affairs (UK, founded in 1920); Council on Foreign Relations (US, 1921); Bilderberg Group (worldwide, 1954); Trilateral Commission (US/worldwide, 1972); and the Club of Rome (worldwide, 1968) which was created to exploit environmental concerns to justify the centralisation of global power to ‘save the planet’. The Club of Rome instigated with others the human-caused climate change hoax which has led to all the ‘green new deals' demanding that very centralisation of control. Cusp organisations, which include endless 'think tanks' all over the world, are designed to coordinate a single global policy between political and business leaders, intelligence personnel, media organisations and anyone who can influence the direction of policy in their own sphere of operation. Major players and regular attenders will know what is happening – or some of it – while others come and go and are kept overwhelmingly in the dark about the big picture. I refer to these cusp groupings as semi-secret in that they can be publicly identified, but what goes on at the inner-core is kept very much 'in house' even from most of their members and participants through a fiercely-imposed system of compartmentalisation. Only let them know what they need to know to serve your interests and no more. The structure of secret societies serves as a perfect example of this principle. Most Freemasons never get higher than the bottom three levels of 'degree' (degree of knowledge) when there are 33 official degrees of the Scottish Rite. Initiates only qualify for the next higher 'compartment' or degree if those at that level choose to allow them. Knowledge can be carefully assigned only to those considered 'safe'. I went to my local Freemason's lodge a few years ago when they were having an 'open day' to show how cuddly they were and when I chatted to some of them I was astonished at how little the rank and file knew even about the most ubiquitous symbols they use. The mushroom technique – keep them in the dark and feed them bullshit – applies to most people in the web as well as the population as a whole. Sub-divisions of the web mirror in theme and structure transnational corporations which have a headquarters somewhere in the world dictating to all their subsidiaries in different countries. Subsidiaries operate in their methodology and branding to the same centrally-dictated plan and policy in pursuit of particular ends. The Cult web functions in the same way. Each country has its own web as a subsidiary of the global one. They consist of networks of secret societies, semi-secret groups and bloodline families and their job is to impose the will of the spider and the global web in their particular country. Subsidiary networks control and manipulate the national political system, finance, corporations, media, medicine, etc. to ensure that they follow the globally-dictated Cult agenda. These networks were the means through which the 'Covid' hoax could be played out with almost every country responding in the same way.

The 'Yessir' pyramid

Compartmentalisation is the key to understanding how a tiny few can dictate the lives of billions when combined with a top-down sequence of imposition and acquiescence. The inner core of the Cult sits at the peak of the pyramidal hierarchy of human society (Fig 2 overleaf). It imposes its will – its agenda for the world – on the level immediately below which acquiesces to that imposition. This level then imposes the Cult will on the level below them which acquiesces and imposes on the next level. Very quickly we meet levels in the hierarchy that have no idea there even is a Cult, but the sequence of imposition and acquiescence continues down the pyramid in just the same way. 'I don't know why we are doing this but the order came from "on-high" and so we better just do it.' Alfred Lord Tennyson said of the cannon fodder levels in his poem *The Charge of the Light Brigade*: 'Theirs not to reason why; theirs but to do and die.' The next line says that 'into the valley of death rode the six hundred' and they died because they obeyed without question what their perceived 'superiors' told them to do. In the same way the population capitulated to 'Covid'. The whole hierarchical pyramid functions like this to allow the very few to direct the enormous many. Eventually imposition-acquiescence-imposition-acquiescence comes down to the mass of the population at the foot of the pyramid. If they acquiesce to those levels of the hierarchy imposing on them (governments/law enforcement/doctors/media) a circuit is completed between the population and the handful of super-psychopaths in the Cult inner core at the top of the pyramid. Without a circuit-breaking refusal to obey, the sequence of imposition and acquiescence allows a staggeringly few people to impose their will upon the entirety of humankind. We are looking at the very sequence that has subjugated billions since the start of 2020. Our freedom has not been taken from us. Humanity has given it away. Fascists do not impose fascism because there are not enough of them. Fascism is imposed by the population acquiescing to fascism. Put another way allowing their perceptions to be programmed to the extent that leads to the population giving their freedom away by giving their perceptions – their mind – away. If this circuit is not broken by humanity ceasing to cooperate with their own enslavement then nothing can change. For that to happen people have to critically think and see through the lies and window dressing and then summon the backbone to act upon what they see. The Cult spends its days working to stop either happening and its methodology is systematic and highly detailed, but it can be overcome and that is what this book is all about.

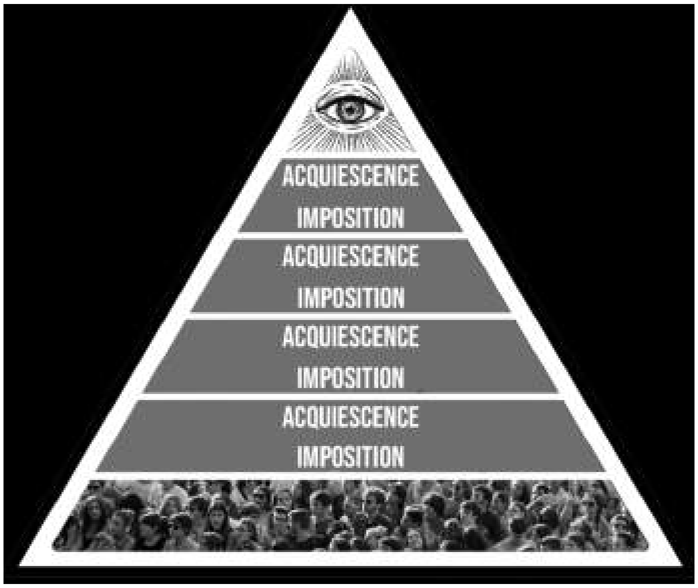

Figure 2: The simple sequence of imposition and compliance that allows a handful of people at the peak of the pyramid to dictate the lives of billions.

The Life Program

Okay, back to world number 1 or the world of the ‘masses’. Observe the process of what we call ‘life’ and it is a perceptual download from cradle to grave. The Cult has created a global structure in which perception can be programmed and the program continually topped-up with what appears to be constant confirmation that the program is indeed true reality. The important word here is ‘appears’.

This is the structure, the fly-trap, the Postage Stamp Consensus or Perceptual Mainframe, which represents that incredibly narrow band of perceived possibility delivered by the 'education' system, mainstream media, science and medicine. From the earliest age the download begins with parents who have themselves succumbed to the very programming their children are about to go through. Most parents don't do this out of malevolence and mostly it is quite the opposite. They do what they believe is best for their children and that is what the program has told them is best. Within three or four years comes the major transition from parental programming to full-blown state (Cult) programming in school, college and university where perceptually-programmed teachers and academics pass on their programming to the next generations. Teachers who resist are soon marginalised and their careers ended while children who resist are called a problem child for whom Ritalin may need to be prescribed. A few years after entering the 'world' children are under the control of authority figures representing the state telling them when they have to be there, when they can leave and when they can speak, eat, even go to the toilet. This is calculated preparation for a lifetime of obeying authority in all its forms. Reflex-action fear of authority is instilled by authority from the start. Children soon learn the carrot and stick consequences of obeying or defying authority which is underpinned daily for the rest of their life. Fortunately I daydreamed through this crap and never obeyed authority simply because it told me to. This approach to my alleged 'betters' continues to this day. There can be consequences of pursuing open-minded freedom in a world of closed-minded conformity. I spent a lot of time in school corridors after being ejected from the classroom for not taking some of it seriously and now I spend a lot of time being ejected from Facebook, YouTube and Twitter. But I can tell you that being true to yourself and not compromising your self-respect is far more exhilarating than bowing to authority for authority's sake. You don't have to be a sheep to the shepherd (authority) and the sheep dog (fear of not obeying authority).

The perceptual download continues throughout the formative years in school, college and university while script-reading 'teachers', 'academics' 'scientists', 'doctors' and 'journalists' insist that ongoing generations must be as programmed as they are. Accept the program or you will not pass your 'exams' which confirm your 'degree' of programming. It is tragic to think that many parents pressure their offspring to work hard at school to download the program and qualify for the next stage at college and university. The late, great, American comedian George Carlin said: 'Here's a bumper sticker I'd like to see: We are proud parents of a child who has resisted his teachers' attempts to break his spirit and bend him to the will of his corporate masters.' Well, the best of luck finding many of those, George. Then comes the moment to leave the formal programming years in academia and enter the 'adult' world of work. There you meet others in your chosen or prescribed arena who went through the same Postage Stamp Consensus program before you did. There is therefore overwhelming agreement between almost everyone on the basic foundations of Postage Stamp reality and the rejection, even contempt, of the few who have a mind of their own and are prepared to use it. This has two major effects. Firstly, the consensus confirms to the programmed that their download is really how things are. I mean, everyone knows that, right? Secondly, the arrogance and ignorance of Postage Stamp adherents ensure that anyone questioning the program will have unpleasant consequences for seeking their own truth and not picking their perceptions from the shelf marked: 'Things you must believe without question and if you don't you're a dangerous lunatic conspiracy theorist and a harebrained nutter'.

Every government, agency and corporation is founded on the same Postage Stamp prison cell and you can see why so many people believe the same thing while calling it their own 'opinion'. Fusion of governments and corporations in pursuit of the same agenda was the definition of fascism described by Italian dictator Benito Mussolini. The pressure to conform to perceptual norms downloaded for a lifetime is incessant and infiltrates society right down to family groups that become censors and condemners of their own ‘black sheep’ for not, ironically, being sheep. We have seen an explosion of that in the ‘Covid’ era. Cult-owned global media unleashes its propaganda all day every day in support of the Postage Stamp and targets with abuse and ridicule anyone in the public eye who won’t bend their mind to the will of the tyranny. Any response to this is denied (certainly in my case). They don’t want to give a platform to expose official lies. Cult-owned-and-created Internet giants like Facebook, Google, YouTube and Twitter delete you for having an unapproved opinion. Facebook boasts that its AI censors delete 97-percent of ‘hate speech’ before anyone even reports it. Much of that ‘hate speech’ will simply be an opinion that Facebook and its masters don’t want people to see. Such perceptual oppression is widely known as fascism. Even Facebook executive Benny Thomas, a ‘CEO Global Planning Lead’, said in comments secretly recorded by investigative journalism operation Project Veritas that Facebook is ‘too powerful’ and should be broken up:

> I mean, no king in history has been the ruler of two billion people, but Mark Zuckerberg is … And he’s 36. That’s too much for a 36-year-old ... You should not have power over two billion people. I just think that’s wrong.

Thomas said Facebook-owned platforms like Instagram, Oculus, and WhatsApp needed to be separate companies. ‘It’s too much power when they’re all one together’. That’s the way the Cult likes it, however. We have an executive of a Cult organisation in Benny Thomas that doesn’t know there is a Cult such is the compartmentalisation. Thomas said that Facebook and Google ‘are no longer companies, they’re countries’. Actually they are more powerful than countries on the basis that if you control information you control perception and control human society.

I love my oppressor

Another expression of this psychological trickery is for those who realise they are being pressured into compliance to eventually convince themselves to believe the official narratives to protect their self-respect from accepting the truth that they have succumbed to meek and subservient compliance. Such people become some of the most vehement defenders of the system. You can see them everywhere screaming abuse at those who prefer to think for themselves and by doing so reminding the compliers of their own capitulation to conformity. ‘You are talking dangerous nonsense you Covidiot!!’ Are you trying to convince me or yourself? It is a potent form of Stockholm syndrome which is defined as: ‘A psychological condition that occurs when a victim of abuse identifies and attaches, or bonds, positively with their abuser.’ An example is hostages bonding and even ‘falling in love’ with their kidnappers. The syndrome has been observed in domestic violence, abused children, concentration camp inmates, prisoners of war and many and various Satanic cults. These are some traits of Stockholm syndrome listed at goodtherapy.org:

- Positive regard towards perpetrators of abuse or captor [see ‘Covid’].
- Failure to cooperate with police and other government authorities when it comes to holding perpetrators of abuse or kidnapping accountable [or in the case of ‘Covid’ cooperating with the police to enforce and defend their captors’ demands].
- Little or no effort to escape [see ‘Covid’].
- Belief in the goodness of the perpetrators or kidnappers [see ‘Covid’].
- Appeasement of captors. This is a manipulative strategy for maintaining one’s safety. As victims get rewarded – perhaps with less abuse or even with life itself – their appeasing behaviours are reinforced [see ‘Covid’].
- Learned helplessness. This can be akin to ‘if you can’t beat ‘em, join ‘em’. As the victims fail to escape the abuse or captivity, they may start giving up and soon realize it’s just easier for everyone if they acquiesce all their power to their captors [see ‘Covid’].

- Feelings of pity toward the abusers, believing they are actually victims themselves. Because of this, victims may go on a crusade or mission to 'save' [protect] their abuser [see the venom unleashed on those challenging the official 'Covid' narrative].
- Unwillingness to learn to detach from their perpetrators and heal. In essence, victims may tend to be less loyal to themselves than to their abuser [*definitely* see 'Covid'].

Ponder on those traits and compare them with the behaviour of great swathes of the global population who have defended governments and authorities which have spent every minute destroying their lives and livelihoods and those of their children and grandchildren since early 2020 with fascistic lockdowns, house arrest and employment deletion to 'protect' them from a 'deadly virus' that their abusers' perceptually created to bring about this very outcome. We are looking at mass Stockholm syndrome. All those that agree to concede their freedom will believe those perceptions are originating in their own independent 'mind' when in fact by conceding their reality to Stockholm syndrome they have by definition conceded any independence of mind. Listen to the 'opinions' of the acquiescing masses in this 'Covid' era and what gushes forth is the repetition of the official version of everything delivered unprocessed, unfiltered and unquestioned. The whole programming dynamic works this way. I must be free because I'm told that I am and so I think that I am.

You can see what I mean with the chapter theme of 'I'm thinking – Oh, but *are* you?' The great majority are not thinking, let alone for themselves. They are repeating what authority has told them to believe which allows them to be controlled. Weaving through this mentality is the fear that the 'conspiracy theorists' are right and this again explains the often hysterical abuse that ensues when you dare to contest the official narrative of anything. Denial is the mechanism of hiding from yourself what you don't want to be true. Telling people what they want to hear is easy, but it's an infinitely greater challenge to tell them what they would rather not be happening.

One is akin to pushing against an open door while the other is met with vehement resistance no matter what the scale of evidence. I don't want it to be true so I'll convince myself that it's not. Examples are everywhere from the denial that a partner is cheating despite all the signs to the reflex-action rejection of any idea that world events in which country after country act in exactly the same way are centrally coordinated. To accept the latter is to accept that a force of unspeakable evil is working to destroy your life and the lives of your children with nothing too horrific to achieve that end. Who the heck wants that to be true? But if we don't face reality the end is duly achieved and the consequences are far worse and ongoing than breaking through the walls of denial today with the courage to make a stand against tyranny.

Connect the dots – but how?

A crucial aspect of perceptual programming is to portray a world in which everything is random and almost nothing is connected to anything else. Randomness cannot be coordinated by its very nature and once you perceive events as random the idea they could be connected is waved away as the rantings of the tinfoil-hat brigade. You can't plan and coordinate random you idiot! No, you can't, but you can hide the coldly-calculated and long-planned behind the *illusion* of randomness. A foundation manifestation of the Renegade Mind is to scan reality for patterns that connect the apparently random and turn pixels and dots into pictures. This is the way I work and have done so for more than 30 years. You look for similarities in people, modus operandi and desired outcomes and slowly, then ever quicker, the picture forms. For instance: There would seem to be no connection between the 'Covid pandemic' hoax and the human-caused global-warming hoax and yet they are masks (appropriately) on the same face seeking the same outcome. Those pushing the global warming myth through the Club of Rome and other Cult agencies are driving the lies about 'Covid' – Bill Gates is an obvious one, but they are endless. Why would the same people be involved in both when they are clearly not connected? Oh, but they *are*. Common themes with personnel are matched by common goals. The ‘solutions’ to both ‘problems’ are centralisation of global power to impose the will of the few on the many to ‘save’ humanity from ‘Covid’ and save the planet from an ‘existential threat’ (we need ‘zero Covid’ and ‘zero carbon emissions’). These, in turn, connect with the ‘dot’ of globalisation which was coined to describe the centralisation of global power in every area of life through incessant political and corporate expansion, trading blocks and superstates like the European Union. If you are the few and you want to control the many you have to centralise power and decision-making. The more you centralise power the more power the few at the centre will have over the many; and the more that power is centralised the more power those at the centre have to centralise even quicker. The momentum of centralisation gets faster and faster which is exactly the process we have witnessed. In this way the hoaxed ‘pandemic’ and the fakery of human-caused global warming serve the interests of globalisation and the seizure of global power in the hands of the Cult inner-circle which is behind ‘Covid’, ‘climate change’ *and* globalisation. At this point random ‘dots’ become a clear and obvious picture or pattern.

Klaus Schwab, the classic Bond villain who founded the Cult’s Gates-funded World Economic Forum, published a book in 2020, *The Great Reset*, in which he used the ‘problem’ of ‘Covid’ to justify a total transformation of human society to ‘save’ humanity from ‘climate change’. Schwab said: ‘The pandemic represents a rare but narrow window of opportunity to reflect, reimagine, and reset our world.’ What he didn’t mention is that the Cult he serves is behind both hoaxes as I show in my book *The Answer*. He and the Cult don’t have to reimagine the world. They know precisely what they want and that’s why they destroyed human society with ‘Covid’ to ‘build back better’ in their grand design. Their job is not to imagine, but to get humanity to imagine and agree with their plans while believing it’s all random. It must be pure coincidence that ‘The Great Reset’ has long been the Cult’s code name for the global imposition of fascism and replaced previous code-names of the ‘New World

Order' used by Cult frontmen like Father George Bush and the 'New Order of the Ages' which emerged from Freemasonry and much older secret societies. New Order of the Ages appears on the reverse of the Great Seal of the United States as 'Novus ordo seclorum' underneath the Cult symbol used since way back of the pyramid and all seeing-eye (Fig 3). The pyramid is the hierarchy of human control headed by the illuminated eye that symbolises the force behind the Cult which I will expose in later chapters. The term 'Annuit Coeptis' translates as 'He favours our undertaking'. We are told the 'He' is the Christian god, but 'He' is not as I will be explaining.

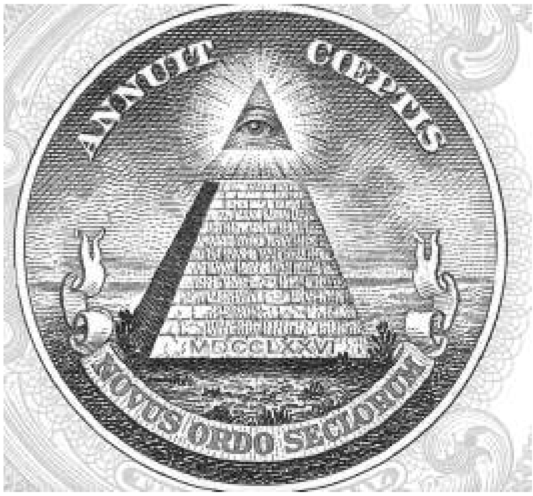

Figure 3: The all-seeing eye of the Cult 'god' on the Freemason-designed Great Seal of the United States and also on the dollar bill.

Having you on

Two major Cult techniques of perceptual manipulation that relate to all this are what I have called since the 1990s Problem-Reaction-Solution (PRS) and the Totalitarian Tiptoe (TT). They can be uncovered by the inquiring mind with a simple question: Who benefits? The answer usually identifies the perpetrators of a given action or happening through the concept of 'he who most benefits from a crime is the one most likely to have committed it'. The Latin 'Cue bono?' – Who benefits? – is widely attributed to the Roman orator and statesman Marcus Tullius Cicero. No wonder it goes back so far when the concept has been relevant to human behaviour since history was recorded. Problem-Reaction-Solution is the technique used to manipulate us every day by covertly creating a problem (or the illusion of one) and offering the solution to the problem (or the illusion of one). In the first phase you create the problem and blame someone or something else for why it has happened. This may relate to a financial collapse, terrorist attack, war, global warming or pandemic, anything in fact that will allow you to impose the 'solution' to change society in the way you desire at that time. The 'problem' doesn't have to be real. PRS is manipulation of perception and all you need is the population to believe the problem is real. Human-caused global warming and the 'Covid pandemic' only have to be *perceived* to be real for the population to accept the 'solutions' of authority. I refer to this technique as NO-Problem-Reaction-Solution. Billions did not meekly accept house arrest from early 2020 because there was a real deadly 'Covid pandemic' but because they perceived – believed – that to be the case. The antidote to Problem-Reaction-Solution is to ask who benefits from the proposed solution. Invariably it will be anyone who wants to justify more control through deletion of freedom and centralisation of power and decision-making.

The two world wars were Problem-Reaction-Solutions that transformed and realigned global society. Both were manipulated into being by the Cult as I have detailed in books since the mid-1990s. They dramatically centralised global power, especially World War Two, which led to the United Nations and other global bodies thanks to the overt and covert manipulations of the Rockefeller family and other Cult bloodlines like the Rothschilds. The UN is a stalking horse for full-blown world government that I will come to shortly. The land on which the UN building stands in New York was donated by the Rockefellers and the same Cult family was behind Big Pharma scalpel and drug 'medicine' and the creation of the World Health Organization as part of the UN. They have been stalwarts of the eugenics movement and funded Hitler's race-purity expert' Ernst Rudin. The human-caused global warming hoax has been orchestrated by the Club of Rome through the UN which is manufacturing both the ‘problem’ through its Intergovernmental Panel on Climate Change and imposing the ‘solution’ through its Agenda 21 and Agenda 2030 which demand the total centralisation of global power to ‘save the world’ from a climate hoax the United Nations is itself perpetrating. What a small world the Cult can be seen to be particularly among the inner circles. The bedfellow of Problem-Reaction-Solution is the Totalitarian Tiptoe which became the Totalitarian Sprint in 2020. The technique is fashioned to hide the carefully-coordinated behind the cover of apparently random events. You start the sequence at ‘A’ and you know you are heading for ‘Z’. You don’t want people to know that and each step on the journey is presented as a random happening while all the steps strung together lead in the same direction. The speed may have quickened dramatically in recent times, but you can still see the incremental approach of the Tiptoe in the case of ‘Covid’ as each new imposition takes us deeper into fascism. Tell people they have to do this or that to get back to ‘normal’, then this and this and this. With each new demand adding to the ones that went before the population’s freedom is deleted until it disappears. The spider wraps its web around the flies more comprehensively with each new diktat. I’ll highlight this in more detail when I get to the ‘Covid’ hoax and how it has been pulled off. Another prime example of the Totalitarian Tiptoe is how the Cult-created European Union went from a ‘free-trade zone’ to a centralised bureaucratic dictatorship through the Tiptoe of incremental centralisation of power until nations became mere administrative units for Cult-owned dark suits in Brussels.

The antidote to ignorance is knowledge which the Cult seeks vehemently to deny us, but despite the systematic censorship to that end the Renegade Mind can overcome this by vociferously seeking out the facts no matter the impediments put in the way. There is also a method of thinking and perceiving – *knowing* – that doesn’t even need names, dates, place-type facts to identify the patterns that reveal the story. I’ll get to that in the final chapter. All you need to know about the manipulation of human society and to what end is still out there – *at the time of writing* – in the form of books, videos and websites for those that really want to breach the walls of programmed perception. To access this knowledge requires the abandonment of the mainstream media as a source of information in the awareness that this is owned and controlled by the Cult and therefore promotes mass perceptions that suit the Cult. Mainstream media lies all day, every day. That is its function and very reason for being. Where it does tell the truth, here and there, is only because the truth and the Cult agenda very occasionally coincide. If you look for fact and insight to the BBC, CNN and virtually all the rest of them you are asking to be conned and perceptually programmed.

Know the outcome and you'll see the journey

Events seem random when you have no idea where the world is being taken. Once you do the random becomes the carefully planned. Know the outcome and you'll see the journey is a phrase I have been using for a long time to give context to daily happenings that appear unconnected. Does a problem, or illusion of a problem, trigger a proposed 'solution' that further drives society in the direction of the outcome? Invariably the answer will be yes and the random – *abracadabra* – becomes the clearly coordinated. So what is this outcome that unlocks the door to a massively expanded understanding of daily events? I will summarise its major aspects – the fine detail is in my other books – and those new to this information will see that the world they thought they were living in is a very different place. The foundation of the Cult agenda is the incessant centralisation of power and all such centralisation is ultimately in pursuit of Cult control on a global level. I have described for a long time the planned world structure of top-down dictatorship as the Hunger Games Society. The term obviously comes from the movie series which portrayed a world in which a few living in military-protected hi-tech luxury were the overlords of a population condemned to abject poverty in isolated 'sectors' that were not allowed to interact. 'Covid' lockdowns and travel bans anyone? The 'Hunger Games' pyramid of structural control has the inner circle of the Cult at the top with pretty much the entire population at the bottom under their control through dependency for survival on the Cult. The whole structure is planned to be protected and enforced by a military-police state (Fig 4).

Here you have the reason for the global lockdowns of the fake pandemic to coldly destroy independent incomes and livelihoods and make everyone dependent on the ‘state’ (the Cult that controls the ‘states’). I have warned in my books for many years about the plan to introduce a ‘guaranteed income’ – a barely survivable pittance – designed to impose dependency when employment was destroyed by AI technology and now even more comprehensively at great speed by the ‘Covid’ scam. Once the pandemic was played and lockdown consequences began to delete independent income the authorities began to talk right on cue about the need for a guaranteed income and a ‘Great Reset’. Guaranteed income will be presented as benevolent governments seeking to help a desperate people – desperate as a direct result of actions of the same governments. The truth is that such payments are a trap. You will only get them if you do exactly what the authorities demand including mass vaccination (genetic manipulation). We have seen this theme already in Australia where those dependent on government benefits have them reduced if parents don’t agree to have their children vaccinated according to an insane health-destroying government-dictated schedule. Calculated economic collapse applies to governments as well as people. The Cult wants rid of countries through the creation of a world state with countries broken up into regions ruled by a world government and super states like the European Union. Countries must be bankrupted, too, to this end and it’s being achieved by the trillions in ‘rescue packages’ and furlough payments, trillions in lost taxation, and money-no-object spending on ‘Covid’ including constant all-medium advertising (programming) which has made the media dependent on government for much of its income. The day of reckoning is coming – as planned – for government spending and given that it has been made possible by printing money and not by production/taxation there is inflation on the way that has the potential to wipe out monetary value. In that case there will be no need for the Cult to steal your money. It just won't be worth anything (see the German Weimar Republic before the Nazis took over). Many have been okay with lockdowns while getting a percentage of their income from so-called furlough payments without having to work. Those payments are dependent, however, on people having at least a theoretical job with a business considered non-essential and ordered to close. As these business go under because they are closed by lockdown after lockdown the furlough stops and it will for everyone eventually. Then what? The 'then what?' is precisely the idea.

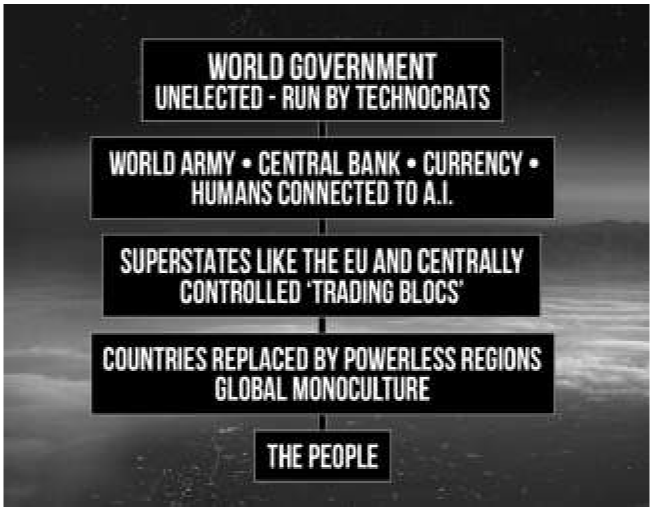
Figure 4: The Hunger Games Society structure I have long warned was planned and now the 'Covid' hoax has made it possible. This is the real reason for lockdowns.

Hired hands

Between the Hunger Games Cult elite and the dependent population is planned to be a vicious military-police state (a fusion of the two into one force). This has been in the making for a long time with police looking ever more like the military and carrying weapons to match. The pandemic scam has seen this process accelerate so fast as lockdown house arrest is brutally enforced by carefully recruited fascist minds and gormless system-servers. The police and military are planned to merge into a centrally-directed world army in a global structure headed by a world government which wouldn't be elected even by the election fixes now in place. The world army is not planned even to be human and instead wars would be fought, primarily against the population, using robot technology controlled by artificial intelligence. I have been warning about this for decades and now militaries around the world are being transformed by this very AI technology. The global regime that I describe is a particular form of fascism known as a technocracy in which decisions are not made by clueless and co-opted politicians but by unelected technocrats – scientists, engineers, technologists and bureaucrats. Cult-owned-and-controlled Silicon Valley giants are examples of technocracy and they already have far more power to direct world events than governments. They are with their censorship *selecting* governments. I know that some are calling the 'Great Reset' a Marxist communist takeover, but fascism and Marxism are different labels for the same tyranny. Tell those who lived in fascist Germany and Stalinist Russia that there was a difference in the way their freedom was deleted and their lives controlled. I could call it a fascist technocracy or a Marxist technocracy and they would be equally accurate. The Hunger Games society with its world government structure would oversee a world army, world central bank and single world cashless currency imposing its will on a microchipped population (Fig 5). Scan its different elements and see how the illusory pandemic is forcing society in this very direction at great speed. Leaders of 23 countries and the World Health Organization (WHO) backed the idea in March, 2021, of a global treaty for 'international cooperation' in 'health emergencies' and nations should 'come together as a global community for peaceful cooperation that extends beyond this crisis'. Cut the Orwellian bullshit and this means another step towards global government. The plan includes a cashless digital money system that I first warned about in 1993. Right at the start of 'Covid' the deeply corrupt Tedros

Adhanom Ghebreyesus, the crooked and merely gofer 'head' of the World Health Organization, said it was possible to catch the 'virus' by touching cash and it was better to use cashless means. The claim was ridiculous nonsense and like the whole 'Covid' mind-trick it was nothing to do with 'health' and everything to do with pushing every aspect of the Cult agenda. As a result of the Tedros lie the use of cash has plummeted. The Cult script involves a single world digital currency that would eventually be technologically embedded in the body. China is a massive global centre for the Cult and if you watch what is happening there you will know what is planned for everywhere. The Chinese government is developing a digital currency which would allow fines to be deducted immediately via AI for anyone caught on camera breaking its fantastic list of laws and the money is going to be programmable with an expiry date to ensure that no one can accrue wealth except the Cult and its operatives.



WORLD GOVERNMENT
UNELECTED - RUN BY TECHNOCRATS
WORLD ARMY • CENTRAL BANK • CURRENCY •
HUMANS CONNECTED TO A.I.
SUPERSTATES LIKE THE EU AND CENTRALLY
CONTROLLED 'TRADING BLOCS'
COUNTRIES REPLACED BY POWERLESS REGIONS
GLOBAL MONOCULTURE
THE PEOPLE

Figure 5: The structure of global control the Cult has been working towards for so long and this has been enormously advanced by the 'Covid' illusion.

Serfdom is so smart

The Cult plan is far wider, extreme, and more comprehensive than even most conspiracy researchers appreciate and I will come to the true depths of deceit and control in the chapters 'Who controls the

Cult?' and 'Escaping Wetiko'. Even the world that we know is crazy enough. We are being deluged with ever more sophisticated and controlling technology under the heading of 'smart'. We have smart televisions, smart meters, smart cards, smart cars, smart driving, smart roads, smart pills, smart patches, smart watches, smart skin, smart borders, smart pavements, smart streets, smart cities, smart communities, smart environments, smart growth, smart planet ... smart *everything* around us. Smart technologies and methods of operation are designed to interlock to create a global Smart Grid connecting the entirety of human society including human minds to create a centrally-dictated 'hive' mind. 'Smart cities' is code for densely-occupied megacities of total surveillance and control through AI. Ever more destructive frequency communication systems like 5G have been rolled out without any official testing for health and psychological effects (colossal). 5G/6G/7G systems are needed to run the Smart Grid and each one becomes more destructive of body and mind. Deleting independent income is crucial to forcing people into these AI-policed prisons by ending private property ownership (except for the Cult elite). The Cult's Great Reset now openly foresees a global society in which no one will own any possessions and everything will be rented while the Cult would own literally everything under the guise of government and corporations. The aim has been to use the lockdowns to destroy sources of income on a mass scale and when the people are destitute and in unrepayable amounts of debt (problem) Cult assets come forward with the pledge to write-off debt in return for handing over all property and possessions (solution). Everything – literally everything including people – would be connected to the Internet via AI. I was warning years ago about the coming Internet of Things (IoT) in which all devices and technology from your car to your fridge would be plugged into the Internet and controlled by AI. Now we are already there with much more to come. The next stage is the Internet of Everything (IoE) which is planned to include the connection of AI to the human brain and body to replace the human mind with a centrally-controlled AI mind. Instead of perceptions being manipulated through control of information and censorship those perceptions would come direct from the Cult through AI. What do you think? You think whatever AI decides that you think. In human terms there would be no individual 'think' any longer. Too incredible? The ravings of a lunatic? Not at all. Cult-owned crazies in Silicon Valley have been telling us the plan for years without explaining the real motivation and calculated implications. These include Google executive and 'futurist' Ray Kurzweil who highlights the year 2030 for when this would be underway. He said:

> Our thinking ... will be a hybrid of biological and non-biological thinking ... humans will be able to extend their limitations and 'think in the cloud' ... We're going to put gateways to the cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations.
>
> As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

The sales-pitch of Kurzweil and Cult-owned Silicon Valley is that this would make us 'super-human' when the real aim is to make us post-human and no longer 'human' in the sense that we have come to know. The entire global population would be connected to AI and become the centrally-controlled 'hive-mind' of externally-delivered perceptions. The Smart Grid being installed to impose the Cult's will on the world is being constructed to allow particular locations – even one location – to control the whole global system. From these prime control centres, which absolutely include China and Israel, anything connected to the Internet would be switched on or off and manipulated at will. Energy systems could be cut, communication via the Internet taken down, computer-controlled driverless autonomous vehicles driven off the road, medical devices switched off, the potential is limitless given how much AI and Internet connections now run human society. We have seen nothing yet if we allow this to continue. Autonomous vehicle makers are working with law enforcement to produce cars designed to automatically pull over if they detect a police or emergency vehicle flashing from up to 100 feet away. At a police stop the car would be unlocked and the window rolled down automatically. Vehicles would only take you where the computer (the state) allowed. The end of petrol vehicles and speed limiters on all new cars in the UK and EU from 2022 are steps leading to electric computerised transport over which ultimately you have no control. The picture is far bigger even than the Cult global network or web and that will become clear when I get to the nature of the 'spider'. There is a connection between all these happenings and the instigation of DNA-manipulating 'vaccines' (which aren't 'vaccines') justified by the 'Covid' hoax. That connection is the unfolding plan to transform the human body from a biological to a synthetic biological state and this is why synthetic biology is such a fast-emerging discipline of mainstream science. 'Covid vaccines' are infusing self-replicating synthetic genetic material into the cells to cumulatively take us on the Totalitarian Tiptoe from Human 1.0 to the synthetic biological Human 2.0 which will be physically and perceptually attached to the Smart Grid to one hundred percent control every thought, perception and deed. Humanity needs to wake up and *fast*.

This is the barest explanation of where the 'outcome' is planned to go but it's enough to see the journey happening all around us. Those new to this information will already see 'Covid' in a whole new context. I will add much more detail as we go along, but for the minutiae evidence see my mega-works, *The Answer, The Trigger* and *Everything You Need to Know But Have Never Been Told*.

Now – how does a Renegade Mind see the 'world'?

CHAPTER TWO

Renegade Perception

It is one thing to be clever and another to be wise
George R.R. Martin

A simple definition of the difference between a programmed mind and a Renegade Mind would be that one sees only dots while the other connects them to see the picture. Reading reality with accuracy requires the observer to (a) know the planned outcome and (b) realise that everything, but *everything*, is connected.

The entirety of infinite reality is connected – that's its very nature – and with human society an expression of infinite reality the same must apply. Simple cause and effect is a connection. The effect is triggered by the cause and the effect then becomes the cause of another effect. Nothing happens in isolation because it *can't*. Life in whatever reality is simple choice and consequence. We make choices and these lead to consequences. If we don't like the consequences we can make different choices and get different consequences which lead to other choices and consequences. The choice and the consequence are not only connected they are indivisible. You can't have one without the other as an old song goes. A few cannot control the world unless those being controlled allow that to happen – cause and effect, choice and consequence. Control – who has it and who doesn't – is a two-way process, a symbiotic relationship, involving the controller and controlled. 'They took my freedom away!!' Well, yes, but you also gave it to them. Humanity is subjected to mass control because humanity has acquiesced to that control. This is all cause and effect and literally a case of give and take. In the same way world events of every kind are connected and the Cult works incessantly to sell the illusion of the random and coincidental to maintain the essential (to them) perception of dots that hide the picture. Renegade Minds know this and constantly scan the world for patterns of connection. This is absolutely pivotal in understanding the happenings in the world and without that perspective clarity is impossible. First you know the planned outcome and then you identify the steps on the journey – the day-by-day apparently random which, when connected in relation to the outcome, no longer appear as individual events, but as the proverbial *chain* of events leading in the same direction. I'll give you some examples:

Political puppet show

We are told to believe that politics is 'adversarial' in that different parties with different beliefs engage in an endless tussle for power. There may have been some truth in that up to a point – and only a point – but today divisions between 'different' parties are rhetorical not ideological. Even the rhetorical is fusing into one-speak as the parties eject any remaining free thinkers while others succumb to the ever-gathering intimidation of anyone with the 'wrong' opinion. The Cult is not a new phenomenon and can be traced back thousands of years as my books have documented. Its intergenerational initiates have been manipulating events with increasing effect the more that global power has been centralised. In ancient times the Cult secured control through the system of monarchy in which 'special' bloodlines (of which more later) demanded the right to rule as kings and queens simply by birthright and by vanquishing others who claimed the same birthright. There came a time, however, when people had matured enough to see the unfairness of such tyranny and demanded a say in who governed them. Note the word – *governed* them. Not served them – *governed* them, hence government defined as 'the political direction and control exercised over the actions of the members, citizens, or inhabitants of communities, societies, and states; direction of the affairs of a state, community, etc.' Governments exercise control over rather than serve just like the monarchies before them. Bizarrely there are still countries like the United Kingdom which are ruled by a monarch *and* a government that officially answers to the monarch. The UK head of state and that of Commonwealth countries such as Canada, Australia and New Zealand is 'selected' by who in a *single family* had unprotected sex with whom and in what order. Pinch me it can't be true. Ouch! Shit, it is. The demise of monarchies in most countries offered a potential vacuum in which some form of free and fair society could arise and the Cult had that base covered. Monarchies had served its interests but they couldn't continue in the face of such widespread opposition and, anyway, replacing a 'royal' dictatorship that people could see with a dictatorship 'of the people' hiding behind the concept of 'democracy' presented far greater manipulative possibilities and ways of hiding coordinated tyranny behind the illusion of 'freedom'.

Democracy is quite wrongly defined as government selected by the population. This is not the case at all. It is government selected by *some* of the population (and then only in theory). This 'some' doesn't even have to be the majority as we have seen so often in first-past-the-post elections in which the so-called majority party wins fewer votes than the 'losing' parties combined. Democracy can give total power to a party in government from a minority of the votes cast. It's a sleight of hand to sell tyranny as freedom. Seventy-four million Trump-supporting Americans didn't vote for the 'Democratic' Party of Joe Biden in the distinctly dodgy election in 2020 and yet far from acknowledging the wishes and feelings of that great percentage of American society the Cult-owned Biden government set out from day one to destroy them and their right to a voice and opinion. Empty shell Biden and his Cult handlers said they were doing this to 'protect democracy'. Such is the level of lunacy and sickness to which politics has descended. Connect the dots and relate them to the desired outcome – a world government run by self-appointed technocrats and no longer even elected politicians. While operating through its political agents in government the Cult is at the same time encouraging public distain for politicians by putting idiots and incompetents in theoretical power on the road to deleting them. The idea is to instil a public reaction that says of the technocrats: 'Well, they couldn't do any worse than the pathetic politicians.' It's all about controlling perception and Renegade Minds can see through that while programmed minds cannot when they are ignorant of both the planned outcome and the manipulation techniques employed to secure that end. This knowledge can be learned, however, and fast if people choose to get informed.

Politics may at first sight appear very difficult to control from a central point. I mean look at the 'different' parties and how would you be able to oversee them all and their constituent parts? In truth, it's very straightforward because of their structure. We are back to the pyramid of imposition and acquiescence. Organisations are structured in the same way as the system as a whole. Political parties are not open forums of free expression. They are hierarchies. I was a national spokesman for the British Green Party which claimed to be a different kind of politics in which influence and power was devolved; but I can tell you from direct experience – and it's far worse now – that Green parties are run as hierarchies like all the others however much they may try to hide that fact or kid themselves that it's not true. A very few at the top of all political parties are directing policy and personnel. They decide if you are elevated in the party or serve as a government minister and to do that you have to be a yes man or woman. Look at all the maverick political thinkers who never ascended the greasy pole. If you want to progress within the party or reach 'high-office' you need to fall into line and conform. Exceptions to this are rare indeed. Should you want to run for parliament or Congress you have to persuade the local or state level of the party to select you and for that you need to play the game as dictated by the hierarchy. If you secure election and wish to progress within the greater structure you need to go on conforming to what is acceptable to those running the hierarchy from the peak of the pyramid. Political parties are perceptual gulags and the very fact that there are party ‘Whips’ appointed to ‘whip’ politicians into voting the way the hierarchy demands exposes the ridiculous idea that politicians are elected to serve the people they are supposed to represent. Cult operatives and manipulation has long seized control of major parties that have any chance of forming a government and at least most of those that haven’t. A new party forms and the Cult goes to work to infiltrate and direct. This has reached such a level today that you see video compilations of ‘leaders’ of all parties whether Democrats, Republicans, Conservative, Labour and Green parroting the same Cult mantra of ‘Build Back Better’ and the ‘Great Reset’ which are straight off the Cult song-sheet to describe the transformation of global society in response to the Cult-instigated hoaxes of the ‘Covid pandemic’ and human-caused ‘climate change’. To see Caroline Lucas, the Green Party MP that I knew when I was in the party in the 1980s, speaking in support of plans proposed by Cult operative Klaus Schwab representing the billionaire global elite is a real head-shaker.

Many parties – one master

The party system is another mind-trick and was instigated to change the nature of the dictatorship by swapping ‘royalty’ for dark suits that people believed – though now ever less so – represented their interests. Understanding this trick is to realise that a single force (the Cult) controls all parties either directly in terms of the major ones or through manipulation of perception and ideology with others. You don’t need to manipulate Green parties to demand your transformation of society in the name of ‘climate change’ when they are obsessed with the lie that this is essential to ‘save the planet’. You just give them a platform and away they go serving your interests while believing they are being environmentally virtuous. America’s political structure is a perfect blueprint for how the two or multi-party system is really a one-party state. The Republican Party is controlled from one step back in the shadows by a group made up of billionaires and their gofers known as neoconservatives or Neocons.

I have exposed them in fine detail in my books and they were the driving force behind the policies of the imbecilic presidency of Boy George Bush which included 9/11 (see *The Trigger* for a comprehensive demolition of the official story), the subsequent 'war on terror' (war *of* terror) and the invasions of Afghanistan and Iraq. The latter was a No-Problem-Reaction-Solution based on claims by Cult operatives, including Bush and British Prime Minister Tony Blair, about Saddam Hussein's 'weapons of mass destruction' which did not exist as war criminals Bush and Blair well knew.

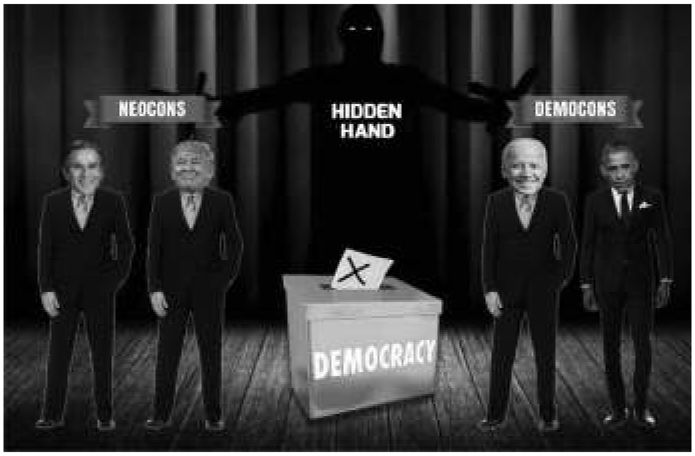


Figure 6: Different front people, different parties – same control system.

The Democratic Party has its own 'Neocon' group controlling from the background which I call the 'Democons' and here's the penny-drop – the Neocons and Democons answer to the same masters one step further back into the shadows (Fig 6). At that level of the Cult the Republican and Democrat parties are controlled by the same people and no matter which is in power the Cult is in power. This is how it works in almost every country and certainly in Britain with Conservative, Labour, Liberal Democrat and Green parties now all on the same page whatever the rhetoric may be in their feeble attempts to appear different. Neocons operated at the time of Bush through a think tank called The Project for the New American Century which in September, 2000, published a document entitled *Rebuilding America's Defenses: Strategies, Forces, and Resources*

For a New Century demanding that America fight 'multiple, simultaneous major theatre wars' as a 'core mission' to force regime-change in countries including Iraq, Libya and Syria. Neocons arranged for Bush ('Republican') and Blair ('Labour Party') to front-up the invasion of Iraq and when they departed the Democons orchestrated the targeting of Libya and Syria through Barack Obama ('Democrat') and British Prime Minister David Cameron ('Conservative Party'). We have 'different' parties and 'different' people, but the same unfolding script. The more the Cult has seized the reigns of parties and personnel the more their policies have transparently pursued the same agenda to the point where the fascist 'Covid' impositions of the Conservative junta of Jackboot Johnson in Britain were opposed by the Labour Party because they were not fascist enough. The Labour Party is likened to the US Democrats while the Conservative Party is akin to a British version of the Republicans and on both sides of the Atlantic they all speak the same language and support the direction demanded by the Cult although some more enthusiastically than others. It's a similar story in country after country because it's all centrally controlled. Oh, but what about Trump? I'll come to him shortly. Political 'choice' in the 'party' system goes like this: You vote for Party A and they get into government. You don't like what they do so next time you vote for Party B and they get into government. You don't like what they do when it's pretty much the same as Party A and why wouldn't that be with both controlled by the same force? Given that only two, sometimes three, parties have any chance of forming a government to get rid of Party B that you don't like you have to vote again for Party A which … you don't like. This, ladies and gentlemen, is what they call 'democracy' which we are told – wrongly – is a term interchangeable with 'freedom'.

The cult of cults

At this point I need to introduce a major expression of the Global Cult known as Sabbatian-Frankism. Sabbatian is also spelt as Sabbatean. I will summarise here. I have published major exposés and detailed background in other works. Sabbatian-Frankism combines the names of two frauds posing as 'Jewish' men, Sabbatai Zevi (1626-1676), a rabbi, black magician and occultist who proclaimed he was the Jewish messiah; and Jacob Frank (1726-1791), the Polish 'Jew', black magician and occultist who said he was the reincarnation of 'messiah' Zevi and biblical patriarch Jacob. They worked across two centuries to establish the Sabbatian-Frankist cult that plays a major, indeed central, role in the manipulation of human society by the Global Cult which has its origins much further back in history than Sabbatai Zevi. I should emphasise two points here in response to the shrill voices that will scream 'anti-Semitism': (1) Sabbatian-Frankists are NOT Jewish and only pose as such to hide their cult behind a Jewish façade; and (2) my information about this cult has come from Jewish sources who have long realised that their society and community has been infiltrated and taken over by interloper Sabbatian-Frankists. Infiltration has been the foundation technique of Sabbatian-Frankism from its official origin in the 17th century. Zevi's Sabbatian sect attracted a massive following described as the biggest messianic movement in Jewish history, spreading as far as Africa and Asia, and he promised a return for the Jews to the 'Promised Land' of Israel. Sabbatianism was not Judaism but an inversion of everything that mainstream Judaism stood for. So much so that this sinister cult would have a feast day when Judaism had a fast day and whatever was forbidden in Judaism the Sabbatians were encouraged and even commanded to do. This included incest and what would be today called Satanism. Members were forbidden to marry outside the sect and there was a system of keeping their children ignorant of what they were part of until they were old enough to be trusted not to unknowingly reveal anything to outsiders. The same system is employed to this day by the Global Cult in general which Sabbatian-Frankism has enormously influenced and now largely controls.

Zevi and his Sabbatians suffered a setback with the intervention by the Sultan of the Islamic Ottoman Empire in the Middle East and what is now the Republic of Turkey where Zevi was located. The

Sultan gave him the choice of proving his ‘divinity’, converting to Islam or facing torture and death. Funnily enough Zevi chose to convert or at least appear to. Some of his supporters were disillusioned and drifted away, but many did not with 300 families also converting – only in theory – to Islam. They continued behind this Islamic smokescreen to follow the goals, rules and rituals of Sabbatianism and became known as ‘crypto-Jews’ or the ‘Dönmeh’ which means ‘to turn’. This is rather ironic because they didn’t ‘turn’ and instead hid behind a fake Islamic persona. The process of appearing to be one thing while being very much another would become the calling card of Sabbatianism especially after Zevi’s death and the arrival of the Satanist Jacob Frank in the 18th century when the cult became Sabbatian-Frankism and plumbed still new depths of depravity and infiltration which included – still includes – human sacrifice and sex with children. Wherever Sabbatians go paedophilia and Satanism follow and is it really a surprise that Hollywood is so infested with child abuse and Satanism when it was established by Sabbatian-Frankists and is still controlled by them? Hollywood has been one of the prime vehicles for global perceptual programming and manipulation. How many believe the version of ‘history’ portrayed in movies when it is a travesty and inversion (again) of the truth? Rabbi Marvin Antelman describes Frankism in his book, *To Eliminate the Opiate*, as ‘a movement of complete evil’ while Jewish professor Gershom Scholem said of Frank in *The Messianic Idea in Judaism*: ‘In all his actions [he was] a truly corrupt and degenerate individual ... one of the most frightening phenomena in the whole of Jewish history.’ Frank was excommunicated by traditional rabbis, as was Zevi, but Frank was undeterred and enjoyed vital support from the House of Rothschild, the infamous banking dynasty whose inner-core are Sabbatian-Frankists and not Jews. Infiltration of the Roman Church and Vatican was instigated by Frank with many Dönmeh ‘turning’ again to convert to Roman Catholicism with a view to hijacking the reins of power. This was the ever-repeating modus operandi and continues to be so. Pose as an advocate of the religion, culture or country that you want to control and then manipulate your people into the positions of authority and influence largely as advisers, administrators and Svengalis for those that appear to be in power. They did this with Judaism, Christianity (Christian Zionism is part of this), Islam and other religions and nations until Sabbatian-Frankism spanned the world as it does today.

Sabbatian Saudis and the terror network

One expression of the Sabbatian-Frankist Dönmeh within Islam is the ruling family of Saudi Arabia, the House of Saud, through which came the vile distortion of Islam known as Wahhabism. This is the violent creed followed by terrorist groups like Al-Qaeda and ISIS or Islamic State. Wahhabism is the hand-chopping, head-chopping 'religion' of Saudi Arabia which is used to keep the people in a constant state of fear so the interloper House of Saud can continue to rule. Al-Qaeda and Islamic State were lavishly funded by the House of Saud while being created and directed by the Sabbatian-Frankist network in the United States that operates through the Pentagon, CIA and the government in general of whichever 'party'. The front man for the establishment of Wahhabism in the middle of the 18th century was a Sabbatian-Frankist 'crypto-Jew' posing as Islamic called Muhammad ibn Abd al-Wahhab. His daughter would marry the son of Muhammad bin Saud who established the first Saudi state before his death in 1765 with support from the British Empire. Bin Saud's successors would establish modern Saudi Arabia in league with the British and Americans in 1932 which allowed them to seize control of Islam's major shrines in Mecca and Medina. They have dictated the direction of Sunni Islam ever since while Iran is the major centre of the Shiite version and here we have the source of at least the public conflict between them. The Sabbatian network has used its Wahhabi extremists to carry out Problem-Reaction-Solution terrorist attacks in the name of 'Al-Qaeda' and 'Islamic State' to justify a devastating 'war on terror', ever-increasing surveillance of the population and to terrify people into compliance. Another insight of the Renegade Mind is the streetwise understanding that just because a country, location or people are attacked doesn’t mean that those apparently representing that country, location or people are not behind the attackers. Often they are *orchestrating* the attacks because of the societal changes that can be then justified in the name of ‘saving the population from terrorists’.

I show in great detail in *The Trigger* how Sabbatian-Frankists were the real perpetrators of 9/11 and not ‘19 Arab hijackers’ who were blamed for what happened. Observe what was justified in the name of 9/11 alone in terms of Middle East invasions, mass surveillance and control that fulfilled the demands of the Project for the New American Century document published by the Sabbatian Neocons. What appear to be enemies are on the deep inside players on the same Sabbatian team. Israel and Arab ‘royal’ dictatorships are all ruled by Sabbatians and the recent peace agreements between Israel and Saudi Arabia, the United Arab Emirates (UAE) and others are only making formal what has always been the case behind the scenes. Palestinians who have been subjected to grotesque tyranny since Israel was bombed and terrorised into existence in 1948 have never stood a chance. Sabbatian-Frankists have controlled Israel (so the constant theme of violence and war which Sabbatians love) and they have controlled the Arab countries that Palestinians have looked to for real support that never comes. ‘Royal families’ of the Arab world in Saudi Arabia, Bahrain, UAE, etc., are all Sabbatians with allegiance to the aims of the cult and not what is best for their Arabic populations. They have stolen the oil and financial resources from their people by false claims to be ‘royal dynasties’ with a genetic right to rule and by employing vicious militaries to impose their will.

Satanic ‘illumination’

The Satanist Jacob Frank formed an alliance in 1773 with two other Sabbatians, Mayer Amschel Rothschild (1744-1812), founder of the Rothschild banking dynasty, and Jesuit-educated fraudulent Jew, Adam Weishaupt, and this led to the formation of the Bavarian Illuminati, firstly under another name, in 1776. The Illuminati would be the manipulating force behind the French Revolution (1789-1799) and was also involved in the American Revolution (1775-1783) before and after the Illuminati's official creation. Weishaupt would later become (in public) a Protestant Christian in archetypal Sabbatian style. I read that his name can be decoded as Adam-Weishaupt or 'the first man to lead those who know'. He wasn't a leader in the sense that he was a subordinate, but he did lead those below him in a crusade of transforming human society that still continues today. The theme was confirmed as early as 1785 when a horseman courier called Lanz was reported to be struck by lighting and extensive Illuminati documents were found in his saddlebags. They made the link to Weishaupt and detailed the plan for world takeover. Current events with 'Covid' fascism have been in the making for a very long time. Jacob Frank was jailed for 13 years by the Catholic Inquisition after his arrest in 1760 and on his release he headed for Frankfurt, Germany, home city and headquarters of the House of Rothschild where the alliance was struck with Mayer Amschel Rothschild and Weishaupt. Rothschild arranged for Frank to be given the title of Baron and he became a wealthy nobleman with a big following of Jews in Germany, the Austro-Hungarian Empire and other European countries. Most of them would have believed he was on their side.

The name 'Illuminati' came from the Zohar which is a body of works in the Jewish mystical 'bible' called the Kabbalah. 'Zohar' is the foundation of Sabbatian-Frankist belief and in Hebrew 'Zohar' means 'splendour', 'radiance', 'illuminated', and so we have 'Illuminati'. They claim to be the 'Illuminated Ones' from their knowledge systematically hidden from the human population and passed on through generations of carefully-chosen initiates in the global secret society network or Cult. Hidden knowledge includes an awareness of the Cult agenda for the world and the nature of our collective reality that I will explore later. Cult 'illumination' is symbolised by the torch held by the Statue of Liberty which was gifted to New York by French Freemasons in Paris who knew exactly what it represents. 'Liberty' symbolises the goddess worshipped in

Babylon as Queen Semiramis or Ishtar. The significance of this will become clear. Notice again the ubiquitous theme of inversion with the Statue of 'Liberty' really symbolising mass control (Fig 7). A mirror-image statute stands on an island in the River Seine in Paris from where New York Liberty originated (Fig 8). A large replica of the Liberty flame stands on top of the Pont de l'Alma tunnel in Paris where Princess Diana died in a Cult ritual described in *The Biggest Secret*. Lucifer 'the light bringer' is related to all this (and much more as we'll see) and 'Lucifer' is a central figure in Sabbatian-Frankism and its associated Satanism. Sabbatians reject the Jewish Torah, or Pentateuch, the 'five books of Moses' in the Old Testament known as Genesis, Exodus, Leviticus, Numbers, and Deuteronomy which are claimed by Judaism and Christianity to have been dictated by 'God' to Moses on Mount Sinai. Sabbatians say these do not apply to them and they seek to replace them with the Zohar to absorb Judaism and its followers into their inversion which is an expression of a much greater global inversion. They want to delete all religions and force humanity to worship a one-world religion – Sabbatian Satanism that also includes worship of the Earth goddess. Satanic themes are being more and more introduced into mainstream society and while Christianity is currently the foremost target for destruction the others are planned to follow.

Figure 7: The Cult goddess of Babylon disguised as the Statue of Liberty holding the flame of Lucifer the 'light bringer'.

Radio France

Marx brothers

Rabbi Marvin Antelman connects the Illuminati to the Jacobins in *To Eliminate the Opiate* and Jacobins were the force behind the French Revolution. He links both to the Bund der Gerechten, or League of the Just, which was the network that inflicted communism/Marxism on the world. Antelman wrote:

> The original inner circle of the Bund der Gerechten consisted of born Catholics, Protestants and Jews [Sabbatian-Frankist infiltrators], and those representatives of respective subdivisions formulated schemes for the ultimate destruction of their faiths. The heretical Catholics laid plans which they felt would take a century or more for the ultimate destruction of the church; the apostate Jews for the ultimate destruction of the Jewish religion.

Sabbatian-created communism connects into this anti-religion agenda in that communism does not allow for the free practice of religion. The Sabbatian 'Bund' became the International Communist Party and Communist League and in 1848 'Marxism' was born with the Communist Manifesto of Sabbatian assets Karl Marx and Friedrich Engels. It is absolutely no coincidence that Marxism, just a different name for fascist and other centrally-controlled tyrannies, is being imposed worldwide as a result of the 'Covid' hoax and nor that Marxist/fascist China was the place where the hoax originated. The reason for this will become very clear in the chapter 'Covid: The calculated catastrophe'. The so-called 'Woke' mentality has hijacked traditional beliefs of the political left and replaced them with far-right make-believe ‘social justice’ better known as Marxism. Woke will, however, be swallowed by its own perceived ‘revolution’ which is really the work of billionaires and billionaire corporations feigning being ‘Woke’. Marxism is being touted by Wokers as a replacement for ‘capitalism’ when we don’t have ‘capitalism’. We have cartelism in which the market is stitched up by the very Cult billionaires and corporations bankrolling Woke. Billionaires love Marxism which keeps the people in servitude while they control from the top. Terminally naïve Wokers think they are ‘changing the world’ when it’s the Cult that is doing the changing and when they have played their vital part and become surplus to requirements they, too, will be targeted. The Illuminati-Jacobins were behind the period known as ‘The Terror’ in the French Revolution in 1793 and 1794 when Jacobin Maximillian de Robespierre and his Orwellian ‘Committee of Public Safety’ killed 17,000 ‘enemies of the Revolution’ who had once been ‘friends of the Revolution’. Karl Marx (1818-1883), whose Sabbatian creed of Marxism has cost the lives of at least 100 million people, is a hero once again to Wokers who have been systematically kept ignorant of real history by their ‘education’ programming. As a result they now promote a Sabbatian ‘Marxist’ abomination destined at some point to consume them. Rabbi Antelman, who spent decades researching the Sabbatian plot, said of the League of the Just and Karl Marx:

> Contrary to popular opinion Karl Marx did not originate the Communist Manifesto. He was paid for his services by the League of the Just, which was known in its country of origin, Germany, as the Bund der Geaechteten.

Antelman said the text attributed to Marx was the work of other people and Marx ‘was only repeating what others already said’. Marx was ‘a hired hack – lackey of the wealthy Illuminists’. Marx famously said that religion was the ‘opium of the people’ (part of the Sabbatian plan to demonise religion) and Antelman called his books, *To Eliminate the Opiate*. Marx was born Jewish, but his family converted to Christianity (Sabbatian modus operandi) and he attacked Jews, not least in his book, *A World Without Jews*. In doing so he supported the Sabbatian plan to destroy traditional Jewishness and Judaism which we are clearly seeing today with the vindictive targeting of orthodox Jews by the Sabbatian government of Israel over 'Covid' laws. I don't follow any religion and it has done much damage to the world over centuries and acted as a perceptual straightjacket. Renegade Minds, however, are always asking *why* something is being done. It doesn't matter if they agree or disagree with what is happening – *why* is it happening is the question. The 'why?' can be answered with regard to religion in that religions create interacting communities of believers when the Cult wants to dismantle all discourse, unity and interaction (see 'Covid' lockdowns) and the ultimate goal is to delete all religions for a one-world religion of Cult Satanism worshipping their 'god' of which more later. We see the same 'why?' with gun control in America. I don't have guns and don't want them, but why is the Cult seeking to disarm the population at the same time that law enforcement agencies are armed to their molars and why has every tyrant in history sought to disarm people before launching the final takeover? They include Hitler, Stalin, Pol Pot and Mao who followed confiscation with violent seizing of power. You know it's a Cult agenda by the people who immediately race to the microphones to exploit dead people in multiple shootings. Ultra-Zionist Cult lackey Senator Chuck Schumer was straight on the case after ten people were killed in Boulder, Colorado in March, 2121. Simple rule … if Schumer wants it the Cult wants it and the same with his ultra-Zionist mate the wild-eyed Senator Adam Schiff. At the same time they were calling for the disarmament of Americans, many of whom live a long way from a police response, Schumer, Schiff and the rest of these pampered clowns were sitting on Capitol Hill behind a razor-wired security fence protected by thousands of armed troops in addition to their own armed bodyguards. Mom and pop in an isolated home? They're just potential mass shooters.

Zion Mainframe

Sabbatian-Frankists and most importantly the Rothschilds were behind the creation of 'Zionism', a political movement that demanded a Jewish homeland in Israel as promised by Sabbatai Zevi. The very symbol of Israel comes from the German meaning of the name Rothschild. Dynasty founder Mayer Amschel Rothschild changed the family name from Bauer to Rothschild, or 'Red-Shield' in German, in deference to the six-pointed 'Star of David' hexagram displayed on the family's home in Frankfurt. The symbol later appeared on the flag of Israel after the Rothschilds were centrally involved in its creation. Hexagrams are not a uniquely Jewish symbol and are widely used in occult ('hidden') networks often as a symbol for Saturn (see my other books for why). Neither are Zionism and Jewishness interchangeable. Zionism is a political movement and philosophy and not a 'race' or a people. Many Jews oppose Zionism and many non-Jews, including US President Joe Biden, call themselves Zionists as does Israel-centric Donald Trump. America's support for the Israel government is pretty much a gimme with ultra-Zionist billionaires and corporations providing fantastic and dominant funding for both political parties. Former Congresswoman Cynthia McKinney has told how she was approached immediately she ran for office to 'sign the pledge' to Israel and confirm that she would always vote in that country's best interests. All American politicians are approached in this way. Anyone who refuses will get no support or funding from the enormous and all-powerful Zionist lobby that includes organisations like mega-lobby group AIPAC, the American Israel Public Affairs Committee. Trump's biggest funder was ultra-Zionist casino and media billionaire Sheldon Adelson while major funders of the Democratic Party include ultra-Zionist George Soros and ultra-Zionist financial and media mogul, Haim Saban. Some may reel back at the suggestion that Soros is an Israel-firster (Sabbatian-controlled Israel-firster), but Renegade Minds watch the actions not the words and everywhere Soros donates his billions the Sabbatian agenda benefits. In the spirit of Sabbatian inversion Soros pledged $1 billion for a new university network to promote 'liberal values and tackle intolerance'. He made the announcement during his annual speech at the Cult-owned World Economic Forum in Davos, Switzerland, in January, 2020, after his ‘harsh criticism’ of ‘authoritarian rulers’ around the world. You can only laugh at such brazen mendacity. How *he* doesn’t laugh is the mystery. Translated from the Orwellian ‘liberal values and tackle intolerance’ means teaching non-white people to hate white people and for white people to loathe themselves for being born white. The reason for that will become clear.

The ‘Anti-Semitism’ fraud

Zionists support the Jewish homeland in the land of Palestine which has been the Sabbatian-Rothschild goal for so long, but not for the benefit of Jews. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. This is nothing more than a Sabbatian protection racket to stop legitimate investigation and exposure of their agendas and activities. The official definition of ‘anti-Semitism’ has more recently been expanded to include criticism of Zionism – a *political movement* – and this was done to further stop exposure of Sabbatian infiltrators who created Zionism as we know it today in the 19th century. Renegade Minds will talk about these subjects when they know the shit that will come their way. People must decide if they want to know the truth or just cower in the corner in fear of what others will say. Sabbatians have been trying to label me as ‘anti-Semitic’ since the 1990s as I have uncovered more and more about their background and agendas. Useless, gutless, fraudulent ‘journalists’ then just repeat the smears without question and on the day I was writing this section a pair of unquestioning repeaters called Ben Quinn and Archie Bland (how appropriate) outright called me an ‘anti-Semite’ in the establishment propaganda sheet, the London *Guardian*, with no supporting evidence. The

Sabbatian Anti-Semitism Industry said so and who are they to question that? They wouldn't dare. Ironically 'Semitic' refers to a group of languages in the Middle East that are almost entirely Arabic. 'Anti-Semitism' becomes 'anti-Arab' which if the consequences of this misunderstanding were not so grave would be hilarious. Don't bother telling Quinn and Bland. I don't want to confuse them, bless 'em. One reason I am dubbed 'anti-Semitic' is that I wrote in the 1990s that Jewish operatives (Sabbatians) were heavily involved in the Russian Revolution when Sabbatians overthrew the Romanov dynasty. This apparently made me 'anti-Semitic'. Oh, really? Here is a section from *The Trigger*:

> British journalist Robert Wilton confirmed these themes in his 1920 book *The Last Days of the Romanovs* when he studied official documents from the Russian government to identify the members of the Bolshevik ruling elite between 1917 and 1919. The Central Committee included 41 Jews among 62 members; the Council of the People's Commissars had 17 Jews out of 22 members; and 458 of the 556 most important Bolshevik positions between 1918 and 1919 were occupied by Jewish people. Only 17 were Russian. Then there were the 23 Jews among the 36 members of the vicious Cheka Soviet secret police established in 1917 who would soon appear all across the country.
>
> Professor Robert Service of Oxford University, an expert on 20th century Russian history, found evidence that ['Jewish'] Leon Trotsky had sought to make sure that Jews were enrolled in the Red Army and were disproportionately represented in the Soviet civil bureaucracy that included the Cheka which performed mass arrests, imprisonment and executions of 'enemies of the people'. A US State Department Decimal File (861.00/5339) dated November 13th, 1918, names [Rothschild banking agent in America] Jacob Schiff and a list of ultra-Zionists as funders of the Russian Revolution leading to claims of a 'Jewish plot', but the key point missed by all is they were not 'Jews' – they were Sabbatian-Frankists.

Britain's Winston Churchill made the same error by mistake or otherwise. He wrote in a 1920 edition of the *Illustrated Sunday Herald* that those behind the Russian revolution were part of a 'worldwide conspiracy for the overthrow of civilisation and for the reconstitution of society on the basis of arrested development, of envious malevolence, and impossible equality' (see 'Woke' today because that has been created by the same network). Churchill said there was no need to exaggerate the part played in the creation of Bolshevism and in the actual bringing about of the Russian

Revolution 'by these international and for the most part atheistical Jews' ['atheistical Jews' = Sabbatians]. Churchill said it is certainly a very great one and probably outweighs all others: 'With the notable exception of Lenin, the majority of the leading figures are Jews.' He went on to describe, knowingly or not, the Sabbatian modus operandi of placing puppet leaders nominally in power while they control from the background:

> Moreover, the principal inspiration and driving power comes from the Jewish leaders. Thus Tchitcherin, a pure Russian, is eclipsed by his nominal subordinate, Litvinoff, and the influence of Russians like Bukharin or Lunacharski cannot be compared with the power of Trotsky, or of Zinovieff, the Dictator of the Red Citadel (Petrograd), or of Krassin or Radek – all Jews. In the Soviet institutions the predominance of Jews is even more astonishing. And the prominent, if not indeed the principal, part in the system of terrorism applied by the Extraordinary Commissions for Combatting Counter-Revolution has been taken by Jews, and in some notable cases by Jewesses.

What I said about seriously disproportionate involvement in the Russian Revolution by Jewish 'revolutionaries' (Sabbatians) is provable fact, but truth is no defence against the Sabbatian Anti-Semitism Industry, its repeater parrots like Quinn and Bland, and the now breathtaking network of so-called 'Woke' 'anti-hate' groups with interlocking leaderships and funding which have the role of discrediting and silencing anyone who gets too close to exposing the Sabbatians. We have seen 'truth is no defence' confirmed in legal judgements with the Saskatchewan Human Rights Commission in Canada decreeing this: 'Truthful statements can be presented in a manner that would meet the definition of hate speech, and not all truthful statements must be free from restriction.' Most 'anti-hate' activists, who are themselves consumed by hatred, are too stupid and ignorant of the world to know how they are being used. They are far too far up their own virtue-signalling arses and it's far too dark for them to see anything.

The 'revolution' game

The background and methods of the 'Russian' Revolution are straight from the Sabbatian playbook seen in the French Revolution and endless others around the world that appear to start as a revolution of the people against tyrannical rule and end up with a regime change to more tyrannical rule overtly or covertly. Wars, terror attacks and regime overthrows follow the Sabbatian cult through history with its agents creating them as Problem-Reaction-Solutions to remove opposition on the road to world domination. Sabbatian dots connect the Rothschilds with the Illuminati, Jacobins of the French Revolution, the 'Bund' or League of the Just, the International Communist Party, Communist League and the Communist Manifesto of Karl Marx and Friedrich Engels that would lead to the Rothschild-funded Russian Revolution. The sequence comes under the heading of 'creative destruction' when you advance to your global goal by continually destroying the status quo to install a new status quo which you then also destroy. The two world wars come to mind. With each new status quo you move closer to your planned outcome. Wars and mass murder are to Sabbatians a collective blood sacrifice ritual. They are obsessed with death for many reasons and one is that death is an inversion of life. Satanists and Sabbatians are obsessed with death and often target churches and churchyards for their rituals. Inversion-obsessed Sabbatians explain the use of inverted symbolism including the *inverted* pentagram and *inverted* cross. The inversion of the cross has been related to targeting Christianity, but the cross was a religious symbol long before Christianity and its inversion is a statement about the Sabbatian mentality and goals more than any single religion.

Sabbatians operating in Germany were behind the rise of the occult-obsessed Nazis and the subsequent Jewish exodus from Germany and Europe to Palestine and the United States after World War Two. The Rothschild dynasty was at the forefront of this both as political manipulators and by funding the operation. Why would Sabbatians help to orchestrate the horrors inflicted on Jews by the Nazis and by Stalin after they organised the Russian Revolution? Sabbatians hate Jews and their religion, that's why. They pose as Jews and secure positions of control within Jewish society and play the 'anti-Semitism' card to protect themselves from exposure through a global network of organisations answering to the Sabbatian-created-and-controlled globe-spanning intelligence network that involves a stunning web of military-intelligence operatives and operations for a tiny country of just nine million. Among them are Jewish assets who are not Sabbatians but have been convinced by them that what they are doing is for the good of Israel and the Jewish community to protect them from what they have been programmed since childhood to believe is a Jew-hating hostile world. The Jewish community is just a highly convenient cover to hide the true nature of Sabbatians. Anyone getting close to exposing their game is accused by Sabbatian place-people and gofers of 'anti-Semitism' and claiming that all Jews are part of a plot to take over the world. I am not saying that. I am saying that Sabbatians – the *real* Jew-haters – have infiltrated the Jewish community to use them both as a cover and an 'anti-Semitic' defence against exposure. Thus we have the Anti-Semitism Industry targeted researchers in this way and most Jewish people think this is justified and genuine. They don't know that their 'Jewish' leaders and institutions of state, intelligence and military are not controlled by Jews at all, but cultists and stooges of Sabbatian-Frankism. I once added my name to a pro-Jewish freedom petition online and the next time I looked my name was gone and text had been added to the petition blurb to attack me as an 'anti-Semite' such is the scale of perceptual programming.

Moving on America

I tell the story in *The Trigger* and a chapter called 'Atlantic Crossing' how particularly after Israel was established the Sabbatians moved in on the United States and eventually grasped control of government administration, the political system via both Democrats and Republicans, the intelligence community like the CIA and National Security Agency (NSA), the Pentagon and mass media. Through this seriously compartmentalised network Sabbatians and their operatives in Mossad, Israeli Defense Forces (IDF) and US agencies pulled off 9/11 and blamed it on 19 'Al-Qaeda hijackers' dominated by men from, or connected to, Sabbatian-ruled Saudi

Arabia. The '19' were not even on the planes let alone flew those big passenger jets into buildings while being largely incompetent at piloting one-engine light aircraft. 'Hijacker' Hani Hanjour who is said to have flown American Airlines Flight 77 into the Pentagon with a turn and manoeuvre most professional pilots said they would have struggled to do was banned from renting a small plane by instructors at the Freeway Airport in Bowie, Maryland, just *six weeks* earlier on the grounds that he was an incompetent pilot. The Jewish population of the world is just 0.2 percent with even that almost entirely concentrated in Israel (75 percent Jewish) and the United States (around two percent). This two percent and globally 0.2 percent refers to *Jewish* people and not Sabbatian interlopers who are a fraction of that fraction. What a sobering thought when you think of the fantastic influence on world affairs of tiny Israel and that the Project for the New America Century (PNAC) which laid out the blueprint in September, 2000, for America's war on terror and regime change wars in Iraq, Libya and Syria was founded and dominated by Sabbatians known as 'Neocons'. The document conceded that this plan would not be supported politically or publicly without a major attack on American soil and a Problem-Reaction-Solution excuse to send troops to war across the Middle East. Sabbatian Neocons said:

> ... [The] process of transformation ... [war and regime change] ... is likely to be a long one, absent some catastrophic and catalysing event – like a new Pearl Harbor.

Four months later many of those who produced that document came to power with their inane puppet George Bush from the long-time Sabbatian Bush family. They included Sabbatian Dick Cheney who was officially vice-president, but really de-facto president for the entirety of the 'Bush' government. Nine months after the 'Bush' inauguration came what Bush called at the time 'the Pearl Harbor of the 21st century' and with typical Sabbatian timing and symbolism 2001 was the 60th anniversary of the attack in 1941 by the Japanese Air Force on Pearl Harbor, Hawaii, which allowed President Franklin Delano Roosevelt to take the United States into a Sabbatian-instigated Second World War that he said in his election campaign that he never would. The evidence is overwhelming that Roosevelt and his military and intelligence networks knew the attack was coming and did nothing to stop it, but they did make sure that America's most essential naval ships were not in Hawaii at the time. Three thousand Americans died in the Pearl Harbor attacks as they did on September 11th. By the 9/11 year of 2001 Sabbatians had widely infiltrated the US government, military and intelligence operations and used their compartmentalised assets to pull off the 'Al-Qaeda' attacks. If you read *The Trigger* it will blow your mind to see the utterly staggering concentration of 'Jewish' operatives (Sabbatian infiltrators) in essential positions of political, security, legal, law enforcement, financial and business power before, during, and after the attacks to make them happen, carry them out, and then cover their tracks – and I do mean *staggering* when you think of that 0.2 percent of the world population and two percent of Americans which are Jewish while Sabbatian infiltrators are a fraction of that. A central foundation of the 9/11 conspiracy was the hijacking of government, military, Air Force and intelligence computer systems in real time through 'back-door' access made possible by Israeli (Sabbatian) 'cyber security' software. Sabbatian-controlled Israel is on the way to rivalling Silicon Valley for domination of cyberspace and is becoming the dominant force in cyber-security which gives them access to entire computer systems and their passcodes across the world. Then add to this that Zionists head (officially) Silicon Valley giants like Google (Larry Page and Sergey Brin), Google-owned YouTube (Susan Wojcicki), Facebook (Mark Zuckerberg and Sheryl Sandberg), and Apple (Chairman Arthur D. Levinson), and that ultra-Zionist hedge fund billionaire Paul Singer has a $1 billion stake in Twitter which is only nominally headed by 'CEO' pothead Jack Dorsey. As cable news host Tucker Carlson said of Dorsey: 'There used to be debate in the medical community whether dropping a ton of acid had permanent effects and I think that debate has now ended.' Carlson made the comment after Dorsey told a hearing on Capitol Hill (if you cut through his bullshit) that he believed in free speech so long as he got to decide what you can hear and see. These 'big names' of Silicon Valley are only front men and women for the Global Cult, not least the Sabbatians, who are the true controllers of these corporations. Does anyone still wonder why these same people and companies have been ferociously censoring and banning people (like me) for exposing any aspect of the Cult agenda and especially the truth about the 'Covid' hoax which Sabbatians have orchestrated?

The Jeffrey Epstein paedophile ring was a Sabbatian operation. He was officially 'Jewish' but he was a Sabbatian and women abused by the ring have told me about the high number of 'Jewish' people involved. The Epstein horror has Sabbatian written all over it and matches perfectly their modus operandi and obsession with sex and ritual. Epstein was running a Sabbatian blackmail ring in which famous people with political and other influence were provided with young girls for sex while everything was being filmed and recorded on hidden cameras and microphones at his New York house, Caribbean island and other properties. Epstein survivors have described this surveillance system to me and some have gone public. Once the famous politician or other figure knew he or she was on video they tended to do whatever they were told. Here we go again …when you've got them by the balls their hearts and minds will follow. Sabbatians use this blackmail technique on a wide scale across the world to entrap politicians and others they need to act as demanded. Epstein's private plane, the infamous 'Lolita Express', had many well-known passengers including Bill Clinton while Bill Gates has flown on an Epstein plane and met with him four years after Epstein had been jailed for paedophilia. They subsequently met many times at Epstein's home in New York according to a witness who was there. Epstein's infamous side-kick was Ghislaine Maxwell, daughter of Mossad agent and ultra-Zionist mega-crooked British businessman, Bob Maxwell, who at one time owned the *Daily Mirror* newspaper. Maxwell was murdered at sea on his boat in 1991 by Sabbatian-controlled Mossad when he became a liability with his business empire collapsing as a former Mossad operative has confirmed (see *The Trigger*).

Money, money, money, funny money ...

Before I come to the Sabbatian connection with the last three US presidents I will lay out the crucial importance to Sabbatians of controlling banking and finance. Sabbatian Mayer Amschel Rothschild set out to dominate this arena in his family's quest for total global control. What is freedom? It is, in effect, choice. The more choices you have the freer you are and the fewer your choices the more you are enslaved. In the global structure created over centuries by Sabbatians the biggest decider and restrictor of choice is … money. Across the world if you ask people what they would like to do with their lives and why they are not doing that they will reply 'I don't have the money'. This is the idea. A global elite of multi-billionaires are described as 'greedy' and that is true on one level; but control of money – who has it and who doesn't – is not primarily about greed. It's about control. Sabbatians have seized ever more control of finance and sucked the wealth of the world out of the hands of the population. We talk now, after all, about the 'One-percent' and even then the wealthiest are a lot fewer even than that. This has been made possible by a money scam so outrageous and so vast it could rightly be called the scam of scams founded on creating 'money' out of nothing and 'loaning' that with interest to the population. Money out of nothing is called 'credit'. Sabbatians have asserted control over governments and banking ever more completely through the centuries and secured financial laws that allow banks to lend hugely more than they have on deposit in a confidence trick known as fractional reserve lending. Imagine if you could lend money that doesn't exist and charge the recipient interest for doing so. You would end up in jail. Bankers by contrast end up in mansions, private jets, Malibu and Monaco.

Banks are only required to keep a fraction of their deposits and wealth in their vaults and they are allowed to lend 'money' they don't have called 'credit. Go into a bank for a loan and if you succeed the banker will not move any real wealth into your account. They will type into your account the amount of the agreed 'loan' – say £100,000. This is not wealth that really exists; it is non-existent, fresh-air, created-out-of-nothing 'credit' which has never, does not, and will never exist except in theory. Credit is backed by nothing except wind and only has buying power because people think that it has buying power and accept it in return for property, goods and services. I have described this situation as like those cartoon characters you see chasing each other and when they run over the edge of a cliff they keep running forward on fresh air until one of them looks down, realises what's happened, and they all crash into the ravine. The whole foundation of the Sabbatian financial system is to stop people looking down except for periodic moments when they want to crash the system (as in 2008 and 2020 ongoing) and reap the rewards from all the property, businesses and wealth their borrowers had signed over as 'collateral' in return for a 'loan' of fresh air. Most people think that money is somehow created by governments when it comes into existence from the start as a debt through banks 'lending' illusory money called credit. Yes, the very currency of exchange is a *debt* from day one issued as an interest-bearing loan. Why don't governments create money interest-free and lend it to their people interest-free? Governments are controlled by Sabbatians and the financial system is controlled by Sabbatians for whom interest-free money would be a nightmare come true. Sabbatians underpin their financial domination through their global network of central banks, including the privately-owned US Federal Reserve and Britain's Bank of England, and this is orchestrated by a privately-owned central bank coordination body called the Bank for International Settlements in Basle, Switzerland, created by the usual suspects including the Rockefellers and Rothschilds. Central bank chiefs don't answer to governments or the people. They answer to the Bank for International Settlements or, in other words, the Global Cult which is dominated today by Sabbatians.

Built-in disaster

There are so many constituent scams within the overall banking scam. When you take out a loan of thin-air credit only the amount of that loan is theoretically brought into circulation to add to the amount in circulation; but you are paying back the principle plus interest. The additional interest is not created and this means that with every 'loan' there is a shortfall in the money in circulation between what is borrowed and what has to be paid back. There is never even close to enough money in circulation to repay all outstanding public and private debt including interest. Coldly weaved in the very fabric of the system is the certainty that some will lose their homes, businesses and possessions to the banking 'lender'. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts it becomes painfully obvious that there is not enough money to service all debt and interest. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts and it becomes painfully obvious – as in 2008 and currently – that there is not enough money to service all debt and interest. Sabbatian banksters have been leading the human population through a calculated series of booms (more debt incurred) and busts (when the debt can't be repaid and the banks get the debtor's tangible wealth in exchange for non-existent 'credit'). With each 'bust' Sabbatian bankers have absorbed more of the world's tangible wealth and we end up with the One-percent. Governments are in bankruptcy levels of debt to the same system and are therefore owned by a system they do not control. The Federal Reserve, 'America's central bank', is privately-owned and American presidents only nominally appoint its chairman or woman to maintain the illusion that it's an arm of government. It's not. The 'Fed' is a cartel of private banks which handed billions to its associates and friends after the crash of 2008 and has been Sabbatian-controlled since it was manipulated into being in 1913 through the covert trickery of Rothschild banking agents Jacob Schiff and Paul

Warburg, and the Sabbatian Rockefeller family. Somehow from a Jewish population of two-percent and globally 0.2 percent (Sabbatian interlopers remember are far smaller) ultra-Zionists headed the Federal Reserve for 31 years between 1987 and 2018 in the form of Alan Greenspan, Bernard Bernanke and Janet Yellen (now Biden's Treasury Secretary) with Yellen's deputy chairman a Israeli-American duel citizen and ultra-Zionist Stanley Fischer, a former governor of the Bank of Israel. Ultra-Zionist Fed chiefs spanned the presidencies of Ronald Reagan ('Republican'), Father George Bush ('Republican'), Bill Clinton ('Democrat'), Boy George Bush ('Republican') and Barack Obama ('Democrat'). We should really add the pre-Greenspan chairman, Paul Adolph Volcker, 'appointed' by Jimmy Carter ('Democrat') who ran the Fed between 1979 and 1987 during the Carter and Reagan administrations before Greenspan took over. Volcker was a long-time associate and business partner of the Rothschilds. No matter what the 'party' officially in power the United States economy was directed by the same force. Here are members of the Obama, Trump and Biden administrations and see if you can make out a common theme.

Barack Obama ('Democrat')

Ultra-Zionists Robert Rubin, Larry Summers, and Timothy Geithner ran the US Treasury in the Clinton administration and two of them reappeared with Obama. Ultra-Zionist Fed chairman Alan Greenspan had manipulated the crash of 2008 through deregulation and jumped ship just before the disaster to make way for ultra-Zionist Bernard Bernanke to hand out trillions to Sabbatian 'too big to fail' banks and businesses, including the ubiquitous ultra-Zionist Goldman Sachs which has an ongoing staff revolving door operation between itself and major financial positions in government worldwide. Obama inherited the fallout of the crash when he took office in January, 2009, and fortunately he had the support of his ultra-Zionist White House Chief of Staff Rahm Emmanuel, son of a terrorist who helped to bomb Israel into being in 1948, and his ultra-Zionist senior adviser David Axelrod, chief strategist in Obama's two successful presidential campaigns. Emmanuel, later mayor of Chicago and former senior fundraiser and strategist for Bill Clinton, is an example of the Sabbatian policy after Israel was established of migrating insider families to America so their children would be born American citizens. 'Obama' chose this financial team throughout his administration to respond to the Sabbatian-instigated crisis:

Timothy Geithner (ultra-Zionist) Treasury Secretary; Jacob J. Lew, Treasury Secretary; Larry Summers (ultra-Zionist), director of the White House National Economic Council; Paul Adolph Volcker (Rothschild business partner), chairman of the Economic Recovery Advisory Board; Peter Orszag (ultra-Zionist), director of the Office of Management and Budget overseeing all government spending; Penny Pritzker (ultra-Zionist), Commerce Secretary; Jared Bernstein (ultra-Zionist), chief economist and economic policy adviser to Vice President Joe Biden; Mary Schapiro (ultra-Zionist), chair of the Securities and Exchange Commission (SEC); Gary Gensler (ultra-Zionist), chairman of the Commodity Futures Trading Commission (CFTC); Sheila Bair (ultra-Zionist), chair of the Federal Deposit Insurance Corporation (FDIC); Karen Mills (ultra-Zionist), head of the Small Business Administration (SBA); Kenneth Feinberg (ultra-Zionist), Special Master for Executive [bail-out] Compensation. Feinberg would be appointed to oversee compensation (with strings) to 9/11 victims and families in a campaign to stop them having their day in court to question the official story. At the same time ultra-Zionist Bernard Bernanke was chairman of the Federal Reserve and these are only some of the ultra-Zionists with allegiance to Sabbatian-controlled Israel in the Obama government. Obama's biggest corporate donor was ultra-Zionist Goldman Sachs which had employed many in his administration.

Donald Trump ('Republican')

Trump claimed to be an outsider (he wasn't) who had come to 'drain the swamp'. He embarked on this goal by immediately appointing ultra-Zionist Steve Mnuchin, a Goldman Sachs employee for 17 years, as his Treasury Secretary. Others included Gary Cohn (ultra-Zionist), chief operating officer of Goldman Sachs, his first Director of the National Economic Council and chief economic adviser, who was later replaced by Larry Kudlow (ultra-Zionist). Trump's senior adviser throughout his four years in the White House was his sinister son-in-law Jared Kushner, a life-long friend of Israel Prime Minister Benjamin Netanyahu. Kushner is the son of a convicted crook who was pardoned by Trump in his last days in office. Other ultra-Zionists in the Trump administration included: Stephen Miller, Senior Policy Adviser; Avrahm Berkowitz, Deputy Adviser to Trump and his Senior Adviser Jared Kushner; Ivanka Trump, Adviser to the President, who converted to Judaism when she married Jared Kushner; David Friedman, Trump lawyer and Ambassador to Israel; Jason Greenblatt, Trump Organization executive vice president and chief legal officer, who was made Special Representative for International Negotiations and the Israeli-Palestinian Conflict; Rod Rosenstein, Deputy Attorney General; Elliot Abrams, Special Representative for Venezuela, then Iran; John Eisenberg, National Security Council Legal Adviser and Deputy Council to the President for National Security Affairs; Anne Neuberger, Deputy National Manager, National Security Agency; Ezra Cohen-Watnick, Acting Under Secretary of Defense for Intelligence; Elan Carr, Special Envoy to monitor and combat anti-Semitism; Len Khodorkovsky, Deputy Special Envoy to monitor and combat anti-Semitism; Reed Cordish, Assistant to the President, Intragovernmental and Technology Initiatives. Trump Vice President Mike Pence and Secretary of State Mike Pompeo, both Christian Zionists, were also vehement supporters of Israel and its goals and ambitions.

Donald 'free-speech believer' Trump pardoned a number of financial and violent criminals while ignoring calls to pardon Julian Assange and Edward Snowden whose crimes are revealing highly relevant information about government manipulation and corruption and the widespread illegal surveillance of the American people by US 'security' agencies. It's so good to know that Trump is on the side of freedom and justice and not mega-criminals with allegiance to Sabbatian-controlled Israel. These included a pardon for Israeli spy Jonathan Pollard who was jailed for life in 1987 under the Espionage Act. Aviem Sella, the Mossad agent who recruited Pollard, was also pardoned by Trump while Assange sat in jail and Snowden remained in exile in Russia. Sella had 'fled' (was helped to escape) to Israel in 1987 and was never extradited despite being charged under the Espionage Act. A Trump White House statement said that Sella's clemency had been 'supported by Benjamin Netanyahu, Ron Dermer, Israel's US Ambassador, David Friedman, US Ambassador to Israel and Miriam Adelson, wife of leading Trump donor Sheldon Adelson who died shortly before. Other friends of Jared Kushner were pardoned along with Sholom Weiss who was believed to be serving the longest-ever white-collar prison sentence of more than 800 years in 2000. The sentence was commuted of Ponzi-schemer Eliyahu Weinstein who defrauded Jews and others out of $200 million. I did mention that Assange and Snowden were ignored, right? Trump gave Sabbatians almost everything they asked for in military and political support, moving the US Embassy from Tel Aviv to Jerusalem with its critical symbolic and literal implications for Palestinian statehood, and the 'deal of the Century' designed by Jared Kushner and David Friedman which gave the Sabbatian Israeli government the green light to substantially expand its already widespread program of building illegal Jewish-only settlements in the occupied land of the West Bank. This made a two-state 'solution' impossible by seizing all the land of a potential Palestinian homeland and that had been the plan since 1948 and then 1967 when the Arab-controlled Gaza Strip, West Bank, Sinai Peninsula and Syrian Golan Heights were occupied by Israel. All the talks about talks and road maps and delays have been buying time until the West Bank was physically occupied by Israeli real estate. Trump would have to be a monumentally ill-informed idiot not to see that this was the plan he was helping to complete. The Trump administration was in so many ways the Kushner administration which means the Netanyahu administration which means the Sabbatian administration. I understand why many opposing Cult fascism in all its forms gravitated to Trump, but he was a crucial part of the Sabbatian plan and I will deal with this in the next chapter.

Joe Biden ('Democrat')

A barely cognitive Joe Biden took over the presidency in January, 2021, along with his fellow empty shell, Vice-President Kamala Harris, as the latest Sabbatian gofers to enter the White House. Names on the door may have changed and the 'party' – the force behind them remained the same as Zionists were appointed to a stream of pivotal areas relating to Sabbatian plans and policy. They included: Janet Yellen, Treasury Secretary, former head of the Federal Reserve, and still another ultra-Zionist running the US Treasury after Mnuchin (Trump), Lew and Geithner (Obama), and Summers and Rubin (Clinton); Anthony Blinken, Secretary of State; Wendy Sherman, Deputy Secretary of State (so that's 'Biden's' Sabbatian foreign policy sorted); Jeff Zients, White House coronavirus coordinator; Rochelle Walensky, head of the Centers for Disease Control; Rachel Levine, transgender deputy health secretary (that's 'Covid' hoax policy under control); Merrick Garland, Attorney General; Alejandro Mayorkas, Secretary of Homeland Security; Cass Sunstein, Homeland Security with responsibility for new immigration laws; Avril Haines, Director of National Intelligence; Anne Neuberger, National Security Agency cybersecurity director (note, cybersecurity); David Cohen, CIA Deputy Director; Ronald Klain, Biden's Chief of Staff (see Rahm Emanuel); Eric Lander, a 'leading geneticist', Office of Science and Technology Policy director (see Smart Grid, synthetic biology agenda); Jessica Rosenworcel, acting head of the Federal Communications Commission (FCC) which controls Smart Grid technology policy and electromagnetic communication systems including 5G. How can it be that so many pivotal positions are held by two-percent of the American population and 0.2 percent of the world population administration after administration no matter who is the president and what is the party? It's a coincidence? Of course it's not and this is why Sabbatians have built their colossal global web of interlocking 'anti-hate' hate groups to condemn anyone who asks these glaring questions as an 'anti-Semite'. The way that Jewish people horrifically abused in Sabbatian-backed Nazi Germany are exploited to this end is stomach-turning and disgusting beyond words.

Political fusion

Sabbatian manipulation has reversed the roles of Republicans and Democrats and the same has happened in Britain with the Conservative and Labour Parties. Republicans and Conservatives were always labelled the 'right' and Democrats and Labour the 'left', but look at the policy positions now and the Democrat-Labour 'left' has moved further to the 'right' than Republicans and Conservatives under the banner of 'Woke', the Cult-created far-right tyranny. Where once the Democrat-Labour 'left' defended free speech and human rights they now seek to delete them and as I said earlier despite the 'Covid' fascism of the Jackboot Johnson Conservative government in the UK the Labour Party of leader Keir Starmer demanded even more extreme measures. The Labour Party has been very publicly absorbed by Sabbatians after a political and media onslaught against the previous leader, the weak and inept Jeremy Corbyn, over made-up allegations of 'anti-Semitism' both by him and his party. The plan was clear with this 'anti-Semite' propaganda and what was required in response was a swift and decisive 'fuck off' from Corbyn and a statement to expose the Anti-Semitism Industry (Sabbatian) attempt to silence Labour criticism of the Israeli government (Sabbatians) and purge the party of all dissent against the extremes of ultra-Zionism (Sabbatians). Instead Corbyn and his party fell to their knees and appeased the abusers which, by definition, is impossible. Appeasing one demand leads only to a new demand to be appeased until takeover is complete. Like I say – 'fuck off' would have been a much more effective policy and I have used it myself with great effect over the years when Sabbatians are on my case which is most of the time. I consider that fact a great compliment, by the way. The outcome of the Labour Party capitulation is that we now have a Sabbatian-controlled

Conservative Party ‘opposed’ by a Sabbatian-controlled Labour Party in a one-party Sabbatian state that hurtles towards the extremes of tyranny (the Sabbatian cult agenda). In America the situation is the same. Labour’s Keir Starmer spends his days on his knees with his tongue out pointing to Tel Aviv, or I guess now Jerusalem, while Boris Johnson has an ‘anti-Semitism czar’ in the form of former Labour MP John Mann who keeps Starmer company on his prayer mat.

Sabbatian influence can be seen in Jewish members of the Labour Party who have been ejected for criticism of Israel including those from families that suffered in Nazi Germany. Sabbatians despise real Jewish people and target them even more harshly because it is so much more difficult to dub them ‘anti-Semitic’ although in their desperation they do try.

CHAPTER THREE

The Pushbacker sting

Until you realize how easy it is for your mind to be manipulated, you remain the puppet of someone else's game
Evita Ochel

I will use the presidencies of Trump and Biden to show how the manipulation of the one-party state plays out behind the illusion of political choice across the world. No two presidencies could – on the face of it – be more different and apparently at odds in terms of direction and policy.

A Renegade Mind sees beyond the obvious and focuses on outcomes and consequences and not image, words and waffle. The Cult embarked on a campaign to divide America between those who blindly support its agenda (the mentality known as 'Woke') and those who are pushing back on where the Cult and its Sabbatians want to go. This presents infinite possibilities for dividing and ruling the population by setting them at war with each other and allows a perceptual ring fence of demonisation to encircle the Pushbackers in a modern version of the Little Big Horn in 1876 when American cavalry led by Lieutenant Colonel George Custer were drawn into a trap, surrounded and killed by Native American tribes defending their land of thousands of years from being seized by the government. In this modern version the roles are reversed and it's those defending themselves from the Sabbatian government who are surrounded and the government that's seeking to destroy them. This trap was set years ago and to explain how we must return to 2016 and the emergence of Donald Trump as a candidate to be President of the United States. He set out to overcome the best part of 20 other candidates in the Republican Party before and during the primaries and was not considered by many in those early stages to have a prayer of living in the White House. The Republican Party was said to have great reservations about Trump and yet somehow he won the nomination. When you know how American politics works – politics in general – there is no way that Trump could have become the party's candidate unless the Sabbatian-controlled 'Neocons' that run the Republican Party wanted that to happen. We saw the proof in emails and documents made public by WikiLeaks that the Democratic Party hierarchy, or Democons, systematically undermined the campaign of Bernie Sanders to make sure that Sabbatian gofer Hillary Clinton won the nomination to be their presidential candidate. If the Democons could do that then the Neocons in the Republican Party could have derailed Trump in the same way. But they didn't and at that stage I began to conclude that Trump could well be the one chosen to be president. If that was the case the 'why' was pretty clear to see – the goal of dividing America between Cult agenda-supporting Wokers and Pushbackers who gravitated to Trump because he was telling them what they wanted to hear. His constituency of support had been increasingly ignored and voiceless for decades and profoundly through the eight years of Sabbatian puppet Barack Obama. Now here was someone speaking their language of pulling back from the incessant globalisation of political and economic power, the exporting of American jobs to China and elsewhere by 'American' (Sabbatian) corporations, the deletion of free speech, and the mass immigration policies that had further devastated job opportunities for the urban working class of all races and the once American heartlands of the Midwest.

Beware the forked tongue

Those people collectively sighed with relief that at last a political leader was apparently on their side, but another trait of the Renegade Mind is that you look even harder at people telling you what you want to hear than those who are telling you otherwise. Obviously as I said earlier people wish what they want to hear to be true and genuine and they are much more likely to believe that than someone saying what they don't want to here and don't want to be true. Sales people are taught to be skilled in eliciting by calculated questioning what their customers want to hear and repeating that back to them as their own opinion to get their targets to like and trust them. Assets of the Cult are also sales people in the sense of selling perception. To read Cult manipulation you have to play the long and expanded game and not fall for the Vaudeville show of party politics. Both American parties are vehicles for the Cult and they exploit them in different ways depending on what the agenda requires at that moment. Trump and the Republicans were used to be the focus of dividing America and isolating Pushbackers to open the way for a Biden presidency to become the most extreme in American history by advancing the full-blown Woke (Cult) agenda with the aim of destroying and silencing Pushbackers now labelled Nazi Trump supporters and white supremacists.

Sabbatians wanted Trump in office for the reasons described by ultra-Zionist Saul Alinsky (1909-1972) who was promoting the Woke philosophy through 'community organising' long before anyone had heard of it. In those days it still went by its traditional name of Marxism. The reason for the manipulated Trump phenomenon was laid out in Alinsky's 1971 book, *Rules for Radicals*, which was his blueprint for overthrowing democratic and other regimes and replacing them with Sabbatian Marxism. Not surprisingly his to-do list was evident in the Sabbatian French and Russian 'Revolutions' and that in China which will become very relevant in the next chapter about the 'Covid' hoax. Among Alinsky's followers have been the deeply corrupt Barack Obama, House Speaker Nancy Pelosi and Hillary Clinton who described him as a 'hero'. All three are Sabbatian stooges with Pelosi personifying the arrogant corrupt idiocy that so widely fronts up for the Cult inner core. Predictably as a Sabbatian advocate of the 'light-bringer' Alinsky features Lucifer on the dedication page of his book as the original radical who gained his own kingdom ('Earth' as we shall see). One of Alinsky's golden radical rules was to pick an individual and focus all attention, hatred and blame on them and not to target faceless bureaucracies and corporations. *Rules for Radicals* is really a Sabbatian handbook with its contents repeatedly employed all over the world for centuries and why wouldn't Sabbatians bring to power their designer-villain to be used as the individual on which all attention, hatred and blame was bestowed? This is what they did and the only question for me is how much Trump knew that and how much he was manipulated. A bit of both, I suspect. This was Alinsky's Trump technique from a man who died in 1972. The technique has spanned history:

> Pick the target, freeze it, personalize it, polarize it. Don't try to attack abstract corporations or bureaucracies. Identify a responsible individual. Ignore attempts to shift or spread the blame.

From the moment Trump came to illusory power everything was about him. It wasn't about Republican policy or opinion, but all about Trump. Everything he did was presented in negative, derogatory and abusive terms by the Sabbatian-dominated media led by Cult operations such as CNN, MSNBC, *The New York Times* and the Jeff Bezos-owned *Washington Post* – 'Pick the target, freeze it, personalize it, polarize it.' Trump was turned into a demon to be vilified by those who hated him and a demi-god loved by those who worshipped him. This, in turn, had his supporters, too, presented as equally demonic in preparation for the punchline later down the line when Biden was about to take office. It was here's a Trump, there's a Trump, everywhere a Trump, Trump. Virtually every news story or happening was filtered through the lens of 'The Donald'. You loved him or hated him and which one you chose was said to define you as Satan's spawn or a paragon of virtue. Even supporting some Trump policies or statements and not others was enough for an assault on your character. No shades of grey were or are allowed. Everything is black and white (literally and figuratively). A Californian I knew had her head utterly scrambled by her hatred for Trump while telling people they should love each other. She was so totally consumed by

Trump Derangement Syndrome as it became to be known that this glaring contradiction would never have occurred to her. By definition anyone who criticised Trump or praised his opponents was a hero and this lady described Joe Biden as 'a kind, honest gentleman' when he's a provable liar, mega-crook and vicious piece of work to boot. Sabbatians had indeed divided America using Trump as the fall-guy and all along the clock was ticking on the consequences for his supporters.

In hock to his masters

Trump gave Sabbatians via Israel almost everything they wanted in his four years. Ask and you shall receive was the dynamic between himself and Benjamin Netanyahu orchestrated by Trump's ultra-Zionist son-in-law Jared Kushner, his ultra-Zionist Ambassador to Israel, David Friedman, and ultra-Zionist 'Israel adviser', Jason Greenblatt. The last two were central to the running and protecting from collapse of his business empire, the Trump Organisation, and colossal business failures made him forever beholding to Sabbatian networks that bailed him out. By the start of the 1990s Trump owed $4 billion to banks that he couldn't pay and almost $1billion of that was down to him personally and not his companies. This mega-disaster was the result of building two new casinos in Atlantic City and buying the enormous Taj Mahal operation which led to crippling debt payments. He had borrowed fantastic sums from 72 banks with major Sabbatian connections and although the scale of debt should have had him living in a tent alongside the highway they never foreclosed. A plan was devised to lift Trump from the mire by BT Securities Corporation and Rothschild Inc. and the case was handled by Wilber Ross who had worked for the Rothschilds for 27 years. Ross would be named US Commerce Secretary after Trump's election. Another crucial figure in saving Trump was ultra-Zionist 'investor' Carl Icahn who bought the Taj Mahal casino. Icahn was made special economic adviser on financial regulation in the Trump administration. He didn't stay long but still managed to find time to make a tidy sum of a reported $31.3 million when he sold his holdings affected by the price of steel three days before Trump imposed a 235 percent tariff on steel imports. What amazing bits of luck these people have. Trump and Sabbatian operatives have long had a close association and his mentor and legal adviser from the early 1970s until 1986 was the dark and genetically corrupt ultra-Zionist Roy Cohn who was chief counsel to Senator Joseph McCarthy's 'communist' witch-hunt in the 1950s. *Esquire* magazine published an article about Cohn with the headline 'Don't mess with Roy Cohn'. He was described as the most feared lawyer in New York and 'a ruthless master of dirty tricks ... [with] ... more than one Mafia Don on speed dial'. Cohn's influence, contacts, support and protection made Trump a front man for Sabbatians in New York with their connections to one of Cohn's many criminal employers, the 'Russian' Sabbatian Mafia. Israel-centric media mogul Rupert Murdoch was introduced to Trump by Cohn and they started a long friendship. Cohn died in 1986 weeks after being disbarred for unethical conduct by the Appellate Division of the New York State Supreme Court. The wheels of justice do indeed run slow given the length of Cohn's crooked career.

QAnon-sense

We are asked to believe that Donald Trump with his fundamental connections to Sabbatian networks and operatives has been leading the fight to stop the Sabbatian agenda for the fascistic control of America and the world. Sure he has. A man entrapped during his years in the White House by Sabbatian operatives and whose biggest financial donor was casino billionaire Sheldon Adelson who was Sabbatian to his DNA?? Oh, do come on. Trump has been used to divide America and isolate Pushbackers on the Cult agenda under the heading of 'Trump supporters', 'insurrectionists' and 'white supremacists'. The US Intelligence/Mossad Psyop or psychological operation known as QAnon emerged during the Trump years as a central pillar in the Sabbatian campaign to lead Pushbackers into the trap set by those that wished to destroy them. I knew from the start that QAnon was a scam because I had seen the same scenario many times before over 30 years under different names and I had written about one in particular in the books. ‘Not again’ was my reaction when QAnon came to the fore. The same script is pulled out every few years and a new name added to the letterhead. The story always takes the same form: ‘Insiders’ or ‘the good guys’ in the government-intelligence-military ‘Deep State’ apparatus were going to instigate mass arrests of the ‘bad guys’ which would include the Rockefellers, Rothschilds, Barack Obama, Hillary Clinton, George Soros, etc., etc. Dates are given for when the ‘good guys’ are going to move in, but the dates pass without incident and new dates are given which pass without incident. The central message to Pushbackers in each case is that they don’t have to do anything because there is ‘a plan’ and it is all going to be sorted by the ‘good guys’ on the inside. ‘Trust the plan’ was a QAnon mantra when the only plan was to misdirect Pushbackers into putting their trust in a Psyop they believed to be real. Beware, beware, those who tell you what you want to hear and always check it out. Right up to Biden’s inauguration QAnon was still claiming that ‘the Storm’ was coming and Trump would stay on as president when Biden and his cronies were arrested and jailed. It was never going to happen and of course it didn’t, but what did happen as a result provided that punchline to the Sabbatian Trump/QAnon Psyop.

On January 6th, 2021, a very big crowd of Trump supporters gathered in the National Mall in Washington DC down from the Capitol Building to protest at what they believed to be widespread corruption and vote fraud that stopped Trump being re-elected for a second term as president in November, 2020. I say as someone that does not support Trump or Biden that the evidence is clear that major vote-fixing went on to favour Biden, a man with cognitive problems so advanced he can often hardly string a sentence together without reading the words written for him on the Teleprompter. Glaring ballot discrepancies included serious questions about electronic voting machines that make vote rigging a comparative cinch and hundreds of thousands of paper votes that suddenly appeared during already advanced vote counts and virtually all of them for Biden. Early Trump leads in crucial swing states suddenly began to close and disappear. The pandemic hoax was used as the excuse to issue almost limitless numbers of mail-in ballots with no checks to establish that the recipients were still alive or lived at that address. They were sent to streams of people who had not even asked for them. Private organisations were employed to gather these ballots and who knows what they did with them before they turned up at the counts. The American election system has been manipulated over decades to become a sick joke with more holes than a Swiss cheese for the express purpose of dictating the results. Then there was the criminal manipulation of information by Sabbatian tech giants like Facebook, Twitter and Google-owned YouTube which deleted pro-Trump, anti-Biden accounts and posts while everything in support of Biden was left alone. Sabbatians wanted Biden to win because after the dividing of America it was time for full-on Woke and every aspect of the Cult agenda to be unleashed.

Hunter gatherer

Extreme Silicon Valley bias included blocking information by the *New York Post* exposing a Biden scandal that should have ended his bid for president in the final weeks of the campaign. Hunter Biden, his monumentally corrupt son, is reported to have sent a laptop to be repaired at a local store and failed to return for it. Time passed until the laptop became the property of the store for non-payment of the bill. When the owner saw what was on the hard drive he gave a copy to the FBI who did nothing even though it confirmed widespread corruption in which the Joe Biden family were using his political position, especially when he was vice president to Obama, to make multiple millions in countries around the world and most notably Ukraine and China. Hunter Biden's one-time business partner Tony Bobulinski went public when the story broke in the *New York Post* to confirm the corruption he saw and that Joe Biden not only knew what was going on he also profited from the spoils. Millions were handed over by a Chinese company with close connections – like all major businesses in China – to the Chinese communist party of President Xi Jinping. Joe Biden even boasted at a meeting of the Cult's World Economic Forum that as vice president he had ordered the government of Ukraine to fire a prosecutor. What he didn't mention was that the same man just happened to be investigating an energy company which was part of Hunter Biden's corrupt portfolio. The company was paying him big bucks for no other reason than the influence his father had. Overnight Biden's presidential campaign should have been over given that he had lied publicly about not knowing what his son was doing. Instead almost the entire Sabbatian-owned mainstream media and Sabbatian-owned Silicon Valley suppressed circulation of the story. This alone went a mighty way to rigging the election of 2020. Cult assets like Mark Zuckerberg at Facebook also spent hundreds of millions to be used in support of Biden and vote 'administration'.

The Cult had used Trump as the focus to divide America and was now desperate to bring in moronic, pliable, corrupt Biden to complete the double-whammy. No way were they going to let little things like the will of the people thwart their plan. Silicon Valley widely censored claims that the election was rigged because it *was* rigged. For the same reason anyone claiming it was rigged was denounced as a 'white supremacist' including the pathetically few Republican politicians willing to say so. Right across the media where the claim was mentioned it was described as a 'false claim' even though these excuses for 'journalists' would have done no research into the subject whatsoever. Trump won seven million more votes than any sitting president had ever achieved while somehow a cognitively-challenged soon to be 78-year-old who was hidden away from the public for most of the campaign managed to win more votes than any presidential candidate in history. It makes no sense. You only had to see election rallies for both candidates to witness the enthusiasm for Trump and the apathy for Biden. Tens of thousands would attend Trump events while Biden was speaking in empty car parks with often only television crews attending and framing their shots to hide the fact that no one was there. It was pathetic to see footage come to light of Biden standing at a podium making speeches only to TV crews and party fixers while reading the words written for him on massive Teleprompter screens. So, yes, those protestors on January 6th had a point about election rigging, but some were about to walk into a trap laid for them in Washington by the Cult Deep State and its QAnon Psyop. This was the Capitol Hill riot ludicrously dubbed an 'insurrection'.

The spider and the fly

Renegade Minds know there are not two 'sides' in politics, only one side, the Cult, working through all 'sides'. It's a stage show, a puppet show, to direct the perceptions of the population into focusing on diversions like parties and candidates while missing the puppeteers with their hands holding all the strings. The Capitol Hill 'insurrection' brings us back to the Little Big Horn. Having created two distinct opposing groupings – Woke and Pushbackers – the trap was about to be sprung. Pushbackers were to be encircled and isolated by associating them all in the public mind with Trump and then labelling Trump as some sort of Confederate leader. I knew immediately that the Capitol riot was a set-up because of two things. One was how easy the rioters got into the building with virtually no credible resistance and secondly I could see – as with the 'Covid' hoax in the West at the start of 2020 – how the Cult could exploit the situation to move its agenda forward with great speed. My experience of Cult techniques and activities over more than 30 years has showed me that while they do exploit situations they haven't themselves created this never happens with events of fundamental agenda significance. Every time major events giving cultists the excuse to rapidly advance their plan you find they are manipulated into being for the specific reason of providing that excuse – Problem-Reaction-Solution. Only a tiny minority of the huge crowd of Washington protestors sought to gain entry to the Capitol by smashing windows and breaching doors. That didn't matter. The whole crowd and all Pushbackers, even if they did not support Trump, were going to be lumped together as dangerous insurrectionists and conspiracy theorists. The latter term came into widespread use through a CIA memo in the 1960s aimed at discrediting those questioning the nonsensical official story of the Kennedy assassination and it subsequently became widely employed by the media. It's still being used by inept 'journalists' with no idea of its origin to discredit anyone questioning anything that authority claims to be true. When you are perpetrating a conspiracy you need to discredit the very word itself even though the dictionary definition of conspiracy is merely 'the activity of secretly planning with other people to do something bad or illegal' and 'a general agreement to keep silent about a subject for the purpose of keeping it secret'. On that basis there are conspiracies almost wherever you look. For obvious reasons the Cult and its lapdog media have to claim there are no conspiracies even though the word appears in state laws as with conspiracy to defraud, to murder, and to corrupt public morals.

Agent provocateurs are widely used by the Cult Deep State to manipulate genuine people into acting in ways that suit the desired outcome. By genuine in this case I mean protestors genuinely supporting Trump and claims that the election was stolen. In among them, however, were agents of the state wearing the garb of Trump supporters and QAnon to pump-prime the Capital riot which some genuine Trump supporters naively fell for. I described the situation as 'Come into my parlour said the spider to the fly'. Leaflets appeared through the Woke paramilitary arm Antifa, the anti-fascist fascists, calling on supporters to turn up in Washington looking like Trump supporters even though they hated him. Some of those arrested for breaching the Capitol Building were sourced to Antifa and its stable mate Black Lives Matter. Both organisations are funded by Cult billionaires and corporations. One man charged for the riot was according to his lawyer a former FBI agent who had held top secret security clearance for 40 years. Attorney Thomas Plofchan said of his client, 66-year-old Thomas Edward Caldwell:

> He has held a Top Secret Security Clearance since 1979 and has undergone multiple Special Background Investigations in support of his clearances. After retiring from the Navy, he

> worked as a section chief for the Federal Bureau of Investigation from 2009-2010 as a GS-12 [mid-level employee].
>
> He also formed and operated a consulting firm performing work, often classified, for U.S government customers including the US. Drug Enforcement Agency, Department of Housing and Urban Development, the US Coast Guard, and the US Army Personnel Command.

A judge later released Caldwell pending trial in the absence of evidence about a conspiracy or that he tried to force his way into the building. *The New York Post* reported a 'law enforcement source' as saying that 'at least two known Antifa members were spotted' on camera among Trump supporters during the riot while one of the rioters arrested was John Earle Sullivan, a seriously extreme Black Lives Matter Trump-hater from Utah who was previously arrested and charged in July, 2020, over a BLM-Antifa riot in which drivers were threatened and one was shot. Sullivan is the founder of Utah-based Insurgence USA which is an affiliate of the Cult-created-and-funded Black Lives Matter movement. Footage appeared and was then deleted by Twitter of Trump supporters calling out Antifa infiltrators and a group was filmed changing into pro-Trump clothing before the riot. Security at the building was *pathetic* – as planned. Colonel Leroy Fletcher Prouty, a man with long experience in covert operations working with the US security apparatus, once described the tell-tale sign to identify who is involved in an assassination. He said:

> No one has to direct an assassination – it happens. The active role is played secretly by permitting it to happen. This is the greatest single clue. Who has the power to call off or reduce the usual security precautions?

This principle applies to many other situations and certainly to the Capitol riot of January 6th, 2021.

The sting

With such a big and potentially angry crowd known to be gathering near the Capitol the security apparatus would have had a major police detail to defend the building with National Guard troops on standby given the strength of feeling among people arriving from all over America encouraged by the QAnon Psyop and statements by Donald Trump. Instead Capitol Police 'security' was flimsy, weak, and easily breached. The same number of officers was deployed as on a regular day and that is a blatant red flag. They were not staffed or equipped for a possible riot that had been an obvious possibility in the circumstances. No protective and effective fencing worth the name was put in place and there were no contingency plans. The whole thing was basically a case of standing aside and waving people in. Once inside police mostly backed off apart from one Capitol police officer who ridiculously shot dead unarmed Air Force veteran protestor Ashli Babbitt without a warning as she climbed through a broken window. The 'investigation' refused to name or charge the officer after what must surely be considered a murder in the circumstances. They just lifted a carpet and swept. The story was endlessly repeated about five people dying in the 'armed insurrection' when there was no report of rioters using weapons. Apart from Babbitt the other four died from a heart attack, strokes and apparently a drug overdose. Capitol police officer Brian Sicknick was reported to have died after being bludgeoned with a fire extinguisher when he was alive after the riot was over and died later of what the Washington Medical Examiner's Office said was a stroke. Sicknick had no external injuries. The lies were delivered like rapid fire. There was a narrative to build with incessant repetition of the lie until the lie became the accepted 'everybody knows that' truth. The 'Big Lie' technique of Nazi Propaganda Minister Joseph Goebbels is constantly used by the Cult which was behind the Nazis and is today behind the 'Covid' and 'climate change' hoaxes. Goebbels said:

> If you tell a lie big enough and keep repeating it, people will eventually come to believe it. The lie can be maintained only for such time as the State can shield the people from the political, economic and/or military consequences of the lie. It thus becomes vitally important for the State to use all of its powers to repress dissent, for the truth is the mortal enemy of the lie, and thus by extension, the truth is the greatest enemy of the State.

Most protestors had a free run of the Capitol Building. This allowed pictures to be taken of rioters in iconic parts of the building including the Senate chamber which could be used as propaganda images against all Pushbackers. One Congresswoman described the scene as ‘the worst kind of non-security anybody could ever imagine’. Well, the first part was true, but someone obviously did imagine it and made sure it happened. Some photographs most widely circulated featured people wearing QAnon symbols and now the Psyop would be used to dub all QAnon followers with the ubiquitous fit-all label of ‘white supremacist’ and ‘insurrectionists’. When a Muslim extremist called Noah Green drove his car at two police officers at the Capitol Building killing one in April, 2021, there was no such political and media hysteria. They were just disappointed he wasn’t white.

The witch-hunt

Government prosecutor Michael Sherwin, an aggressive, dark-eyed, professional Rottweiler led the ‘investigation’ and to call it over the top would be to understate reality a thousand fold. Hundreds were tracked down and arrested for the crime of having the wrong political views and people were jailed who had done nothing more than walk in the building, committed no violence or damage to property, took a few pictures and left. They were labelled a ‘threat to the Republic’ while Biden sat in the White House signing executive orders written for him that were dismantling ‘the Republic’. Even when judges ruled that a mother and son should not be in jail the government kept them there. Some of those arrested have been badly beaten by prison guards in Washington and lawyers for one man said he suffered a fractured skull and was made blind in one eye. Meanwhile a woman is shot dead for no reason by a Capitol Police officer and we are not allowed to know who he is never mind what has happened to him although that will be *nothing*. The Cult’s QAnon/Trump sting to identify and isolate Pushbackers and then target them on the road to crushing and deleting them was a resounding success. You would have thought the Russians had invaded the building at gunpoint and lined up senators for a firing squad to see the political and media reaction. Congresswoman Alexandria Ocasio-Cortez is a child in a woman's body, a terrible-twos, me, me, me, Woker narcissist of such proportions that words have no meaning. She said she thought she was going to die when 'insurrectionists' banged on her office door. It turned out she wasn't even in the Capitol Building when the riot was happening and the 'banging' was a Capitol Police officer. She referred to herself as a 'survivor' which is an insult to all those true survivors of violent and sexual abuse while she lives her pampered and privileged life talking drivel for a living. Her Woke colleague and fellow mega-narcissist Rashida Tlaib broke down describing the devastating effect on her, too, of *not being* in the building when the rioters were there. Ocasio-Cortez and Tlaib are members of a fully-Woke group of Congresswomen known as 'The Squad' along with Ilhan Omar and Ayanna Pressley. The Squad from what I can see can be identified by its vehement anti-white racism, anti-white men agenda, and, as always in these cases, the absence of brain cells on active duty.

The usual suspects were on the riot case immediately in the form of Democrat ultra-Zionist senators and operatives Chuck Schumer and Adam Schiff demanding that Trump be impeached for 'his part in the insurrection'. The same pair of prats had led the failed impeachment of Trump over the invented 'Russia collusion' nonsense which claimed Russia had helped Trump win the 2016 election. I didn't realise that Tel Aviv had been relocated just outside Moscow. I must find an up-to-date map. The Russia hoax was a Sabbatian operation to keep Trump occupied and impotent and to stop any rapport with Russia which the Cult wants to retain as a perceptual enemy to be pulled out at will. Puppet Biden began attacking Russia when he came to office as the Cult seeks more upheaval, division and war across the world. A two-year stage show 'Russia collusion inquiry' headed by the not-very-bright former 9/11 FBI chief Robert Mueller, with support from 19 lawyers, 40 FBI agents plus intelligence analysts, forensic accountants and other staff, devoured tens of millions of dollars and found no evidence of Russia collusion which a ten-year-old could have told them on day one. Now the same moronic Schumer and Schiff wanted a second impeachment of Trump over the Capitol 'insurrection' (riot) which the arrested development of Schumer called another 'Pearl Harbor' while others compared it with 9/11 in which 3,000 died and, in the case of CNN, with the Rwandan genocide in the 1990s in which an estimated 500,000 to 600,000 were murdered, between 250, 000 and 500,000 women were raped, and populations of whole towns were hacked to death with machetes. To make those comparisons purely for Cult political reasons is beyond insulting to those that suffered and lost their lives and confirms yet again the callous inhumanity that we are dealing with. Schumer is a monumental idiot and so is Schiff, but they serve the Cult agenda and do whatever they're told so they get looked after. Talking of idiots – another inane man who spanned the Russia and Capitol impeachment attempts was Senator Eric Swalwell who had the nerve to accuse Trump of collusion with the Russians while sleeping with a Chinese spy called Christine Fang or 'Fang Fang' which is straight out of a Bond film no doubt starring Klaus Schwab as the bloke living on a secret island and controlling laser weapons positioned in space and pointing at world capitals. Fang Fang plays the part of Bond's infiltrator girlfriend which I'm sure she would enjoy rather more than sharing a bed with the brainless Swalwell, lying back and thinking of China. The FBI eventually warned Swalwell about Fang Fang which gave her time to escape back to the Chinese dictatorship. How very thoughtful of them. The second Trump impeachment also failed and hardly surprising when an impeachment is supposed to remove a sitting president and by the time it happened Trump was no longer president. These people are running your country America, well, officially anyway. Terrifying isn't it?

Outcomes tell the story - always

The outcome of all this – and it's the *outcome* on which Renegade Minds focus, not the words – was that a vicious, hysterical and obviously pre-planned assault was launched on Pushbackers to censor, silence and discredit them and even targeted their right to earn a living. They have since been condemned as ‘domestic terrorists’ that need to be treated like Al-Qaeda and Islamic State. ‘Domestic terrorists’ is a label the Cult has been trying to make stick since the period of the Oklahoma bombing in 1995 which was blamed on ‘far-right domestic terrorists’. If you read *The Trigger* you will see that the bombing was clearly a Problem-Reaction-Solution carried out by the Deep State during a Bill Clinton administration so corrupt that no dictionary definition of the term would even nearly suffice. Nearly 30, 000 troops were deployed from all over America to the empty streets of Washington for Biden’s inauguration. Ten thousand of them stayed on with the pretext of protecting the capital from insurrectionists when it was more psychological programming to normalise the use of the military in domestic law enforcement in support of the Cult plan for a police-military state. Biden’s fascist administration began a purge of ‘wrong-thinkers’ in the military which means anyone that is not on board with Woke. The Capitol Building was surrounded by a fence with razor wire and the Land of the Free was further symbolically and literally dismantled. The circle was completed with the installation of Biden and the exploitation of the QAnon Psyop.

America had never been so divided since the civil war of the 19th century, Pushbackers were isolated and dubbed terrorists and now, as was always going to happen, the Cult immediately set about deleting what little was left of freedom and transforming American society through a swish of the hand of the most controlled ‘president’ in American history leading (officially at least) the most extreme regime since the country was declared an independent state on July 4th, 1776. Biden issued undebated, dictatorial executive orders almost by the hour in his opening days in office across the whole spectrum of the Cult wish-list including diluting controls on the border with Mexico allowing thousands of migrants to illegally enter the United States to transform the demographics of America and import an election-changing number of perceived Democrat voters. Then there were Biden deportation amnesties for the already illegally resident (estimated to be as high as 20 or even 30 million). A bill before Congress awarded American citizenship to anyone who could prove they had worked in agriculture for just 180 days in the previous two years as ‘Big Ag’ secured its slave labour long-term. There were the plans to add new states to the union such as Puerto Rico and making Washington DC a state. They are all parts of a plan to ensure that the Cult-owned Woke Democrats would be permanently in power.

Border – what border?

I have exposed in detail in other books how mass immigration into the United States and Europe is the work of Cult networks fuelled by the tens of billions spent to this and other ends by George Soros and his global Open Society (open borders) Foundations. The impact can be seen in America alone where the population has increased by *100 million* in little more than 30 years mostly through immigration. I wrote in *The Answer* that the plan was to have so many people crossing the southern border that the numbers become unstoppable and we are now there under Cult-owned Biden. El Salvador in Central America puts the scale of what is happening into context. A third of the population now lives in the United States, much of it illegally, and many more are on the way. The methodology is to crush Central and South American countries economically and spread violence through machete-wielding psychopathic gangs like MS-13 based in El Salvador and now operating in many American cities. Biden-imposed lax security at the southern border means that it is all but open. He said before his ‘election’ that he wanted to see a surge towards the border if he became president and that was the green light for people to do just that after election day to create the human disaster that followed for both America and the migrants. When that surge came the imbecilic Alexandria Ocasio-Cortez said it wasn’t a ‘surge’ because they are ‘children, not insurgents’ and the term ‘surge’ (used by Biden) was a claim of ‘white supremacists’.

This disingenuous lady may one day enter the realm of the most basic intelligence, but it won't be any time soon.

Sabbatians and the Cult are in the process of destroying America by importing violent people and gangs in among the genuine to terrorise American cities and by overwhelming services that cannot cope with the sheer volume of new arrivals. Something similar is happening in Europe as Western society in general is targeted for demographic and cultural transformation and upheaval. The plan demands violence and crime to create an environment of intimidation, fear and division and Soros has been funding the election of district attorneys across America who then stop prosecuting many crimes, reduce sentences for violent crimes and free as many violent criminals as they can. Sabbatians are creating the chaos from which order – their order – can respond in a classic Problem-Reaction-Solution. A Freemasonic moto says 'Ordo Ab Chao' (Order out of Chaos) and this is why the Cult is constantly creating chaos to impose a new 'order'. Here you have the reason the Cult is constantly creating chaos. The 'Covid' hoax can be seen with those entering the United States by plane being forced to take a 'Covid' test while migrants flooding through southern border processing facilities do not. Nothing is put in the way of mass migration and if that means ignoring the government's own 'Covid' rules then so be it. They know it's all bullshit anyway. Any pushback on this is denounced as 'racist' by Wokers and Sabbatian fronts like the ultra-Zionist Anti-Defamation League headed by the appalling Jonathan Greenblatt which at the same time argues that Israel should not give citizenship and voting rights to more Palestinian Arabs or the 'Jewish population' (in truth the Sabbatian network) will lose control of the country.

Society-changing numbers

Biden's masters have declared that countries like El Salvador are so dangerous that their people must be allowed into the United States for humanitarian reasons when there are fewer murders in large parts of many Central American countries than in US cities like

Baltimore. That is not to say Central America cannot be a dangerous place and Cult-controlled American governments have been making it so since way back, along with the dismantling of economies, in a long-term plan to drive people north into the United States. Parts of Central America are very dangerous, but in other areas the story is being greatly exaggerated to justify relaxing immigration criteria. Migrants are being offered free healthcare and education in the United States as another incentive to head for the border and there is no requirement to be financially independent before you can enter to prevent the resources of America being drained. You can't blame migrants for seeking what they believe will be a better life, but they are being played by the Cult for dark and nefarious ends. The numbers since Biden took office are huge. In February, 2021, more than 100,000 people were known to have tried to enter the US illegally through the southern border (it was 34,000 in the same month in 2020) and in March it was 170,000 – a 418 percent increase on March, 2020. These numbers are only known people, not the ones who get in unseen. The true figure for migrants illegally crossing the border in a single month was estimated by one congressman at 250,000 and that number will only rise under Biden's current policy. Gangs of murdering drug-running thugs that control the Mexican side of the border demand money – thousands of dollars – to let migrants cross the Rio Grande into America. At the same time gun battles are breaking out on the border several times a week between rival Mexican drug gangs (which now operate globally) who are equipped with sophisticated military-grade weapons, grenades and armoured vehicles. While the Capitol Building was being 'protected' from a non-existent 'threat' by thousands of troops, and others were still deployed at the time in the Cult Neocon war in Afghanistan, the southern border of America was left to its fate. This is not incompetence, it is cold calculation.

By March, 2021, there were 17,000 unaccompanied children held at border facilities and many of them are ensnared by people traffickers for paedophile rings and raped on their journey north to America. This is not conjecture – this is fact. Many of those designated children are in reality teenage boys or older. Meanwhile Wokers posture their self-purity for encouraging poor and tragic people to come to America and face this nightmare both on the journey and at the border with the disgusting figure of House Speaker Nancy Pelosi giving disingenuous speeches about caring for migrants. The woman's evil. Wokers condemned Trump for having children in cages at the border (so did Obama, *Shhhh*), but now they are sleeping on the floor without access to a shower with one border facility 729 percent over capacity. The Biden insanity even proposed flying migrants from the southern border to the northern border with Canada for 'processing'. The whole shambles is being overseen by ultra-Zionist Secretary of Homeland Security, the moronic liar Alejandro Mayorkas, who banned news cameras at border facilities to stop Americans seeing what was happening. Mayorkas said there was not a ban on news crews; it was just that they were not allowed to film. Alongside him at Homeland Security is another ultra-Zionist Cass Sunstein appointed by Biden to oversee new immigration laws. Sunstein despises conspiracy researchers to the point where he suggests they should be banned or *taxed* for having such views. The man is not bonkers or anything. He's perfectly well-adjusted, but adjusted to what is the question. Criticise what is happening and you are a 'white supremacist' when earlier non-white immigrants also oppose the numbers which effect their lives and opportunities. Black people in poor areas are particularly damaged by uncontrolled immigration and the increased competition for work opportunities with those who will work for less. They are also losing voting power as Hispanics become more dominant in former black areas. It's a downward spiral for them while the billionaires behind the policy drone on about how much they care about black people and 'racism'. None of this is about compassion for migrants or black people – that's just wind and air. Migrants are instead being mercilessly exploited to transform America while the countries they leave are losing their future and the same is true in Europe. Mass immigration may now be the work of Woke Democrats, but it can be traced back to the 1986 Immigration Reform and Control Act (it wasn't) signed into law by Republican hero President Ronald Reagan which gave amnesty to millions living in the United States illegally and other incentives for people to head for the southern border. Here we have the one-party state at work again.

Save me syndrome

Almost every aspect of what I have been exposing as the Cult agenda was on display in even the first days of 'Biden' with silencing of Pushbackers at the forefront of everything. A Renegade Mind will view the Trump years and QAnon in a very different light to their supporters and advocates as the dots are connected. The QAnon/Trump Psyop has given the Cult all it was looking for. We may not know how much, or little, that Trump realised he was being used, but that's a side issue. This pincer movement produced the desired outcome of dividing America and having Pushbackers isolated. To turn this around we have to look at new routes to empowerment which do not include handing our power to other people and groups through what I will call the 'Save Me Syndrome' – 'I want someone else to do it so that I don't have to'. We have seen this at work throughout human history and the QAnon/Trump Psyop is only the latest incarnation alongside all the others. Religion is an obvious expression of this when people look to a 'god' or priest to save them or tell them how to be saved and then there are 'save me' politicians like Trump. Politics is a diversion and not a 'saviour'. It is a means to block positive change, not make it possible.

Save Me Syndrome always comes with the same repeating theme of handing your power to whom or what you believe will save you while your real 'saviour' stares back from the mirror every morning. Renegade Minds are constantly vigilant in this regard and always asking the question 'What can I do?' rather than 'What can someone else do for me?' Gandhi was right when he said: 'You must be the change you want to see in the world.' We are indeed the people we have been waiting for. We are presented with a constant raft of reasons to concede that power to others and forget where the real power is. Humanity has the numbers and the Cult does not. It has to use diversion and division to target the unstoppable power that comes from unity. Religions, governments, politicians, corporations, media, QAnon, are all different manifestations of this power-diversion and dilution. Refusing to give your power to governments and instead handing it to Trump and QAnon is not to take a new direction, but merely to recycle the old one with new names on the posters. I will explore this phenomenon as we proceed and how to break the cycles and recycles that got us here through the mists of repeating perception and so repeating history.

For now we shall turn to the most potent example in the entire human story of the consequences that follow when you give your power away. I am talking, of course, of the ‘Covid’ hoax.

CHAPTER FOUR

‘Covid’: Calculated catastrophe

Facts are threatening to those invested in fraud
DaShanne Stokes

We can easily unravel the real reason for the ‘Covid pandemic’ hoax by employing the Renegade Mind methodology that I have outlined this far. We’ll start by comparing the long-planned Cult outcome with the ‘Covid pandemic’ outcome. Know the outcome and you’ll see the journey.

I have highlighted the plan for the Hunger Games Society which has been in my books for so many years with the very few controlling the very many through ongoing dependency. To create this dependency it is essential to destroy independent livelihoods, businesses and employment to make the population reliant on the state (the Cult) for even the basics of life through a guaranteed pittance income. While independence of income remained these Cult ambitions would be thwarted. With this knowledge it was easy to see where the ‘pandemic’ hoax was going once talk of ‘lockdowns’ began and the closing of all but perceived ‘essential’ businesses to ‘save’ us from an alleged ‘deadly virus’. Cult corporations like Amazon and Walmart were naturally considered ‘essential’ while mom and pop shops and stores had their doors closed by fascist decree. As a result with every new lockdown and new regulation more small and medium, even large businesses not owned by the Cult, went to the wall while Cult giants and their frontmen and women grew financially fatter by the second. Mom and pop were denied an income and the right to earn a living and the wealth of people like Jeff Bezos (Amazon), Mark Zuckerberg (Facebook) and Sergei Brin and Larry Page (Google/Alphabet) have reached record levels. The Cult was increasing its own power through further dramatic concentrations of wealth while the competition was being destroyed and brought into a state of dependency. Lockdowns have been instigated to secure that very end and were never anything to do with health. My brother Paul spent 45 years building up a bus repair business, but lockdowns meant buses were running at a fraction of normal levels for months on end. Similar stories can told in their hundreds of millions worldwide. Efforts of a lifetime coldly destroyed by Cult multi-billionaires and their lackeys in government and law enforcement who continued to earn their living from the taxation of the people while denying the right of the same people to earn theirs. How different it would have been if those making and enforcing these decisions had to face the same financial hardships of those they affected, but they never do.

Gates of Hell

Behind it all in the full knowledge of what he is doing and why is the psychopathic figure of Cult operative Bill Gates. His puppet Tedros at the World Health Organization declared 'Covid' a pandemic in March, 2020. The WHO had changed the definition of a 'pandemic' in 2009 just a month before declaring the 'swine flu pandemic' which would not have been so under the previous definition. The same applies to 'Covid'. The definition had included… 'an infection by an infectious agent, occurring simultaneously in different countries, with a significant mortality rate relative to the proportion of the population infected'. The new definition removed the need for 'significant mortality'. The 'pandemic' has been fraudulent even down to the definition, but Gates demanded economy-destroying lockdowns, school closures, social distancing, mandatory masks, a 'vaccination' for every man, woman and child on the planet and severe consequences and restrictions for those that refused. Who gave him this power? The

Cult did which he serves like a little boy in short trousers doing what his daddy tells him. He and his psychopathic missus even smiled when they said that much worse was to come (what they knew was planned to come). Gates responded in the matter-of-fact way of all psychopaths to a question about the effect on the world economy of what he was doing:

> Well, it won't go to zero but it will shrink. Global GDP is probably going to take the biggest hit ever [Gates was smiling as he said this] … in my lifetime this will be the greatest economic hit. But you don't have a choice. People act as if you have a choice. People don't feel like going to the stadium when they might get infected … People are deeply affected by seeing these stats, by knowing they could be part of the transmission chain, old people, their parents and grandparents, could be affected by this, and so you don't get to say ignore what is going on here.
>
> There will be the ability to open up, particularly in rich countries, if things are done well over the next few months, but for the world at large normalcy only returns when we have largely vaccinated the entire population.

The man has no compassion or empathy. How could he when he's a psychopath like all Cult players? My own view is that even beyond that he is very seriously mentally ill. Look in his eyes and you can see this along with his crazy flailing arms. You don't do what he has done to the world population since the start of 2020 unless you are mentally ill and at the most extreme end of psychopathic. You especially don't do it when to you know, as we shall see, that cases and deaths from 'Covid' are fakery and a product of monumental figure massaging. 'These stats' that Gates referred to are based on a 'test' that's not testing for the 'virus' as he has known all along. He made his fortune with big Cult support as an infamously ruthless software salesman and now buys global control of 'health' (death) policy without the population he affects having any say. It's a breathtaking outrage. Gates talked about people being deeply affected by fear of 'Covid' when that was because of *him* and his global network lying to them minute-by-minute supported by a lying media that he seriously influences and funds to the tune of hundreds of millions. He's handed big sums to media operations including the BBC, NBC, Al Jazeera, Univision, *PBS NewsHour,* *ProPublica, National Journal, The Guardian, The Financial Times, The Atlantic, Texas Tribune, USA Today* publisher Gannett, *Washington Monthly, Le Monde,* Center for Investigative Reporting, Pulitzer Center on Crisis Reporting, National Press Foundation, International Center for Journalists, Solutions Journalism Network, the Poynter Institute for Media Studies, and many more. Gates is everywhere in the 'Covid' hoax and the man must go to prison – or a mental facility – for the rest of his life and his money distributed to those he has taken such enormous psychopathic pleasure in crushing.

The Muscle

The Hunger Games global structure demands a police-military state – a fusion of the two into one force – which viciously imposes the will of the Cult on the population and protects the Cult from public rebellion. In that regard, too, the 'Covid' hoax just keeps on giving. Often unlawful, ridiculous and contradictory 'Covid' rules and regulations have been policed across the world by moronic automatons and psychopaths made faceless by face-nappy masks and acting like the Nazi SS and fascist blackshirts and brownshirts of Hitler and Mussolini. The smallest departure from the rules decreed by the psychos in government and their clueless gofers were jumped upon by the face-nappy fascists. Brutality against public protestors soon became commonplace even on girls, women and old people as the brave men with the batons – the Face-Nappies as I call them – broke up peaceful protests and handed out fines like confetti to people who couldn't earn a living let alone pay hundreds of pounds for what was once an accepted human right. Robot Face-Nappies of Nottingham police in the English East Midlands fined one group £11,000 for attending a child's birthday party. For decades I charted the transformation of law enforcement as genuine, decent officers were replaced with psychopaths and the brain dead who would happily and brutally do whatever their masters told them. Now they were let loose on the public and I would emphasise the point that none of this just happened. The step-by-step change in the dynamic between police and public was orchestrated from the shadows by those who knew where this was all going and the same with the perceptual reframing of those in all levels of authority and official administration through 'training courses' by organisations such as Common Purpose which was created in the late 1980s and given a massive boost in Blair era Britain until it became a global phenomenon. Supposed public 'servants' began to view the population as the enemy and the same was true of the police. This was the start of the explosion of behaviour manipulation organisations and networks preparing for the all-war on the human psyche unleashed with the dawn of 2020. I will go into more detail about this later in the book because it is a core part of what is happening.

Police desecrated beauty spots to deter people gathering and arrested women for walking in the countryside alone 'too far' from their homes. We had arrogant, clueless sergeants in the Isle of Wight police where I live posting on Facebook what they insisted the population must do or else. A schoolmaster sergeant called Radford looked young enough for me to ask if his mother knew he was out, but he was posting what he *expected* people to do while a Sergeant Wilkinson boasted about fining lads for meeting in a McDonald's car park where they went to get a lockdown takeaway. Wilkinson added that he had even cancelled their order. What a pair of prats these people are and yet they have increasingly become the norm among Jackboot Johnson's Yellowshirts once known as the British police. This was the theme all over the world with police savagery common during lockdown protests in the United States, the Netherlands, and the fascist state of Victoria in Australia under its tyrannical and again moronic premier Daniel Andrews. Amazing how tyrannical and moronic tend to work as a team and the same combination could be seen across America as arrogant, narcissistic Woke governors and mayors such as Gavin Newsom (California), Andrew Cuomo (New York), Gretchen Whitmer (Michigan), Lori Lightfoot (Chicago) and Eric Garcetti (Los Angeles) did their Nazi and Stalin impressions with the full support of the compliant brutality of their enforcers in uniform as they arrested small business owners defying fascist shutdown orders and took them to jail in ankle shackles and handcuffs. This happened to bistro owner Marlena Pavlos-Hackney in Gretchen Whitmer's fascist state of Michigan when police arrived to enforce an order by a state-owned judge for 'putting the community at risk' at a time when other states like Texas were dropping restrictions and migrants were pouring across the southern border without any 'Covid' questions at all. I'm sure there are many officers appalled by what they are ordered to do, but not nearly enough of them. If they were truly appalled they would not do it. As the months passed every opportunity was taken to have the military involved to make their presence on the streets ever more familiar and 'normal' for the longer-term goal of police-military fusion.

Another crucial element to the Hunger Games enforcement network has been encouraging the public to report neighbours and others for 'breaking the lockdown rules'. The group faced with £11,000 in fines at the child's birthday party would have been dobbed-in by a neighbour with a brain the size of a pea. The technique was most famously employed by the Stasi secret police in communist East Germany who had public informants placed throughout the population. A police chief in the UK says his force doesn't need to carry out 'Covid' patrols when they are flooded with so many calls from the public reporting other people for visiting the beach. Dorset police chief James Vaughan said people were so enthusiastic about snitching on their fellow humans they were now operating as an auxiliary arm of the police: 'We are still getting around 400 reports a week from the public, so we will respond to reports …We won't need to be doing hotspot patrols because people are very quick to pick the phone up and tell us.' Vaughan didn't say that this is a pillar of all tyrannies of whatever complexion and the means to hugely extend the reach of enforcement while spreading distrust among the people and making them wary of doing anything that might get them reported. Those narcissistic Isle of Wight sergeants Radford and Wilkinson never fail to add a link to their Facebook posts where the public can inform on their fellow slaves.

Neither would be self-aware enough to realise they were imitating the Stasi which they might well never have heard of. Government psychologists that I will expose later laid out a policy to turn communities against each other in the same way.

A coincidence? Yep, and I can knit fog

I knew from the start of the alleged pandemic that this was a Cult operation. It presented limitless potential to rapidly advance the Cult agenda and exploit manipulated fear to demand that every man, woman and child on the planet was 'vaccinated' in a process never used on humans before which infuses self-replicating *synthetic* material into human cells. Remember the plan to transform the human body from a biological to a synthetic biological state. I'll deal with the 'vaccine' (that's not actually a vaccine) when I focus on the genetic agenda. Enough to say here that mass global 'vaccination' justified by this 'new virus' set alarms ringing after 30 years of tracking these people and their methods. The 'Covid' hoax officially beginning in China was also a big red flag for reasons I will be explaining. The agenda potential was so enormous that I could dismiss any idea that the 'virus' appeared naturally. Major happenings with major agenda implications never occur without Cult involvement in making them happen. My questions were twofold in early 2020 as the media began its campaign to induce global fear and hysteria: Was this alleged infectious agent released on purpose by the Cult or did it even exist at all? I then did what I always do in these situations. I sat, observed and waited to see where the evidence and information would take me. By March and early April synchronicity was strongly – and ever more so since then – pointing me in the direction of *there is no 'virus'*. I went public on that with derision even from swathes of the alternative media that voiced a scenario that the Chinese government released the 'virus' in league with Deep State elements in the United States from a top-level bio-lab in Wuhan where the 'virus' is said to have first appeared. I looked at that possibility, but I didn't buy it for several reasons. Deaths from the 'virus' did not in any way match what they would have been with a ‘deadly bioweapon’ and it is much more effective if you sell the *illusion* of an infectious agent rather than having a real one unless you can control through injection who has it and who doesn’t. Otherwise you lose control of events. A made-up ‘virus’ gives you a blank sheet of paper on which you can make it do whatever you like and have any symptoms or mutant ‘variants’ you choose to add while a real infectious agent would limit you to what it actually does. A phantom disease allows you to have endless ludicrous ‘studies’ on the ‘Covid’ dollar to widen the perceived impact by inventing ever more ‘at risk’ groups including one study which said those who walk slowly may be almost four times more likely to die from the ‘virus’. People are in psychiatric wards for less.

A real ‘deadly bioweapon’ can take out people in the hierarchy that are not part of the Cult, but essential to its operation. Obviously they don’t want that. Releasing a real disease means you immediately lose control of it. Releasing an illusory one means you don’t. Again it’s vital that people are extra careful when dealing with what they want to hear. A bioweapon unleashed from a Chinese laboratory in collusion with the American Deep State may fit a conspiracy narrative, but is it true? Would it not be far more effective to use the excuse of a ‘virus’ to justify the real bioweapon – the ‘vaccine’? That way your disease agent does not have to be transmitted and arrives directly through a syringe. I saw a French virologist Luc Montagnier quoted in the alternative media as saying he had discovered that the alleged ‘new’ severe acute respiratory syndrome coronavirus , or SARS-CoV-2, was made artificially and included elements of the human immunodeficiency ‘virus’ (HIV) and a parasite that causes malaria. SARS-CoV-2 is alleged to trigger an alleged illness called Covid-19. I remembered Montagnier’s name from my research years before into claims that an HIV ‘retrovirus’ causes AIDs – claims that were demolished by Berkeley virologist Peter Duesberg who showed that no one had ever proved that HIV causes acquired immunodeficiency syndrome or AIDS. Claims that become accepted as fact, publicly and medically, with no proof whatsoever are an ever-recurring story that profoundly applies to

'Covid'. Nevertheless, despite the lack of proof, Montagnier's team at the Pasteur Institute in Paris had a long dispute with American researcher Robert Gallo over which of them discovered and isolated the HIV 'virus' and with *no evidence* found it to cause AIDS. You will see later that there is also no evidence that any 'virus' causes any disease or that there is even such a thing as a 'virus' in the way it is said to exist. The claim to have 'isolated' the HIV 'virus' will be presented in its real context as we come to the shocking story – and it is a story – of SARS-CoV-2 and so will Montagnier's assertion that he identified the full SARS-CoV-2 genome.

Hoax in the making

We can pick up the 'Covid' story in 2010 and the publication by the Rockefeller Foundation of a document called 'Scenarios for the Future of Technology and International Development'. The inner circle of the Rockefeller family has been serving the Cult since John D. Rockefeller (1839-1937) made his fortune with Standard Oil. It is less well known that the same Rockefeller – the Bill Gates of his day – was responsible for establishing what is now referred to as 'Big Pharma', the global network of pharmaceutical companies that make outrageous profits dispensing scalpel and drug 'medicine' and are obsessed with pumping vaccines in ever-increasing number into as many human arms and backsides as possible. John D. Rockefeller was the driving force behind the creation of the 'education' system in the United States and elsewhere specifically designed to program the perceptions of generations thereafter. The Rockefeller family donated exceptionally valuable land in New York for the United Nations building and were central in establishing the World Health Organization in 1948 as an agency of the UN which was created from the start as a Trojan horse and stalking horse for world government. Now enter Bill Gates. His family and the Rockefellers have long been extremely close and I have seen genealogy which claims that if you go back far enough the two families fuse into the same bloodline. Gates has said that the Bill and Melinda Gates Foundation was inspired by the Rockefeller Foundation and why not when both are serving the same Cult? Major tax-exempt foundations are overwhelmingly criminal enterprises in which Cult assets fund the Cult agenda in the guise of 'philanthropy' while avoiding tax in the process. Cult operatives can become mega-rich in their role of front men and women for the psychopaths at the inner core and they, too, have to be psychopaths to knowingly serve such evil. Part of the deal is that a big percentage of the wealth gleaned from representing the Cult has to be spent advancing the ambitions of the Cult and hence you have the Rockefeller Foundation, Bill and Melinda Gates Foundation (and *so* many more) and people like George Soros with his global Open Society Foundations spending their billions in pursuit of global Cult control. Gates is a global public face of the Cult with his interventions in world affairs including Big Tech influence; a central role in the 'Covid' and 'vaccine' scam; promotion of the climate change shakedown; manipulation of education; geoengineering of the skies; and his food-control agenda as the biggest owner of farmland in America, his GMO promotion and through other means. As one writer said: 'Gates monopolizes or wields disproportionate influence over the tech industry, global health and vaccines, agriculture and food policy (including biopiracy and fake food), weather modification and other climate technologies, surveillance, education and media.' The almost limitless wealth secured through Microsoft and other not-allowed-to-fail ventures (including vaccines) has been ploughed into a long, long list of Cult projects designed to enslave the entire human race. Gates and the Rockefellers have been working as one unit with the Rockefeller-established World Health Organization leading global 'Covid' policy controlled by Gates through his mouth-piece Tedros. Gates became the WHO's biggest funder when Trump announced that the American government would cease its donations, but Biden immediately said he would restore the money when he took office in January, 2021. The Gates Foundation (the Cult) owns through limitless funding the world health system and the major players across the globe in the 'Covid' hoax.

Okay, with that background we return to that Rockefeller Foundation document of 2010 headed 'Scenarios for the Future of Technology and International Development' and its 'imaginary' epidemic of a virulent and deadly influenza strain which infected 20 percent of the global population and killed eight million in seven months. The Rockefeller scenario was that the epidemic destroyed economies, closed shops, offices and other businesses and led to governments imposing fierce rules and restrictions that included mandatory wearing of face masks and body-temperature checks to enter communal spaces like railway stations and supermarkets. The document predicted that even after the height of the Rockefeller-envisaged epidemic the authoritarian rule would continue to deal with further pandemics, transnational terrorism, environmental crises and rising poverty. Now you may think that the Rockefellers are our modern-day seers or alternatively, and rather more likely, that they well knew what was planned a few years further on. Fascism had to be imposed, you see, to 'protect citizens from risk and exposure'. The Rockefeller scenario document said:

> During the pandemic, national leaders around the world flexed their authority and imposed airtight rules and restrictions, from the mandatory wearing of face masks to body-temperature checks at the entries to communal spaces like train stations and supermarkets. Even after the pandemic faded, this more authoritarian control and oversight of citizens and their activities stuck and even intensified. In order to protect themselves from the spread of increasingly global problems – from pandemics and transnational terrorism to environmental crises and rising poverty – leaders around the world took a firmer grip on power.
>
> At first, the notion of a more controlled world gained wide acceptance and approval. Citizens willingly gave up some of their sovereignty – and their privacy – to more paternalistic states in exchange for greater safety and stability. Citizens were more tolerant, and even eager, for top-down direction and oversight, and national leaders had more latitude to impose order in the ways they saw fit.
>
> In developed countries, this heightened oversight took many forms: biometric IDs for all citizens, for example, and tighter regulation of key industries whose stability was deemed vital to national interests. In many developed countries, enforced cooperation with a suite of new regulations and agreements slowly but steadily restored both order and, importantly, economic growth.

There we have the prophetic Rockefellers in 2010 and three years later came their paper for the Global Health Summit in Beijing, China, when government representatives, the private sector, international organisations and groups met to discuss the next 100 years of 'global health'. The Rockefeller Foundation-funded paper was called 'Dreaming the Future of Health for the Next 100 Years and more prophecy ensued as it described a dystopian future: 'The abundance of data, digitally tracking and linking people may mean the 'death of privacy' and may replace physical interaction with transient, virtual connection, generating isolation and raising questions of how values are shaped in virtual networks.' Next in the 'Covid' hoax preparation sequence came a 'table top' simulation in 2018 for another 'imaginary' pandemic of a disease called Clade X which was said to kill 900 million people. The exercise was organised by the Gates-funded Johns Hopkins University's Center for Health Security in the United States and this is the very same university that has been compiling the disgustingly and systematically erroneous global figures for 'Covid' cases and deaths. Similar Johns Hopkins health crisis scenarios have included the Dark Winter exercise in 2001 and Atlantic Storm in 2005.

Nostradamus 201

For sheer predictive genius look no further prophecy-watchers than the Bill Gates-funded Event 201 held only six weeks before the 'coronavirus pandemic' is supposed to have broken out in China and Event 201 was based on a scenario of a global 'coronavirus pandemic'. Melinda Gates, the great man's missus, told the BBC that he had 'prepared for years' for a coronavirus pandemic which told us what we already knew. Nostradamugates had predicted in a TED talk in 2015 that a pandemic was coming that would kill a lot of people and demolish the world economy. My god, the man is a machine – possibly even literally. Now here he was only weeks before the real thing funding just such a simulated scenario and involving his friends and associates at Johns Hopkins, the World Economic Forum Cult-front of Klaus Schwab, the United Nations, Johnson & Johnson, major banks, and officials from China and the Centers for Disease Control in the United States. What synchronicity – Johns Hopkins would go on to compile the fraudulent 'Covid' figures, the World Economic Forum and Schwab would push the 'Great Reset' in response to 'Covid', the Centers for Disease Control would be at the forefront of 'Covid' policy in the United States, Johnson & Johnson would produce a 'Covid vaccine', and everything would officially start just weeks later in China. Spooky, eh? They were even accurate in creating a simulation of a 'virus' pandemic because the 'real thing' would also be a simulation. Event 201 was not an exercise preparing for something that might happen; it was a rehearsal for what those in control knew was *going* to happen and very shortly. Hours of this simulation were posted on the Internet and the various themes and responses mirrored what would soon be imposed to transform human society. News stories were inserted and what they said would be commonplace a few weeks later with still more prophecy perfection. Much discussion focused on the need to deal with misinformation and the 'anti-vax movement' which is exactly what happened when the 'virus' arrived – was said to have arrived – in the West.

Cult-owned social media banned criticism and exposure of the official 'virus' narrative and when I said there *was* no 'virus' in early April, 2020, I was banned by one platform after another including YouTube, Facebook and later Twitter. The mainstream broadcast media in Britain was in effect banned from interviewing me by the Tony-Blair-created government broadcasting censor Ofcom headed by career government bureaucrat Melanie Dawes who was appointed just as the 'virus' hoax was about to play out in January, 2020. At the same time the Ickonic media platform was using Vimeo, another ultra-Zionist-owned operation, while our own player was being created and they deleted in an instant hundreds of videos, documentaries, series and shows to confirm their unbelievable vindictiveness. We had copies, of course, and they had to be restored one by one when our player was ready. These people have no class. Sabbatian Facebook promised free advertisements for the Gates-controlled World Health Organization narrative while deleting ‘false claims and conspiracy theories’ to stop ‘misinformation’ about the alleged coronavirus. All these responses could be seen just a short while earlier in the scenarios of Event 201. Extreme censorship was absolutely crucial for the Cult because the official story was so ridiculous and unsupportable by the evidence that it could never survive open debate and the free-flow of information and opinion. If you can’t win a debate then don’t have one is the Cult’s approach throughout history. Facebook’s little boy front man – front boy – Mark Zuckerberg equated ‘credible and accurate information’ with official sources and exposing their lies with ‘misinformation’.

Silencing those that can see

The censorship dynamic of Event 201 is now the norm with an army of narrative-supporting ‘fact-checker’ organisations whose entire reason for being is to tell the public that official narratives are true and those exposing them are lying. One of the most appalling of these ‘fact-checkers’ is called NewsGuard founded by ultra-Zionist Americans Gordon Crovitz and Steven Brill. Crovitz is a former publisher of *The Wall Street Journal*, former Executive Vice President of Dow Jones, a member of the Council on Foreign Relations (CFR), and on the board of the American Association of Rhodes Scholars. The CFR and Rhodes Scholarships, named after Rothschild agent Cecil Rhodes who plundered the gold and diamonds of South Africa for his masters and the Cult, have featured widely in my books. NewsGuard don’t seem to like me for some reason – I really can’t think why – and they have done all they can to have me censored and discredited which is, to quote an old British politician, like being savaged by a dead sheep. They are, however, like all in the censorship network, very well connected and funded by organisations themselves funded by, or connected to, Bill Gates. As you would expect with anything associated with Gates NewsGuard has an offshoot called HealthGuard which ‘fights online health care hoaxes’. How very kind. Somehow the NewsGuard European Managing Director Anna-Sophie Harling, a remarkably young-looking woman with no broadcasting experience and little hands-on work in journalism, has somehow secured a position on the ‘Content Board’ of UK government broadcast censor Ofcom. An executive of an organisation seeking to discredit dissidents of the official narratives is making decisions for the government broadcast ‘regulator’ about content?? Another appalling ‘fact-checker’ is Full Fact funded by George Soros and global censors Google and Facebook.

It’s amazing how many activists in the ‘fact-checking’, ‘anti-hate’, arena turn up in government-related positions – people like UK Labour Party activist Imran Ahmed who heads the Center for Countering Digital Hate founded by people like Morgan McSweeney, now chief of staff to the Labour Party’s hapless and useless ‘leader’ Keir Starmer. Digital Hate – which is what it really is – uses the American spelling of Center to betray its connection to a transatlantic network of similar organisations which in 2020 shapeshifted from attacking people for ‘hate’ to attacking them for questioning the ‘Covid’ hoax and the dangers of the ‘Covid vaccine’. It’s just a coincidence, you understand. This is one of Imran Ahmed’s hysterical statements: ‘I would go beyond calling anti-vaxxers conspiracy theorists to say they are an extremist group that pose a national security risk.’ No one could ever accuse this prat of understatement and he’s including in that those parents who are now against vaccines after their children were damaged for life or killed by them. He’s such a nice man. Ahmed does the rounds of the Woke media getting soft-ball questions from spineless ‘journalists’ who never ask what right he has to campaign to destroy the freedom of speech of others while he demands it for himself. There also seems to be an overrepresentation in Ofcom of people connected to the narrative-worshipping BBC. This incredible global network of narrative-support was super-vital when the ‘Covid’ hoax was played in the light of the mega-whopper lies that have to be defended from the spotlight cast by the most basic intelligence.

Setting the scene

The Cult plays the long game and proceeds step-by-step ensuring that everything is in place before major cards are played and they don't come any bigger than the 'Covid' hoax. The psychopaths can't handle events where the outcome isn't certain and as little as possible – preferably nothing – is left to chance. Politicians, government and medical officials who would follow direction were brought to illusory power in advance by the Cult web whether on the national stage or others like state governors and mayors of America. For decades the dynamic between officialdom, law enforcement and the public was changed from one of service to one of control and dictatorship. Behaviour manipulation networks established within government were waiting to impose the coming 'Covid' rules and regulations specifically designed to subdue and rewire the psyche of the people in the guise of protecting health. These included in the UK the Behavioural Insights Team part-owned by the British government Cabinet Office; the Scientific Pandemic Insights Group on Behaviours (SPI-B); and a whole web of intelligence and military groups seeking to direct the conversation on social media and control the narrative. Among them are the cyberwarfare (on the people) 77th Brigade of the British military which is also coordinated through the Cabinet Office as civilian and military leadership continues to combine in what they call the Fusion Doctrine. The 77th Brigade is a British equivalent of the infamous Israeli (Sabbatian) military cyberwarfare and Internet manipulation operation Unit 8200 which I expose at length in *The Trigger*. Also carefully in place were the medical and science advisers to government – many on the payroll past or present of Bill Gates – and a whole alternative structure of unelected government stood by to take control when elected parliaments were effectively closed down once the 'Covid' card was slammed on the table. The structure I have described here and so much more was installed in every major country through the Cult networks. The top-down control hierarchy looks like this: The Cult – Cult-owned Gates – the World Health Organization and Tedros – Gates-funded or controlled chief medical officers and science 'advisers' (dictators) in each country –

political 'leaders'– law enforcement – The People. Through this simple global communication and enforcement structure the policy of the Cult could be imposed on virtually the entire human population so long as they acquiesced to the fascism. With everything in place it was time for the button to be pressed in late 2019/early 2020.

These were the prime goals the Cult had to secure for its will to prevail:

1) Locking down economies, closing all but designated 'essential' businesses (Cult-owned corporations were 'essential'), and putting the population under house arrest was an imperative to destroy independent income and employment and ensure dependency on the Cult-controlled state in the Hunger Games Society. Lockdowns had to be established as the global blueprint from the start to respond to the 'virus' and followed by pretty much the entire world.

2) The global population had to be terrified into believing in a deadly 'virus' that didn't actually exist so they would unquestioningly obey authority in the belief that authority must know how best to protect them and their families. Software salesman Gates would suddenly morph into the world's health expert and be promoted as such by the Cult-owned media.

3) A method of testing that wasn't testing for the 'virus', but was only claimed to be, had to be in place to provide the illusion of 'cases' and subsequent 'deaths' that had a very different cause to the 'Covid-19' that would be scribbled on the death certificate.

4) Because there was no 'virus' and the great majority testing positive with a test not testing for the 'virus' would have no symptoms of anything the lie had to be sold that people without symptoms (without the 'virus') could still pass it on to others. This was crucial to justify for the first time quarantining – house arresting – healthy people. Without this the economy-destroying lockdown of *everybody* could not have been credibly sold.

5) The 'saviour' had to be seen as a vaccine which beyond evil drug companies were working like angels of mercy to develop as quickly as possible, with all corners cut, to save the day. The public must absolutely not know that the 'vaccine' had nothing to do with a 'virus' or that the contents were ready and waiting with a very different motive long before the 'Covid' card was even lifted from the pack.

I said in March, 2020, that the 'vaccine' would have been created way ahead of the 'Covid' hoax which justified its use and the following December an article in the New York *Intelligencer* magazine said the Moderna 'vaccine' had been 'designed' by

January, 2020. This was 'before China had even acknowledged that the disease could be transmitted from human to human, more than a week before the first confirmed coronavirus case in the United States'. The article said that by the time the first American death was announced a month later 'the vaccine had already been manufactured and shipped to the National Institutes of Health for the beginning of its Phase I clinical trial'. The 'vaccine' was actually 'designed' long before that although even with this timescale you would expect the article to ask how on earth it could have been done that quickly. Instead it asked why the 'vaccine' had not been rolled out then and not months later. Journalism in the mainstream is truly dead. I am going to detail in the next chapter why the 'virus' has never existed and how a hoax on that scale was possible, but first the foundation on which the Big Lie of 'Covid' was built.

The test that doesn't test

Fraudulent 'testing' is the bottom line of the whole 'Covid' hoax and was the means by which a 'virus' that did not exist *appeared* to exist. They could only achieve this magic trick by using a test not testing for the 'virus'. To use a test that *was* testing for the 'virus' would mean that every test would come back negative given there was no 'virus'. They chose to exploit something called the RT-PCR test invented by American biochemist Kary Mullis in the 1980s who said publicly that his PCR test … *cannot detect infectious disease*. Yes, the 'test' used worldwide to detect infectious 'Covid' to produce all the illusory 'cases' and 'deaths' compiled by Johns Hopkins and others *cannot detect infectious disease*. This fact came from the mouth of the man who invented PCR and was awarded the Nobel Prize in Chemistry in 1993 for doing so. Sadly, and incredibly conveniently for the Cult, Mullis died in August, 2019, at the age of 74 just before his test would be fraudulently used to unleash fascism on the world. He was said to have died from pneumonia which was an irony in itself. A few months later he would have had 'Covid-19' on his death certificate. I say the timing of his death was convenient because had he lived Mullis, a brilliant, honest and decent man, would have been vociferously speaking out against the use of his test to detect ‘Covid’ when it was never designed, or able, to do that. I know that to be true given that Mullis made the same point when his test was used to ‘detect’ – not detect – HIV. He had been seriously critical of the Gallo/Montagnier claim to have isolated the HIV ‘virus’ and shown it to cause AIDS for which Mullis said there was no evidence. AIDS is actually not a disease but a series of diseases from which people die all the time. When they die from those *same diseases* after a positive ‘test’ for HIV then AIDS goes on their death certificate. I think I’ve heard that before somewhere. Countries instigated a policy with ‘Covid’ that anyone who tested positive with a test not testing for the ‘virus’ and died of any other cause within 28 days and even longer ‘Covid-19’ had to go on the death certificate. Cases have come from the test that can’t test for infectious disease and the deaths are those who have died of *anything* after testing positive with a test not testing for the ‘virus’. I’ll have much more later about the death certificate scandal.

Mullis was deeply dismissive of the now US ‘Covid’ star Anthony Fauci who he said was a liar who didn’t know anything about anything – ‘and I would say that to his face – nothing.’ He said of Fauci: ‘The man thinks he can take a blood sample, put it in an electron microscope and if it’s got a virus in there you’ll know it – he doesn’t understand electron microscopy and he doesn’t understand medicine and shouldn’t be in a position like he’s in.’ That position, terrifyingly, has made him the decider of ‘Covid’ fascism policy on behalf of the Cult in his role as director since 1984 of the National Institute of Allergy and Infectious Diseases (NIAID) while his record of being wrong is laughable; but being wrong, so long as it’s the *right kind* of wrong, is why the Cult loves him. He’ll say anything the Cult tells him to say. Fauci was made Chief Medical Adviser to the President immediately Biden took office. Biden was installed in the White House by Cult manipulation and one of his first decisions was to elevate Fauci to a position of even more control. This is a coincidence? Yes, and I identify as a flamenco dancer called Lola. How does such an incompetent criminal like Fauci remain in that pivotal position in American health since *the 1980s*? When you serve the Cult it looks after you until you are surplus to requirements. Kary Mullis said prophetically of Fauci and his like: 'Those guys have an agenda and it's not an agenda we would like them to have … they make their own rules, they change them when they want to, and Tony Fauci does not mind going on television in front of the people who pay his salary and lie directly into the camera.' Fauci has done that almost daily since the 'Covid' hoax began. Lying is in Fauci's DNA. To make the situation crystal clear about the PCR test this is a direct quote from its inventor Kary Mullis:

> It [the PCR test] doesn't tell you that you're sick and doesn't tell you that the thing you ended up with was really going to hurt you ...'

Ask yourself why governments and medical systems the world over have been using this very test to decide who is 'infected' with the SARS-CoV-2 'virus' and the alleged disease it allegedly causes, 'Covid-19'. The answer to that question will tell you what has been going on. By the way, here's a little show-stopper – the 'new' SARS-CoV-2 'virus' was 'identified' as such right from the start using … *the PCR test not testing for the 'virus'*. If you are new to this and find that shocking then stick around. I have hardly started yet. Even worse, other 'tests', like the 'Lateral Flow Device' (LFD), are considered so useless that they have to be *confirmed* by the PCR test! Leaked emails written by Ben Dyson, adviser to UK 'Health' Secretary Matt Hancock, said they were 'dangerously unreliable'. Dyson, executive director of strategy at the Department of Health, wrote: 'As of today, someone who gets a positive LFD result in (say) London has at best a 25 per cent chance of it being a true positive, but if it is a self-reported test potentially as low as 10 per cent (on an optimistic assumption about specificity) or as low as 2 per cent (on a more pessimistic assumption).' These are the 'tests' that schoolchildren and the public are being urged to have twice a week or more and have to isolate if they get a positive. Each fake positive goes in the statistics as a 'case' no matter how ludicrously inaccurate and the ‘cases’ drive lockdown, masks and the pressure to ‘vaccinate’. The government said in response to the email leak that the ‘tests’ were accurate which confirmed yet again what shocking bloody liars they are. The real false positive rate is *100 percent* as we’ll see. In another ‘you couldn’t make it up’ the UK government agreed to pay £2.8 billion to California’s Innova Medical Group to supply the irrelevant lateral flow tests. The company’s primary test-making centre is in China. Innova Medical Group, established in March, 2020, is owned by Pasaca Capital Inc, chaired by Chinese-American millionaire Charles Huang who was born in Wuhan.

How it works – and how it doesn’t

The RT-PCR test, known by its full title of Polymerase chain reaction, is used across the world to make millions, even billions, of copies of a DNA/RNA genetic information sample. The process is called ‘amplification’ and means that a tiny sample of genetic material is amplified to bring out the detailed content. I stress that it is not testing for an infectious disease. It is simply amplifying a sample of genetic material. In the words of Kary Mullis: ‘PCR is … just a process that’s used to make a whole lot of something out of something.’ To emphasise the point companies that make the PCR tests circulated around the world to ‘test’ for ‘Covid’ warn on the box that it can’t be used to detect ‘Covid’ or infectious disease and is for research purposes only. It’s okay, rest for a minute and you’ll be fine. This is the test that produces the ‘cases’ and ‘deaths’ that have been used to destroy human society. All those global and national medical and scientific ‘experts’ demanding this destruction to ‘save us’ *KNOW* that the test is not testing for the ‘virus’ and the cases and deaths they claim to be real are an almost unimaginable fraud. Every one of them and so many others including politicians and psychopaths like Gates and Tedros must be brought before Nuremburg-type trials and jailed for the rest of their lives. The more the genetic sample is amplified by PCR the more elements of that material become sensitive to the test and by that I don’t mean sensitive for a ‘virus’ but for elements of the genetic material which is *naturally* in the body or relates to remnants of old conditions of various kinds lying dormant and causing no disease. Once the amplification of the PCR reaches a certain level *everyone* will test positive. So much of the material has been made sensitive to the test that everyone will have some part of it in their body. Even lying criminals like Fauci have said that once PCR amplifications pass 35 cycles everything will be a false positive that cannot be trusted for the reasons I have described. I say, like many proper doctors and scientists, that 100 percent of the 'positives' are false, but let's just go with Fauci for a moment.

He says that any amplification over 35 cycles will produce false positives and yet the US Centers for Disease Control (CDC) and Food and Drug Administration (FDA) have recommended up to *40 cycles* and the National Health Service (NHS) in Britain admitted in an internal document for staff that it was using *45 cycles* of amplification. A long list of other countries has been doing the same and at least one 'testing' laboratory has been using *50 cycles*. Have you ever heard a doctor, medical 'expert' or the media ask what level of amplification has been used to claim a 'positive'. The 'test' comes back 'positive' and so you have the 'virus', end of story. Now we can see how the government in Tanzania could send off samples from a goat and a pawpaw fruit under human names and both came back positive for 'Covid-19'. Tanzania president John Magufuli mocked the 'Covid' hysteria, the PCR test and masks and refused to import the DNA-manipulating 'vaccine'. The Cult hated him and an article sponsored by the Bill Gates Foundation appeared in the London *Guardian* in February, 2021, headed 'It's time for Africa to rein in Tanzania's anti-vaxxer president'. Well, 'reined in' he shortly was. Magufuli appeared in good health, but then, in March, 2021, he was dead at 61 from 'heart failure'. He was replaced by Samia Hassan Suhulu who is connected to Klaus Schwab's World Economic Forum and she immediately reversed Magufuli's 'Covid' policy. A sample of cola tested positive for 'Covid' with the PCR test in Germany while American actress and singer-songwriter Erykah Badu tested positive in one nostril and negative in the other. Footballer Ronaldo called the PCR test ‘bullshit’ after testing positive three times and being forced to quarantine and miss matches when there was nothing wrong with him. The mantra from Tedros at the World Health Organization and national governments (same thing) has been test, test, test. They know that the more tests they can generate the more fake ‘cases’ they have which go on to become ‘deaths’ in ways I am coming to. The UK government has its Operation Moonshot planned to test multiple millions every day in workplaces and schools with free tests for everyone to use twice a week at home in line with the Cult plan from the start to make testing part of life. A government advertisement for an ‘Interim Head of Asymptomatic Testing Communication’ said the job included responsibility for delivering a ‘communications strategy’ (propaganda) ‘to support the expansion of asymptomatic testing that *‘normalises testing as part of everyday life*’. More tests means more fake ‘cases’, ‘deaths’ and fascism. I have heard of, and from, many people who booked a test, couldn’t turn up, and yet got a positive result through the post for a test they’d never even had. The whole thing is crazy, but for the Cult there’s method in the madness. Controlling and manipulating the level of amplification of the test means the authorities can control whenever they want the number of apparent ‘cases’ and ‘deaths’. If they want to justify more fascist lockdown and destruction of livelihoods they keep the amplification high. If they want to give the illusion that lockdowns and the ‘vaccine’ are working then they lower the amplification and ‘cases’ and ‘deaths’ will appear to fall. In January, 2021, the Cult-owned World Health Organization suddenly warned laboratories about over-amplification of the test and to lower the threshold. Suddenly headlines began appearing such as: ‘Why ARE “Covid” cases plummeting?’ This was just when the vaccine rollout was underway and I had predicted months before they would make cases appear to fall through amplification tampering when the ‘vaccine’ came. These people are so predictable.

Cow vaccines?

The question must be asked of what is on the test swabs being poked far up the nose of the population to the base of the brain? A nasal swab punctured one woman's brain and caused it to leak fluid. Most of these procedures are being done by people with little training or medical knowledge. Dr Lorraine Day, former orthopaedic trauma surgeon and Chief of Orthopaedic Surgery at San Francisco General Hospital, says the tests are really a *'vaccine'*. Cows have long been vaccinated this way. She points out that masks have to cover the nose and the mouth where it is claimed the 'virus' exists in saliva. Why then don't they take saliva from the mouth as they do with a DNA test instead of pushing a long swab up the nose towards the brain? The ethmoid bone separates the nasal cavity from the brain and within that bone is the cribriform plate. Dr Day says that when the swab is pushed up against this plate and twisted the procedure is 'depositing things back there'. She claims that among these 'things' are nanoparticles that can enter the brain. Researchers have noted that a team at the Gates-funded Johns Hopkins have designed tiny, star-shaped micro-devices that can latch onto intestinal mucosa and release drugs into the body. Mucosa is the thin skin that covers the inside surface of parts of the body such as *the nose* and mouth and produces mucus to protect them. The Johns Hopkins micro-devices are called 'theragrippers' and were 'inspired' by a parasitic worm that digs its sharp teeth into a host's intestines. Nasal swabs are also coated in the sterilisation agent ethylene oxide. The US National Cancer Institute posts this explanation on its website:

> At room temperature, ethylene oxide is a flammable colorless gas with a sweet odor. It is used primarily to produce other chemicals, including antifreeze. In smaller amounts, ethylene oxide is used as a pesticide and a sterilizing agent. The ability of ethylene oxide to damage DNA makes it an effective sterilizing agent but also accounts for its cancer-causing activity.

The Institute mentions lymphoma and leukaemia as cancers most frequently reported to be associated with occupational exposure to ethylene oxide along with stomach and breast cancers. How does anyone think this is going to work out with the constant testing regime being inflicted on adults and children at home and at school that will accumulate in the body anything that's on the swab?

Doctors know best

It is vital for people to realise that 'hero' doctors 'know' only what the Big Pharma-dominated medical authorities tell them to 'know' and if they refuse to 'know' what they are told to 'know' they are out the door. They are mostly not physicians or healers, but repeaters of the official narrative – or else. I have seen alleged professional doctors on British television make shocking statements that we are supposed to take seriously. One called 'Dr' Amir Khan, who is actually telling patients how to respond to illness, said that men could take the birth pill to 'help slow down the effects of Covid-19'. In March, 2021, another ridiculous 'Covid study' by an American doctor proposed injecting men with the female sex hormone progesterone as a 'Covid' treatment. British doctor Nighat Arif told the BBC that face coverings were now going to be part of ongoing normal. Yes, the vaccine protects you, she said (evidence?) … but the way to deal with viruses in the community was always going to come down to hand washing, face covering and keeping a physical distance. That's not what we were told before the 'vaccine' was circulating. Arif said she couldn't imagine ever again going on the underground or in a lift without a mask. I was just thanking my good luck that she was not my doctor when she said – in March, 2021 – that if 'we are *behaving* and we are doing all the right things' she thought we could 'have our nearest and dearest around us at home … around *Christmas* and N*ew Year!* Her patronising delivery was the usual school teacher talking to six-year-olds as she repeated every government talking point and probably believed them all. If we have learned anything from the 'Covid' experience surely it must be that humanity's perception of doctors needs a fundamental rethink. NHS 'doctor' Sara Kayat told her television audience that the 'Covid vaccine' would '100 percent prevent hospitalisation and death'. Not even Big Pharma claimed that. We have to stop taking 'experts' at their word without question when so many of them are clueless and only repeating the party line on which their careers depend. That is not to say there are not brilliants doctors – there are and I have spoken to many of them since all this began – but you won't see them in the mainstream media or quoted by the psychopaths and yes-people in government.

Remember the name – Christian Drosten

German virologist Christian Drosten, Director of Charité Institute of Virology in Berlin, became a national star after the pandemic hoax began. He was feted on television and advised the German government on 'Covid' policy. Most importantly to the wider world Drosten led a group that produced the 'Covid' testing protocol for the PCR test. What a remarkable feat given the PCR cannot test for infectious disease and even more so when you think that Drosten said that his method of testing for SARS-CoV-2 was developed 'without having virus material available'. *He developed a test for a 'virus' that he didn't have and had never seen*. Let that sink in as you survey the global devastation that came from what he did. The whole catastrophe of Drosten's 'test' was based on the alleged genetic sequence published by Chinese scientists on the Internet. We will see in the next chapter that this alleged 'genetic sequence' has never been produced by China or anyone and cannot be when there *is no* SARS-CoV-2. Drosten, however, doesn't seem to let little details like that get in the way. He was the lead author with Victor Corman from the same Charité Hospital of the paper 'Detection of 2019 novel coronavirus (2019-nCoV) by real-time PCR' published in a magazine called *Eurosurveillance*. This became known as the Corman-Drosten paper. In November, 2020, with human society devastated by the effects of the Corman-Drosten test baloney, the protocol was publicly challenged by 22 international scientists and independent researchers from Europe, the United States, and Japan. Among them were senior molecular geneticists, biochemists, immunologists, and microbiologists. They produced a document headed 'External peer review of the RTPCR test to detect SARS-Cov-2 Reveals 10 Major Flaws At The Molecular and Methodological Level: Consequences

For False-Positive Results’. The flaws in the Corman-Drosten test included the following:

- The test is non-specific because of erroneous design
- Results are enormously variable
- The test is unable to discriminate between the whole ‘virus’ and viral fragments
- It doesn’t have positive or negative controls
- The test lacks a standard operating procedure
- It is unsupported by proper peer view

The scientists said the PCR ‘Covid’ testing protocol was not founded on science and they demanded the Corman-Drosten paper be retracted by *Eurosurveillance*. They said all present and previous Covid deaths, cases, and ‘infection rates’ should be subject to a massive retroactive inquiry. Lockdowns and travel restrictions should be reviewed and relaxed and those diagnosed through PCR to have ‘Covid-19’ should not be forced to isolate. Dr Kevin Corbett, a health researcher and nurse educator with a long academic career producing a stream of peer-reviewed publications at many UK universities, made the same point about the PCR test debacle. He said of the scientists’ conclusions: ‘Every scientific rationale for the development of that test has been totally destroyed by this paper. It’s like Hiroshima/Nagasaki to the Covid test.’ He said that China hadn’t given them an isolated ‘virus’ when Drosten developed the test. Instead they had developed the test from *a sequence in a gene bank*.’ Put another way … *they made it up*! The scientists were supported in this contention by a Portuguese appeals court which ruled in November, 2020, that PCR tests are unreliable and it is unlawful to quarantine people based solely on a PCR test. The point about China not providing an isolated virus must be true when the ‘virus’ has never been isolated to this day and the consequences of that will become clear. Drosten and company produced this useless ‘protocol’ right on cue in January, 2020, just as the ‘virus’ was said to be moving westward and it somehow managed to successfully pass a peer-review in 24 hours. In other words there was no peer-review for a test that would be used to decide who had ‘Covid’ and who didn’t across the world. The Cult-created, Gates-controlled World Health Organization immediately recommended all its nearly 200 member countries to use the Drosten PCR protocol to detect ‘cases’ and ‘deaths’. The sting was underway and it continues to this day.

So who is this Christian Drosten that produced the means through which death, destruction and economic catastrophe would be justified? His education background, including his doctoral thesis, would appear to be somewhat shrouded in mystery and his track record is dire as with another essential player in the ‘Covid’ hoax, the Gates-funded Professor Neil Ferguson at the Gates-funded Imperial College in London of whom more shortly. Drosten predicted in 2003 that the alleged original SARS ‘virus’ (SARS-1’) was an epidemic that could have serious effects on economies and an effective vaccine would take at least two years to produce. Drosten’s answer to every alleged ‘outbreak’ is a vaccine which you won’t be shocked to know. What followed were just 774 official deaths worldwide and none in Germany where there were only nine cases. That is even if you believe there ever was a SARS ‘virus’ when the evidence is zilch and I will expand on this in the next chapter. Drosten claims to be co-discoverer of ‘SARS-1’ and developed a test for it in 2003. He was screaming warnings about ‘swine flu’ in 2009 and how it was a widespread infection far more severe than any dangers from a vaccine could be and people should get vaccinated. It would be helpful for Drosten’s vocal chords if he simply recorded the words ‘the virus is deadly and you need to get vaccinated’ and copies could be handed out whenever the latest made-up threat comes along. Drosten’s swine flu epidemic never happened, but Big Pharma didn’t mind with governments spending hundreds of millions on vaccines that hardly anyone bothered to use and many who did wished they hadn’t. A study in 2010 revealed that the risk of dying from swine flu, or H1N1, was no higher than that of the annual seasonal flu which is what at least most of ‘it’ really was as in the case of ‘Covid-19’. A media investigation into Drosten asked how with such a record of inaccuracy he could be *the* government adviser on these issues. The answer to that question is the same with Drosten, Ferguson and Fauci – they keep on giving the authorities the ‘conclusions’ and ‘advice’ they want to hear. Drosten certainly produced the goods for them in January, 2020, with his PCR protocol garbage and provided the foundation of what German internal medicine specialist Dr Claus Köhnlein, co-author of *Virus Mania*, called the ‘test pandemic’. The 22 scientists in the *Eurosurveillance* challenge called out conflicts of interest within the Drosten ‘protocol’ group and with good reason. Olfert Landt, a regular co-author of Drosten ‘studies’, owns the biotech company TIB Molbiol Syntheselabor GmbH in Berlin which manufactures and sells the tests that Drosten and his mates come up with. They have done this with SARS, Enterotoxigenic E. coli (ETEC), MERS, Zika ‘virus’, yellow fever, and now ‘Covid’. Landt told the *Berliner Zeitung* newspaper:

> The testing, design and development came from the Charité [Drosten and Corman]. We simply implemented it immediately in the form of a kit. And if we don’t have the virus, which originally only existed in Wuhan, we can make a synthetic gene to simulate the genome of the virus. That’s what we did very quickly.

This is more confirmation that the Drosten test was designed without access to the ‘virus’ and only a synthetic simulation which is what SARS-CoV-2 really is – a computer-generated synthetic fiction. It’s quite an enterprise they have going here. A Drosten team decides what the test for something should be and Landt’s biotech company flogs it to governments and medical systems across the world. His company must have made an absolute fortune since the ‘Covid’ hoax began. Dr Reiner Fuellmich, a prominent German consumer protection trial lawyer in Germany and California, is on Drosten’s case and that of Tedros at the World Health Organization for crimes against humanity with a class-action lawsuit being prepared in the United States and other legal action in Germany.

Why China?

Scamming the world with a 'virus' that doesn't exist would seem impossible on the face of it, but not if you have control of the relatively few people that make policy decisions and the great majority of the global media. Remember it's not about changing 'real' reality it's about controlling *perception* of reality. You don't have to make something happen you only have make people *believe* that it's happening. Renegade Minds understand this and are therefore much harder to swindle. 'Covid-19' is not a 'real' 'virus'. It's a mind virus, like a computer virus, which has infected the minds, not the bodies, of billions. It all started, publically at least, in China and that alone is of central significance. The Cult was behind the revolution led by its asset Mao Zedong, or Chairman Mao, which established the People's Republic of China on October 1st, 1949. It should have been called The Cult's Republic of China, but the name had to reflect the recurring illusion that vicious dictatorships are run by and for the people (see all the 'Democratic Republics' controlled by tyrants). In the same way we have the 'Biden' Democratic Republic of America officially ruled by a puppet tyrant (at least temporarily) on behalf of Cult tyrants. The creation of Mao's merciless communist/fascist dictatorship was part of a frenzy of activity by the Cult at the conclusion of World War Two which, like the First World War, it had instigated through its assets in Germany, Britain, France, the United States and elsewhere. Israel was formed in 1948; the Soviet Union expanded its 'Iron Curtain' control, influence and military power with the Warsaw Pact communist alliance in 1955; the United Nations was formed in 1945 as a Cult precursor to world government; and a long list of world bodies would be established including the World Health Organization (1948), World Trade Organization (1948 under another name until 1995), International Monetary Fund (1945) and World Bank (1944). Human society was redrawn and hugely centralised in the global Problem-Reaction-Solution that was World War Two. All these changes were significant. Israel would become the headquarters of the Sabbatians and the revolution in China would prepare the ground and control system for the events of 2019/2020.

Renegade Minds know there are no borders except for public consumption. The Cult is a seamless, borderless global entity and to understand the game we need to put aside labels like borders, nations, countries, communism, fascism and democracy. These delude the population into believing that countries are ruled within their borders by a government of whatever shade when these are mere agencies of a global power. America's illusion of democracy and China's communism/fascism are subsidiaries – vehicles – for the same agenda. We may hear about conflict and competition between America and China and on the lower levels that will be true; but at the Cult level they are branches of the same company in the way of the McDonald's example I gave earlier. I have tracked in the books over the years support by US governments of both parties for Chinese Communist Party infiltration of American society through allowing the sale of land, even military facilities, and the acquisition of American business and university influence. All this is underpinned by the infamous stealing of intellectual property and technological know-how. Cult-owned Silicon Valley corporations waive their fraudulent 'morality' to do business with human-rights-free China; Cult-controlled Disney has become China's PR department; and China in effect owns 'American' sports such as basketball which depends for much of its income on Chinese audiences. As a result any sports player, coach or official speaking out against China's horrific human rights record is immediately condemned or fired by the China-worshipping National Basketball Association. One of the first acts of China-controlled Biden was to issue an executive order telling federal agencies to stop making references to the 'virus' by the 'geographic location of its origin'. Long-time Congressman Jerry Nadler warned that criticising China, America's biggest rival, leads to hate crimes against Asian people in the United States. So shut up you bigot. China is fast closing in on Israel as a country that must not be criticised which is apt, really, given that Sabbatians control them both. The two countries have developed close economic, military, technological and strategic ties which include involvement in China's 'Silk Road' transport and economic initiative to connect China with Europe. Israel was the first country in the Middle East to recognise the establishment of Mao's tyranny in 1950 months after it was established.

Project Wuhan – the 'Covid' Psyop

I emphasise again that the Cult plays the long game and what is happening to the world today is the result of centuries of calculated manipulation following a script to take control step-by-step of every aspect of human society. I will discuss later the common force behind all this that has spanned those centuries and thousands of years if the truth be told. Instigating the Mao revolution in China in 1949 with a 2020 'pandemic' in mind is not only how they work – the 71 years between them is really quite short by the Cult's standards of manipulation preparation. The reason for the Cult's Chinese revolution was to create a fiercely-controlled environment within which an extreme structure for human control could be incubated to eventually be unleashed across the world. We have seen this happen since the 'pandemic' emerged from China with the Chinese control-structure founded on AI technology and tyrannical enforcement sweep across the West. Until the moment when the Cult went for broke in the West and put its fascism on public display Western governments had to pay some lip-service to freedom and democracy to not alert too many people to the tyranny-in-the-making. Freedoms were more subtly eroded and power centralised with covert government structures put in place waiting for the arrival of 2020 when that smokescreen of 'freedom' could be dispensed with. The West was not able to move towards tyranny before 2020 anything like as fast as China which was created as a tyranny and had no limits on how fast it could construct the Cult's blueprint for global control. When the time came to impose that structure on the world it was the same Cult-owned Chinese communist/fascist government that provided the excuse – the 'Covid pandemic'. It was absolutely crucial to the Cult plan for the Chinese response to the 'pandemic' –

draconian lockdowns of the entire population – to become the blueprint that Western countries would follow to destroy the livelihoods and freedom of their people. This is why the Cult-owned, Gates-owned, WHO Director-General Tedros said early on:

> The Chinese government is to be congratulated for the extraordinary measures it has taken to contain the outbreak. China is actually setting a new standard for outbreak response and it is not an exaggeration.

Forbes magazine said of China: '… those measures protected untold millions from getting the disease'. The Rockefeller Foundation 'epidemic scenario' document in 2010 said 'prophetically':

> However, a few countries did fare better – China in particular. The Chinese government's quick imposition and enforcement of mandatory quarantine for all citizens, as well as its instant and near-hermetic sealing off of all borders, saved millions of lives, stopping the spread of the virus far earlier than in other countries and enabling a swifter post-pandemic recovery.

Once again – *spooky*.

The first official story was the 'bat theory' or rather the bat diversion. The source of the 'virus outbreak' we were told was a ''wet market' in Wuhan where bats and other animals are bought and eaten in horrifically unhygienic conditions. Then another story emerged through the alternative media that the 'virus' had been released on purpose or by accident from a BSL-4 (biosafety level 4) laboratory in Wuhan not far from the wet market. The lab was reported to create and work with lethal concoctions and bioweapons. Biosafety level 4 is the highest in the World Health Organization system of safety and containment. Renegade Minds are aware of what I call designer manipulation. The ideal for the Cult is for people to buy its prime narrative which in the opening salvoes of the 'pandemic' was the wet market story. It knows, however, that there is now a considerable worldwide alternative media of researchers sceptical of anything governments say and they are often given a version of events in a form they can perceive as credible while misdirecting them from the real truth. In this case let them think that the conspiracy involved is a ‘bioweapon virus’ released from the Wuhan lab to keep them from the real conspiracy – *there is no ‘virus’*. The WHO’s current position on the source of the outbreak at the time of writing appears to be: ‘We haven’t got a clue, mate.’ This is a good position to maintain mystery and bewilderment. The inner circle will know where the ‘virus’ came from – *nowhere*. The bottom line was to ensure the public believed there *was* a ‘virus’ and it didn’t much matter if they thought it was natural or had been released from a lab. The belief that there was a ‘deadly virus’ was all that was needed to trigger global panic and fear. The population was terrified into handing their power to authority and doing what they were told. They had to or they were ‘all gonna die’.

In March, 2020, information began to come my way from real doctors and scientists and my own additional research which had my intuition screaming: ‘Yes, that’s it! *There is no virus*.’ The ‘bioweapon’ was not the ‘virus’; it was the *‘vaccine’* already being talked about that would be the bioweapon. My conclusion was further enhanced by happenings in Wuhan. The ‘virus’ was said to be sweeping the city and news footage circulated of people collapsing in the street (which they’ve never done in the West with the same ‘virus’). The Chinese government was building ‘new hospitals’ in a matter of ten days to ‘cope with demand’ such was the virulent nature of the ‘virus’. Yet in what seemed like no time the ‘new hospitals’ closed – even if they even opened – and China declared itself ‘virus-free’. It was back to business as usual. This was more propaganda to promote the Chinese draconian lockdowns in the West as the way to ‘beat the virus’. Trouble was that we subsequently had lockdown after lockdown, but never business as usual. As the people of the West and most of the rest of the world were caught in an ever-worsening spiral of lockdown, social distancing, masks, isolated old people, families forced apart, and livelihood destruction, it was party-time in Wuhan. Pictures emerged of thousands of people enjoying pool parties and concerts. It made no sense until you realised there never was a ‘virus’ and the whole thing was a Cult set-up to transform human society out of one its major global strongholds – China.

How is it possible to deceive virtually the entire world population into believing there is a deadly virus when there is not even a ‘virus’ let alone a deadly one? It’s nothing like as difficult as you would think and that’s clearly true because it happened.

Postscript: See end of book Postscript for more on the ‘Wuhan lab virus release’ story which the authorities and media were pushing heavily in the summer of 2021 to divert attention from the truth that the ‘Covid virus’ is pure invention.

CHAPTER FIVE

There *is no* 'virus'

You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time
Abraham Lincoln

The greatest form of mind control is repetition. The more you repeat the same mantra of alleged 'facts' the more will accept them to be true. It becomes an 'everyone knows that, mate'. If you can also censor any other version or alternative to your alleged 'facts' you are pretty much home and cooking.

By the start of 2020 the Cult owned the global mainstream media almost in its entirety to spew out its 'Covid' propaganda and ignore or discredit any other information and view. Cult-owned social media platforms in Cult-owned Silicon Valley were poised and ready to unleash a campaign of ferocious censorship to obliterate all but the official narrative. To complete the circle many demands for censorship by Silicon Valley were led by the mainstream media as 'journalists' became full-out enforcers for the Cult both as propagandists and censors. Part of this has been the influx of young people straight out of university who have become 'journalists' in significant positions. They have no experience and a headful of programmed perceptions from their years at school and university at a time when today's young are the most perceptually-targeted generations in known human history given the insidious impact of technology. They enter the media perceptually prepared and ready to repeat the narratives of the system that programmed them to repeat its narratives. The BBC has a truly pathetic ‘specialist disinformation reporter’ called Marianna Spring who fits this bill perfectly. She is clueless about the world, how it works and what is really going on. Her role is to discredit anyone doing the job that a proper journalist would do and system-serving hacks like Spring wouldn’t dare to do or even see the need to do. They are too busy licking the arse of authority which can never be wrong and, in the case of the BBC propaganda programme, *Panorama*, contacting payments systems such as PayPal to have a donations page taken down for a film company making documentaries questioning vaccines. Even the BBC soap opera *EastEnders* included a disgracefully biased scene in which an inarticulate white working class woman was made to look foolish for questioning the ‘vaccine’ while a well-spoken black man and Asian woman promoted the government narrative. It ticked every BBC box and the fact that the black and minority community was resisting the ‘vaccine’ had nothing to do with the way the scene was written. The BBC has become a disgusting tyrannical propaganda and censorship operation that should be defunded and disbanded and a free media take its place with a brief to stop censorship instead of demanding it. A BBC ‘interview’ with Gates goes something like: ‘Mr Gates, sir, if I can call you sir, would you like to tell our audience why you are such a great man, a wonderful humanitarian philanthropist, and why you should absolutely be allowed as a software salesman to decide health policy for approaching eight billion people? Thank you, sir, please sir.’ Propaganda programming has been incessant and merciless and when all you hear is the same story from the media, repeated by those around you who have only heard the same story, is it any wonder that people on a grand scale believe absolute mendacious garbage to be true? You are about to see, too, why this level of information control is necessary when the official ‘Covid’ narrative is so nonsensical and unsupportable by the evidence.

Structure of Deceit

The pyramid structure through which the ‘Covid’ hoax has been manifested is very simple and has to be to work. As few people as possible have to be involved with full knowledge of what they are doing – and why – or the real story would get out. At the top of the pyramid are the inner core of the Cult which controls Bill Gates who, in turn, controls the World Health Organization through his pivotal funding and his puppet Director-General mouthpiece, Tedros. Before he was appointed Tedros was chair of the Gates-founded Global Fund to ‘fight against AIDS, tuberculosis and malaria’, a board member of the Gates-funded ‘vaccine alliance’ GAVI, and on the board of another Gates-funded organisation. Gates owns him and picked him for a specific reason – Tedros is a crook and worse. ‘Dr’ Tedros (he’s not a medical doctor, the first WHO chief not to be) was a member of the tyrannical Marxist government of Ethiopia for decades with all its human rights abuses. He has faced allegations of corruption and misappropriation of funds and was exposed three times for covering up cholera epidemics while Ethiopia’s health minister. Tedros appointed the mass-murdering genocidal Zimbabwe dictator Robert Mugabe as a WHO goodwill ambassador for public health which, as with Tedros, is like appointing a psychopath to run a peace and love campaign. The move was so ridiculous that he had to drop Mugabe in the face of widespread condemnation. American economist David Steinman, a Nobel peace prize nominee, lodged a complaint with the International Criminal Court in The Hague over alleged genocide by Tedros when he was Ethiopia’s foreign minister. Steinman says Tedros was a ‘crucial decision maker’ who directed the actions of Ethiopia’s security forces from 2013 to 2015 and one of three officials in charge when those security services embarked on the ‘killing’ and ‘torturing’ of Ethiopians. You can see where Tedros is coming from and it’s sobering to think that he has been the vehicle for Gates and the Cult to direct the global response to ‘Covid’. Think about that. A psychopathic Cult dictates to psychopath Gates who dictates to psychopath Tedros who dictates how countries of the world must respond to a ‘Covid virus’ never scientifically shown to exist. At the same time psychopathic Cult-owned Silicon Valley information giants like Google, YouTube, Facebook and Twitter announced very early on that they would give the Cult/Gates/Tedros/WHO version of the narrative free advertising and censor those who challenged their intelligence-insulting, mendacious story.

The next layer in the global 'medical' structure below the Cult, Gates and Tedros are the chief medical officers and science 'advisers' in each of the WHO member countries which means virtually all of them. Medical officers and arbiters of science (they're not) then take the WHO policy and recommended responses and impose them on their country's population while the political 'leaders' say they are deciding policy (they're clearly not) by 'following the science' on the advice of the 'experts' – the same medical officers and science 'advisers' (dictators). In this way with the rarest of exceptions the entire world followed the same policy of lockdown, people distancing, masks and 'vaccines' dictated by the psychopathic Cult, psychopathic Gates and psychopathic Tedros who we are supposed to believe give a damn about the health of the world population they are seeking to enslave. That, amazingly, is all there is to it in terms of crucial decision-making. Medical staff in each country then follow like sheep the dictates of the shepherds at the top of the national medical hierarchies – chief medical officers and science 'advisers' who themselves follow like sheep the shepherds of the World Health Organization and the Cult. Shepherds at the national level often have major funding and other connections to Gates and his Bill and Melinda Gates Foundation which carefully hands out money like confetti at a wedding to control the entire global medical system from the WHO down.

Follow the money

Christopher Whitty, Chief Medical Adviser to the UK Government at the centre of 'virus' policy, a senior adviser to the government's Scientific Advisory Group for Emergencies (SAGE), and Executive Board member of the World Health Organization, was gifted a grant of $40 million by the Bill and Melinda Gates Foundation for malaria research in Africa. The BBC described the unelected Whitty as 'the official who will probably have the greatest impact on our everyday lives of any individual policymaker in modern times' and so it turned out. What Gates and Tedros have said Whitty has done like his equivalents around the world. Patrick Vallance, co-chair of SAGE and the government's Chief Scientific Adviser, is a former executive of Big Pharma giant GlaxoSmithKline with its fundamental financial and business connections to Bill Gates. In September, 2020, it was revealed that Vallance owned a deferred bonus of shares in GlaxoSmithKline worth £600,000 while the company was 'developing' a 'Covid vaccine'. Move along now – nothing to see here – what could possibly be wrong with that? Imperial College in London, a major player in 'Covid' policy in Britain and elsewhere with its 'Covid-19' Response Team, is funded by Gates and has big connections to China while the now infamous Professor Neil Ferguson, the useless 'computer modeller' at Imperial College is also funded by Gates. Ferguson delivered the dramatically inaccurate excuse for the first lockdowns (much more in the next chapter). The Institute for Health Metrics and Evaluation (IHME) in the United States, another source of outrageously false 'Covid' computer models to justify lockdowns, is bankrolled by Gates who is a vehement promotor of lockdowns. America's version of Whitty and Vallance, the again now infamous Anthony Fauci, has connections to 'Covid vaccine' maker Moderna as does Bill Gates through funding from the Bill and Melinda Gates Foundation. Fauci is director of the National Institute of Allergy and Infectious Diseases (NIAID), a major recipient of Gates money, and they are very close. Deborah Birx who was appointed White House Coronavirus Response Coordinator in February, 2020, is yet another with ties to Gates. Everywhere you look at the different elements around the world behind the coordination and decision making of the 'Covid' hoax there is Bill Gates and his money. They include the World Health Organization; Centers for Disease Control (CDC) in the United States; National Institutes of Health (NIH) of Anthony Fauci; Imperial College and Neil Ferguson; the London School of Hygiene where Chris Whitty worked; Regulatory agencies like the UK Medicines & Healthcare products Regulatory Agency (MHRA) which gave emergency approval for ‘Covid vaccines’; Wellcome Trust; GAVI, the Vaccine Alliance; the Coalition for Epidemic Preparedness Innovations (CEPI); Johns Hopkins University which has compiled the false ‘Covid’ figures; and the World Economic Forum. A Nationalfile.com article said:

> Gates has a lot of pull in the medical world, he has a multi-million dollar relationship with Dr. Fauci, and Fauci originally took the Gates line supporting vaccines and casting doubt on [the drug hydroxychloroquine]. Coronavirus response team member Dr. Deborah Birx, appointed by former president Obama to serve as United States Global AIDS Coordinator, also sits on the board of a group that has received billions from Gates’ foundation, and Birx reportedly used a disputed Bill Gates-funded model for the White House’s Coronavirus effort. Gates is a big proponent for a population lockdown scenario for the Coronavirus outbreak.

Another funder of Moderna is the Defense Advanced Research Projects Agency (DARPA), the technology-development arm of the Pentagon and one of the most sinister organisations on earth. DARPA had a major role with the CIA covert technology-funding operation In-Q-Tel in the development of Google and social media which is now at the centre of global censorship. Fauci and Gates are extremely close and openly admit to talking regularly about ‘Covid’ policy, but then why wouldn’t Gates have a seat at every national ‘Covid’ table after his Foundation committed $1.75 billion to the ‘fight against Covid-19’. When passed through our Orwellian Translation Unit this means that he has bought and paid for the Cult-driven ‘Covid’ response worldwide. Research the major ‘Covid’ response personnel in your own country and you will find the same Gates funding and other connections again and again. Medical and science chiefs following World Health Organization ‘policy’ sit atop a medical hierarchy in their country of administrators, doctors and nursing staff. These ‘subordinates’ are told they must work and behave in accordance with the policy delivered from the ‘top’ of the national ‘health’ pyramid which is largely the policy delivered by the WHO which is the policy delivered by Gates and the Cult. The whole ‘Covid’ narrative has been imposed on medical staff by a climate of fear although great numbers don’t even need that to comply. They do so through breathtaking levels of ignorance and include doctors who go through life simply repeating what Big Pharma and their hierarchical masters tell them to say and believe. No wonder Big Pharma 'medicine' is one of the biggest killers on Planet Earth.

The same top-down system of intimidation operates with regard to the Cult Big Pharma cartel which also dictates policy through national and global medical systems in this way. The Cult and Big Pharma agendas are the same because the former controls and owns the latter. 'Health' administrators, doctors, and nursing staff are told to support and parrot the dictated policy or they will face consequences which can include being fired. How sad it's been to see medical staff meekly repeating and imposing Cult policy without question and most of those who can see through the deceit are only willing to speak anonymously off the record. They know what will happen if their identity is known. This has left the courageous few to expose the lies about the 'virus', face masks, overwhelmed hospitals that aren't, and the dangers of the 'vaccine' that isn't a vaccine. When these medical professionals and scientists, some renowned in their field, have taken to the Internet to expose the truth their articles, comments and videos have been deleted by Cult-owned Facebook, Twitter and YouTube. What a real head-shaker to see YouTube videos with leading world scientists and highly qualified medical specialists with an added link underneath to the notorious Cult propaganda website *Wikipedia* to find the 'facts' about the same subject.

HIV – the 'Covid' trial-run

I'll give you an example of the consequences for health and truth that come from censorship and unquestioning belief in official narratives. The story was told by PCR inventor Kary Mullis in his book *Dancing Naked in the Mind Field*. He said that in 1984 he accepted as just another scientific fact that Luc Montagnier of France's Pasteur Institute and Robert Gallo of America's National Institutes of Health had independently discovered that a 'retrovirus' dubbed HIV (human immunodeficiency virus) caused AIDS. They were, after all, Mullis writes, specialists in retroviruses. This is how the medical and science pyramids work. Something is announced or *assumed* and then becomes an everybody-knows-that purely through repetition of the assumption as if it is fact. Complete crap becomes accepted truth with no supporting evidence and only repetition of the crap. This is how a 'virus' that doesn't exist became the 'virus' that changed the world. The HIV-AIDS fairy story became a multi-billion pound industry and the media poured out propaganda terrifying the world about the deadly HIV 'virus' that caused the lethal AIDS. By then Mullis was working at a lab in Santa Monica, California, to detect retroviruses with his PCR test in blood donations received by the Red Cross. In doing so he asked a virologist where he could find a reference for HIV being the cause of AIDS. 'You don't need a reference,' the virologist said … *'Everybody knows it.'* Mullis said he wanted to quote a reference in the report he was doing and he said he felt a little funny about not knowing the source of such an important discovery when everyone else seemed to. The virologist suggested he cite a report by the Centers for Disease Control and Prevention (CDC) on morbidity and mortality. Mullis read the report, but it only said that an organism had been identified and did not say how. The report did not identify the original scientific work. Physicians, however, *assumed* (key recurring theme) that if the CDC was convinced that HIV caused AIDS then proof must exist. Mullis continues:

> I did computer searches. Neither Montagnier, Gallo, nor anyone else had published papers describing experiments which led to the conclusion that HIV probably caused AIDS. I read the papers in Science for which they had become well known as AIDS doctors, but all they had said there was that they had found evidence of a past infection by something which was probably HIV in some AIDS patients.
>
> They found antibodies. Antibodies to viruses had always been considered evidence of past disease, not present disease. Antibodies signaled that the virus had been defeated. The patient had saved himself. There was no indication in these papers that this virus caused a disease. They didn't show that everybody with the antibodies had the disease. In fact they found some healthy people with antibodies.

Mullis asked why their work had been published if Montagnier and Gallo hadn't really found this evidence, and why had they been fighting so hard to get credit for the discovery? He says he was hesitant to write 'HIV is the probable cause of AIDS' until he found published evidence to support that. 'Tens of thousands of scientists and researchers were spending billions of dollars a year doing research based on this idea,' Mullis writes. 'The reason had to be there somewhere; otherwise these people would not have allowed their research to settle into one narrow channel of investigation.' He said he lectured about PCR at numerous meetings where people were always talking about HIV and he asked them how they knew that HIV was the cause of AIDS:

> Everyone said something. Everyone had the answer at home, in the office, in some drawer. They all knew, and they would send me the papers as soon as they got back. But I never got any papers. Nobody ever sent me the news about how AIDS was caused by HIV.

Eventually Mullis was able to ask Montagnier himself about the reference proof when he lectured in San Diego at the grand opening of the University of California AIDS Research Center. Mullis says this was the last time he would ask his question without showing anger. Montagnier said he should reference the CDC report. 'I read it', Mullis said, and it didn't answer the question. 'If Montagnier didn't know the answer who the hell did?' Then one night Mullis was driving when an interview came on National Public Radio with Peter Duesberg, a prominent virologist at Berkeley and a California Scientist of the Year. Mullis says he finally understood why he could not find references that connected HIV to AIDS – *there weren't any!* No one had ever proved that HIV causes AIDS even though it had spawned a multi-billion pound global industry and the media was repeating this as fact every day in their articles and broadcasts terrifying the shit out of people about AIDS and giving the impression that a positive test for HIV (see 'Covid') was a death sentence. Duesberg was a threat to the AIDS gravy train and the agenda that underpinned it. He was therefore abused and castigated after he told the Proceedings of the National Academy of Sciences there was no good evidence implicating the new ‘virus’. Editors rejected his manuscripts and his research funds were deleted. Mullis points out that the CDC has defined AIDS as one of more than 30 diseases *if accompanied* by a positive result on a test that detects antibodies to HIV; but those same diseases are not defined as AIDS cases when antibodies are not detected:

> If an HIV-positive woman develops uterine cancer, for example, she is considered to have AIDS. If she is not HIV positive, she simply has uterine cancer. An HIV-positive man with tuberculosis has AIDS; if he tests negative he simply has tuberculosis. If he lives in Kenya or Colombia, where the test for HIV antibodies is too expensive, he is simply presumed to have the antibodies and therefore AIDS, and therefore he can be treated in the World Health Organization’s clinic. It’s the only medical help available in some places. And it’s free, because the countries that support WHO are worried about AIDS.

Mullis accuses the CDC of continually adding new diseases (see ever more ‘Covid symptoms’) to the grand AIDS definition and of virtually doctoring the books to make it appear as if the disease continued to spread. He cites how in 1993 the CDC enormously broadened its AIDS definition and county health authorities were delighted because they received $2,500 per year from the Federal government for every reported AIDS case. Ladies and gentlemen, I have just described, via Kary Mullis, the ‘Covid pandemic’ of 2020 and beyond. Every element is the same and it’s been pulled off in the same way by the same networks.

The ‘Covid virus’ exists? Okay – prove it. Er ... still waiting

What Kary Mullis described with regard to ‘HIV’ has been repeated with ‘Covid’. A claim is made that a new, or ‘novel’, infection has been found and the entire medical system of the world repeats that as fact exactly as they did with HIV and AIDS. No one in the mainstream asks rather relevant questions such as ‘How do you know?’ and ‘Where is your proof?’ The SARS-Cov-2 ‘virus’ and the ‘Covid-19 disease’ became an overnight ‘everybody-knows-that’. The origin could be debated and mulled over, but what you could not suggest was that ‘SARS-Cov-2’ didn’t exist. That would be ridiculous. ‘Everybody knows’ the ‘virus’ exists. Well, I didn’t for one along with American proper doctors like Andrew Kaufman and Tom Cowan and long-time American proper journalist Jon Rappaport. We dared to pursue the obvious and simple question: ‘Where’s the evidence?’ The overwhelming majority in medicine, journalism and the general public did not think to ask that. After all, *everyone knew* there was a new ‘virus’. Everyone was saying so and I heard it on the BBC. Some would eventually argue that the ‘deadly virus’ was nothing like as deadly as claimed, but few would venture into the realms of its very existence. Had they done so they would have found that the evidence for that claim had gone AWOL as with HIV causes AIDS. In fact, not even that. For something to go AWOL it has to exist in the first place and scientific proof for a ‘SARS-Cov-2’ can be filed under nothing, nowhere and zilch.

Dr Andrew Kaufman is a board-certified forensic psychiatrist in New York State, a Doctor of Medicine and former Assistant Professor and Medical Director of Psychiatry at SUNY Upstate Medical University, and Medical Instructor of Hematology and Oncology at the Medical School of South Carolina. He also studied biology at the Massachusetts Institute of Technology (MIT) and trained in Psychiatry at Duke University. Kaufman is retired from allopathic medicine, but remains a consultant and educator on natural healing, I saw a video of his very early on in the ‘Covid’ hoax in which he questioned claims about the ‘virus’ in the absence of any supporting evidence and with plenty pointing the other way. I did everything I could to circulate his work which I felt was asking the pivotal questions that needed an answer. I can recommend an excellent pull-together interview he did with the website The Last Vagabond entitled *Dr Andrew Kaufman: Virus Isolation, Terrain Theory and Covid-19* and his website is andrewkaufmanmd.com. Kaufman is not only a forensic psychiatrist; he is forensic in all that he does. He always reads original scientific papers, experiments and studies instead of second-third-fourth-hand reports about the ‘virus’ in the media which are repeating the repeated repetition of the narrative. When he did so with the original Chinese ‘virus’ papers Kaufman realised that there was no evidence of a ‘SARS-Cov-2’. They had never – from the start – shown it to exist and every repeat of this claim worldwide was based on the accepted existence of proof that was nowhere to be found – see Kary Mullis and HIV. Here we go again.

Let’s postulate

Kaufman discovered that the Chinese authorities immediately concluded that the cause of an illness that broke out among about 200 initial patients in Wuhan was a ‘new virus’ when there were no grounds to make that conclusion. The alleged ‘virus’ was not isolated from other genetic material in their samples and then shown through a system known as Koch’s postulates to be the causative agent of the illness. The world was told that the SARS-Cov-2 ‘virus’ caused a disease they called ‘Covid-19’ which had ‘flu-like’ symptoms and could lead to respiratory problems and pneumonia. If it wasn’t so tragic it would almost be funny. *‘Flu-like’ symptoms’? Pneumonia? Respiratory disease?* What in *CHINA* and particularly in *Wuhan*, one of the most polluted cities in the world with a resulting epidemic of respiratory disease?? Three hundred thousand people get pneumonia in China every year and there are nearly a billion cases worldwide of ‘flu-like symptoms’. These have a whole range of causes – including pollution in Wuhan – but no other possibility was credibly considered in late 2019 when the world was told there was a new and deadly ‘virus’. The global prevalence of pneumonia and ‘flu-like systems’ gave the Cult networks unlimited potential to re-diagnose these other causes as the mythical ‘Covid-19’ and that is what they did from the very start. Kaufman revealed how Chinese medical and science authorities (all subordinates to the Cult-owned communist government) took genetic material from the lungs of only a few of the first patients. The material contained their own cells, bacteria, fungi and other microorganisms living in their bodies. The only way you could prove the existence of the ‘virus’ and its responsibility for the alleged ‘Covid-19’ was to isolate the virus from all the other material – a process also known as ‘purification’ – and then follow the postulates sequence developed in the late 19th century by German physician and bacteriologist Robert Koch which became the 'gold standard' for connecting an alleged causation agent to a disease:

1. The microorganism (bacteria, fungus, virus, etc.) must be present in every case of the disease and all patients must have the same symptoms. It must also *not be present in healthy individuals*.

2. The microorganism must be isolated from the host with the disease. If the microorganism is a bacteria or fungus it must be grown in a pure culture. If it is a virus, it must be purified (i.e. containing no other material except the virus particles) from a clinical sample.

3. The specific disease, with all of its characteristics, must be reproduced when the infectious agent (the purified virus or a pure culture of bacteria or fungi) is inoculated into a healthy, susceptible host.

4. The microorganism must be recoverable from the experimentally infected host as in step 2.

Not one of these criteria has been met in the case of 'SARS-Cov-2' and 'Covid-19'. Not ONE. *EVER*. Robert Koch refers to bacteria and not viruses. What are called 'viral particles' are so minute (hence masks are useless by any definition) that they could only be seen after the invention of the electron microscope in the 1930s and can still only be observed through that means. American bacteriologist and virologist Thomas Milton Rivers, the so-called 'Father of Modern Virology' who was very significantly director of the Rockefeller Institute for Medical Research in the 1930s, developed a less stringent version of Koch's postulates to identify 'virus' causation known as 'Rivers criteria'. 'Covid' did not pass that process either. Some even doubt whether any 'virus' can be isolated from other particles containing genetic material in the Koch method. Freedom of Information requests in many countries asking for scientific proof that the 'Covid virus' has been purified and isolated and shown to exist have all come back with a 'we don't have that' and when this happened with a request to the UK Department of Health they added this comment:

> However, outside of the scope of the [Freedom of Information Act] and on a discretionary basis, the following information has been advised to us, which may be of interest. Most infectious diseases are caused by viruses, bacteria or fungi. Some bacteria or fungi have the capacity to grow on their own in isolation, for example in colonies on a petri dish. Viruses are different in that they are what we call 'obligate pathogens' – that is, they cannot survive or reproduce without infecting a host ...
>
> … For some diseases, it is possible to establish causation between a microorganism and a disease by isolating the pathogen from a patient, growing it in pure culture and reintroducing it to a healthy organism. These are known as 'Koch's postulates' and were developed in 1882. However, as our understanding of disease and different disease-causing agents has advanced, these are no longer the method for determining causation [Andrew Kaufman asks why in that case are there two published articles falsely claiming to satisfy Koch's postulates].
>
> It has long been known that viral diseases cannot be identified in this way as viruses cannot be grown in 'pure culture'. When a patient is tested for a viral illness, this is normally done by looking for the presence of antigens, or viral genetic code in a host with molecular biology techniques [Kaufman asks how you could know the origin of these chemicals without having a pure culture for comparison].

> For the record 'antigens' are defined so:
>
> Invading microorganisms have antigens on their surface that the human body can recognise as being foreign – meaning not belonging to it. When the body recognises a foreign antigen, lymphocytes (white blood cells) produce antibodies, which are complementary in shape to the antigen.

Notwithstanding that this is open to question in relation to 'SARS-Cov-2' the presence of 'antibodies' can have many causes and they are found in people that are perfectly well. Kary Mullis said: 'Antibodies … had always been considered evidence of past disease, not present disease.'

'Covid' really is a *computer* 'virus'

Where the UK Department of Health statement says 'viruses' are now 'diagnosed' through a 'viral genetic code in a host with molecular biology techniques', they mean … *the PCR test* which its inventor said cannot test for infectious disease. They have no credible method of connecting a 'virus' to a disease and we will see that there is no scientific proof that any 'virus' causes any disease or there is any such thing as a 'virus' in the way that it is described. Tenacious Canadian researcher Christine Massey and her team made some 40 Freedom of Information requests to national public health agencies in different countries asking for proof that SARS-CoV-2 has been isolated and not one of them could supply that information. Massey said of her request in Canada: ‘Freedom of Information reveals Public Health Agency of Canada has no record of ‘SARS-COV-2’ isolation performed by anyone, anywhere, ever.’ If you accept the comment from the UK Department of Health it’s because they can’t isolate a ‘virus’. Even so many ‘science’ papers claimed to have isolated the ‘Covid virus’ until they were questioned and had to admit they hadn’t. A reply from the Robert Koch Institute in Germany was typical: ‘I am not aware of a paper which purified isolated SARS-CoV-2.’ So what the hell was Christian Drosten and his gang using to design the ‘Covid’ testing protocol that has produced all the illusory Covid’ cases and ‘Covid’ deaths when the head of the Chinese version of the CDC admitted there was a problem right from the start in that the ‘virus’ had never been isolated/purified? Breathe deeply: What they are calling ‘Covid’ is actually created by a *computer program* i.e. *they made it up* – er, that’s it. They took lung fluid, with many sources of genetic material, from one single person alleged to be infected with Covid-19 by a PCR test which they *claimed*, without clear evidence, contained a ‘virus’. They used several computer programs to create a model of a theoretical virus genome sequence from more than fifty-six million small sequences of RNA, each of an unknown source, assembling them like a puzzle with no known solution. The computer filled in the gaps with sequences from bits in the gene bank to make it look like a bat SARS-like coronavirus! A wave of the magic wand and poof, an in silico (computer-generated) genome, a scientific fantasy, was created. UK health researcher Dr Kevin Corbett made the same point with this analogy:

> … It’s like giving you a few bones and saying that’s your fish. It could be any fish. Not even a skeleton. Here’s a few fragments of bones. That’s your fish … It’s all from gene bank and the bits of the virus sequence that weren’t there they made up.
>
> They synthetically created them to fill in the blanks. That’s what genetics is; it’s a code. So it’s ABBBCCDDD and you’re missing some what you think is EEE so you put it in. It’s all

> synthetic. You just manufacture the bits that are missing. This is the end result of the geneticization of virology. This is basically a computer virus.

Further confirmation came in an email exchange between British citizen journalist Frances Leader and the government's Medicines & Healthcare Products Regulatory Agency (the Gates-funded MHRA) which gave emergency permission for untested 'Covid vaccines' to be used. The agency admitted that the 'vaccine' is not based on an isolated 'virus', but comes from a *computer-generated model*. Frances Leader was naturally banned from Cult-owned fascist Twitter for making this exchange public. The process of creating computer-generated alleged 'viruses' is called 'in silico' or 'in silicon' – computer chips – and the term 'in silico' is believed to originate with biological experiments using only a computer in 1989. 'Vaccines' involved with 'Covid' are also produced 'in silico' or by computer not a natural process. If the original 'virus' is nothing more than a made-up computer model how can there be 'new variants' of something that never existed in the first place? They are not new 'variants'; they are new *computer models* only minutely different to the original program and designed to further terrify the population into having the 'vaccine' and submitting to fascism. You want a 'new variant'? Click, click, enter – there you go. Tell the medical profession that you have discovered a 'South African variant', 'UK variants' or a 'Brazilian variant' and in the usual HIV-causes-AIDS manner they will unquestioningly repeat it with no evidence whatsoever to support these claims. They will go on television and warn about the dangers of 'new variants' while doing nothing more than repeating what they have been told to be true and knowing that any deviation from that would be career suicide. Big-time insiders will know it's a hoax, but much of the medical community is clueless about the way they are being played and themselves play the public without even being aware they are doing so. What an interesting 'coincidence' that AstraZeneca and Oxford University were conducting 'Covid vaccine trials' in the three countries – the UK, South Africa and Brazil – where the first three 'variants' were claimed to have 'broken out'.

Here’s your ‘virus’ – it’s a unicorn

Dr Andrew Kaufman presented a brilliant analysis describing how the ‘virus’ was imagined into fake existence when he dissected an article published by *Nature* and written by 19 authors detailing *alleged* ‘sequencing of a complete viral genome’ of the ‘new SARS-CoV-2 virus’. This computer-modelled *in silico* genome was used as a template for all subsequent genome sequencing experiments that resulted in the so-called variants which he said now number more than *6,000*. The fake genome was constructed from more than 56 million individual short strands of RNA. Those little pieces were assembled into longer pieces by finding areas of overlapping sequences. The computer programs created over two million possible combinations from which the authors simply chose the longest one. They then compared this to a ‘bat virus’ and the computer ‘alignment’ rearranged the sequence and filled in the gaps! They called this computer-generated abomination the ‘complete genome’. Dr Tom Cowan, a fellow medical author and collaborator with Kaufman, said such computer-generation constitutes scientific fraud and he makes this superb analogy:

> Here is an equivalency: A group of researchers claim to have found a unicorn because they found a piece of a hoof, a hair from a tail, and a snippet of a horn. They then add that information into a computer and program it to re-create the unicorn, and they then claim this computer re-creation is the real unicorn. Of course, they had never actually seen a unicorn so could not possibly have examined its genetic makeup to compare their samples with the actual unicorn’s hair, hooves and horn.
>
> The researchers claim they decided which is the real genome of SARS-CoV-2 by ‘consensus’, sort of like a vote. Again, different computer programs will come up with different versions of the imaginary ‘unicorn’, so they come together as a group and decide which is the real imaginary unicorn.

This is how the ‘virus’ that has transformed the world was brought into fraudulent ‘existence’. Extraordinary, yes, but as the Nazis said the bigger the lie the more will believe it. Cowan, however, wasn’t finished and he went on to identify what he called the real blockbuster in the paper. He quotes this section from a paper written by virologists and published by the CDC and then explains what it means:

> Therefore, we examined the capacity of SARS-CoV-2 to infect and replicate in several common primate and human cell lines, including human adenocarcinoma cells (A549), human liver cells (HUH 7.0), and human embryonic kidney cells (HEK-293T). In addition to Vero E6 and Vero CCL81 cells. ... Each cell line was inoculated at high multiplicity of infection and examined 24h post-infection.
>
> No CPE was observed in any of the cell lines except in Vero cells, which grew to greater than 10 to the 7th power at 24 h post-infection. In contrast, HUH 7.0 and 293T showed only modest viral replication, and A549 cells were incompatible with SARS CoV-2 infection.

Cowan explains that when virologists attempt to prove infection they have three possible 'hosts' or models on which they can test. The first was humans. Exposure to humans was generally not done for ethical reasons and has never been done with SARS-CoV-2 or any coronavirus. The second possible host was animals. Cowan said that forgetting for a moment that they never actually use purified virus when exposing animals they do use solutions that they *claim* contain the virus. Exposure to animals has been done with SARS-CoV-2 in an experiment involving mice and this is what they found: *None of the wild (normal) mice got sick*. In a group of genetically-modified mice, a statistically insignificant number lost weight and had slightly bristled fur, but they experienced nothing like the illness called 'Covid-19'. Cowan said the third method – the one they mostly rely on – is to inoculate solutions they *say* contain the virus onto a variety of tissue cultures. This process had never been shown to kill tissue *unless* the sample material was starved of nutrients and poisoned as *part of the process*. Yes, incredibly, in tissue experiments designed to show the 'virus' is responsible for killing the tissue they starve the tissue of nutrients and add toxic drugs including antibiotics and they do not have control studies to see if it's the starvation and poisoning that is degrading the tissue rather than the 'virus' they allege to be in there somewhere. You want me to pinch you? Yep, I understand. Tom Cowan said this about the whole nonsensical farce as he explains what that quote from the CDC paper really means:

> The shocking thing about the above quote is that using their own methods, the virologists found that solutions containing SARS-CoV-2 – even in high amounts – were NOT, I repeat NOT, infective to any of the three human tissue cultures they tested. In plain English, this means they proved, on their terms, that this 'new coronavirus' is not infectious to human beings. It is ONLY infective to monkey kidney cells, and only then when you add two potent drugs (gentamicin and amphotericin), known to be toxic to kidneys, to the mix.
>
> My friends, read this again and again. These virologists, published by the CDC, performed a clear proof, on their terms, showing that the SARS-CoV-2 virus is harmless to human beings. That is the only possible conclusion, but, unfortunately, this result is not even mentioned in their conclusion. They simply say they can provide virus stocks cultured only on monkey Vero cells, thanks for coming.

Cowan concluded: 'If people really understood how this "science" was done, I would hope they would storm the gates and demand honesty, transparency and truth.' Dr Michael Yeadon, former Vice President and Chief Scientific Adviser at drug giant Pfizer has been a vocal critic of the 'Covid vaccine' and its potential for multiple harm. He said in an interview in April, 2021, that 'not one [vaccine] has the virus. He was asked why vaccines normally using a 'dead' version of a disease to activate the immune system were not used for 'Covid' and instead we had the synthetic methods of the 'mRNA Covid vaccine'. Yeadon said that to do the former 'you'd have to have some of [the virus] wouldn't you?' He added: 'No-one's got any – seriously.' Yeadon said that surely they couldn't have fooled the whole world for a year without having a virus, 'but oddly enough ask around – no one's got it'. He didn't know why with all the 'great labs' around the world that the virus had not been isolated – 'Maybe they've been too busy running bad PCR tests and vaccines that people don't need.' What is today called 'science' is not 'science' at all. Science is no longer what is, but whatever people can be manipulated to *believe* that it is. Real science has been hijacked by the Cult to dispense and produce the 'expert scientists' and contentions that suit the agenda of the Cult. How big-time this has happened with the 'Covid' hoax which is entirely based on fake science delivered by fake 'scientists' and fake 'doctors'. The human-caused climate change hoax is also entirely based on fake science delivered by fake 'scientists' and fake 'climate experts'. In both cases real scientists, climate experts and doctors have their views suppressed and deleted by the Cult-owned science establishment, media and Silicon Valley. This is the ‘science’ that politicians claim to be ‘following’ and a common denominator of ‘Covid’ and climate are Cult psychopaths Bill Gates and his mate Klaus Schwab at the Gates-funded World Economic Forum. But, don’t worry, it’s all just a coincidence and absolutely nothing to worry about. *Zzzzzzzz*.

What is a ‘virus’ REALLY?

Dr Tom Cowan is one of many contesting the very existence of viruses let alone that they cause disease. This is understandable when there is no scientific evidence for a disease-causing ‘virus’. German virologist Dr Stefan Lanka won a landmark case in 2017 in the German Supreme Court over his contention that there is no such thing as a measles virus. He had offered a big prize for anyone who could prove there is and Lanka won his case when someone sought to claim the money. There is currently a prize of more than 225,000 euros on offer from an Isolate Truth Fund for anyone who can prove the isolation of SARS-CoV-2 and its genetic substance. Lanka wrote in an article headed ‘The Misconception Called Virus’ that scientists think a ‘virus’ is causing tissue to become diseased and degraded when in fact it is the *processes they are using* which do that – not a ‘virus’. Lanka has done an important job in making this point clear as Cowan did in his analysis of the CDC paper. Lanka says that all claims about viruses as disease-causing pathogens are wrong and based on ‘easily recognisable, understandable and verifiable misinterpretations.’ Scientists believed they were working with ‘viruses’ in their laboratories when they were really working with ‘typical particles of specific dying tissues or cells …’ Lanka said that the tissue decaying process claimed to be caused by a ‘virus’ still happens when no alleged ‘virus’ is involved. It’s the *process* that does the damage and not a ‘virus’. The genetic sample is deprived of nutrients, removed from its energy supply through removal from the body and then doused in toxic antibiotics to remove any bacteria. He confirms again that establishment scientists do not (pinch me) conduct control experiments to see if this is the case and if they did they would see the claims that ‘viruses’ are doing the damage is nonsense. He adds that during the measles ‘virus’ court case he commissioned an independent laboratory to perform just such a control experiment and the result was that the tissues and cells died in the exact same way as with alleged ‘infected’ material. This is supported by a gathering number of scientists, doctors and researchers who reject what is called ‘germ theory’ or the belief in the body being infected by contagious sources emitted by other people. Researchers Dawn Lester and David Parker take the same stance in their highly-detailed and sourced book *What Really Makes You Ill – Why everything you thought you knew about disease is wrong* which was recommended to me by a number of medical professionals genuinely seeking the truth. Lester and Parker say there is no provable scientific evidence to show that a ‘virus’ can be transmitted between people or people and animals or animals and people:

> The definition also claims that viruses are the cause of many diseases, as if this has been definitively proven. But this is not the case; there is no original scientific evidence that definitively demonstrates that any virus is the cause of any disease. The burden of proof for any theory lies with those who proposed it; but none of the existing documents provides ‘proof’ that supports the claim that ‘viruses’ are pathogens.

Dr Tom Cowan employs one of his clever analogies to describe the process by which a ‘virus’ is named as the culprit for a disease when what is called a ‘virus’ is only material released by cells detoxing themselves from infiltration by chemical or radiation poisoning. The tidal wave of technologically-generated radiation in the ‘smart’ modern world plus all the toxic food and drink are causing this to happen more than ever. Deluded ‘scientists’ misread this as a gathering impact of what they wrongly label ‘viruses’.

Paper can infect houses

Cowan said in an article for davidicke.com – with his tongue only mildly in his cheek – that he believed he had made a tremendous discovery that may revolutionise science. He had discovered that small bits of paper are alive, ‘well alive-ish’, can ‘infect’ houses, and then reproduce themselves inside the house. The result was that this explosion of growth in the paper inside the house causes the house to explode, blowing it to smithereens. His evidence for this new theory is that in the past months he had carefully examined many of the houses in his neighbourhood and found almost no scraps of paper on the lawns and surrounds of the house. There was an occasional stray label, but nothing more. Then he would return to these same houses a week or so later and with a few, not all of them, particularly the old and decrepit ones, he found to his shock and surprise they were littered with stray bits of paper. He knew then that the paper had infected these houses, made copies of itself, and blew up the house. A young boy on a bicycle at one of the sites told him he had seen a demolition crew using dynamite to explode the house the previous week, but Cowan dismissed this as the idle thoughts of silly boys because ‘I was on to something big’. He was on to how ‘scientists’ mistake genetic material in the detoxifying process for something they call a ‘virus’. Cowan said of his house and paper story:

> If this sounds crazy to you, it’s because it should. This scenario is obviously nuts. But consider this admittedly embellished, for effect, current viral theory that all scientists, medical doctors and virologists currently believe.

He takes the example of the ‘novel SARS-Cov2’ virus to prove the point. First they take someone with an undefined illness called ‘Covid-19’ and don’t even attempt to find any virus in their sputum. Never mind the scientists still describe how this ‘virus’, which they have not located attaches to a cell receptor, injects its genetic material, in ‘Covid’s’ case, RNA, into the cell. The RNA once inserted exploits the cell to reproduce itself and makes ‘thousands, nay millions, of copies of itself … Then it emerges victorious to claim its next victim’:

If you were to look in the scientific literature for proof, actual scientific proof, that uniform SARS-CoV2 viruses have been properly isolated from the sputum of a sick person, that actual spike proteins could be seen protruding from the virus (which has not been found), you would find that such evidence doesn't exist.

If you go looking in the published scientific literature for actual pictures, proof, that these spike proteins or any viral proteins are ever attached to any receptor embedded in any cell membrane, you would also find that no such evidence exists. If you were to look for a video or documented evidence of the intact virus injecting its genetic material into the body of the cell, reproducing itself and then emerging victorious by budding off the cell membrane, you would find that no such evidence exists.

The closest thing you would find is electron micrograph pictures of cellular particles, possibly attached to cell debris, both of which to be seen were stained by heavy metals, a process that completely distorts their architecture within the living organism. This is like finding bits of paper stuck to the blown-up bricks, thereby proving the paper emerged by taking pieces of the bricks on its way out.

The Enders baloney

Cowan describes the 'Covid' story as being just as make-believe as his paper story and he charts back this fantasy to a Nobel Prize winner called John Enders (1897-1985), an American biomedical scientist who has been dubbed 'The Father of Modern Vaccines'. Enders is claimed to have 'discovered' the process of the viral culture which 'proved' that a 'virus' caused measles. Cowan explains how Enders did this 'by using the EXACT same procedure that has been followed by every virologist to find and characterize every new virus since 1954'. Enders took throat swabs from children with measles and immersed them in 2ml of milk. Penicillin (100u/ml) and the antibiotic streptomycin (50,g/ml) were added and the whole mix was centrifuged – rotated at high speed to separate large cellular debris from small particles and molecules as with milk and cream, for example. Cowan says that if the aim is to find little particles of genetic material ('viruses') in the snot from children with measles it would seem that the last thing you would do is mix the snot with other material – milk –that also has genetic material. 'How are you ever going to know whether whatever you found came from the snot or the milk?' He points out that streptomycin is a 'nephrotoxic' or poisonous-to-the-kidney drug. You will see the relevance of that shortly. Cowan says that it gets worse, much worse, when Enders describes the culture medium upon which the virus 'grows': 'The culture medium consisted of bovine amniotic fluid (90%), beef embryo extract (5%), horse serum (5%), antibiotics and phenol red as an indicator of cell metabolism.' Cowan asks incredulously: 'Did he just say that the culture medium also contained fluids and tissues that are themselves rich sources of genetic material?' The genetic cocktail, or 'medium', is inoculated onto tissue and cells from rhesus monkey *kidney* tissue. This is where the importance of streptomycin comes in and currently-used antimicrobials and other drugs that are *poisonous to kidneys* and used in ALL modern viral cultures (e.g. gentamicin, streptomycin, and amphotericin). Cowan asks: 'How are you ever going to know from this witch's brew where any genetic material comes from as we now have five different sources of rich genetic material in our mix?' Remember, he says, that all genetic material, whether from monkey kidney tissues, bovine serum, milk, etc., is made from the exact same components. The same central question returns: 'How are you possibly going to know that it was the virus that killed the kidney tissue and not the toxic antibiotic and starvation rations on which you are growing the tissue?' John Enders answered the question himself – *you can't*:

> A second agent was obtained from an uninoculated culture of monkey kidney cells. The cytopathic changes [death of the cells] it induced in the unstained preparations could not be distinguished with confidence from the viruses isolated from measles.

The death of the cells ('cytopathic changes') happened in exactly the same manner, whether they inoculated the kidney tissue with the measles snot or not, Cowan says. 'This is evidence that the destruction of the tissue, the very proof of viral causation of illness, was not caused by anything in the snot because they saw the same destructive effect when the snot was not even used … the cytopathic, i.e., cell-killing, changes come from the process of the culture itself, not from any virus in any snot, period.' Enders quotes in his 1957 paper a virologist called Ruckle as reporting similar findings 'and in addition has isolated an agent from monkey kidney tissue that is so far indistinguishable from human measles virus'. In other words, Cowan says, these particles called 'measles viruses' are simply and clearly breakdown products of the starved and poisoned tissue. For measles 'virus' see all 'viruses' including the so-called 'Covid virus'. Enders, the 'Father of Modern Vaccines', also said:

> There is a potential risk in employing cultures of primate cells for the production of vaccines composed of attenuated virus, since the presence of other agents possibly latent in primate tissues cannot be definitely excluded by any known method.

Cowan further quotes from a paper published in the journal *Viruses* in May, 2020, while the 'Covid pandemic' was well underway in the media if not in reality. 'EVs' here refers to particles of genetic debris from our own tissues, such as exosomes of which more in a moment: 'The remarkable resemblance between EVs and viruses has caused quite a few problems in the studies focused on the analysis of EVs released during viral infections.' Later the paper adds that to date a reliable method that can actually guarantee a complete separation (of EVs from viruses) DOES NOT EXIST. This was published at a time when a fairy tale 'virus' was claimed in total certainty to be causing a fairy tale 'viral disease' called 'Covid-19' – a fairy tale that was already well on the way to transforming human society in the image that the Cult has worked to achieve for so long. Cowan concludes his article:

> To summarize, there is no scientific evidence that pathogenic viruses exist. What we think of as 'viruses' are simply the normal breakdown products of dead and dying tissues and cells. When we are well, we make fewer of these particles; when we are starved, poisoned, suffocated by wearing masks, or afraid, we make more.
>
> There is no engineered virus circulating and making people sick. People in laboratories all over the world are making genetically modified products to make people sick. These are called vaccines. There is no virome, no 'ecosystem' of viruses, viruses are not 8%, 50% or 100 % of our genetic material. These are all simply erroneous ideas based on the misconception called a virus.

What is 'Covid'? Load of bollocks

The background described here by Cowan and Lanka was emphasised in the first video presentation that I saw by Dr Andrew Kaufman when he asked whether the ‘Covid virus’ was in truth a natural defence mechanism of the body called ‘exosomes’. These are released by cells when in states of toxicity – see the same themes returning over and over. They are released ever more profusely as chemical and radiation toxicity increases and think of the potential effect therefore of 5G alone as its destructive frequencies infest the human energetic information field with a gathering pace (5G went online in Wuhan in 2019 as the ‘virus’ emerged). I’ll have more about this later. Exosomes transmit a warning to the rest of the body that ‘Houston, we have a problem’. Kaufman presented images of exosomes and compared them with ‘Covid’ under an electron microscope and the similarity was remarkable. They both attach to the same cell receptors (*claimed* in the case of ‘Covid’), contain the same genetic material in the form of RNA or ribonucleic acid, and both are found in ‘viral cell cultures’ with damaged or dying cells. James Hildreth MD, President and Chief Executive Officer of the Meharry Medical College at Johns Hopkins, said: ‘The virus is fully an exosome in every sense of the word.’ Kaufman’s conclusion was that there is no ‘virus’: ‘This entire pandemic is a completely manufactured crisis … there is no evidence of anyone dying from [this] illness.’ Dr Tom Cowan and Sally Fallon Morell, authors of *The Contagion Myth*, published a statement with Dr Kaufman in February, 2021, explaining why the ‘virus’ does not exist and you can read it that in full in the Appendix.

‘Virus’ theory can be traced to the ‘cell theory’ in 1858 of German physician Rudolf Virchow (1821-1920) who contended that disease originates from a single cell infiltrated by a ‘virus’. Dr Stefan Lanka said that findings and insights with respect to the structure, function and central importance of tissues in the creation of life, which were already known in 1858, comprehensively refute the cell theory. Virchow ignored them. We have seen the part later played by John Enders in the 1950s and Lanka notes that infection theories were only established as a global dogma through the policies and eugenics of the Third Reich in Nazi Germany (creation of the same Sabbatian cult behind the 'Covid' hoax). Lanka said: 'Before 1933, scientists dared to contradict this theory; after 1933, these critical scientists were silenced'. Dr Tom Cowan's view is that ill-heath is caused by too much of something, too little of something, or toxification from chemicals and radiation – not contagion. We must also highlight as a major source of the 'virus' theology a man still called the 'Father of Modern Virology' – Thomas Milton Rivers (1888-1962). There is no way given the Cult's long game policy that it was a coincidence for the 'Father of Modern Virology' to be director of the Rockefeller Institute for Medical Research from 1937 to 1956 when he is credited with making the Rockefeller Institute a leader in 'viral research'. Cult Rockefellers were the force behind the creation of Big Pharma 'medicine', established the World Health Organisation in 1948, and have long and close associations with the Gates family that now runs the WHO during the pandemic hoax through mega-rich Cult gofer and psychopath Bill Gates.

Only a Renegade Mind can see through all this bullshit by asking the questions that need to be answered, not taking 'no' or prevarication for an answer, and certainly not hiding from the truth in fear of speaking it. Renegade Minds have always changed the world for the better and they will change this one no matter how bleak it may currently appear to be.

CHAPTER SIX

Sequence of deceit

If you tell the truth, you don't have to remember anything
Mark Twain

Against the background that I have laid out this far the sequence that took us from an invented 'virus' in Cult-owned China in late 2019 to the fascist transformation of human society can be seen and understood in a whole new context.

We were told that a deadly disease had broken out in Wuhan and the world media began its campaign (coordinated by behavioural psychologists as we shall see) to terrify the population into unquestioning compliance. We were shown images of Chinese people collapsing in the street which never happened in the West with what was supposed to be the same condition. In the earliest days when alleged cases and deaths were few the fear register was hysterical in many areas of the media and this would expand into the common media narrative across the world. The real story was rather different, but we were never told that. The Chinese government, one of the Cult's biggest centres of global operation, said they had discovered a new illness with flu-like and pneumonia-type symptoms in a city with such toxic air that it is overwhelmed with flu-like symptoms, pneumonia and respiratory disease. Chinese scientists said it was a new – 'novel' – coronavirus which they called Sars-Cov-2 and that it caused a disease they labelled 'Covid-19'. There was no evidence for this and the 'virus' has never to this day been isolated, purified and its genetic code established from that. It was from the beginning a computer-generated fiction. Stories of Chinese whistleblowers saying the number of deaths was being supressed or that the 'new disease' was related to the Wuhan bio-lab misdirected mainstream and alternative media into cul-de-sacs to obscure the real truth – there was no 'virus'.

Chinese scientists took genetic material from the lung fluid of just a few people and said they had found a 'new' disease when this material had a wide range of content. There was no evidence for a 'virus' for the very reasons explained in the last two chapters. The 'virus' has never been shown to (a) exist and (b) cause any disease. People were diagnosed on symptoms that are so widespread in Wuhan and polluted China and with a PCR test that can't detect infectious disease. On this farce the whole global scam was sold to the rest of the world which would also diagnose respiratory disease as 'Covid-19' from symptoms alone or with a PCR test not testing for a 'virus'. Flu miraculously disappeared *worldwide* in 2020 and into 2021 as it was redesignated 'Covid-19'. It was really the same old flu with its 'flu-like' symptoms attributed to 'flu-like' 'Covid-19'. At the same time with very few exceptions the Chinese response of draconian lockdown and fascism was the chosen weapon to respond across the West as recommended by the Cult-owned Tedros at the Cult-owned World Health Organization run by the Cult-owned Gates. All was going according to plan. Chinese scientists – everything in China is controlled by the Cult-owned government – compared their contaminated RNA lung-fluid material with other RNA sequences and said it appeared to be just under 80 percent identical to the SARS-CoV-1 'virus' claimed to be the cause of the SARS (severe acute respiratory syndrome) 'outbreak' in 2003. They decreed that because of this the 'new virus' had to be related and they called it SARS-CoV-2. There are some serious problems with this assumption and *assumption* was all it was. Most 'factual' science turns out to be assumptions repeated into everyone-knows-that. A match of under 80-percent is meaningless. Dr Kaufman makes the point that there's a *96 percent* genetic correlation between humans and chimpanzees, but 'no one would say our genetic material is part of the chimpanzee family'. Yet the Chinese authorities were claiming that a much lower percentage, less than 80 percent, proved the existence of a new 'coronavirus'. For goodness sake human DNA is 60 percent similar to a *banana*.

You are feeling sleepy

The entire 'Covid' hoax is a global Psyop, a psychological operation to program the human mind into believing and fearing a complete fantasy. A crucial aspect of this was what *appeared* to happen in Italy. It was all very well streaming out daily images of an alleged catastrophe in Wuhan, but to the Western mind it was still on the other side of the world in a very different culture and setting. A reaction of 'this could happen to me and my family' was still nothing like as intense enough for the mind-doctors. The Cult needed a Western example to push people over that edge and it chose Italy, one of its major global locations going back to the Roman Empire. An Italian 'Covid' crisis was manufactured in a particular area called Lombardy which just happens to be notorious for its toxic air and therefore respiratory disease. Wuhan, China, déjà vu. An hysterical media told horror stories of Italians dying from 'Covid' in their droves and how Lombardy hospitals were being overrun by a tidal wave of desperately ill people needing treatment after being struck down by the 'deadly virus'. Here was the psychological turning point the Cult had planned. Wow, if this is happening in Italy, the Western mind concluded, this indeed could happen to me and my family. Another point is that Italian authorities responded by following the Chinese blueprint so vehemently recommended by the Cult-owned World Health Organization. They imposed fascistic lockdowns on the whole country viciously policed with the help of surveillance drones sweeping through the streets seeking out anyone who escaped from mass house arrest. Livelihoods were destroyed and psychology unravelled in the way we have witnessed since in all lockdown countries. Crucial to the plan was that Italy responded in this way to set the precedent of suspending freedom and imposing fascism in a 'Western liberal democracy'. I emphasised in an animated video explanation on davidicke.com posted in the summer of 2020 how important it was to the Cult to expand the Chinese lockdown model across the West. Without this, and the bare-faced lie that non-symptomatic people could still transmit a 'disease' they didn't have, there was no way locking down the whole population, sick and not sick, could be pulled off. At just the right time and with no evidence Cult operatives and gofers claimed that people without symptoms could pass on the 'disease'. In the name of protecting the 'vulnerable' like elderly people, who lockdowns would kill by the tens of thousands, we had for the first time healthy people told to isolate as well as the sick. The great majority of people who tested positive had no symptoms because there was nothing wrong with them. It was just a trick made possible by a test not testing for the 'virus'.

Months after my animated video the Gates-funded Professor Neil Ferguson at the Gates-funded Imperial College confirmed that I was right. He didn't say it in those terms, naturally, but he did say it. Ferguson will enter the story shortly for his outrageously crazy 'computer models' that led to Britain, the United States and many other countries following the Chinese and now Italian methods of response. Put another way, following the Cult script. Ferguson said that SAGE, the UK government's scientific advisory group which has controlled 'Covid' policy from the start, wanted to follow the Chinese lockdown model (while they all continued to work and be paid), but they wondered if they could possibly, in Ferguson's words, 'get away with it in Europe'. 'Get away with it'? Who the hell do these moronic, arrogant people think they are? This appalling man Ferguson said that once Italy went into national lockdown they realised they, too, could mimic China:

> It's a communist one-party state, we said. We couldn't get away with it in Europe, we thought … and then Italy did it. And we realised we could. Behind this garbage from Ferguson is a simple fact: Doing the same as China in every country was the plan from the start and Ferguson's 'models' would play a central role in achieving that. It's just a coincidence, of course, and absolutely nothing to worry your little head about.

Oops, sorry, our mistake

Once the Italian segment of the Psyop had done the job it was designed to do a very different story emerged. Italian authorities revealed that 99 percent of those who had 'died from Covid-19' in Italy had one, two, three, or more 'co-morbidities' or illnesses and health problems that could have ended their life. The US Centers for Disease Control and Prevention (CDC) published a figure of 94 percent for Americans dying of 'Covid' while having other serious medical conditions – on average two to three (some five or six) other potential causes of death. In terms of death from an unproven 'virus' I say it is 100 percent. The other one percent in Italy and six percent in the US would presumably have died from 'Covid's' flu-like symptoms with a range of other possible causes in conjunction with a test not testing for the 'virus'. Fox News reported that even more startling figures had emerged in one US county in which 410 of 422 deaths attributed to 'Covid-19' had other potentially deadly health conditions. The Italian National Health Institute said later that the average age of people dying with a 'Covid-19' diagnosis in Italy was about 81. Ninety percent were over 70 with ten percent over 90. In terms of other reasons to die some 80 percent had two or more chronic diseases with half having three or more including cardiovascular problems, diabetes, respiratory problems and cancer. Why is the phantom 'Covid-19' said to kill overwhelmingly old people and hardly affect the young? Old people continually die of many causes and especially respiratory disease which you can re-diagnose 'Covid-19' while young people die in tiny numbers by comparison and rarely of respiratory disease. Old people 'die of Covid' because they die of other things that can be redesignated 'Covid' and it really is that simple.

Flu has flown

The blueprint was in place. Get your illusory 'cases' from a test not testing for the 'virus' and redesignate other causes of death as 'Covid-19'. You have an instant 'pandemic' from something that is nothing more than a computer-generated fiction. With near-on a billion people having ‘flu-like’ symptoms every year the potential was limitless and we can see why flu quickly and apparently miraculously disappeared *worldwide* by being diagnosed ‘Covid-19’. The painfully bloody obvious was explained away by the childlike media in headlines like this in the UK ‘*Independent*’: ‘Not a single case of flu detected by Public Health England this year as Covid restrictions suppress virus’. I kid you not. The masking, social distancing and house arrest that did not make the ‘Covid virus’ disappear somehow did so with the ‘flu virus’. Even worse the article, by a bloke called Samuel Lovett, suggested that maybe the masking, sanitising and other ‘Covid’ measures should continue to keep the flu away. With a ridiculousness that disturbs your breathing (it’s ‘Covid-19’) the said Lovett wrote: ‘With widespread social distancing and mask-wearing measures in place throughout the UK, the usual routes of transmission for influenza have been blocked.’ He had absolutely no evidence to support that statement, but look at the consequences of him acknowledging the obvious. With flu not disappearing at all and only being relabelled ‘Covid-19’ he would have to contemplate that ‘Covid’ was a hoax on a scale that is hard to imagine. You need guts and commitment to truth to even go there and that’s clearly something Samuel Lovett does not have in abundance. He would never have got it through the editors anyway.

Tens of thousands die in the United States alone every winter from flu including many with pneumonia complications. CDC figures record *45 million* Americans diagnosed with flu in 2017-2018 of which 61,000 died and some reports claim 80,000. Where was the same hysteria then that we have seen with ‘Covid-19’? Some 250,000 Americans are admitted to hospital with pneumonia every year with about 50,000 cases proving fatal. About 65 million suffer respiratory disease every year and three million deaths makes this the third biggest cause of death worldwide. You only have to redesignate a portion of all these people ‘Covid-19’ and you have an instant global pandemic or the *appearance* of one. Why would doctors do this? They are told to do this and all but a few dare not refuse those who must be obeyed. Doctors in general are not researching their own knowledge and instead take it direct and unquestioned from the authorities that own them and their careers. The authorities say they must now diagnose these symptoms 'Covid-19' and not flu, or whatever, and they do it. Dark suits say put 'Covid-19' on death certificates no matter what the cause of death and the doctors do it. Renegade Minds don't fall for the illusion that doctors and medical staff are all highly-intelligent, highly-principled, seekers of medical truth. *Some are*, but not the majority. They are repeaters, gofers, and yes sir, no sir, purveyors of what the system demands they purvey. The 'Covid' con is not merely confined to diseases of the lungs. Instructions to doctors to put 'Covid-19' on death certificates for anyone dying of *anything* within 28 days (or much more) of a positive test not testing for the 'virus' opened the floodgates. The term dying *with* 'Covid' and not *of* 'Covid' was coined to cover the truth. Whether it was a *with* or an *of* they were all added to the death numbers attributed to the 'deadly virus' compiled by national governments and globally by the Gates-funded Johns Hopkins operation in the United States that was so involved in those 'pandemic' simulations. Fraudulent deaths were added to the ever-growing list of fraudulent 'cases' from false positives from a false test. No wonder Professor Walter Ricciardi, scientific advisor to the Italian minister of health, said after the Lombardy hysteria had done its job that 'Covid' death rates were due to Italy having the second oldest population in the world and to *how hospitals record deaths*:

> The way in which we code deaths in our country is very generous in the sense that all the people who die in hospitals with the coronavirus are deemed to be dying of the coronavirus. On re-evaluation by the National Institute of Health, only 12 per cent of death certificates have shown a direct causality from coronavirus, while 88 per cent of patients who have died have at least one pre-morbidity – many had two or three.

This is extraordinary enough when you consider the propaganda campaign to use Italy to terrify the world, but how can they even say twelve percent were genuine when the 'virus' has not been shown to exist, its 'code' is a computer program, and diagnosis comes from a test not testing for it? As in China, and soon the world, 'Covid-19' in

Italy was a redesignation of diagnosis. Lies and corruption were to become the real 'pandemic' fuelled by a pathetically-compliant medical system taking its orders from the tiny few at the top of their national hierarchy who answered to the World Health Organization which answers to Gates and the Cult. Doctors were told – ordered – to diagnose a particular set of symptoms 'Covid-19' and put that on the death certificate for any cause of death if the patient had tested positive with a test not testing for the virus or had 'Covid' symptoms like the flu. The United States even introduced big financial incentives to manipulate the figures with hospitals receiving £4,600 from the Medicare system for diagnosing someone with regular pneumonia, $13,000 if they made the diagnosis from the same symptoms 'Covid-19' pneumonia, and $39, 000 if they put a 'Covid' diagnosed patient on a ventilator that would almost certainly kill them. A few – painfully and pathetically few – medical whistleblowers revealed (before Cult-owned YouTube deleted their videos) that they had been instructed to 'let the patient crash' and put them straight on a ventilator instead of going through a series of far less intrusive and dangerous methods as they would have done before the pandemic hoax began and the financial incentives kicked in. We are talking cold-blooded murder given that ventilators are so damaging to respiratory systems they are usually the last step before heaven awaits. Renegade Minds never fall for the belief that people in white coats are all angels of mercy and cannot be full-on psychopaths. I have explained in detail in *The Answer* how what I am describing here played out across the world coordinated by the World Health Organization through the medical hierarchies in almost every country.

Medical scientist calls it

Information about the non-existence of the 'virus' began to emerge for me in late March, 2020, and mushroomed after that. I was sent an email by Sir Julian Rose, a writer, researcher, and organic farming promotor, from a medical scientist friend of his in the United States. Even at that early stage in March the scientist was able to explain how the ‘Covid’ hoax was being manipulated. He said there were no reliable tests for a specific ‘Covid-19 virus’ and nor were there any reliable agencies or media outlets for reporting numbers of actual ‘Covid-19’ cases. We have seen in the long period since then that he was absolutely right. ‘Every action and reaction to Covid-19 is based on totally flawed data and we simply cannot make accurate assessments,’ he said. Most people diagnosed with ‘Covid-19’ were showing nothing more than cold and flu-like symptoms ‘because most coronavirus strains *are* nothing more than cold/flu-like symptoms’. We had farcical situations like an 84-year-old German man testing positive for ‘Covid-19’ and his nursing home ordered to quarantine only for him to be found to have a common cold. The scientist described back then why PCR tests and what he called the ‘Mickey Mouse test kits’ were useless for what they were claimed to be identifying. ‘The idea these kits can isolate a specific virus like Covid-19 is nonsense,’ he said. Significantly, he pointed out that ‘if you want to create a totally false panic about a totally false pandemic – pick a coronavirus’. This is exactly what the Cult-owned Gates, World Economic Forum and Johns Hopkins University did with their Event 201 ‘simulation’ followed by their real-life simulation called the ‘pandemic’. The scientist said that all you had to do was select the sickest of people with respiratory-type diseases in a single location – ‘say Wuhan’ – and administer PCR tests to them. You can then claim that anyone showing ‘viral sequences’ similar to a coronavirus ‘which will inevitably be quite a few’ is suffering from a ‘new’ disease:

> Since you already selected the sickest flu cases a fairly high proportion of your sample will go on to die. You can then say this ‘new’ virus has a CFR [case fatality rate] higher than the flu and use this to infuse more concern and do more tests which will of course produce more ‘cases’, which expands the testing, which produces yet more ‘cases’ and so on and so on. Before long you have your ‘pandemic’, and all you have done is use a simple test kit trick to convert the worst flu and pneumonia cases into something new that doesn’t ACTUALLY EXIST [my emphasis].

He said that you then ‘just run the same scam in other countries’ and make sure to keep the fear message running high ‘so that people will feel panicky and less able to think critically’. The only problem to overcome was the fact *there is no* actual new deadly pathogen and only regular sick people. This meant that deaths from the ‘new deadly pathogen’ were going to be way too low for a real new deadly virus pandemic, but he said this could be overcome in the following ways – all of which would go on to happen:

> 1. You can claim this is just the beginning and more deaths are imminent [you underpin this with fantasy ‘computer projections’]. Use this as an excuse to quarantine everyone and then claim the quarantine prevented the expected millions of dead.
>
> 2. You can [say that people] ‘minimizing’ the dangers are irresponsible and bully them into not talking about numbers.
>
> 3. You can talk crap about made up numbers hoping to blind people with pseudoscience.
>
> 4. You can start testing well people (who, of course, will also likely have shreds of coronavirus [RNA] in them) and thus inflate your ‘case figures’ with ‘asymptomatic carriers’ (you will of course have to spin that to sound deadly even though any virologist knows the more symptom-less cases you have the less deadly is your pathogen).

The scientist said that if you take these simple steps ‘you can have your own entirely manufactured pandemic up and running in weeks’. His analysis made so early in the hoax was brilliantly prophetic of what would actually unfold. Pulling all the information together in these recent chapters we have this is simple 1, 2, 3, of how you can delude virtually the entire human population into believing in a ‘virus’ that doesn’t exist:

- A ‘Covid case’ is someone who tests positive with a test not testing for the ‘virus’.

- A ‘Covid death’ is someone who dies of *any cause* within 28 days (or much longer) of testing positive with a test not testing for the ‘virus.

- Asymptomatic means there is nothing wrong with you, but they claim you can pass on what you don’t have to justify locking down (quarantining) healthy people in totality.

The foundations of the hoax are that simple. A study involving ten million people in Wuhan, published in November, 2020, demolished the whole lie about those without symptoms passing on the 'virus'. They found '300 asymptomatic cases' and traced their contacts to find that not one of them was detected with the 'virus'. 'Asymptomatic' patients and their contacts were isolated for no less than two weeks and nothing changed. I know it's all crap, but if you are going to claim that those without symptoms can transmit 'the virus' then you must produce evidence for that and they never have. Even World Health Organization official Dr Maria Van Kerkhove, head of the emerging diseases and zoonosis unit, said as early as June, 2020, that she doubted the validity of asymptomatic transmission. She said that 'from the data we have, it still seems to be rare that an asymptomatic person actually transmits onward to a secondary individual' and by 'rare' she meant that she couldn't cite any case of asymptomatic transmission.

The Ferguson factor

The problem for the Cult as it headed into March, 2020, when the script had lockdown due to start, was that despite all the manipulation of the case and death figures they still did not have enough people alleged to have died from 'Covid' to justify mass house arrest. This was overcome in the way the scientist described: 'You can claim this is just the beginning and more deaths are imminent … Use this as an excuse to quarantine everyone and then claim the quarantine prevented the expected millions of dead.' Enter one Professor Neil Ferguson, the Gates-funded 'epidemiologist' at the Gates-funded Imperial College in London. Ferguson is Britain's Christian Drosten in that he has a dire record of predicting health outcomes, but is still called upon to advise government on the next health outcome when another 'crisis' comes along. This may seem to be a strange and ridiculous thing to do. Why would you keep turning for policy guidance to people who have a history of being monumentally wrong? Ah, but it makes sense from the Cult point of view. These ‘experts’ keep on producing predictions that suit the Cult agenda for societal transformation and so it was with Neil Ferguson as he revealed his horrific (and clearly insane) computer model predictions that allowed lockdowns to be imposed in Britain, the United States and many other countries. Ferguson does not have even an A-level in biology and would appear to have no formal training in computer modelling, medicine or epidemiology, according to Derek Winton, an MSc in Computational Intelligence. He wrote an article somewhat aghast at what Ferguson did which included taking no account of respiratory disease ‘seasonality’ which means it is far worse in the winter months. Who would have thought that respiratory disease could be worse in the winter? Well, certainly not Ferguson.

The massively China-connected Imperial College and its bizarre professor provided the excuse for the long-incubated Chinese model of human control to travel westward at lightning speed. Imperial College confirms on its website that it collaborates with the Chinese Research Institute; publishes more than 600 research papers every year with Chinese research institutions; has 225 Chinese staff; 2,600 Chinese students – the biggest international group; 7,000 former students living in China which is the largest group outside the UK; and was selected for a tour by China’s President Xi Jinping during his state visit to the UK in 2015. The college takes major donations from China and describes itself as the UK’s number one university collaborator with Chinese research institutions. The China communist/fascist government did not appear phased by the woeful predictions of Ferguson and Imperial when during the lockdown that Ferguson induced the college signed a five-year collaboration deal with China tech giant Huawei that will have Huawei’s indoor 5G network equipment installed at the college’s West London tech campus along with an ‘AI cloud platform’. The deal includes Chinese sponsorship of Imperial’s Venture Catalyst entrepreneurship competition. Imperial is an example of the enormous influence the Chinese government has within British and North American universities and research centres – and further afield. Up to 200 academics from more than a dozen UK universities are being investigated on suspicion of ‘unintentionally’ helping the Chinese government build weapons of mass destruction by ‘transferring world-leading research in advanced military technology such as aircraft, missile designs and cyberweapons’. Similar scandals have broken in the United States, but it’s all a coincidence. Imperial College serves the agenda in many other ways including the promotion of every aspect of the United Nations Agenda 21/2030 (the Great Reset) and produced computer models to show that human-caused ‘climate change’ is happening when in the real world it isn’t. Imperial College is driving the climate agenda as it drives the ‘Covid’ agenda (both Cult hoaxes) while Patrick Vallance, the UK government’s Chief Scientific Adviser on ‘Covid’, was named Chief Scientific Adviser to the UN ‘climate change’ conference known as COP26 hosted by the government in Glasgow, Scotland. ‘Covid’ and ‘climate’ are fundamentally connected.

Professor Woeful

From Imperial’s bosom came Neil Ferguson still advising government despite his previous disasters and it was announced early on that he and other key people like UK Chief Medical Adviser Chris Whitty had caught the ‘virus’ as the propaganda story was being sold. Somehow they managed to survive and we had Prime Minister Boris Johnson admitted to hospital with what was said to be a severe version of the ‘virus’ in this same period. His whole policy and demeanour changed when he returned to Downing Street. It’s a small world with these government advisors – especially in their communal connections to Gates – and Ferguson had partnered with Whitty to write a paper called ‘Infectious disease: Tough choices to reduce Ebola transmission’ which involved another scare-story that didn’t happen. Ferguson’s ‘models’ predicted that up to150, 000 could die from ‘mad cow disease’, or BSE, and its version in sheep if it was transmitted to humans. BSE was not transmitted and instead triggered by an organophosphate pesticide used to treat a pest on cows. Fewer than 200 deaths followed from the human form. Models by Ferguson and his fellow incompetents led to the unnecessary culling of millions of pigs, cattle and sheep in the foot and mouth outbreak in 2001 which destroyed the lives and livelihoods of farmers and their families who had often spent decades building their herds and flocks. Vast numbers of these animals did not have foot and mouth and had no contact with the infection. Another 'expert' behind the cull was Professor Roy Anderson, a computer modeller at Imperial College specialising in the epidemiology of *human*, not animal, disease. Anderson has served on the Bill and Melinda Gates Grand Challenges in Global Health advisory board and chairs another Gates-funded organisation. Gates is everywhere.

In a precursor to the 'Covid' script Ferguson backed closing schools 'for prolonged periods' over the swine flu 'pandemic' in 2009 and said it would affect a third of the world population if it continued to spread at the speed he claimed to be happening. His mates at Imperial College said much the same and a news report said: 'One of the authors, the epidemiologist and disease modeller Neil Ferguson, who sits on the World Health Organisation's emergency committee for the outbreak, said the virus had "full pandemic potential".' Professor Liam Donaldson, the Chris Whitty of his day as Chief Medical Officer, said the worst case could see 30 percent of the British people infected by swine flu with 65,000 dying. Ferguson and Donaldson were indeed proved correct when at the end of the year the number of deaths attributed to swine flu was 392. The term 'expert' is rather liberally applied unfortunately, not least to complete idiots. Swine flu 'projections' were great for GlaxoSmithKline (GSK) as millions rolled in for its Pandemrix influenza vaccine which led to brain damage with children most affected. The British government (taxpayers) paid out more than £60 million in compensation after GSK was given immunity from prosecution. Yet another 'Covid' déjà vu. Swine flu was supposed to have broken out in Mexico, but Dr Wolfgang Wodarg, a German doctor, former member of parliament and critic of the 'Covid' hoax, observed 'the spread of swine flu' in Mexico City at the time. He said: ‘What we experienced in Mexico City was a very mild flu which did not kill more than usual – which killed even fewer people than usual.’ Hyping the fear against all the facts is not unique to ‘Covid’ and has happened many times before. Ferguson is reported to have over-estimated the projected death toll of bird flu (H5N1) by some three million-fold, but bird flu vaccine makers again made a killing from the scare. This is some of the background to the Neil Ferguson who produced the perfectly-timed computer models in early 2020 predicting that half a million people would die in Britain without draconian lockdown and 2.2 million in the United States. Politicians panicked, people panicked, and lockdowns of alleged short duration were instigated to ‘flatten the curve’ of cases gleaned from a test not testing for the ‘virus’. I said at the time that the public could forget the ‘short duration’ bit. This was an agenda to destroy the livelihoods of the population and force them into mass control through dependency and there was going to be nothing ‘short’ about it. American researcher Daniel Horowitz described the consequences of the ‘models’ spewed out by Gates-funded Ferguson and Imperial College:

> What led our government and the governments of many other countries into panic was a single Imperial College of UK study, funded by global warming activists, that predicted 2.2 million deaths if we didn’t lock down the country. In addition, the reported 8-9% death rate in Italy scared us into thinking there was some other mutation of this virus that they got, which might have come here.
>
> Together with the fact that we were finally testing and had the ability to actually report new cases, we thought we were headed for a death spiral. But again … we can’t flatten a curve if we don’t know when the curve started.

How about it *never* started?

Giving them what they want

An investigation by German news outlet *Welt Am Sonntag (World on Sunday)* revealed how in March, 2020, the German government gathered together ‘leading scientists from several research institutes and universities’ and ‘together, they were to produce a [modelling] paper that would serve as legitimization for further tough political measures'. The Cult agenda was justified by computer modelling not based on evidence or reality; it was specifically constructed to justify the Cult demand for lockdowns all over the world to destroy the independent livelihoods of the global population. All these modellers and everyone responsible for the 'Covid' hoax have a date with a trial like those in Nuremberg after World War Two when Nazis faced the consequences of their war crimes. These corrupt-beyond-belief 'modellers' wrote the paper according to government instructions and it said that that if lockdown measures were lifted then up to one million Germans would die from 'Covid-19' adding that some would die 'agonizingly at home, gasping for breath' unable to be treated by hospitals that couldn't cope. All lies. No matter – it gave the Cult all that it wanted. What did long-time government 'modeller' Neil Ferguson say? If the UK and the United States didn't lockdown half a million would die in Britain and 2.2 million Americans. Anyone see a theme here? 'Modellers' are such a crucial part of the lockdown strategy that we should look into their background and follow the money. Researcher Rosemary Frei produced an excellent article headlined 'The Modelling-paper Mafiosi'. She highlights a guy called John Edmunds, a British epidemiologist, and professor in the Faculty of Epidemiology and Population Health at the London School of Hygiene & Tropical Medicine. He studied at Imperial College. Edmunds is a member of government 'Covid' advisory bodies which have been dictating policy, the New and Emerging Respiratory Virus Threats Advisory Group (NERVTAG) and the Scientific Advisory Group for Emergencies (SAGE).

Ferguson, another member of NERVTAG and SAGE, led the way with the original 'virus' and Edmunds has followed in the 'variant' stage and especially the so-called UK or Kent variant known as the 'Variant of Concern' (VOC) B.1.1.7. He said in a co-written report for the Centre for Mathematical modelling of Infectious Diseases at the London School of Hygiene and Tropical Medicine, with input from the Centre's 'Covid-19' Working Group, that there was 'a realistic possibility that VOC B.1.1.7 is associated with an increased risk of death compared to non-VOC viruses'. Fear, fear, fear, get the vaccine, fear, fear, fear, get the vaccine. Rosemary Frei reveals that almost all the paper's authors and members of the modelling centre's 'Covid-19' Working Group receive funding from the Bill and Melinda Gates Foundation and/or the associated Gates-funded Wellcome Trust. The paper was published by e-journal *Medr χiv* which only publishes papers not peer-reviewed and the journal was established by an organisation headed by Facebook's Mark Zuckerberg and his missus. What a small world it is. Frei discovered that Edmunds is on the Scientific Advisory Board of the Coalition for Epidemic Preparedness Innovations (CEPI) which was established by the Bill and Melinda Gates Foundation, Klaus Schwab's Davos World Economic Forum and Big Pharma giant Wellcome. CEPI was 'launched in Davos [in 2017] to develop vaccines to stop future epidemics', according to its website. 'Our mission is to accelerate the development of vaccines against emerging infectious diseases and enable equitable access to these vaccines for people during outbreaks.' What kind people they are. Rosemary Frei reveals that Public Health England (PHE) director Susan Hopkins is an author of her organisation's non-peer-reviewed reports on 'new variants'. Hopkins is a professor of infectious diseases at London's Imperial College which is gifted tens of millions of dollars a year by the Bill and Melinda Gates Foundation. Gates-funded modelling disaster Neil Ferguson also co-authors Public Health England reports and he spoke in December, 2020, about the potential danger of the B.1.1.7. 'UK variant' promoted by Gates-funded modeller John Edmunds. When I come to the 'Covid vaccines' the 'new variants' will be shown for what they are – bollocks.

Connections, connections

All these people and modellers are lockdown-obsessed or, put another way, they demand what the Cult demands. Edmunds said in January, 2021, that to ease lockdowns too soon would be a disaster and they had to 'vaccinate much, much, much more widely than the elderly'. Rosemary Frei highlights that Edmunds is married to Jeanne Pimenta who is described in a LinkedIn profile as director of epidemiology at GlaxoSmithKline (GSK) and she held shares in the company. Patrick Vallance, co-chair of SAGE and the government's Chief Scientific Adviser, is a former executive of GSK and has a deferred bonus of shares in the company worth £600,000. GSK has serious business connections with Bill Gates and is collaborating with mRNA-'vaccine' company CureVac to make 'vaccines' for the new variants that Edmunds is talking about. GSK is planning a 'Covid vaccine' with drug giant Sanofi. Puppet Prime Minister Boris Johnson announced in the spring of 2021 that up to 60 million vaccine doses were to be made at the GSK facility at Barnard Castle in the English North East. Barnard Castle, with a population of just 6,000, was famously visited in breach of lockdown rules in April, 2020, by Johnson aide Dominic Cummings who said that he drove there 'to test his eyesight' before driving back to London. Cummings would be better advised to test his integrity – not that it would take long. The GSK facility had nothing to do with his visit then although I'm sure Patrick Vallance would have been happy to arrange an introduction and some tea and biscuits. Ruthless psychopath Gates has made yet another fortune from vaccines in collaboration with Big Pharma companies and gushes at the phenomenal profits to be made from vaccines – more than a 20-to-1 return as he told one interviewer. Gates also tweeted in December, 2019, with the foreknowledge of what was coming: 'What's next for our foundation? I'm particularly excited about what the next year could mean for one of the best buys in global health: vaccines.'

Modeller John Edmunds is a big promotor of vaccines as all these people appear to be. He's the dean of the London School of Hygiene & Tropical Medicine's Faculty of Epidemiology and Population Health which is primarily funded by the Bill and Melinda Gates Foundation and the Gates-established and funded GAVI vaccine alliance which is the Gates vehicle to vaccinate the world. The organisation Doctors Without Borders has described GAVI as being 'aimed more at supporting drug-industry desires to promote new products than at finding the most efficient and sustainable means for fighting the diseases of poverty'. But then that's why the psychopath Gates created it. John Edmunds said in a video that the London School of Hygiene & Tropical Medicine is involved in every aspect of vaccine development including large-scale clinical trials. He contends that mathematical modelling can show that vaccines protect individuals and society. That's on the basis of shit in and shit out, I take it. Edmunds serves on the UK Vaccine Network as does Ferguson and the government's foremost 'Covid' adviser, the grim-faced, dark-eyed Chris Whitty. The Vaccine Network says it works 'to support the government to identify and shortlist targeted investment opportunities for the most promising vaccines and vaccine technologies that will help combat infectious diseases with epidemic potential, and to address structural issues related to the UK's broader vaccine infrastructure'. Ferguson is acting Director of the Imperial College Vaccine Impact Modelling Consortium which has funding from the Bill and Melina Gates Foundation and the Gates-created GAVI 'vaccine alliance'. Anyone wonder why these characters see vaccines as the answer to every problem? Ferguson is wildly enthusiastic in his support for GAVI's campaign to vaccine children en masse in poor countries. You would expect someone like Gates who has constantly talked about the need to reduce the population to want to fund vaccines to keep more people alive. I'm sure that's why he does it. The John Edmunds London School of Hygiene & Tropical Medicine (LSHTM) has a Vaccines Manufacturing Innovation Centre which develops, tests and commercialises vaccines. Rosemary Frei writes:

> The vaccines centre also performs affiliated activities like combating 'vaccine hesitancy'. The latter includes the Vaccine Confidence Project. The project's stated purpose is, among other things, 'to provide analysis and guidance for early response and engagement with the public to ensure sustained confidence in vaccines and immunisation'. The Vaccine Confidence Project's director is LSHTM professor Heidi Larson. For more than a decade she's been researching how to combat vaccine hesitancy.

How the bloody hell can blokes like John Edmunds and Neil Ferguson with those connections and financial ties model 'virus' case and death projections for the government and especially in a way that gives their paymasters like Gates exactly what they want? It's insane, but this is what you find throughout the world.

'Covid' is not dangerous, oops, wait, yes it is

Only days before Ferguson's nightmare scenario made Jackboot Johnson take Britain into a China-style lockdown to save us from a deadly 'virus' the UK government website gov.uk was reporting something very different to Ferguson on a page of official government guidance for 'high consequence infectious diseases (HCID)'. It said this about 'Covid-19':

> As of 19 March 2020, COVID-19 *is no longer considered to be a high consequence infectious diseases (HCID) in the UK* [my emphasis]. The 4 nations public health HCID group made an interim recommendation in January 2020 to classify COVID-19 as an HCID. This was based on consideration of the UK HCID criteria about the virus and the disease with information available during the early stages of the outbreak.
>
> Now that more is known about COVID-19, the public health bodies in the UK have reviewed the most up to date information about COVID-19 against the UK HCID criteria. They have determined that several features have now changed; in particular, more information is available about mortality rates (low overall), and there is now greater clinical awareness and a specific and sensitive laboratory test, the availability of which continues to increase. The Advisory Committee on Dangerous Pathogens (ACDP) is also of the opinion that COVID-19 should no longer be classified as an HCID.

Soon after the government had been exposed for downgrading the risk they upgraded it again and everyone was back to singing from the same Cult hymn book. Ferguson and his fellow Gates clones indicated that lockdowns and restrictions would have to continue until a Gates-funded vaccine was developed. Gates said the same because Ferguson and his like were repeating the Gates script which is the Cult script. 'Flatten the curve' became an ongoing nightmare of continuing lockdowns with periods in between of severe restrictions in pursuit of destroying independent incomes and had nothing to do with protecting health about which the Cult gives not a shit. Why wouldn't Ferguson be pushing a vaccine 'solution' when he's owned by vaccine-obsessive Gates who makes a fortune from them and when Ferguson heads the Vaccine Impact Modelling Consortium at Imperial College funded by the Gates Foundation and GAVI, the ‘vaccine alliance’, created by Gates as his personal vaccine promotion operation? To compound the human catastrophe that Ferguson’s ‘models’ did so much to create he was later exposed for breaking his own lockdown rules by having sexual liaisons with his married girlfriend Antonia Staats at his home while she was living at another location with her husband and children. Staats was a ‘climate’ activist and senior campaigner at the Soros-funded Avaaz which I wouldn’t trust to tell me that grass is green. Ferguson had to resign as a government advisor over this hypocrisy in May, 2020, but after a period of quiet he was back being quoted by the ridiculous media on the need for more lockdowns and a vaccine rollout. Other government-advising ‘scientists’ from Imperial College’ held the fort in his absence and said lockdown could be indefinite until a vaccine was found. The Cult script was being sung by the payrolled choir. I said there was no intention of going back to ‘normal’ when the ‘vaccine’ came because the ‘vaccine’ is part of a very different agenda that I will discuss in Human 2.0. Why would the Cult want to let the world go back to normal when destroying that normal forever was the whole point of what was happening? House arrest, closing businesses and schools through lockdown, (un)social distancing and masks all followed the Ferguson fantasy models. Again as I predicted (these people are so predictable) when the ‘vaccine’ arrived we were told that house arrest, lockdown, (un)social distancing and masks would still have to continue. I will deal with the masks in the next chapter because they are of fundamental importance.

Where’s the ‘pandemic’?

Any mildly in-depth assessment of the figures revealed what was really going on. Cult-funded and controlled organisations still have genuine people working within them such is the number involved. So it is with Genevieve Briand, assistant program director of the Applied Economics master’s degree program at Johns Hopkins

University. She analysed the impact that 'Covid-19' had on deaths from *all* causes in the United States using official data from the CDC for the period from early February to early September, 2020. She found that allegedly 'Covid' *related*-deaths exceeded those from heart disease which she found strange with heart disease always the biggest cause of fatalities. Her research became even more significant when she noted the sudden decline in 2020 of *all* non-'Covid' deaths: 'This trend is completely contrary to the pattern observed in all previous years … the total decrease in deaths by other causes almost exactly equals the increase in deaths by Covid-19.' This was such a game, set and match in terms of what was happening that Johns Hopkins University deleted the article on the grounds that it 'was being used to support false and dangerous inaccuracies about the impact of the pandemic'. No – because it exposed the scam from official CDC figures and this was confirmed when those figures were published in January, 2021. Here we can see the effect of people dying from heart attacks, cancer, road accidents and gunshot wounds – *anything* – having 'Covid-19' on the death certificate along with those diagnosed from 'symptoms' who had even not tested positive with a test not testing for the 'virus'. I am not kidding with the gunshot wounds, by the way. Brenda Bock, coroner in Grand County, Colorado, revealed that two gunshot victims tested positive for the 'virus' within the previous 30 days and were therefore classified as 'Covid deaths'. Bock said: 'These two people had tested positive for Covid, but that's not what killed them. A gunshot wound is what killed them.' She said she had not even finished her investigation when the state listed the gunshot victims as deaths due to the 'virus'. The death and case figures for 'Covid-19' are an absolute joke and yet they are repeated like parrots by the media, politicians and alleged medical 'experts'. The official Cult narrative is the only show in town.

Genevieve Briand found that deaths from all causes were not exceptional in 2020 compared with previous years and a Spanish magazine published figures that said the same about Spain which was a 'Covid' propaganda hotspot at one point. *Discovery Salud*, a health and medicine magazine, quoted government figures which showed how 17,000 *fewer* people died in Spain in 2020 than in 2019 and more than 26,000 fewer than in 2018. The age-standardised mortality rate for England and Wales when age distribution is taken into account was significantly lower in 2020 than the 1970s, 80s and 90s, and was only the ninth highest since 2000. Where is the 'pandemic'?

Post mortems and autopsies virtually disappeared for 'Covid' deaths amid claims that 'virus-infected' bodily fluids posed a risk to those carrying out the autopsy. This was rejected by renowned German pathologist and forensic doctor Klaus Püschel who said that he and his staff had by then done 150 autopsies on 'Covid' patients with no problems at all. He said they were needed to know why some 'Covid' patients suffered blood clots and not severe respiratory infections. The 'virus' is, after all, called SARS or 'severe acute respiratory syndrome'. I highlighted in the spring of 2020 this phenomenon and quoted New York intensive care doctor Cameron Kyle-Sidell who posted a soon deleted YouTube video to say that they had been told to prepare to treat an infectious disease called 'Covid-19', but that was not what they were dealing with. Instead he likened the lung condition of the most severely ill patients to what you would expect with cabin depressurisation in a plane at 30,000 feet or someone dropped on the top of Everest without oxygen or acclimatisation. I have never said this is not happening to a small minority of alleged 'Covid' patients – I am saying this is not caused by a phantom 'contagious virus'. Indeed Kyle-Sidell said that 'Covid-19' was not the disease they were told was coming their way. 'We are operating under a medical paradigm that is untrue,' he said, and he believed they were treating the wrong disease: 'These people are being slowly starved of oxygen.' Patients would take off their oxygen masks in a state of fear and stress and while they were blue in the face on the brink of death. They did not look like patients dying of pneumonia. You can see why they don't want autopsies when their virus doesn't exist and there is another condition in some people that they don't wish to be uncovered. I should add here that the 5G system of millimetre waves was being rapidly introduced around the world in 2020 and even more so now as they fire 5G at the Earth from satellites. At 60 gigahertz within the 5G range that frequency interacts with the oxygen molecule and stops people breathing in sufficient oxygen to be absorbed into the bloodstream. They are installing 5G in schools and hospitals. The world is not mad or anything. 5G can cause major changes to the lungs and blood as I detail in *The Answer* and these consequences are labelled 'Covid-19', the alleged symptoms of which can be caused by 5G and other electromagnetic frequencies as cells respond to radiation poisoning.

The 'Covid death' scam

Dr Scott Jensen, a Minnesota state senator and medical doctor, exposed 'Covid' Medicare payment incentives to hospitals and death certificate manipulation. He said he was sent a seven-page document by the US Department of Health 'coaching' him on how to fill out death certificates which had never happened before. The document said that he didn't need to have a laboratory test for 'Covid-19' to put that on the death certificate and that shocked him when death certificates are supposed to be about facts. Jensen described how doctors had been 'encouraged, if not pressured' to make a diagnosis of 'Covid-19' if they thought it was probable or *'presumed'*. No positive test was necessary – not that this would have mattered anyway. He said doctors were told to diagnose 'Covid' by symptoms when these were the same as colds, allergies, other respiratory problems, and certainly with influenza which 'disappeared' in the 'Covid' era. A common sniffle was enough to get the dreaded verdict. Ontario authorities decreed that a single care home resident with *one* symptom from a long list must lead to the isolation of the entire home. Other courageous doctors like Jensen made the same point about death figure manipulation and how deaths by other causes were falling while 'Covid-19 deaths' were rising at the same rate due to re-diagnosis. Their videos rarely survive long on YouTube with its Cult-supporting algorithms courtesy of CEO Susan Wojcicki and her bosses at Google. Figure-tampering was so glaring and ubiquitous that even officials were letting it slip or outright saying it. UK chief scientific adviser Patrick Vallance said on one occasion that ‘Covid’ on the death certificate doesn’t mean ‘Covid’ was the cause of death (so why the hell is it there?) and we had the rare sight of a BBC reporter telling the truth when she said: ‘Someone could be successfully treated for Covid, in say April, discharged, and then in June, get run over by a bus and die … That person would still be counted as a Covid death in England.’ Yet the BBC and the rest of the world media went on repeating the case and death figures as if they were real. Illinois Public Health Director Dr Ngozi Ezike revealed the deceit while her bosses must have been clenching their buttocks:

> If you were in a hospice and given a few weeks to live and you were then found to have Covid that would be counted as a Covid death. [There might be] a clear alternate cause, but it is still listed as a Covid death. So everyone listed as a Covid death doesn’t mean that was the cause of the death, but that they had Covid at the time of death.

Yes, a ‘Covid virus’ never shown to exist and tested for with a test not testing for the ‘virus’. In the first period of the pandemic hoax through the spring of 2020 the process began of designating almost everything a ‘Covid’ death and this has continued ever since. I sat in a restaurant one night listening to a loud conversation on the next table where a family was discussing in bewilderment how a relative who had no symptoms of ‘Covid’, and had died of a long-term problem, could have been diagnosed a death by the ‘virus’. I could understand their bewilderment. If they read this book they will know why this medical fraud has been perpetrated the world over.

Some media truth shock

The media ignored the evidence of death certificate fraud until eventually one columnist did speak out when she saw it first-hand. Bel Mooney is a long-time national newspaper journalist in Britain currently working for the *Daily Mail*. Her article on February 19th, 2021, carried this headline: ‘My dad Ted passed three Covid tests and died of a chronic illness yet he's officially one of Britain's 120,000 victims of the virus and is far from alone ... so how many more are there?' She told how her 99-year-old father was in a care home with a long-standing chronic obstructive pulmonary disease and vascular dementia. Maybe, but he was still aware enough to tell her from the start that there was no 'virus' and he refused the 'vaccine' for that reason. His death was not unexpected given his chronic health problems and Mooney said she was shocked to find that 'Covid-19' was declared the cause of death on his death certificate. She said this was a 'bizarre and unacceptable untruth' for a man with long-time health problems who had tested negative twice at the home for the 'virus'. I was also shocked by this story although not by what she said. I had been highlighting the death certificate manipulation for ten months. It was the confirmation that a professional full-time journalist only realised this was going on when it affected her directly and neither did she know that whether her dad tested positive or negative was irrelevant with the test not testing for the 'virus'. Where had she been? She said she did not believe in 'conspiracy theories' without knowing I'm sure that this and 'conspiracy theorists' were terms put into widespread circulation by the CIA in the 1960s to discredit those who did not accept the ridiculous official story of the Kennedy assassination. A blanket statement of 'I don't believe in conspiracy theories' is always bizarre. The dictionary definition of the term alone means the world is drowning in conspiracies. What she said was even more daft when her dad had just been affected by the 'Covid' conspiracy. Why else does she think that 'Covid-19' was going on the death certificates of people who died of something else?

To be fair once she saw from personal experience what was happening she didn't mince words. Mooney was called by the care home on the morning of February 9th to be told her father had died in his sleep. When she asked for the official cause of death what came back was 'Covid-19'. Mooney challenged this and was told there had been deaths from Covid on the dementia floor (confirmed by a test not testing for the 'virus') so they considered it 'reasonable to assume'. 'But doctor,' Mooney rightly protested, 'an assumption isn't a diagnosis.' She said she didn't blame the perfectly decent and sympathetic doctor – 'he was just doing his job'. Sorry, but that's *bullshit*. He wasn't doing his job at all. He was putting a false cause of death on the death certificate and that is a criminal offence for which he should be brought to account and the same with the millions of doctors worldwide who have done the same. They were not doing their job they were following orders and that must not wash at new Nuremberg trials any more than it did at the first ones. Mooney's doctor was 'assuming' (presuming) as he was told to, but 'just following orders' makes no difference to his actions. A doctor's job is to serve the patient and the truth, not follow orders, but that's what they have done all over the world and played a central part in making the 'Covid' hoax possible with all its catastrophic consequences for humanity. Shame on them and they must answer for their actions. Mooney said her disquiet worsened when she registered her father's death by telephone and was told by the registrar there had been very many other cases like hers where 'the deceased' had not tested positive for 'Covid' yet it was recorded as the cause of death. The test may not matter, but those involved at their level *think* it matters and it shows a callous disregard for accurate diagnosis. The pressure to do this is coming from the top of the national 'health' pyramids which in turn obey the World Health Organization which obeys Gates and the Cult. Mooney said the registrar agreed that this must distort the national figures adding that 'the strangest thing is that every winter we record countless deaths from flu, and this winter there have been none. Not one!' She asked if the registrar thought deaths from flu were being misdiagnosed and lumped together with 'Covid' deaths. The answer was a 'puzzled yes'. Mooney said that the funeral director said the same about 'Covid' deaths which had nothing to do with 'Covid'. They had lost count of the number of families upset by this and other funeral companies in different countries have had the same experience. Mooney wrote:

> The nightly shroud-waving and shocking close-ups of pain imposed on us by the TV news bewildered and terrified the population into eager compliance with lockdowns. We were invited to 'save the NHS' and to grieve for strangers – the real-life loved ones behind those shocking death counts. Why would the public imagine what I now fear, namely that the way Covid-19 death statistics are compiled might make the numbers seem greater than they are?

Oh, just a little bit – like 100 percent.

Do the maths

Mooney asked why a country would wish to skew its mortality figures by wrongly certifying deaths? What had been going on? Well, if you don't believe in conspiracies you will never find the answer which is that *it's a conspiracy*. She did, however, describe what she had discovered as a 'national scandal'. In reality it's a global scandal and happening everywhere. Pillars of this conspiracy were all put into place before the button was pressed with the Drosten PCR protocol and high amplifications to produce the cases and death certificate changes to secure illusory 'Covid' deaths. Mooney notes that normally two doctors were needed to certify a death, with one having to know the patient, and how the rules were changed in the spring of 2020 to allow one doctor to do this. In the same period 'Covid deaths' were decreed to be all cases where Covid-19 was put on the death certificate even without a positive test or any symptoms. Mooney asked: 'How many of the 30,851 (as of January 15) care home resident deaths with Covid-19 on the certificate (32.4 per cent of all deaths so far) were based on an assumption, like that of my father? And what has that done to our national psyche?'All of them is the answer to the first question and it has devastated and dismantled the national psyche, actually the global psyche, on a colossal scale. In the UK case and death data is compiled by organisations like Public Health England (PHE) and the Office for National Statistics (ONS). Mooney highlights the insane policy of counting a death from any cause as 'Covid-19' if this happens within 28 days of a positive test (with a test not testing for the 'virus') and she points out that ONS statistics reflect deaths 'involving Covid' 'or due to Covid' which meant in practice any death where 'Covid-19' was mentioned on the death certificate. She described the consequences of this fraud:

> Most people will accept the narrative they are fed, so panicky governments here and in Europe witnessed the harsh measures enacted in totalitarian China and jumped into lockdown. Headlines about Covid deaths tolled like the knell that would bring doomsday to us all. Fear stalked our empty streets. Politicians parroted the frankly ridiculous aim of 'zero Covid' and shut down the economy, while most British people agreed that lockdown was essential and (astonishingly to me, as a patriotic Brit) even wanted more restrictions.
>
> For what? Lies on death certificates? Never mind the grim toll of lives ruined, suicides, schools closed, rising inequality, depression, cancelled hospital treatments, cancer patients in a torture of waiting, poverty, economic devastation, loneliness, families kept apart, and so on. How many lives have been lost as a direct result of lockdown?

She said that we could join in a national chorus of shock and horror at reaching the 120,000 death toll which was surely certain to have been totally skewed all along, but what about the human cost of lockdown justified by these 'death figures'? *The British Medical Journal* had reported a 1,493 percent increase in cases of children taken to Great Ormond Street Hospital with abusive head injuries alone and then there was the effect on families:

> Perhaps the most shocking thing about all this is that families have been kept apart – and obeyed the most irrational, changing rules at the whim of government – because they believed in the statistics. They succumbed to fear, which his generation rejected in that war fought for freedom. Dad (God rest his soul) would be angry. And so am I.

Another theme to watch is that in the winter months when there are more deaths from all causes they focus on 'Covid' deaths and in the summer when the British Lung Foundation says respiratory disease plummets by 80 percent they rage on about 'cases'. Either way fascism on population is always the answer.

Nazi eugenics in the 21st century

Elderly people in care homes have been isolated from their families month after lonely month with no contact with relatives and grandchildren who were banned from seeing them. We were told that lockdown fascism was to ‘protect the vulnerable’ like elderly people. At the same time Do Not Resuscitate (DNR) orders were placed on their medical files so that if they needed resuscitation it wasn’t done and ‘Covid-19’ went on their death certificates. Old people were not being ‘protected’ they were being culled – murdered in truth. DNR orders were being decreed for disabled and young people with learning difficulties or psychological problems. The UK Care Quality Commission, a non-departmental body of the Department of Health and Social Care, found that 34 percent of those working in health and social care were pressured into placing ‘do not attempt cardiopulmonary resuscitation’ orders on ‘Covid’ patients who suffered from disabilities and learning difficulties without involving the patient or their families in the decision. UK judges ruled that an elderly woman with dementia should have the DNA-manipulating ‘Covid vaccine’ against her son’s wishes and that a man with severe learning difficulties should have the jab despite his family’s objections. Never mind that many had already died. The judiciary always supports doctors and government in fascist dictatorships. They wouldn’t dare do otherwise. A horrific video was posted showing fascist officers from Los Angeles police forcibly giving the ‘Covid’ shot to women with special needs who were screaming that they didn’t want it. The same fascists are seen giving the jab to a sleeping elderly woman in a care home. This is straight out of the Nazi playbook. Hitler’s Nazis committed mass murder of the mentally ill and physically disabled throughout Germany and occupied territories in the programme that became known as Aktion T4, or just T4. Sabbatian-controlled Hitler and his grotesque crazies set out to kill those they considered useless and unnecessary. The Reich Committee for the Scientific Registering of Hereditary and Congenital Illnesses registered the births of babies identified by physicians to have ‘defects’. By 1941 alone more than 5,000 children were murdered by the state and it is estimated that in total the number of innocent people killed in Aktion T4 was between 275,000 and 300,000. Parents were told their children had been sent away for ‘special treatment’ never to return. It is rather pathetic to see claims about plans for new extermination camps being dismissed today when the same force behind current events did precisely that 80 years ago. Margaret Sanger was a Cult operative who used 'birth control' to sanitise her programme of eugenics. Organisations she founded became what is now Planned Parenthood. Sanger proposed that 'the whole dysgenic population would have its choice of segregation or sterilization'. These included epileptics, 'feeble-minded', and prostitutes. Sanger opposed charity because it perpetuated 'human waste'. She reveals the Cult mentality and if anyone thinks that extermination camps are a 'conspiracy theory' their naivety is touching if breathtakingly stupid.

If you don't believe that doctors can act with callous disregard for their patients it is worth considering that doctors and medical staff agreed to put government-decreed DNR orders on medical files and do nothing when resuscitation is called for. I don't know what you call such people in your house. In mine they are Nazis from the Josef Mengele School of Medicine. Phenomenal numbers of old people have died worldwide from the effects of lockdown, depression, lack of treatment, the 'vaccine' (more later) and losing the will to live. A common response at the start of the manufactured pandemic was to remove old people from hospital beds and transfer them to nursing homes. The decision would result in a mass cull of elderly people in those homes through lack of treatment – *not* 'Covid'. Care home whistleblowers have told how once the 'Covid' era began doctors would not come to their homes to treat patients and they were begging for drugs like antibiotics that often never came. The most infamous example was ordered by New York governor Andrew Cuomo, brother of a moronic CNN host, who amazingly was given an Emmy Award for his handling of the 'Covid crisis' by the ridiculous Wokers that hand them out. Just how ridiculous could be seen in February, 2021, when a Department of Justice and FBI investigation began into how thousands of old people in New York died in nursing homes after being discharged from hospital to make way for 'Covid' patients on Cuomo's say-so – and how he and his staff covered up these facts. This couldn't have happened to a nicer psychopath. Even then there was a 'Covid' spin. Reports said that thousands of old people who tested positive for 'Covid' in hospital were transferred to nursing homes to both die of 'Covid' and transmit it to others. No – they were in hospital because they were ill and the fact that they tested positive with a test not testing for the 'virus' is irrelevant. They were ill often with respiratory diseases ubiquitous in old people near the end of their lives. Their transfer out of hospital meant that their treatment stopped and many would go on to die.

They're old. Who gives a damn?

I have exposed in the books for decades the Cult plan to cull the world's old people and even to introduce at some point what they call a 'demise pill' which at a certain age everyone would take and be out of here by law. In March, 2021, Spain legalised euthanasia and assisted suicide following the Netherlands, Belgium, Luxembourg and Canada on the Tiptoe to the demise pill. Treatment of old people by many 'care' homes has been a disgrace in the 'Covid' era. There are many, many, caring staff – I know some. There have, however, been legions of stories about callous treatment of old people and their families. Police were called when families came to take their loved ones home in the light of isolation that was killing them. They became prisoners of the state. Care home residents in insane, fascist Ontario, Canada, were not allowed to leave their *room* once the 'Covid' hoax began. UK staff have even wheeled elderly people away from windows where family members were talking with them. Oriana Criscuolo from Stockport in the English North West dropped off some things for her 80-year-old father who has Parkinson's disease and dementia and she wanted to wave to him through a ground-floor window. She was told that was 'illegal'. When she went anyway they closed the curtains in the middle of the day. Oriana said:

> It's just unbelievable. I cannot understand how care home staff – people who are being paid to care – have become so uncaring. Their behaviour is inhumane and cruel. It's beyond belief.

She was right and this was not a one-off. What a way to end your life in such loveless circumstances. UK registered nurse Nicky Millen, a proper old school nurse for 40 years, said that when she started her career care was based on dignity, choice, compassion and empathy. Now she said ‘the things that are important to me have gone out of the window.’ She was appalled that people were dying without their loved ones and saying goodbye on iPads. Nicky described how a distressed 89-year-old lady stroked her face and asked her ‘how many paracetamol would it take to finish me off’. Life was no longer worth living while not seeing her family. Nicky said she was humiliated in front of the ward staff and patients for letting the lady stroke her face and giving her a cuddle. Such is the dehumanisation that the ‘Covid’ hoax has brought to the surface. Nicky worked in care homes where patients told her they were being held prisoner. ‘I want to live until I die’, one said to her. ‘I had a lady in tears because she hadn’t seen her great-grandson.’ Nicky was compassionate old school meeting psychopathic New Normal. She also said she had worked on a ‘Covid’ ward with no ‘Covid’ patients. Jewish writer Shai Held wrote an article in March, 2020, which was headlined ‘The Staggering, Heartless Cruelty Toward the Elderly’. What he described was happening from the earliest days of lockdown. He said ‘the elderly’ were considered a group and not unique individuals (the way of the Woke). Shai Held said:

> Notice how the all-too-familiar rhetoric of dehumanization works: ‘The elderly’ are bunched together as a faceless mass, all of them considered culprits and thus effectively deserving of the suffering the pandemic will inflict upon them. Lost entirely is the fact that the elderly are individual human beings, each with a distinctive face and voice, each with hopes and dreams, memories and regrets, friendships and marriages, loves lost and loves sustained.

‘The elderly’ have become another dehumanised group for which anything goes and for many that has resulted in cold disregard for their rights and their life. The distinctive face that Held talks about is designed to be deleted by masks until everyone is part of a faceless mass.

‘War-zone’ hospitals myth

Again and again medical professionals have told me what was really going on and how hospitals ‘overrun like war zones’ according to the media were virtually empty. The mantra from medical whistleblowers was please don’t use my name or my career is over. Citizen journalists around the world sneaked into hospitals to film evidence exposing the ‘war-zone’ lie. They really *were* largely empty with closed wards and operating theatres. I met a hospital worker in my town on the Isle of Wight during the first lockdown in 2020 who said the only island hospital had never been so quiet. Lockdown was justified by the psychopaths to stop hospitals being overrun. At the same time that the island hospital was near-empty the military arrived here to provide *extra beds*. It was all propaganda to ramp up the fear to ensure compliance with fascism as were never-used temporary hospitals with thousands of beds known as Nightingales and never-used make-shift mortuaries opened by the criminal UK government. A man who helped to install those extra island beds attributed to the army said they were never used and the hospital was empty. Doctors and nurses ‘stood around talking or on their phones, wandering down to us to see what we were doing’. There were no masks or social distancing. He accused the useless local island paper, the *County Press*, of ‘pumping the fear as if our hospital was overrun and we only have one so it should have been’. He described ambulances parked up with crews outside in deck chairs. When his brother called an ambulance he was told there was a two-hour backlog which he called ‘bullshit’. An old lady on the island fell ‘and was in a bad way’, but a caller who rang for an ambulance was told the situation wasn’t urgent enough. Ambulance stations were working under capacity while people would hear ambulances with sirens blaring driving through the streets. When those living near the stations realised what was going on they would follow them as they left, circulated around an urban area with the sirens going, and then came back without stopping. All this was to increase levels of fear and the same goes for the ‘ventilator shortage crisis’ that cost tens of millions for hastily produced ventilators never to be used.

Ambulance crews that agreed to be exploited in this way for fear propaganda might find themselves a mirror. I wish them well with that. Empty hospitals were the obvious consequence of treatment and diagnoses of non-'Covid' conditions cancelled and those involved handed a death sentence. People have been dying at home from undiagnosed and untreated cancer, heart disease and other life-threatening conditions to allow empty hospitals to deal with a 'pandemic' that wasn't happening.

Death of the innocent

'War-zones' have been laying off nursing staff, even doctors where they can. There was no work for them. Lockdown was justified by saving lives and protecting the vulnerable they were actually killing with DNR orders and preventing empty hospitals being 'overrun'. In Britain the mantra of stay at home to 'save the NHS' was everywhere and across the world the same story was being sold when it was all lies. Two California doctors, Dan Erickson and Artin Massihi at Accelerated Urgent Care in Bakersfield, held a news conference in April, 2020, to say that intensive care units in California were 'empty, essentially', with hospitals shutting floors, not treating patients and laying off doctors. The California health system was working at minimum capacity 'getting rid of doctors because we just don't have the volume'. They said that people with conditions such as heart disease and cancer were not coming to hospital out of fear of 'Covid-19'. Their video was deleted by Susan Wojcicki's Cult-owned YouTube after reaching five million views. Florida governor Ron Desantis, who rejected the severe lockdowns of other states and is being targeted for doing so, said that in March, 2020, every US governor was given models claiming they would run out of hospital beds in days. That was never going to happen and the 'modellers' knew it. Deceit can be found at every level of the system. Urgent children's operations were cancelled including fracture repairs and biopsies to spot cancer. Eric Nicholls, a consultant paediatrician, said 'this is obviously concerning and we need to return to normal operating and to increase capacity as soon as possible'. Psychopaths in power were rather less concerned *because* they are psychopaths. Deletion of urgent care and diagnosis has been happening all over the world and how many kids and others have died as a result of the actions of these cold and heartless lunatics dictating 'health' policy? The number must be stratospheric. Richard Sullivan, professor of cancer and global health at King's College London, said people feared 'Covid' more than cancer such was the campaign of fear. 'Years of lost life will be quite dramatic', Sullivan said, with 'a huge amount of avoidable mortality'. Sarah Woolnough, executive director for policy at Cancer Research UK, said there had been a 75 percent drop in urgent referrals to hospitals by family doctors of people with suspected cancer. Sullivan said that 'a lot of services have had to scale back – we've seen a dramatic decrease in the amount of elective cancer surgery'. Lockdown deaths worldwide has been absolutely fantastic with the *New York Post* reporting how data confirmed that 'lockdowns end more lives than they save':

> There was a sharp decline in visits to emergency rooms and an increase in fatal heart attacks because patients didn't receive prompt treatment. Many fewer people were screened for cancer. Social isolation contributed to excess deaths from dementia and Alzheimer's.
>
> Researchers predicted that the social and economic upheaval would lead to tens of thousands of "deaths of despair" from drug overdoses, alcoholism and suicide. As unemployment surged and mental-health and substance-abuse treatment programs were interrupted, the reported levels of anxiety, depression and suicidal thoughts increased dramatically, as did alcohol sales and fatal drug overdoses.

This has been happening while nurses and other staff had so much time on their hands in the 'war-zones' that Tic-Tok dancing videos began appearing across the Internet with medical staff dancing around in empty wards and corridors as people died at home from causes that would normally have been treated in hospital.

Mentions in dispatches

One brave and truth-committed whistleblower was Louise Hampton, a call handler with the UK NHS who made a viral Internet video saying she had done 'fuck all' during the 'pandemic' which was ‘a load of bollocks’. She said that ‘Covid-19’ was rebranded flu and of course she lost her job. This is what happens in the medical and endless other professions now when you tell the truth. Louise filmed inside ‘war-zone’ accident and emergency departments to show they were empty and I mean *empty* as in no one there. The mainstream media could have done the same and blown the gaff on the whole conspiracy. They haven’t to their eternal shame. Not that most ‘journalists’ seem capable of manifesting shame as with the psychopaths they slavishly repeat without question. The relative few who were admitted with serious health problems were left to die alone with no loved ones allowed to see them because of ‘Covid’ rules and they included kids dying without the comfort of mum and dad at their bedside while the evil behind this couldn’t give a damn. It was all good fun to them. A Scottish NHS staff nurse publicly quit in the spring of 2021 saying: ‘I can no longer be part of the lies and the corruption by the government.’ She said hospitals ‘aren’t full, the beds aren’t full, beds have been shut, wards have been shut’. Hospitals were never busy throughout ‘Covid’. The staff nurse said that Nicola Sturgeon, tragically the leader of the Scottish government, was on television saying save the hospitals and the NHS – ‘but the beds are empty’ and ‘we’ve not seen flu, we always see flu every year’. She wrote to government and spoke with her union Unison (the unions are Cult-compromised and *useless*, but nothing changed. Many of her colleagues were scared of losing their jobs if they spoke out as they wanted to. She said nursing staff were being affected by wearing masks all day and ‘my head is splitting every shift from wearing a mask’. The NHS is part of the fascist tyranny and must be dismantled so we can start again with human beings in charge. (Ironically, hospitals were reported to be busier again when official ‘Covid’ cases *fell* in spring/summer of 2021 and many other conditions required treatment at the same time as *the fake vaccine rollout*.)

I will cover the ‘Covid vaccine’ scam in detail later, but it is another indicator of the sickening disregard for human life that I am highlighting here. The DNA-manipulating concoctions do not fulfil the definition of a ‘vaccine’, have never been used on humans before and were given only emergency approval because trials were not completed and they continued using the unknowing public. The result was what a NHS senior nurse with responsibility for ‘vaccine’ procedure said was ‘genocide’. She said the ‘vaccines’ were not ‘vaccines’. They had not been shown to be safe and claims about their effectiveness by drug companies were ‘poetic licence’. She described what was happening as a ‘horrid act of human annihilation’. The nurse said that management had instigated a policy of not providing a Patient Information Leaflet (PIL) before people were ‘vaccinated’ even though health care professionals are supposed to do this according to protocol. Patients should also be told that they are taking part in an ongoing clinical trial. Her challenges to what is happening had seen her excluded from meetings and ridiculed in others. She said she was told to ‘watch my step … or I would find myself surplus to requirements’. The nurse, who spoke anonymously in fear of her career, said she asked her NHS manager why he/she was content with taking part in genocide against those having the ‘vaccines’. The reply was that everyone had to play their part and to ‘put up, shut up, and get it done’. Government was ‘leaning heavily’ on NHS management which was clearly leaning heavily on staff. This is how the global ‘medical’ hierarchy operates and it starts with the Cult and its World Health Organization.

She told the story of a doctor who had the Pfizer jab and when questioned had no idea what was in it. The doctor had never read the literature. We have to stop treating doctors as intellectual giants when so many are moral and medical pygmies. The doctor did not even know that the ‘vaccines’ were not fully approved or that their trials were ongoing. They were, however, asking their patients if they minded taking part in follow-ups for research purposes – yes, the *ongoing clinical trial*. The nurse said the doctor’s ignorance was not rare and she had spoken to a hospital consultant who had the jab without any idea of the background or that the ‘trials’ had not been completed. Nurses and pharmacists had shown the same ignorance.

'My NHS colleagues have forsaken their duty of care, broken their code of conduct – Hippocratic Oath – and have been brainwashed just the same as the majority of the UK public through propaganda …' She said she had not been able to recruit a single NHS colleague, doctor, nurse or pharmacist to stand with her and speak out. Her union had refused to help. She said that if the genocide came to light she would not hesitate to give evidence at a Nuremberg-type trial against those in power who could have affected the outcomes but didn't.

And all for what?

To put the nonsense into perspective let's say the 'virus' does exist and let's go completely crazy and accept that the official manipulated figures for cases and deaths are accurate. *Even then* a study by Stanford University epidemiologist Dr John Ioannidis published on the World Health Organization website produced an average infection to fatality rate of … *0.23 percent!* Ioannidis said: 'If one could sample equally from all locations globally, the median infection fatality rate might even be substantially lower than the 0.23% observed in my analysis.' For healthy people under 70 it was … *0.05 percent*! This compares with the 3.4 percent claimed by the Cult-owned World Health Organization when the hoax was first played and maximum fear needed to be generated. An updated Stanford study in April, 2021, put the 'infection' to 'fatality' rate at just 0.15 percent. Another team of scientists led by Megan O'Driscoll and Henrik Salje studied data from 45 countries and published their findings on the Nature website. For children and young people the figure is so small it virtually does not register although authorities will be hyping dangers to the young when they introduce DNA-manipulating 'vaccines' for children. The O'Driscoll study produced an average infection-fatality figure of 0.003 for children from birth to four; 0.001 for 5 to 14; 0.003 for 15 to 19; and it was still only 0.456 up to 64. To claim that children must be 'vaccinated' to protect them from 'Covid' is an obvious lie and so there must be another reason and there is. What's more the average age of a 'Covid' death is akin to the average age that people die in general. The average age of death in England is about 80 for men and 83 for women. The average age of death from alleged 'Covid' is between 82 and 83. California doctors, Dan Erickson and Artin Massihi, said at their April media conference that projection models of millions of deaths had been 'woefully inaccurate'. They produced detailed figures showing that Californians had a 0.03 chance of dying from 'Covid' based on the number of people who tested positive (with a test not testing for the 'virus'). Erickson said there was a 0.1 percent chance of dying from 'Covid' in the *state* of New York, not just the city, and a 0.05 percent chance in Spain, a centre of 'Covid-19' hysteria at one stage. The Stanford studies supported the doctors' data with fatality rate estimates of 0.23 and 0.15 percent. How close are these figures to my estimate of *zero*? Death-rate figures claimed by the World Health Organization at the start of the hoax were some 15 times higher. The California doctors said there was no justification for lockdowns and the economic devastation they caused. Everything they had ever learned about quarantine was that you quarantine the *sick* and not the healthy. They had never seen this before and it made no medical sense.

Why in the in the light of all this would governments and medical systems the world over say that billions must go under house arrest; lose their livelihood; in many cases lose their mind, their health and their life; force people to wear masks dangerous to health and psychology; make human interaction and even family interaction a criminal offence; ban travel; close restaurants, bars, watching live sport, concerts, theatre, and any activity involving human togetherness and discourse; and closing schools to isolate children from their friends and cause many to commit suicide in acts of hopelessness and despair? The California doctors said lockdown consequences included increased child abuse, partner abuse, alcoholism, depression, and other impacts they were seeing every day. Who would do that to the entire human race if not mentally-ill psychopaths of almost unimaginable extremes like Bill Gates? We must face the reality of what we are dealing with and come out of denial. Fascism and tyranny are made possible only by the target population submitting and acquiescing to fascism and tyranny. The whole of human history shows that to be true. Most people naively and unquestioning believed what they were told about a 'deadly virus' and meekly and weakly submitted to house arrest. Those who didn't believe it – at least in total – still submitted in fear of the consequences of not doing so. For the rest who wouldn't submit draconian fines have been imposed, brutal policing by psychopaths *for* psychopaths, and condemnation from the meek and weak who condemn the Pushbackers on behalf of the very force that has them, too, in its gunsights. 'Pathetic' does not even begin to suffice. Britain's brainless 'Health' Secretary Matt Hancock warned anyone lying to border officials about returning from a list of 'hotspot' countries could face a jail sentence of up to ten years which is more than for racially-aggravated assault, incest and attempting to have sex with a child under 13. Hancock is a lunatic, but he has the state apparatus behind him in a Cult-led chain reaction and the same with UK 'Vaccine Minister' Nadhim Zahawi, a prominent member of the mega-Cult secret society, Le Cercle, which featured in my earlier books. The Cult enforces its will on governments and medical systems; government and medical systems enforce their will on business and police; business enforces its will on staff who enforce it on customers; police enforce the will of the Cult on the population and play their essential part in creating a world of fascist control that their own children and grandchildren will have to live in their entire lives. It is a hierarchical pyramid of imposition and acquiescence and, yes indeedy, of clinical insanity.

Does anyone bright enough to read this book have to ask what the answer is? I think not, but I will reveal it anyway in the fewest of syllables: Tell the psychos and their moronic lackeys to fuck off and let's get on with our lives. We are many – They are few.

CHAPTER SEVEN

War on your mind

One believes things because one has been conditioned to believe them
Aldous Huxley, *Brave New World*

I have described the 'Covid' hoax as a 'Psyop' and that is true in every sense and on every level in accordance with the definition of that term which is psychological warfare. Break down the 'Covid pandemic' to the foundation themes and it is psychological warfare on the human individual and collective mind.

The same can be said for the entire human belief system involving every subject you can imagine. Huxley was right in his contention that people believe what they are conditioned to believe and this comes from the repetition throughout their lives of the same falsehoods. They spew from government, corporations, media and endless streams of 'experts' telling you what the Cult wants you to believe and often believing it themselves (although *far* from always). 'Experts' are rewarded with 'prestigious' jobs and titles and as agents of perceptual programming with regular access to the media. The Cult has to control the narrative – control *information* – or they lose control of the vital, crucial, without-which-they-cannot-prevail public perception of reality. The foundation of that control today is the Internet made possible by the Defense Advanced Research Projects Agency (DARPA), the incredibly sinister technological arm of the Pentagon. The Internet is the result of military technology.

DARPA openly brags about establishing the Internet which has been a long-term project to lasso the minds of the global population. I have said for decades the plan is to control information to such an extreme that eventually no one would see or hear anything that the Cult does not approve. We are closing in on that end with ferocious censorship since the 'Covid' hoax began and in my case it started back in the 1990s in terms of books and speaking venues. I had to create my own publishing company in 1995 precisely because no one else would publish my books even then. I think they're all still running.

Cult Internet

To secure total control of information they needed the Internet in which pre-programmed algorithms can seek out 'unclean' content for deletion and even stop it being posted in the first place. The Cult had to dismantle print and non-Internet broadcast media to ensure the transfer of information to the appropriate-named 'Web' – a critical expression of the *Cult* web. We've seen the ever-quickening demise of traditional media and control of what is left by a tiny number of corporations operating worldwide. Independent journalism in the mainstream is already dead and never was that more obvious than since the turn of 2020. The Cult wants all information communicated via the Internet to globally censor and allow the plug to be pulled any time. Lockdowns and forced isolation has meant that communication between people has been through electronic means and no longer through face-to-face discourse and discussion. Cult psychopaths have targeted the bars, restaurants, sport, venues and meeting places in general for this reason. None of this is by chance and it's to stop people gathering in any kind of privacy or number while being able to track and monitor all Internet communications and block them as necessary. Even private messages between individuals have been censored by these fascists that control Cult fronts like Facebook, Twitter, Google and YouTube which are all officially run by Sabbatian place-people and from the background by higher-level Sabbatian place people.

Facebook, Google, Amazon and their like were seed-funded and supported into existence with money-no-object infusions of funds either directly or indirectly from DARPA and CIA technology arm In-Q-Tel. The Cult plays the long game and prepares very carefully for big plays like 'Covid'. Amazon is another front in the psychological war and pretty much controls the global market in book sales and increasingly publishing. Amazon's limitless funds have deleted fantastic numbers of independent publishers to seize global domination on the way to deciding which books can be sold and circulated and which cannot. Moves in that direction are already happening. Amazon's leading light Jeff Bezos is the grandson of Lawrence Preston Gise who worked with DARPA predecessor ARPA. Amazon has big connections to the CIA and the Pentagon. The plan I have long described went like this:

1. Employ military technology to establish the Internet.

2. Sell the Internet as a place where people can freely communicate without censorship and allow that to happen until the Net becomes the central and irreversible pillar of human society. If the Internet had been highly censored from the start many would have rejected it.

3. Fund and manipulate major corporations into being to control the circulation of information on your Internet using cover stories about geeks in garages to explain how they came about. Give them unlimited funds to expand rapidly with no need to make a profit for years while non-Cult companies who need to balance the books cannot compete. You know that in these circumstances your Googles, YouTubes, Facebooks and Amazons are going to secure near monopolies by either crushing or buying up the opposition.

4. Allow freedom of expression on both the Internet and communication platforms to draw people in until the Internet is the central and irreversible pillar of human society and your communication corporations have reached a stage of near monopoly domination.

5. Then unleash your always-planned frenzy of censorship on the basis of 'where else are you going to go?' and continue to expand that until nothing remains that the Cult does not want its human targets to see.

The process was timed to hit the 'Covid' hoax to ensure the best chance possible of controlling the narrative which they knew they had to do at all costs. They were, after all, about to unleash a 'deadly virus' that didn't really exist. If you do that in an environment of free-flowing information and opinion you would be dead in the water before you could say Gates is a psychopath. The network was in place through which the Cult-created-and-owned World Health Organization could dictate the 'Covid' narrative and response policy slavishly supported by Cult-owned Internet communication giants and mainstream media while those telling a different story were censored. Google, YouTube, Facebook and Twitter openly announced that they would do this. What else would we expect from Cult-owned operations like Facebook which former executives have confirmed set out to make the platform more addictive than cigarettes and coldly manipulates emotions of its users to sow division between people and groups and scramble the minds of the young? If Zuckerberg lives out the rest of his life without going to jail for crimes against humanity, and most emphatically against the young, it will be a travesty of justice. Still, no matter, cause and effect will catch up with him eventually and the same with Sergey Brin and Larry Page at Google with its CEO Sundar Pichai who fix the Google search results to promote Cult narratives and hide the opposition. Put the same key words into Google and other search engines like DuckDuckGo and you will see how different results can be. Wikipedia is another intensely biased 'encyclopaedia' which skews its content to the Cult agenda. YouTube links to Wikipedia's version of 'Covid' and 'climate change' on video pages in which experts in their field offer a different opinion (even that is increasingly rare with Wojcicki censorship). Into this 'Covid' silence-them network must be added government media censors, sorry 'regulators', such as Ofcom in the UK which imposed tyrannical restrictions on British broadcasters that had the effect of banning me from ever appearing. Just to debate with me about my evidence and views on 'Covid' would mean breaking the fascistic impositions of Ofcom and its CEO career government bureaucrat Melanie Dawes. Gutless British broadcasters tremble at the very thought of fascist Ofcom.

Psychos behind 'Covid'

The reason for the ‘Covid’ catastrophe in all its facets and forms can be seen by whom and what is driving the policies worldwide in such a coordinated way. Decisions are not being made to protect health, but to target psychology. The dominant group guiding and ‘advising’ government policy are not medical professionals. They are psychologists and behavioural scientists. Every major country has its own version of this phenomenon and I’ll use the British example to show how it works. In many ways the British version has been affecting the wider world in the form of the huge behaviour manipulation network in the UK which operates in other countries. The network involves private companies, government, intelligence and military. The Cabinet Office is at the centre of the government ‘Covid’ Psyop and part-owns, with ‘innovation charity’ Nesta, the Behavioural Insights Team (BIT) which claims to be independent of government but patently isn’t. The BIT was established in 2010 and its job is to manipulate the psyche of the population to acquiesce to government demands and so much more. It is also known as the ‘Nudge Unit’, a name inspired by the 2009 book by two ultra-Zionists, Cass Sunstein and Richard Thaler, called *Nudge: Improving Decisions About Health, Wealth, and Happiness*. The book, as with the Behavioural Insights Team, seeks to ‘nudge’ behaviour (manipulate it) to make the public follow patterns of action and perception that suit those in authority (the Cult). Sunstein is so skilled at this that he advises the World Health Organization and the UK Behavioural Insights Team and was Administrator of the White House Office of Information and Regulatory Affairs in the Obama administration. Biden appointed him to the Department of Homeland Security – another ultra-Zionist in the fold to oversee new immigration laws which is another policy the Cult wants to control. Sunstein is desperate to silence anyone exposing conspiracies and co-authored a 2008 report on the subject in which suggestions were offered to ban ‘conspiracy theorizing’ or impose ‘some kind of tax, financial or otherwise, on those who disseminate such theories’. I guess a psychiatrist’s chair is out of the question?

Sunstein's mate Richard Thaler, an 'academic affiliate' of the UK Behavioural Insights Team, is a proponent of 'behavioural economics' which is defined as the study of 'the effects of psychological, cognitive, emotional, cultural and social factors on the decisions of individuals and institutions'. Study the effects so they can be manipulated to be what you want them to be. Other leading names in the development of behavioural economics are ultra-Zionists Daniel Kahneman and Robert J. Shiller and they, with Thaler, won the Nobel Memorial Prize in Economic Sciences for their work in this field. The Behavioural Insights Team is operating at the heart of the UK government and has expanded globally through partnerships with several universities including Harvard, Oxford, Cambridge, University College London (UCL) and Pennsylvania. They claim to have 'trained' (reframed) 20,000 civil servants and run more than 750 projects involving 400 randomised controlled trials in dozens of countries' as another version of mind reframers Common Purpose. BIT works from its office in New York with cities and their agencies, as well as other partners, across the United States and Canada – this is a company part-owned by the British government Cabinet Office. An executive order by President Cult-servant Obama established a US Social and Behavioral Sciences Team in 2015. They all have the same reason for being and that's to brainwash the population directly and by brainwashing those in positions of authority.

'Covid' mind game

Another prime aspect of the UK mind-control network is the 'independent' [joke] Scientific Pandemic Insights Group on Behaviours (SPI-B) which 'provides behavioural science advice aimed at anticipating and helping people adhere to interventions that are recommended by medical or epidemiological experts'. That means manipulating public perception and behaviour to do whatever government tells them to do. It's disgusting and if they really want the public to be 'safe' this lot should all be under lock and key. According to the government website SPI-B consists of ‘behavioural scientists, health and social psychologists, anthropologists and historians’ and advises the Whitty-Vallance-led Scientific Advisory Group for Emergencies (SAGE) which in turn advises the government on ‘the science’ (it doesn’t) and ‘Covid’ policy. When politicians say they are being guided by ‘the science’ this is the rabble in each country they are talking about and that ‘science’ is dominated by behaviour manipulators to enforce government fascism through public compliance. The Behaviour Insight Team is headed by psychologist David Solomon Halpern, a visiting professor at King’s College London, and connects with a national and global web of other civilian and military organisations as the Cult moves towards its goal of fusing them into one fascistic whole in every country through its ‘Fusion Doctrine’. The behaviour manipulation network involves, but is not confined to, the Foreign Office; National Security Council; government communications headquarters (GCHQ); MI5; MI6; the Cabinet Office-based Media Monitoring Unit; and the Rapid Response Unit which ‘monitors digital trends to spot emerging issues; including misinformation and disinformation; and identifies the best way to respond’.

There is also the 77th Brigade of the UK military which operates like the notorious Israeli military’s Unit 8200 in manipulating information and discussion on the Internet by posing as members of the public to promote the narrative and discredit those who challenge it. Here we have the military seeking to manipulate *domestic* public opinion while the Nazis in government are fine with that. Conservative Member of Parliament Tobias Ellwood, an advocate of lockdown and control through ‘vaccine passports’, is a Lieutenant Colonel reservist in the 77th Brigade which connects with the military operation jHub, the ‘innovation centre’ for the Ministry of Defence and Strategic Command. jHub has also been involved with the civilian National Health Service (NHS) in ‘symptom tracing’ the population. The NHS is a key part of this mind control network and produced a document in December, 2020, explaining to staff how to use psychological manipulation with different groups and ages to get them to have the DNA-manipulating ‘Covid vaccine’ that’s designed to cumulatively rewrite human genetics. The document, called ‘Optimising Vaccination Roll Out – Do’s and Dont’s for all messaging, documents and “communications” in the widest sense’, was published by NHS England and the NHS Improvement *Behaviour Change Unit* in partnership with Public Health England and Warwick Business School. I hear the mantra about ‘save the NHS’ and ‘protect the NHS’ when we need to scrap the NHS and start again. The current version is far too corrupt, far too anti-human and totally compromised by Cult operatives and their assets. UK government broadcast media censor Ofcom will connect into this web – as will the BBC with its tremendous Ofcom influence – to control what the public see and hear and dictate mass perception. Nuremberg trials must include personnel from all these organisations.

The fear factor

The ‘Covid’ hoax has led to the creation of the UK Cabinet Office-connected Joint Biosecurity Centre (JBC) which is officially described as providing ‘expert advice on pandemics’ using its independent [all Cult operations are ‘independent’] analytical function to provide real-time analysis about infection outbreaks to identify and respond to outbreaks of Covid-19’. Another role is to advise the government on a response to spikes in infections – ‘for example by closing schools or workplaces in local areas where infection levels have risen’. Put another way, promoting the Cult agenda. The Joint Biosecurity Centre is modelled on the Joint Terrorism Analysis Centre which analyses intelligence to set ‘terrorism threat levels’ and here again you see the fusion of civilian and military operations and intelligence that has led to military intelligence producing documents about ‘vaccine hesitancy’ and how it can be combated. Domestic civilian matters and opinions should not be the business of the military. The Joint Biosecurity Centre is headed by Tom Hurd, director general of the Office for Security and Counter-Terrorism from the establishment-to-its-fingertips Hurd family. His father is former Foreign Secretary Douglas Hurd. How coincidental that Tom

Hurd went to the elite Eton College and Oxford University with Boris Johnson. Imperial College with its ridiculous computer modeller Neil Ferguson will connect with this gigantic web that will itself interconnect with similar set-ups in other major and not so major countries. Compared with this Cult network the politicians, be they Boris Johnson, Donald Trump or Joe Biden, are bit-part players ‘following the science’. The network of psychologists was on the ‘Covid’ case from the start with the aim of generating maximum fear of the ‘virus’ to ensure compliance by the population. A government behavioural science group known as SPI-B produced a paper in March, 2020, for discussion by the main government science advisory group known as SAGE. It was headed ‘Options for increasing adherence to social distancing measures’ and it said the following in a section headed ‘Persuasion’:

- A substantial number of people still do not feel sufficiently personally threatened; it could be that they are reassured by the low death rate in their demographic group, although levels of concern may be rising. Having a good understanding of the risk has been found to be positively associated with adoption of COVID-19 social distancing measures in Hong Kong.

- The perceived level of personal threat needs to be increased among those who are complacent, using hard-hitting evaluation of options for increasing social distancing emotional messaging. To be effective this must also empower people by making clear the actions they can take to reduce the threat.

- Responsibility to others: There seems to be insufficient understanding of, or feelings of responsibility about, people’s role in transmitting the infection to others … Messaging about actions need to be framed positively in terms of protecting oneself and the community, and increase confidence that they will be effective.

- Some people will be more persuaded by appeals to play by the rules, some by duty to the community, and some to personal risk.

> All these different approaches are needed. The messaging also needs to take account of the realities of different people's lives. Messaging needs to take account of the different motivational levers and circumstances of different people.

All this could be achieved the SPI-B psychologists said by *using the media to increase the sense of personal threat* which translates as terrify the shit out of the population, including children, so they all do what we want. That's not happened has it? Those excuses for 'journalists' who wouldn't know journalism if it bit them on the arse (the great majority) have played their crucial part in serving this Cult-government Psyop to enslave their own kids and grandkids. How they live with themselves I have no idea. The psychological war has been underpinned by constant government 'Covid' propaganda in almost every television and radio ad break, plus the Internet and print media, which has pounded out the fear with taxpayers footing the bill for their own programming. The result has been people terrified of a 'virus' that doesn't exist or one with a tiny fatality rate even if you believe it does. People walk down the street and around the shops wearing face-nappies damaging their health and psychology while others report those who refuse to be that naïve to the police who turn up in their own face-nappies. I had a cameraman come to my flat and he was so frightened of 'Covid' he came in wearing a mask and refused to shake my hand in case he caught something. He had – naïveitis – and the thought that he worked in the mainstream media was both depressing and made his behaviour perfectly explainable. The fear which has gripped the minds of so many and frozen them into compliance has been carefully cultivated by these psychologists who are really psychopaths. If lives get destroyed and a lot of young people commit suicide it shows our plan is working. SPI-B then turned to compulsion on the public to comply. 'With adequate preparation, rapid change can be achieved', it said. Some countries had introduced mandatory self-isolation on a wide scale without evidence of major public unrest and a large majority of the UK's population appeared to be supportive of more coercive measures with 64 percent of adults saying they would support putting London under a lockdown (watch the 'polls' which are designed to make people believe that public opinion is in favour or against whatever the subject in hand).

For 'aggressive protective measures' to be effective, the SPI-B paper said, special attention should be devoted to those population groups that are more at risk. Translated from the Orwellian this means making the rest of population feel guilty for not protecting the 'vulnerable' such as old people which the Cult and its agencies were about to kill on an industrial scale with lockdown, lack of treatment and the Gates 'vaccine'. Psychopath psychologists sold their guilt-trip so comprehensively that Los Angeles County Supervisor Hilda Solis reported that children were apologising (from a distance) to their parents and grandparents for bringing 'Covid' into their homes and getting them sick. '… These apologies are just some of the last words that loved ones will ever hear as they die alone,' she said. Gut-wrenchingly Solis then used this childhood tragedy to tell children to stay at home and 'keep your loved ones alive'. Imagine heaping such potentially life-long guilt on a kid when it has absolutely nothing to do with them. These people are deeply disturbed and the psychologists behind this even more so.

Uncivil war – divide and rule

Professional mind-controllers at SPI-B wanted the media to increase a sense of responsibility to others (do as you're told) and promote 'positive messaging' for those actions while in contrast to invoke 'social disapproval' by the unquestioning, obedient, community of anyone with a mind of their own. Again the compliant Goebbels-like media obliged. This is an old, old, trick employed by tyrannies the world over throughout human history. You get the target population to keep the target population in line – *your* line. SPI-B said this could 'play an important role in preventing anti-social behaviour or discouraging failure to enact pro-social behaviour'. For 'anti-social' in the Orwellian parlance of SPI-B see any behaviour that government doesn't approve. SPI-B recommendations said that 'social disapproval' should be accompanied by clear messaging and promotion of strong collective identity – hence the government and celebrity mantra of ‘we’re all in this together’. Sure we are. The mind doctors have such contempt for their targets that they think some clueless comedian, actor or singer telling them to do what the government wants will be enough to win them over. We have had UK comedian Lenny Henry, actor Michael Caine and singer Elton John wheeled out to serve the propagandists by urging people to have the DNA-manipulating ‘Covid’ non-‘vaccine’. The role of Henry and fellow black celebrities in seeking to coax a ‘vaccine’ reluctant black community into doing the government’s will was especially stomach-turning. An emotion-manipulating script and carefully edited video featuring these black ‘celebs’ was such an insult to the intelligence of black people and where’s the self-respect of those involved selling their souls to a fascist government agenda? Henry said he heard black people’s ‘legitimate worries and concerns’, but people must ‘trust the facts’ when they were doing exactly that by not having the ‘vaccine’. They had to include the obligatory reference to Black Lives Matter with the line … ‘Don’t let coronavirus cost even more black lives – because we matter’. My god, it was pathetic. ‘I know the vaccine is safe and what it does.’ How? ‘I’m a comedian and it says so in my script.’

SPI-B said social disapproval needed to be carefully managed to avoid victimisation, scapegoating and misdirected criticism, but they knew that their ‘recommendations’ would lead to exactly that and the media were specifically used to stir-up the divide-and-conquer hostility. Those who conform like good little baa, baas, are praised while those who have seen through the tidal wave of lies are ‘Covidiots’. The awake have been abused by the fast asleep for not conforming to fascism and impositions that the awake know are designed to endanger their health, dehumanise them, and tear asunder the very fabric of human society. We have had the curtain-twitchers and morons reporting neighbours and others to the face-nappied police for breaking ‘Covid rules’ with fascist police delighting in posting links and phone numbers where this could be done. The Cult cannot impose its will without a compliant police and military or a compliant population willing to play their part in enslaving themselves and their kids. The words of a pastor in Nazi Germany are so appropriate today:

> First they came for the socialists and I did not speak out because I was not a socialist.
>
> Then they came for the trade unionists and I did not speak out because I was not a trade unionist.
>
> Then they came for the Jews and I did not speak out because I was not a Jew.
>
> Then they came for me and there was no one left to speak for me.

Those who don't learn from history are destined to repeat it and so many are.

'Covid' rules: Rewiring the mind

With the background laid out to this gigantic national and global web of psychological manipulation we can put 'Covid' rules into a clear and sinister perspective. Forget the claims about protecting health. 'Covid' rules are about dismantling the human mind, breaking the human spirit, destroying self-respect, and then putting Humpty Dumpty together again as a servile, submissive slave. Social isolation through lockdown and distancing have devastating effects on the human psyche as the psychological psychopaths well know and that's the real reason for them. Humans need contact with each other, discourse, closeness and touch, or they eventually, and literarily, go crazy. Masks, which I will address at some length, fundamentally add to the effects of isolation and the Cult agenda to dehumanise and de-individualise the population. To do this while knowing – in fact *seeking* – this outcome is the very epitome of evil and psychologists involved in this *are* the epitome of evil. They must like all the rest of the Cult demons and their assets stand trial for crimes against humanity on a scale that defies the imagination. Psychopaths in uniform use isolation to break enemy troops and agents and make them subservient and submissive to tell what they know. The technique is rightly considered a form of torture and torture is most certainly what has been imposed on the human population.

Clinically-insane American psychologist Harry Harlow became famous for his isolation experiments in the 1950s in which he separated baby monkeys from their mothers and imprisoned them for months on end in a metal container or ‘pit of despair’. They soon began to show mental distress and depression as any idiot could have predicted. Harlow put other monkeys in steel chambers for three, six or twelve months while denying them any contact with animals or humans. He said that the effects of total social isolation for six months were ‘so devastating and debilitating that we had assumed initially that twelve months of isolation would not produce any additional decrement’; but twelve months of isolation ‘almost obliterated the animals socially’. This is what the Cult and its psychopaths are doing to you and your children. Even monkeys in partial isolation in which they were not allowed to form relationships with other monkeys became ‘aggressive and hostile, not only to others, but also towards their own bodies’. We have seen this in the young as a consequence of lockdown. UK government psychopaths launched a public relations campaign telling people not to hug each other even after they received the ‘Covid-19 vaccine’ which we were told with more lies would allow a return to ‘normal life’. A government source told *The Telegraph*: ‘It will be along the lines that it is great that you have been vaccinated, but if you are going to visit your family and hug your grandchildren there is a chance you are going to infect people you love.’ The source was apparently speaking from a secure psychiatric facility. Janet Lord, director of Birmingham University’s Institute of Inflammation and Ageing, said that parents and grandparents should avoid hugging their children. Well, how can I put it, Ms Lord? Fuck off. Yep, that’ll do.

Destroying the kids – where are the parents?

Observe what has happened to people enslaved and isolated by lockdown as suicide and self-harm has soared worldwide, particularly among the young denied the freedom to associate with their friends. A study of 49,000 people in English-speaking countries concluded that almost half of young adults are at clinical risk of mental health disorders. A national survey in America of 1,000 currently enrolled high school and college students found that 5 percent reported attempting suicide during the pandemic. Data from the US CDC's National Syndromic Surveillance Program from January 1st to October 17th, 2020, revealed a *31 percent* increase in mental health issues among adolescents aged 12 to 17 compared with 2019. The CDC reported that America in general suffered the biggest drop in life expectancy since World War Two as it fell by a year in the first half of 2020 as a result of 'deaths of despair' – overdoses and suicides. Deaths of despair have leapt by more than 20 percent during lockdown and include the highest number of fatal overdoses ever recorded in a single year – 81,000. Internet addiction is another consequence of being isolated at home which lowers interest in physical activities as kids fall into inertia and what's the point? Children and young people are losing hope and giving up on life, sometimes literally. A 14-year-old boy killed himself in Maryland because he had 'given up' when his school district didn't reopen; an 11-year-old boy shot himself during a zoom class; a teenager in Maine succumbed to the isolation of the 'pandemic' when he ended his life after experiencing a disrupted senior year at school. Children as young as nine have taken their life and all these stories can be repeated around the world. Careers are being destroyed before they start and that includes those in sport in which promising youngsters have not been able to take part. The plan of the psycho-psychologists is working all right. Researchers at Cambridge University found that lockdowns cause significant harm to children's mental health. Their study was published in the *Archives of Disease in Childhood*, and followed 168 children aged between 7 and 11. The researchers concluded:

> During the UK lockdown, children's depression symptoms have increased substantially, relative to before lockdown. The scale of this effect has direct relevance for the continuation of different elements of lockdown policy, such as complete or partial school closures …

> … Specifically, we observed a statistically significant increase in ratings of depression, with a medium-to-large effect size. Our findings emphasise the need to incorporate the potential impact of lockdown on child mental health in planning the ongoing response to the global pandemic and the recovery from it.

Not a chance when the Cult's psycho-psychologists were getting exactly what they wanted. The UK's Royal College of Paediatrics and Child Health has urged parents to look for signs of eating disorders in children and young people after a three to four fold increase. Specialists say the 'pandemic' is a major reason behind the rise. You don't say. The College said isolation from friends during school closures, exam cancellations, loss of extra-curricular activities like sport, and an increased use of social media were all contributory factors along with fears about the virus (psycho-psychologists again), family finances, and students being forced to quarantine. Doctors said young people were becoming severely ill by the time they were seen with 'Covid' regulations reducing face-to-face consultations. Nor is it only the young that have been devastated by the psychopaths. Like all bullies and cowards the Cult is targeting the young, elderly, weak and infirm. A typical story was told by a British lady called Lynn Parker who was not allowed to visit her husband in 2020 for the last ten and half months of his life 'when he needed me most' between March 20th and when he died on December 19th. This vacates the criminal and enters the territory of evil. The emotional impact on the immune system alone is immense as are the number of people of all ages worldwide who have died as a result of Cult-demanded, Gates-demanded, lockdowns.

Isolation is torture

The experience of imposing solitary confinement on millions of prisoners around the world has shown how a large percentage become 'actively psychotic and/or acutely suicidal'. Social isolation has been found to trigger 'a specific psychiatric syndrome, characterized by hallucinations; panic attacks; overt paranoia; diminished impulse control; hypersensitivity to external stimuli; and difficulties with thinking, concentration and memory'. Juan Mendez, a United Nations rapporteur (investigator), said that isolation is a form of torture. Research has shown that even after isolation prisoners find it far more difficult to make social connections and I remember chatting to a shop assistant after one lockdown who told me that when her young son met another child again he had no idea how to act or what to do. Hannah Flanagan, Director of Emergency Services at Journey Mental Health Center in Dane County, Wisconsin, said: 'The specificity about Covid social distancing and isolation that we've come across as contributing factors to the suicides are really new to us this year.' But they are not new to those that devised them. They are getting the effect they want as the population is psychologically dismantled to be rebuilt in a totally different way. Children and the young are particularly targeted. They will be the adults when the full-on fascist AI-controlled technocracy is planned to be imposed and they are being prepared to meekly submit. At the same time older people who still have a memory of what life was like before – and how fascist the new normal really is – are being deleted. You are going to see efforts to turn the young against the old to support this geriatric genocide. Hannah Flanagan said the big increase in suicide in her county proved that social isolation is not only harmful, but deadly. Studies have shown that isolation from others is one of the main risk factors in suicide and even more so with women. Warnings that lockdown could create a 'perfect storm' for suicide were ignored. After all this was one of the *reasons* for lockdown. Suicide, however, is only the most extreme of isolation consequences. There are many others. Dr Dhruv Khullar, assistant professor of healthcare policy at Weill Cornell Medical College, said in a *New York Times* article in 2016 long before the fake 'pandemic':

> A wave of new research suggests social separation is bad for us. Individuals with less social connection have disrupted sleep patterns, altered immune systems, more inflammation and higher levels of stress hormones. One recent study found that isolation increases the risk of heart disease by 29 percent and stroke by 32 percent. Another analysis that pooled data from 70 studies and 3.4 million people found that socially isolated individuals had a 30 percent higher risk of dying in the next seven years, and that this effect was largest in middle age.

> Loneliness can accelerate cognitive decline in older adults, and isolated individuals are twice as likely to die prematurely as those with more robust social interactions. These effects start early: Socially isolated children have significantly poorer health 20 years later, even after controlling for other factors. All told, loneliness is as important a risk factor for early death as obesity and smoking.

There you have proof from that one article alone four years before 2020 that those who have enforced lockdown, social distancing and isolation knew what the effect would be and that is even more so with professional psychologists that have been driving the policy across the globe. We can go back even further to the years 2000 and 2003 and the start of a major study on the effects of isolation on health by Dr Janine Gronewold and Professor Dirk M. Hermann at the University Hospital in Essen, Germany, who analysed data on 4,316 people with an average age of 59 who were recruited for the long-term research project. They found that socially isolated people are more than 40 percent more likely to have a heart attack, stroke, or other major cardiovascular event and nearly 50 percent more likely to die from any cause. Given the financial Armageddon unleashed by lockdown we should note that the study found a relationship between increased cardiovascular risk and lack of financial support. After excluding other factors social isolation was still connected to a 44 percent increased risk of cardiovascular problems and a 47 percent increased risk of death by any cause. Lack of financial support was associated with a 30 percent increase in the risk of cardiovascular health events. Dr Gronewold said it had been known for some time that feeling lonely or lacking contact with close friends and family can have an impact on physical health and the study had shown that having strong social relationships is of high importance for heart health. Gronewold said they didn't understand yet why people who are socially isolated have such poor health outcomes, but this was obviously a worrying finding, particularly during these times of prolonged social distancing. Well, it can be explained on many levels. You only have to identify the point in the body where people feel loneliness and missing people they are parted from – it's in the centre of the chest where they feel the ache of loneliness and the ache of missing people. 'My heart aches for you' … 'My heart aches for some company.' I will explain this more in the chapter Escaping Wetiko, but when you realise that the body is the mind – they are expressions of each other – the reason why state of the mind dictates state of the body becomes clear.

American psychologist Ranjit Powar was highlighting the effects of lockdown isolation as early as April, 2020. She said humans have evolved to be social creatures and are wired to live in interactive groups. Being isolated from family, friends and colleagues could be unbalancing and traumatic for most people and could result in short or even long-term psychological and physical health problems. An increase in levels of anxiety, aggression, depression, forgetfulness and hallucinations were possible psychological effects of isolation. 'Mental conditions may be precipitated for those with underlying pre-existing susceptibilities and show up in many others without any pre-condition.' Powar said personal relationships helped us cope with stress and if we lost this outlet for letting off steam the result can be a big emotional void which, for an average person, was difficult to deal with. 'Just a few days of isolation can cause increased levels of anxiety and depression' – so what the hell has been the effect on the global population of *18 months* of this at the time of writing? Powar said: 'Add to it the looming threat of a dreadful disease being repeatedly hammered in through the media and you have a recipe for many shades of mental and physical distress.' For those with a house and a garden it is easy to forget that billions have had to endure lockdown isolation in tiny overcrowded flats and apartments with nowhere to go outside. The psychological and physical consequences of this are unimaginable and with lunatic and abusive partners and parents the consequences have led to tremendous increases in domestic and child abuse and alcoholism as people seek to shut out the horror. Ranjit Powar said:

> Staying in a confined space with family is not all a rosy picture for everyone. It can be extremely oppressive and claustrophobic for large low-income families huddled together in small single-room houses. Children here are not lucky enough to have many board/electronic games or books to keep them occupied.

> Add to it the deep insecurity of running out of funds for food and basic necessities. On the other hand, there are people with dysfunctional family dynamics, such as domineering, abusive or alcoholic partners, siblings or parents which makes staying home a period of trial. Incidence of suicide and physical abuse against women has shown a worldwide increase. Heightened anxiety and depression also affect a person's immune system, making them more susceptible to illness.

To think that Powar's article was published on April 11th, 2020.

Six-feet fantasy

Social (unsocial) distancing demanded that people stay six feet or two metres apart. UK government advisor Robert Dingwall from the New and Emerging Respiratory Virus Threats Advisory Group said in a radio interview that the two-metre rule was 'conjured up out of nowhere' and was not based on science. No, it was not based on *medical* science, but it didn't come out of nowhere. The distance related to *psychological* science. Six feet/two metres was adopted in many countries and we were told by people like the criminal Anthony Fauci and his ilk that it was founded on science. Many schools could not reopen because they did not have the space for six-feet distancing. Then in March, 2021, after a year of six-feet 'science', a study published in the *Journal of Infectious Diseases* involving more than 500,000 students and almost 100,000 staff over 16 weeks revealed no significant difference in 'Covid' cases between six feet and three feet and Fauci changed his tune. Now three feet was okay. There is no difference between six feet and three *inches* when there is no 'virus' and they got away with six feet for psychological reasons for as long as they could. I hear journalists and others talk about 'unintended consequences' of lockdown. They are not *unintended* at all; they have been coldly-calculated for a specific outcome of human control and that's why super-psychopaths like Gates have called for them so vehemently. Super-psychopath psychologists have demanded them and psychopathic or clueless, spineless, politicians have gone along with them by 'following the science'. But it's not science at all. 'Science' is not what is; it's only what people can be manipulated to believe it is. The whole 'Covid' catastrophe is founded on mind control. Three word or three statement mantras issued by the UK government are a well-known mind control technique and so we've had 'Stay home/protect the NHS/save lives', 'Stay alert/control the virus/save lives' and 'hands/face/space'. One of the most vocal proponents of extreme 'Covid' rules in the UK has been Professor Susan Michie, a member of the British Communist Party, who is not a medical professional. Michie is the director of the Centre for Behaviour Change at University College London. She is a *behavioural psychologist* and another filthy rich 'Marxist' who praised China's draconian lockdown. She was known by fellow students at Oxford University as 'Stalin's nanny' for her extreme Marxism. Michie is an influential member of the UK government's Scientific Advisory Group for Emergencies (SAGE) and behavioural manipulation groups which have dominated 'Covid' policy. She is a consultant adviser to the World Health Organization on 'Covid-19' and behaviour. Why the hell are lockdowns anything to do with her when they are claimed to be about health? Why does a behavioural psychologist from a group charged with changing the behaviour of the public want lockdown, human isolation and mandatory masks? Does that question really need an answer? Michie *absolutely* has to explain herself before a Nuremberg court when humanity takes back its world again and even more so when you see the consequences of masks that she demands are compulsory. This is a Michie classic:

> The benefits of getting primary school children to wear masks is that regardless of what little degree of transmission is occurring in those age groups it could help normalise the practice. Young children wearing masks may be more likely to get their families to accept masks.

Those words alone should carry a prison sentence when you ponder on the callous disregard for children involved and what a statement it makes about the mind and motivations of Susan Michie. What a lovely lady and what she said there encapsulates the mentality of the psychopaths behind the 'Covid' horror. Let us compare what Michie said with a countrywide study in Germany published at researchsquare.com involving 25,000 school children and 17,854 health complaints submitted by parents. Researchers found that masks are harming children physically, psychologically, and behaviourally with 24 health issues associated with mask wearing. They include: shortness of breath (29.7%); dizziness (26.4%); increased headaches (53%); difficulty concentrating (50%); drowsiness or fatigue (37%); and malaise (42%). Nearly a third of children experienced more sleep issues than before and a quarter developed new fears. Researchers found health issues and other impairments in 68 percent of masked children covering their faces for an average of 4.5 hours a day. Hundreds of those taking part experienced accelerated respiration, tightness in the chest, weakness, and short-term impairment of consciousness. A reminder of what Michie said again:

> The benefits of getting primary school children to wear masks is that regardless of what little degree of transmission is occurring in those age groups it could help normalise the practice. Young children wearing masks may be more likely to get their families to accept masks.

Psychopaths in government and psychology now have children and young people – plus all the adults – wearing masks for hours on end while clueless teachers impose the will of the psychopaths on the young they should be protecting. What the hell are parents doing?

Cult lab rats

We have some schools already imposing on students microchipped buzzers that activate when they get ‘too close’ to their pals in the way they do with lab rats. How apt. To the Cult and its brain-dead servants our children *are* lab rats being conditioned to be unquestioning, dehumanised slaves for the rest of their lives. Children and young people are being weaned and frightened away from the most natural human instincts including closeness and touch. I have tracked in the books over the years how schools were banning pupils from greeting each other with a hug and the whole Cult-induced Me Too movement has terrified men and boys from a relaxed and natural interaction with female friends and work colleagues to the point where many men try never to be in a room alone with a woman that's not their partner. Airhead celebrities have as always played their virtue-signalling part in making this happen with their gross exaggeration. For every monster like Harvey Weinstein there are at least tens of thousands of men that don't treat women like that; but everyone must be branded the same and policy changed for them as well as the monster. I am going to be using the word 'dehumanise' many times in this chapter because that is what the Cult is seeking to do and it goes very deep as we shall see. Don't let them kid you that social distancing is planned to end one day. That's not the idea. We are seeing more governments and companies funding and producing wearable gadgets to keep people apart and they would not be doing that if this was meant to be short-term. A tech start-up company backed by GCHQ, the British Intelligence and military surveillance headquarters, has created a social distancing wrist sensor that alerts people when they get too close to others. The CIA has also supported tech companies developing similar devices. The wearable sensor was developed by Tended, one of a number of start-up companies supported by GCHQ (see the CIA and DARPA). The device can be worn on the wrist or as a tag on the waistband and will vibrate whenever someone wearing the device breaches social distancing and gets anywhere near natural human contact. The company had a lucky break in that it was developing a distancing sensor when the 'Covid' hoax arrived which immediately provided a potentially enormous market. How fortunate. The government in big-time Cult-controlled Ontario in Canada is investing $2.5 million in wearable contact tracing technology that 'will alert users if they may have been exposed to the Covid-19 in the workplace and will beep or vibrate if they are within six feet of another person'. Facedrive Inc., the technology company behind this, was founded in 2016 with funding from the Ontario Together Fund and obviously they, too, had a prophet on the board of directors. The human surveillance and control technology is called TraceSCAN and would be worn by the human cyborgs in places such as airports, workplaces, construction sites, care homes and … *schools*.

I emphasise schools with children and young people the prime targets. You know what is planned for society as a whole if you keep your eyes on the schools. They have always been places where the state program the next generation of slaves to be its compliant worker-ants – or Woker-ants these days; but in the mist of the 'Covid' madness they have been transformed into mind laboratories on a scale never seen before. Teachers and head teachers are just as programmed as the kids – often more so. Children are kept apart from human interaction by walk lanes, classroom distancing, staggered meal times, masks, and the rolling-out of buzzer systems. Schools are now physically laid out as a laboratory maze for lab-rats. Lunatics at a school in Anchorage, Alaska, who should be prosecuted for child abuse, took away desks and forced children to kneel (know your place) on a mat for five hours a day while wearing a mask and using their chairs as a desk. How this was supposed to impact on a 'virus' only these clinically insane people can tell you and even then it would be clap-trap. The school banned recess (interaction), art classes (creativity), and physical exercise (getting body and mind moving out of inertia). Everyone behind this outrage should be in jail or better still a mental institution. The behavioural manipulators are all for this dystopian approach to schools. Professor Susan Michie, the mind-doctor and British Communist Party member, said it was wrong to say that schools were safe. They had to be made so by 'distancing', masks and ventilation (sitting all day in the cold). I must ask this lady round for dinner on a night I know I am going to be out and not back for weeks. She probably wouldn't be able to make it, anyway, with all the visits to her own psychologist she must have block-booked.

Masking identity

I know how shocking it must be for you that a behaviour manipulator like Michie wants everyone to wear masks which have long been a feature of mind-control programs like the infamous MKUltra in the United States, but, there we are. We live and learn. I spent many years from 1996 to right across the millennium researching mind control in detail on both sides of the Atlantic and elsewhere. I met a large number of mind-control survivors and many had been held captive in body and mind by MKUltra. MK stands for mind-control, but employs the German spelling in deference to the Nazis spirited out of Germany at the end of World War Two by Operation Paperclip in which the US authorities, with help from the Vatican, transported Nazi mind-controllers and engineers to America to continue their work. Many of them were behind the creation of NASA and they included Nazi scientist and SS officer Wernher von Braun who swapped designing V-2 rockets to bombard London with designing the Saturn V rockets that powered the NASA moon programme's Apollo craft. I think I may have mentioned that the Cult has no borders. Among Paperclip escapees was Josef Mengele, the Angel of Death in the Nazi concentration camps where he conducted mind and genetic experiments on children often using twins to provide a control twin to measure the impact of his 'work' on the other. If you want to observe the Cult mentality in all its extremes of evil then look into the life of Mengele. I have met many people who suffered mercilessly under Mengele in the United States where he operated under the name Dr Greene and became a stalwart of MKUltra programming and torture. Among his locations was the underground facility in the Mojave Desert in California called the China Lake Naval Weapons Station which is almost entirely below the surface. My books *The Biggest Secret*, *Children of the Matrix* and *The Perception Deception* have the detailed background to MKUltra.

The best-known MKUltra survivor is American Cathy O'Brien. I first met her and her late partner Mark Phillips at a conference in Colorado in 1996. Mark helped her escape and deprogram from decades of captivity in an offshoot of MKUltra known as Project Monarch in which 'sex slaves' were provided for the rich and famous including Father George Bush, Dick Cheney and the Clintons. Read Cathy and Mark's book *Trance-Formation of America* and if you are new to this you will be shocked to the core. I read it in 1996 shortly before, with the usual synchronicity of my life, I found myself given a book table at the conference right next to hers. MKUltra never ended despite being very publicly exposed (only a small part of it) in the 1970s and continues in other guises. I am still in touch with Cathy. She contacted me during 2020 after masks became compulsory in many countries to tell me how they were used as part of MKUltra programming. I had been observing 'Covid regulations' and the relationship between authority and public for months. I saw techniques that I knew were employed on individuals in MKUltra being used on the global population. I had read many books and manuals on mind control including one called *Silent Weapons for Quiet Wars* which came to light in the 1980s and was a guide on how to perceptually program on a mass scale. 'Silent Weapons' refers to mind-control. I remembered a line from the manual as governments, medical authorities and law enforcement agencies have so obviously talked to – or rather at – the adult population since the 'Covid' hoax began as if they are children. The document said:

> If a person is spoken to by a T.V. advertiser as if he were a twelve-year-old, then, due to suggestibility, he will, with a certain probability, respond or react to that suggestion with the uncritical response of a twelve-year-old and will reach in to his economic reservoir and deliver its energy to buy that product on impulse when he passes it in the store.

That's why authority has spoken to adults like children since all this began.

Why did Michael Jackson wear masks?

Every aspect of the 'Covid' narrative has mind-control as its central theme. Cathy O'Brien wrote an article for davidicke.com about the connection between masks and mind control. Her daughter Kelly who I first met in the 1990s was born while Cathy was still held captive in MKUltra. Kelly was forced to wear a mask as part of her programming from the age of *two* to dehumanise her, target her sense of individuality and reduce the amount of oxygen her brain and body received. *Bingo*. This is the real reason for compulsory masks, why they have been enforced en masse, and why they seek to increase the number they demand you wear. First one, then two, with one disgraceful alleged 'doctor' recommending four which is nothing less than a death sentence. Where and how often they must be worn is being expanded for the purpose of mass mind control and damaging respiratory health which they can call 'Covid-19'. Canada's government headed by the man-child Justin Trudeau, says it's fine for children of two and older to wear masks. An insane 'study' in Italy involving just 47 children concluded there was no problem for babies as young as *four months* wearing them. Even after people were 'vaccinated' they were still told to wear masks by the criminal that is Anthony Fauci. Cathy wrote that mandating masks is allowing the authorities literally to control the air we breathe which is what was done in MKUltra. You might recall how the singer Michael Jackson wore masks and there is a reason for that. He was subjected to MKUltra mind control through Project Monarch and his psyche was scrambled by these simpletons. Cathy wrote:

> In MKUltra Project Monarch mind control, Michael Jackson had to wear a mask to silence his voice so he could not reach out for help. Remember how he developed that whisper voice when he wasn't singing? Masks control the mind from the outside in, like the redefining of words is doing. By controlling what we can and cannot say for fear of being labeled racist or beaten, for example, it ultimately controls thought that drives our words and ultimately actions (or lack thereof).
>
> Likewise, a mask muffles our speech so that we are not heard, which controls voice … words … mind. This is Mind Control. Masks are an obvious mind control device, and I am disturbed so many people are complying on a global scale. Masks depersonalize while making a person feel as though they have no voice. It is a barrier to others. People who would never choose to comply but are forced to wear a mask in order to keep their job, and ultimately their family fed, are compromised. They often feel shame and are subdued. People have stopped talking with each other while media controls the narrative.

The 'no voice' theme has often become literal with train passengers told not to speak to each other in case they pass on the 'virus', singing banned for the same reason and bonkers California officials telling people riding roller coasters that they cannot shout and scream. Cathy said she heard every day from healed MKUltra survivors who cannot wear a mask without flashing back on ways their breathing was controlled – 'from ball gags and penises to water boarding'. She said that through the years when she saw images of people in China wearing masks 'due to pollution' that it was really to control their oxygen levels. 'I knew it was as much of a population control mechanism of depersonalisation as are burkas', she said. Masks are another Chinese communist/fascist method of control that has been swept across the West as the West becomes China at lightning speed since we entered 2020.

Mask-19

There are other reasons for mandatory masks and these include destroying respiratory health to call it 'Covid-19' and stunting brain development of children and the young. Dr Margarite Griesz-Brisson MD, PhD, is a Consultant Neurologist and Neurophysiologist and the Founder and Medical Director of the London Neurology and Pain Clinic. Her CV goes down the street and round the corner. She is clearly someone who cares about people and won't parrot the propaganda. Griesz-Brisson has a PhD in pharmacology, with special interest in neurotoxicology, environmental medicine, neuroregeneration and neuroplasticity (the way the brain can change in the light of information received). She went public in October, 2020, with a passionate warning about the effects of mask-wearing laws:

> The reinhalation of our exhaled air will without a doubt create oxygen deficiency and a flooding of carbon dioxide. We know that the human brain is very sensitive to oxygen deprivation. There are nerve cells for example in the hippocampus that can't be longer than 3 minutes without oxygen – they cannot survive. The acute warning symptoms are headaches, drowsiness, dizziness, issues in concentration, slowing down of reaction time – reactions of the cognitive system.

Oh, I know, let's tell bus, truck and taxi drivers to wear them and people working machinery. How about pilots, doctors and police? Griesz-Brisson makes the important point that while the symptoms she mentions may fade as the body readjusts this does not alter the fact that people continue to operate in oxygen deficit with long list of potential consequences. She said it was well known that neurodegenerative diseases take years or decades to develop. 'If today you forget your phone number, the breakdown in your brain would have already started 20 or 30 years ago.' She said degenerative processes in your brain are getting amplified as your oxygen deprivation continues through wearing a mask. Nerve cells in the brain are unable to divide themselves normally in these circumstances and lost nerve cells will no longer be regenerated. 'What is gone is gone.' Now consider that people like shop workers and *schoolchildren* are wearing masks for hours every day. What in the name of sanity is going to be happening to them? 'I do not wear a mask, I need my brain to think', Griesz-Brisson said, 'I want to have a clear head when I deal with my patients and not be in a carbon dioxide-induced anaesthesia'. If you are told to wear a mask anywhere ask the organisation, police, store, whatever, for their risk assessment on the dangers and negative effects on mind and body of enforcing mask-wearing. They won't have one because it has never been done not even by government. All of them must be subject to class-action lawsuits as the consequences come to light. They don't do mask risk assessments for an obvious reason. They know what the conclusions would be and independent scientific studies that *have* been done tell a horror story of consequences.

'Masks are criminal'

Dr Griesz-Brisson said that for children and adolescents, masks are an absolute no-no. They had an extremely active and adaptive immune system and their brain was incredibly active with so much to learn. 'The child's brain, or the youth's brain, is thirsting for oxygen.' The more metabolically active an organ was, the more oxygen it required; and in children and adolescents every organ was metabolically active. Griesz-Brisson said that to deprive a child's or adolescent's brain of oxygen, or to restrict it in any way, was not only dangerous to their health, it was absolutely criminal. 'Oxygen deficiency inhibits the development of the brain, and the damage that has taken place as a result CANNOT be reversed.' Mind manipulators of MKUltra put masks on two-year-olds they wanted to neurologically rewire and you can see why. Griesz-Brisson said a child needs the brain to learn and the brain needs oxygen to function. 'We don't need a clinical study for that. This is simple, indisputable physiology.' Consciously and purposely induced oxygen deficiency was an absolutely deliberate health hazard, and an absolute medical contraindication which means that 'this drug, this therapy, this method or measure should not be used, and is not allowed to be used'. To coerce an entire population to use an absolute medical contraindication by force, she said, there had to be definite and serious reasons and the reasons must be presented to competent interdisciplinary and independent bodies to be verified and authorised. She had this warning of the consequences that were coming if mask wearing continued:

> When, in ten years, dementia is going to increase exponentially, and the younger generations couldn't reach their god-given potential, it won't help to say 'we didn't need the masks'. I know how damaging oxygen deprivation is for the brain, cardiologists know how damaging it is for the heart, pulmonologists know how damaging it is for the lungs. Oxygen deprivation damages every single organ. Where are our health departments, our health insurance, our medical associations? It would have been their duty to be vehemently against the lockdown and to stop it and stop it from the very beginning.
>
> Why do the medical boards issue punishments to doctors who give people exemptions? Does the person or the doctor seriously have to prove that oxygen deprivation harms people? What kind of medicine are our doctors and medical associations representing? Who is responsible for this crime? The ones who want to enforce it? The ones who let it happen and play along, or the ones who don't prevent it?

All of the organisations and people she mentions there either answer directly to the Cult or do whatever hierarchical levels above them tell them to do. The outcome of both is the same. 'It's not about masks, it's not about viruses, it's certainly not about your health', Griesz-Brisson said. 'It is about much, much more. I am not participating. I am not afraid.' They were taking our air to breathe and there was no unfounded medical exemption from face masks. Oxygen deprivation was dangerous for every single brain. It had to be the free decision of every human being whether they want to wear a mask that was absolutely ineffective to protect themselves from a virus. She ended by rightly identifying where the responsibility lies for all this:

> The imperative of the hour is personal responsibility. We are responsible for what we think, not the media. We are responsible for what we do, not our superiors. We are responsible for our health, not the World Health Organization. And we are responsible for what happens in our country, not the government.

Halle-bloody-lujah.

But surgeons wear masks, right?

Independent studies of mask-wearing have produced a long list of reports detailing mental, emotional and physical dangers. What a definition of insanity to see police officers imposing mask-wearing on the public which will cumulatively damage their health while the police themselves wear masks that will cumulatively damage *their* health. It's utter madness and both public and police do this because 'the government says so' – yes a government of brain-donor idiots like UK Health Secretary Matt Hancock reading the 'follow the science' scripts of psychopathic, lunatic psychologists. The response you get from Stockholm syndrome sufferers defending the very authorities that are destroying them and their families is that 'surgeons wear masks'. This is considered the game, set and match that they must work and don't cause oxygen deficit. Well, actually, scientific studies have shown that they *do* and oxygen levels are monitored in operating theatres to compensate. Surgeons wear masks to stop spittle and such like dropping into open wounds – not to stop 'viral particles' which are so miniscule they can only be seen through an electron microscope. Holes in the masks are significantly bigger than 'viral particles' and if you sneeze or cough they will breach the mask. I watched an incredibly disingenuous 'experiment' that claimed to prove that masks work in catching 'virus' material from the mouth and nose. They did this with a slow motion camera and the mask did block big stuff which stayed inside the mask and against the face to be breathed in or cause infections on the face as we have seen with many children. ‘Viral particles’, however, would never have been picked up by the camera as they came through the mask when they are far too small to be seen. The ‘experiment’ was therefore disingenuous *and* useless.

Studies have concluded that wearing masks in operating theatres (and thus elsewhere) make no difference to preventing infection while the opposite is true with toxic shite building up in the mask and this had led to an explosion in tooth decay and gum disease dubbed by dentists ‘mask mouth’. You might have seen the Internet video of a furious American doctor urging people to take off their masks after a four-year-old patient had been rushed to hospital the night before and nearly died with a lung infection that doctors sourced to mask wearing. A study in the journal *Cancer Discovery* found that inhalation of harmful microbes can contribute to advanced stage lung cancer in adults and long-term use of masks can help breed dangerous pathogens. Microbiologists have said frequent mask wearing creates a moist environment in which microbes can grow and proliferate before entering the lungs. The Canadian Agency for Drugs and Technologies in Health, or CADTH, a Canadian national organisation that provides research and analysis to healthcare decision-makers, said this as long ago as 2013 in a report entitled ‘Use of Surgical Masks in the Operating Room: A Review of the Clinical Effectiveness and Guidelines’. It said:

- No evidence was found to support the use of surgical face masks to reduce the frequency of surgical site infections
- No evidence was found on the effectiveness of wearing surgical face masks to protect staff from infectious material in the operating room.
- Guidelines recommend the use of surgical face masks by staff in the operating room to protect both operating room staff and patients (despite the lack of evidence).

We were told that the world could go back to 'normal' with the arrival of the 'vaccines'. When they came, fraudulent as they are, the story changed as I knew that it would. We are in the midst of transforming 'normal', not going back to it. Mary Ramsay, head of immunisation at Public Health England, echoed the words of US criminal Anthony Fauci who said masks and other regulations must stay no matter if people are vaccinated. The Fauci idiot continued to wear two masks – different colours so both could be clearly seen – after he *claimed* to have been vaccinated. Senator Rand Paul told Fauci in one exchange that his double-masks were 'theatre' and he was right. It's all theatre. Mary Ramsay back-tracked on the vaccine-return-to-normal theme when she said the public may need to wear masks and social-distance for years despite the jabs. 'People have got used to those lower-level restrictions now, and [they] can live with them', she said telling us what the idea has been all along. 'The vaccine does not give you a pass, even if you have had it, you must continue to follow all the guidelines' said a Public Health England statement which reneged on what we had been told before and made having the 'vaccine' irrelevant to 'normality' even by the official story. Spain's fascist government trumped everyone by passing a law mandating the wearing of masks on the beach and even when swimming in the sea. The move would have devastated what's left of the Spanish tourist industry, posed potential breathing dangers to swimmers and had Northern European sunbathers walking around with their forehead brown and the rest of their face white as a sheet. The ruling was so crazy that it had to be retracted after pressure from public and tourist industry, but it confirmed where the Cult wants to go with masks and how clinically insane authority has become. The determination to make masks permanent and hide the serious dangers to body and mind can be seen in the censorship of scientist Professor Denis Rancourt by Bill Gates-funded academic publishing website ResearchGate over his papers exposing the dangers and uselessness of masks. Rancourt said:

> ResearchGate today has permanently locked my account, which I have had since 2015. Their reasons graphically show the nature of their attack against democracy, and their corruption of

> science … By their obscene non-logic, a scientific review of science articles reporting on harms caused by face masks has a 'potential to cause harm'. No criticism of the psychological device (face masks) is tolerated, if the said criticism shows potential to influence public policy.

This is what happens in a fascist world.

Where are the 'greens' (again)?

Other dangers of wearing masks especially regularly relate to the inhalation of minute plastic fibres into the lungs and the deluge of discarded masks in the environment and oceans. Estimates predicted that more than 1.5 billion disposable masks will end up in the world's oceans every year polluting the water with tons of plastic and endangering marine wildlife. Studies project that humans are using 129 billion face masks each month worldwide – about three million a minute. Most are disposable and made from plastic, non-biodegradable microfibers that break down into smaller plastic particles that become widespread in ecosystems. They are littering cities, clogging sewage channels and turning up in bodies of water. I have written in other books about the immense amounts of microplastics from endless sources now being absorbed into the body. Rolf Halden, director of the Arizona State University (ASU) Biodesign Center for Environmental Health Engineering, was the senior researcher in a 2020 study that analysed 47 human tissue samples and found microplastics in all of them. 'We have detected these chemicals of plastics in every single organ that we have investigated', he said. I wrote in *The Answer* about the world being deluged with microplastics. A study by the Worldwide Fund for Nature (WWF) found that people are consuming on average every week some 2,000 tiny pieces of plastic mostly through water and also through marine life and the air. Every year humans are ingesting enough microplastics to fill a heaped dinner plate and in a life-time of 79 years it is enough to fill two large waste bins. Marco Lambertini, WWF International director general said: 'Not only are plastics polluting our oceans and waterways and killing marine life – it's in all of us and we can't escape consuming plastics,' American geologists found tiny plastic fibres, beads and shards in rainwater samples collected from the remote slopes of the Rocky Mountain National Park near Denver, Colorado. Their report was headed: ‘It is raining plastic.’ Rachel Adams, senior lecturer in Biomedical Science at Cardiff Metropolitan University, said that among health consequences are internal inflammation and immune responses to a ‘foreign body’. She further pointed out that microplastics become carriers of toxins including mercury, pesticides and dioxins (a known cause of cancer and reproductive and developmental problems). These toxins accumulate in the fatty tissues once they enter the body through microplastics. Now this is being compounded massively by people putting plastic on their face and throwing it away.

Workers exposed to polypropylene plastic fibres known as ‘flock’ have developed ‘flock worker’s lung’ from inhaling small pieces of the flock fibres which can damage lung tissue, reduce breathing capacity and exacerbate other respiratory problems. *Now* … commonly used surgical masks have three layers of melt-blown textiles made of … polypropylene. We have billions of people putting these microplastics against their mouth, nose and face for hours at a time day after day in the form of masks. How does anyone think that will work out? I mean – what could possibly go wrong? We posted a number of scientific studies on this at davidicke.com, but when I went back to them as I was writing this book the links to the science research website where they were hosted were dead. Anything that challenges the official narrative in any way is either censored or vilified. The official narrative is so unsupportable by the evidence that only deleting the truth can protect it. A study by Chinese scientists still survived – with the usual twist which it why it was still active, I guess. Yes, they found that virtually all the masks they tested increased the daily intake of microplastic fibres, but people should still wear them because the danger from the ‘virus’ was worse said the crazy ‘team’ from the Institute of Hydrobiology in Wuhan. Scientists first discovered microplastics in lung tissue of some patients who died of lung cancer in the 1990s. Subsequent studies have confirmed the potential health damage with the plastic degrading slowly and remaining in the lungs to accumulate in volume. Wuhan researchers used a machine simulating human breathing to establish that masks shed up to nearly 4,000 microplastic fibres in a month with reused masks producing more. Scientists said some masks are laced with toxic chemicals and a variety of compounds seriously restricted for both health and environmental reasons. They include cobalt (used in blue dye) and formaldehyde known to cause watery eyes, burning sensations in the eyes, nose, and throat, plus coughing, wheezing and nausea. No – that must be 'Covid-19'.

Mask 'worms'

There is another and potentially even more sinister content of masks. Mostly new masks of different makes filmed under a microscope around the world have been found to contain strange black fibres or 'worms' that appear to move or 'crawl' by themselves and react to heat and water. The nearest I have seen to them are the self-replicating fibres that are pulled out through the skin of those suffering from Morgellons disease which has been connected to the phenomena of 'chemtrails' which I will bring into the story later on. Morgellons fibres continue to grow outside the body and have a form of artificial intelligence. Black 'worm' fibres in masks have that kind of feel to them and there is a nanotechnology technique called 'worm micelles' which carry and release drugs or anything else you want to deliver to the body. For sure the suppression of humanity by mind altering drugs is the Cult agenda big time and the more excuses they can find to gain access to the body the more opportunities there are to make that happen whether through 'vaccines' or masks pushed against the mouth and nose for hours on end.

So let us summarise the pros and cons of masks:

Against masks: Breathing in your own carbon dioxide; depriving the body and brain of sufficient oxygen; build-up of toxins in the mask that can be breathed into the lungs and cause rashes on the face and 'mask-mouth'; breathing microplastic fibres and toxic chemicals into the lungs; dehumanisation and deleting individualisation by literally making people faceless; destroying human emotional interaction through facial expression and deleting parental connection with their babies which look for guidance to their facial expression.

For masks: They don't protect you from a 'virus' that doesn't exist and even if it did 'viral' particles are so minute they are smaller than the holes in the mask.

Governments, police, supermarkets, businesses, transport companies, and all the rest who seek to impose masks have done no risk assessment on their consequences for health and psychology and are now open to group lawsuits when the impact becomes clear with a cumulative epidemic of respiratory and other disease. Authorities will try to exploit these effects and hide the real cause by dubbing them 'Covid-19'. Can you imagine setting out to force the population to wear health-destroying masks without doing any assessment of the risks? It is criminal and it is evil, but then how many people targeted in this way, who see their children told to wear them all day at school, have asked for a risk assessment? Billions can't be imposed upon by the few unless the billions allow it. Oh, yes, with just a tinge of irony, 85 percent of all masks made worldwide come from *China*.

Wash your hands in toxic shite

'Covid' rules include the use of toxic sanitisers and again the health consequences of constantly applying toxins to be absorbed through the skin is obvious to any level of Renegade Mind. America's Food and Drug Administration (FDA) said that sanitisers are drugs and issued a warning about 75 dangerous brands which contain methanol used in antifreeze and can cause death, kidney damage and blindness. The FDA circulated the following warning even for those brands that it claims to be safe:

> Store hand sanitizer out of the reach of pets and children, and children should use it only with adult supervision. Do not drink hand sanitizer. This is particularly important for young children, especially toddlers, who may be attracted by the pleasant smell or brightly colored bottles of hand sanitizer.
>
> Drinking even a small amount of hand sanitizer can cause alcohol poisoning in children. (However, there is no need to be concerned if your children eat with or lick their hands after using hand sanitizer.) During this coronavirus pandemic, poison control centers have had an increase in calls about accidental ingestion of hand sanitizer, so it is important that adults monitor young children's use.
>
> Do not allow pets to swallow hand sanitizer. If you think your pet has eaten something potentially dangerous, call your veterinarian or a pet poison control center right away. Hand sanitizer is flammable and should be stored away from heat and flames. When using hand sanitizer, rub your hands until they feel completely dry before performing activities that may involve heat, sparks, static electricity, or open flames.

There you go, perfectly safe, then, and that's without even a mention of the toxins absorbed through the skin. Come on kids – sanitise your hands everywhere you go. It will save you from the 'virus'. Put all these elements together of the 'Covid' normal and see how much health and psychology is being cumulatively damaged, even devastated, to 'protect your health'. Makes sense, right? They are only imposing these things because they care, right? *Right?*

Submitting to insanity

Psychological reframing of the population goes very deep and is done in many less obvious ways. I hear people say how contradictory and crazy 'Covid' rules are and how they are ever changing. This is explained away by dismissing those involved as idiots. It is a big mistake. The Cult is delighted if its cold calculation is perceived as incompetence and idiocy when it is anything but. Oh, yes, there are idiots within the system – lots of them – but they are *administering* the Cult agenda, mostly unknowingly. They are not deciding and dictating it. The bulwark against tyranny is self-respect, always has been, always will be. It is self-respect that has broken every tyranny in history. By its very nature self-respect will not bow to oppression and its perpetrators. There is so little self-respect that it's always the few that overturn dictators. Many may eventually follow, but the few with the iron spines (self-respect) kick it off and generate the momentum. The Cult targets self-respect in the knowledge that once this has gone only submission remains. Crazy, contradictory, ever-changing 'Covid' rules are systematically applied by psychologists to delete self-respect. They *want* you to see that the rules make no sense. It is one thing to decide to do something when *you* have made the choice based on evidence and logic. You still retain your self-respect. It is quite another when you can see what you are being told to do is insane, ridiculous and makes no sense, and *yet you still do it*. Your self-respect is extinguished and this has been happening as ever more obviously stupid and nonsensical things have been demanded and the great majority have complied even when they can see they are stupid and nonsensical.

People walk around in face-nappies knowing they are damaging their health and make no difference to a 'virus'. They do it in fear of not doing it. I know it's daft, but I'll do it anyway. When that happens something dies inside of you and submissive reframing has begun. Next there's a need to hide from yourself that you have conceded your self-respect and you convince yourself that you have not really submitted to fear and intimidation. You begin to believe that you are complying with craziness because it's the right thing to do. When first you concede your self-respect of 2+2 = 4 to 2+2 = 5 you *know* you are compromising your self-respect. Gradually to avoid facing that fact you begin to *believe* that 2+2=5. You have been reframed and I have been watching this process happening in the human psyche on an industrial scale. The Cult is working to break your spirit and one of its major tools in that war is humiliation. I read how former American soldier Bradley Manning (later Chelsea Manning after a sex-change) was treated after being jailed for supplying WikiLeaks with documents exposing the enormity of government and elite mendacity. Manning was isolated in solitary confinement for eight months, put under 24-hour surveillance, forced to hand over clothing before going to bed, and stand naked for every roll call. This is systematic humiliation. The introduction of anal swab ‘Covid’ tests in China has been done for the same reason to delete self-respect and induce compliant submission. Anal swabs are mandatory for incoming passengers in parts of China and American diplomats have said they were forced to undergo the indignity which would have been calculated humiliation by the Cult-owned Chinese government that has America in its sights.

Government-people: An abusive relationship

Spirit-breaking psychological techniques include giving people hope and apparent respite from tyranny only to take it away again. This happened in the UK during Christmas, 2020, when the psycho-psychologists and their political lackeys announced an easing of restrictions over the holiday only to reimpose them almost immediately on the basis of yet another lie. There is a big psychological difference between getting used to oppression and being given hope of relief only to have that dashed. Psychologists know this and we have seen the technique used repeatedly. Then there is traumatising people before you introduce more extreme regulations that require compliance. A perfect case was the announcement by the dark and sinister Whitty and Vallance in the UK that ‘new data’ predicted that 4,000 could die every day over the winter of 2020/2021 if we did not lockdown again. I think they call it lying and after traumatising people with that claim out came Jackboot Johnson the next day with new curbs on human freedom. Psychologists know that a frightened and traumatised mind becomes suggestable to submission and behaviour reframing. Underpinning all this has been to make people fearful and suspicious of each other and see themselves as a potential danger to others. In league with deleted self-respect you have the perfect psychological recipe for self-loathing. The relationship between authority and public is now demonstrably the same as that of subservience to an abusive partner. These are signs of an abusive relationship explained by psychologist Leslie Becker-Phelps:

Psychological and emotional abuse: Undermining a partner's self-worth with verbal attacks, name-calling, and belittling. Humiliating the partner in public, unjustly accusing them of having an affair, or interrogating them about their every behavior. Keeping partner confused or off balance by saying they were just kidding or blaming the partner for 'making' them act this way … Feigning in public that they care while turning against them in private. This leads to victims frequently feeling confused, incompetent, unworthy, hopeless, and chronically self-doubting. [Apply these techniques to how governments have treated the population since New Year, 2020, and the parallels are obvious.]

Physical abuse: The abuser might physically harm their partner in a range of ways, such as grabbing, hitting, punching, or shoving them. They might throw objects at them or harm them with a weapon. [Observe the physical harm imposed by masks, lockdown, and so on.]

Threats and intimidation: One way abusers keep their partners in line is by instilling fear. They might be verbally threatening, or give threatening looks or gestures. Abusers often make it known that they are tracking their partner's every move. They might destroy their partner's possessions, threaten to harm them, or threaten to harm their family members. Not surprisingly, victims of this abuse often feel anxiety, fear, and panic. [No words necessary.]

Isolation: Abusers often limit their partner's activities, forbidding them to talk or interact with friends or family. They might limit access to a car or even turn off their phone. All of this might be done by physically holding them against their will, but is often accomplished through psychological abuse and intimidation. The more isolated a person feels, the fewer resources they have to help gain perspective on their situation and to escape from it. [No words necessary.]

Economic abuse: Abusers often make their partners beholden to them for money by controlling access to funds of any kind. They might prevent their partner from getting a job or withhold access to money they earn from a job. This creates financial dependency that makes leaving the relationship very difficult. [See destruction of livelihoods and the proposed meagre 'guaranteed income' so long as you do whatever you are told.]

Using children: An abuser might disparage their partner's parenting skills, tell their children lies about their partner, threaten to take custody of their children, or threaten to harm their children. These tactics instil fear and often elicit compliance. [See reframed social service mafia and how children are being mercilessly abused by the state over 'Covid' while their parents look on too frightened to do anything.]

A further recurring trait in an abusive relationship is the abused blaming themselves for their abuse and making excuses for the abuser. We have the public blaming each other for lockdown abuse by government and many making excuses for the government while attacking those who challenge the government. How often we have heard authorities say that rules are being imposed or reimposed only because people have refused to 'behave' and follow the rules. We don't want to do it – it's *you*.

Renegade Minds are an antidote to all of these things. They will never concede their self-respect no matter what the circumstances. Even when apparent humiliation is heaped upon them they laugh in its face and reflect back the humiliation on the abuser where it belongs. Renegade Minds will never wear masks they know are only imposed to humiliate, suppress and damage both physically and psychologically. Consequences will take care of themselves and they will never break their spirit or cause them to concede to tyranny. UK newspaper columnist Peter Hitchens was one of the few in the mainstream media to speak out against lockdowns and forced vaccinations. He then announced he had taken the jab. He wanted to see family members abroad and he believed vaccine passports were inevitable even though they had not yet been introduced. Hitchens has a questioning and critical mind, but not a Renegade one. If he had no amount of pressure would have made him concede. Hitchens excused his action by saying that the battle has been lost. Renegade Minds never accept defeat when freedom is at stake and even if they are the last one standing the self-respect of not submitting to tyranny is more important than any outcome or any consequence.

That's why Renegade Minds are the only minds that ever changed anything worth changing.

CHAPTER EIGHT

‘Reframing’ insanity

Insanity is relative. It depends on who has who locked in what cage
Ray Bradbury

‘Reframing’ a mind means simply to change its perception and behaviour. This can be done subconsciously to such an extent that subjects have no idea they have been ‘reframed’ while to any observer changes in behaviour and attitudes are obvious.

Human society is being reframed on a ginormous scale since the start of 2020 and here we have the reason why psychologists rather than doctors have been calling the shots. Ask most people who have succumbed to ‘Covid’ reframing if they have changed and most will say ‘no’; but they *have* and fundamentally. The Cult’s long-game has been preparing for these times since way back and crucial to that has been to prepare both population and officialdom mentally and emotionally. To use the mind-control parlance they had to reframe the population with a mentality that would submit to fascism and reframe those in government and law enforcement to impose fascism or at least go along with it. The result has been the fact-deleted mindlessness of ‘Wokeness’ and officialdom that has either enthusiastically or unquestioningly imposed global tyranny demanded by reframed politicians on behalf of psychopathic and deeply evil cultists. ‘Cognitive reframing’ identifies and challenges the way someone sees the world in the form of situations, experiences and emotions and then restructures those perceptions to view the same set of circumstances in a different way. This can have benefits if the attitudes are personally destructive while on the other side it has the potential for individual and collective mind control which the subject has no idea has even happened.

Cognitive therapy was developed in the 1960s by Aaron T. Beck who was born in Rhode Island in 1921 as the son of Jewish immigrants from the Ukraine. He became interested in the techniques as a treatment for depression. Beck's daughter Judith S. Beck is prominent in the same field and they founded the Beck Institute for Cognitive Behavior Therapy in Philadelphia in 1994. Cognitive reframing, however, began to be used worldwide by those with a very dark agenda. The Cult reframes politicians to change their attitudes and actions until they are completely at odds with what they once appeared to stand for. The same has been happening to government administrators at all levels, law enforcement, military and the human population. Cultists love mind control for two main reasons: It allows them to control what people think, do and say to secure agenda advancement and, by definition, it calms their legendary insecurity and fear of the unexpected. I have studied mind control since the time I travelled America in 1996. I may have been talking to next to no one in terms of an audience in those years, but my goodness did I gather a phenomenal amount of information and knowledge about so many things including the techniques of mind control. I have described this in detail in other books going back to *The Biggest Secret* in 1998. I met a very large number of people recovering from MKUltra and its offshoots and successors and I began to see how these same techniques were being used on the population in general. This was never more obvious than since the 'Covid' hoax began.

Reframing the enforcers

I have observed over the last two decades and more the very clear transformation in the dynamic between the police, officialdom and the public. I tracked this in the books as the relationship mutated from one of serving the public to seeing them as almost the enemy and certainly a lower caste. There has always been a class divide based on income and always been some psychopathic, corrupt, and big-I-am police officers. This was different. Wholesale change was unfolding in the collective dynamic; it was less about money and far more about position and perceived power. An us-and-them was emerging. Noses were lifted skyward by government administration and law enforcement and their attitude to the public they were *supposed* to be serving changed to one of increasing contempt, superiority and control. The transformation was so clear and widespread that it had to be planned. Collective attitudes and dynamics do not change naturally and organically that quickly on that scale. I then came across an organisation in Britain called Common Purpose created in the late 1980s by Julia Middleton who would work in the office of Deputy Prime Minister John Prescott during the long and disastrous premiership of war criminal Tony Blair. When Blair speaks the Cult is speaking and the man should have been in jail a long time ago. Common Purpose proclaims itself to be one of the biggest 'leadership development' organisations in the world while functioning as a *charity* with all the financial benefits which come from that. It hosts 'leadership development' courses and programmes all over the world and claims to have 'brought together' what it calls 'leaders' from more than 100 countries on six continents. The modus operandi of Common Purpose can be compared with the work of the UK government's reframing network that includes the Behavioural Insights Team 'nudge unit' and 'Covid' reframing specialists at SPI-B. WikiLeaks described Common Purpose long ago as 'a hidden virus in our government and schools' which is unknown to the general public: 'It recruits and trains "leaders" to be loyal to the directives of Common Purpose and the EU, instead of to their own departments, which they then undermine or subvert, the NHS [National Health Service] being an example.' This is a vital point to understand the 'Covid' hoax. The NHS, and its equivalent around the world, has been utterly reframed in terms of administrators and much of the medical personnel with the transformation underpinned by recruitment policies. The outcome has been the criminal and psychopathic behaviour of the

NHS over 'Covid' and we have seen the same in every other major country. WikiLeaks said Common Purpose trainees are 'learning to rule without regard to democracy' and to usher in a police state (current events explained). Common Purpose operated like a 'glue' and had members in the NHS, BBC, police, legal profession, church, many of Britain's 7,000 quangos, local councils, the Civil Service, government ministries and Parliament, and controlled many RDA's (Regional Development Agencies). Here we have one answer for how and why British institutions and their like in other countries have changed so negatively in relation to the public. This further explains how and why the beyond-disgraceful reframed BBC has become a propaganda arm of 'Covid' fascism. They are all part of a network pursuing the same goal.

By 2019 Common Purpose was quoting a figure of 85,000 'leaders' that had attended its programmes. These 'students' of all ages are known as Common Purpose 'graduates' and they consist of government, state and local government officials and administrators, police chiefs and officers, and a whole range of others operating within the national, local and global establishment. Cressida Dick, Commissioner of the London Metropolitan Police, is the Common Purpose graduate who was the 'Gold Commander' that oversaw what can only be described as the murder of Brazilian electrician Jean Charles de Menezes in 2005. He was held down by psychopathic police and shot seven times in the head by a psychopathic lunatic after being mistaken for a terrorist when he was just a bloke going about his day. Dick authorised officers to pursue and keep surveillance on de Menezes and ordered that he be stopped from entering the underground train system. Police psychopaths took her at her word clearly. She was 'disciplined' for this outrage by being *promoted* – eventually to the top of the 'Met' police where she has been a disaster. Many Chief Constables controlling the police in different parts of the UK are and have been Common Purpose graduates. I have heard the 'graduate' network described as a sort of Mafia or secret society operating within the fabric of government at all levels pursuing a collective policy ingrained at Common Purpose training events. Founder Julia Middleton herself has said:

> Locally and internationally, Common Purpose graduates will be 'lighting small fires' to create change in their organisations and communities … The Common Purpose effect is best illustrated by the many stories of small changes brought about by leaders, who themselves have changed.

A Common Purpose mission statement declared:

> Common Purpose aims to improve the way society works by expanding the vision, decision-making ability and influence of all kinds of leaders. The organisation runs a variety of educational programmes for leaders of all ages, backgrounds and sectors, in order to provide them with the inspirational, information and opportunities they need to change the world.

Yes, but into what? Since 2020 the answer has become clear.

NLP and the Delphi technique

Common Purpose would seem to be a perfect name or would common programming be better? One of the foundation methods of reaching 'consensus' (group think) is by setting the agenda theme and then encouraging, cajoling or pressuring everyone to agree a 'consensus' in line with the core theme promoted by Common Purpose. The methodology involves the 'Delphi technique', or an adaption of it, in which opinions are expressed that are summarised by a 'facilitator or change agent' at each stage. Participants are 'encouraged' to modify their views in the light of what others have said. Stage by stage the former individual opinions are merged into group consensus which just happens to be what Common Purpose wants them to believe. A key part of this is to marginalise anyone refusing to concede to group think and turn the group against them to apply pressure to conform. We are seeing this very technique used on the general population to make 'Covid' group-thinkers hostile to those who have seen through the bullshit. People can be reframed by using perception manipulation methods such as Neuro-Linguistic Programming (NLP) in which you change perception with the use of carefully constructed language. An NLP website described the technique this way:

> … A method of influencing brain behaviour (the 'neuro' part of the phrase) through the use of language (the 'linguistic' part) and other types of communication to enable a person to 'recode' the way the brain responds to stimuli (that's the 'programming') and manifest new and better behaviours. Neuro-Linguistic Programming often incorporates hypnosis and self-hypnosis to help achieve the change (or 'programming') that is wanted.

British alternative media operation UKColumn has done very detailed research into Common Purpose over a long period. I quoted co-founder and former naval officer Brian Gerrish in my book *Remember Who You Are*, published in 2011, as saying the following years before current times:

> It is interesting that many of the mothers who have had children taken by the State speak of the Social Services people being icily cool, emotionless and, as two ladies said in slightly different words, '… like little robots'. We know that NLP is cumulative, so people can be given small imperceptible doses of NLP in a course here, another in a few months, next year etc. In this way, major changes are accrued in their personality, but the day by day change is almost unnoticeable.

In these and other ways 'graduates' have had their perceptions uniformly reframed and they return to their roles in the institutions of government, law enforcement, legal profession, military, 'education', the UK National Health Service and the whole swathe of the establishment structure to pursue a common agenda preparing for the 'post-industrial', 'post-democratic' society. I say 'preparing' but we are now there. 'Post-industrial' is code for the Great Reset and 'post-democratic' is 'Covid' fascism. UKColumn has spoken to partners of those who have attended Common Purpose 'training'. They have described how personalities and attitudes of 'graduates' changed very noticeably for the worse by the time they had completed the course. They had been 'reframed' and told they are the 'leaders' – the special ones – who know better than the population. There has also been the very demonstrable recruitment of psychopaths and narcissists into government administration at all levels and law enforcement. If you want psychopathy hire psychopaths and you get a simple cause and effect. If you want administrators, police officers and 'leaders' to perceive the public as lesser beings who don't matter then employ narcissists. These personalities are identified using 'psychometrics' that identifies knowledge, abilities, attitudes and personality traits, mostly through carefully-designed questionnaires and tests. As this policy has passed through the decades we have had power-crazy, power-trippers appointed into law enforcement, security and government administration in preparation for current times and the dynamic between public and law enforcement/officialdom has been transformed. UKColumn's Brian Gerrish said of the narcissistic personality:

> Their love of themselves and power automatically means that they will crush others who get in their way. I received a major piece of the puzzle when a friend pointed out that when they made public officials re-apply for their own jobs several years ago they were also required to do psychometric tests. This was undoubtedly the start of the screening process to get 'their' sort of people in post.

How obvious that has been since 2020 although it was clear what was happening long before if people paid attention to the changing public-establishment dynamic.

Change agents

At the centre of events in 'Covid' Britain is the National Health Service (NHS) which has behaved disgracefully in slavishly following the Cult agenda. The NHS management structure is awash with Common Purpose graduates or 'change agents' working to a common cause. Helen Bevan, a Chief of Service Transformation at the NHS Institute for Innovation and Improvement, co-authored a document called 'Towards a million change agents, a review of the social movements literature: implications for large scale change in the NHS'. The document compared a project management approach to that of change and social movements where 'people change themselves and each other – peer to peer'. Two definitions given for a 'social movement' were:

A group of people who consciously attempt to build a radically new social order; involves people of a broad range of social backgrounds; and deploys politically confrontational and socially disruptive tactics – Cyrus Zirakzadeh 1997

Collective challenges, based on common purposes and social solidarities, in sustained interaction with elites, opponents, and authorities – Sidney Tarrow 1994

Helen Bevan wrote another NHS document in which she defined 'framing' as 'the process by which leaders construct, articulate and put across their message in a powerful and compelling way in order to win people to their cause and call them to action'. I think I could come up with another definition that would be rather more accurate. The National Health Service and institutions of Britain and the wider world have been taken over by reframed 'change agents' and that includes everything from the United Nations to national governments, local councils and social services which have been kidnapping children from loving parents on an extraordinary and gathering scale on the road to the end of parenthood altogether. Children from loving homes are stolen and kidnapped by the state and put into the 'care' (inversion) of the local authority through council homes, foster parents and forced adoption. At the same time children are allowed to be abused without response while many are under council 'care'. UKColumn highlighted the Common Purpose connection between South Yorkshire Police and Rotherham council officers in the case of the scandal in that area of the sexual exploitation of children to which the authorities turned not one blind eye, but both:

> We were alarmed to discover that the Chief Executive, the Strategic Director of Children and Young People's Services, the Manager for the Local Strategic Partnership, the Community Cohesion Manager, the Cabinet Member for Cohesion, the Chief Constable and his predecessor had all attended Leadership training courses provided by the pseudo-charity Common Purpose.

Once 'change agents' have secured positions of hire and fire within any organisation things start to move very quickly. Personnel are then hired and fired on the basis of whether they will work towards the agenda the change agent represents. If they do they are rapidly promoted even though they may be incompetent. Those more qualified and skilled who are pre-Common Purpose 'old school' see their careers stall and even disappear. This has been happening for decades in every institution of state, police, 'health' and social services and all of them have been transformed as a result in their attitudes to their jobs and the public. Medical professions, including nursing, which were once vocations for the caring now employ many cold, callous and couldn't give a shit personality types. The UKColumn investigation concluded:

> By blurring the boundaries between people, professions, public and private sectors, responsibility and accountability, Common Purpose encourages 'graduates' to believe that as new selected leaders, they can work together, outside of the established political and social structures, to achieve a paradigm shift or CHANGE – so called 'Leading Beyond Authority'. In doing so, the allegiance of the individual becomes 'reframed' on CP colleagues and their NETWORK.

Reframing the Face-Nappies

Nowhere has this process been more obvious than in the police where recruitment of psychopaths and development of unquestioning mind-controlled group-thinkers have transformed law enforcement into a politically-correct 'Woke' joke and a travesty of what should be public service. Today they wear their face-nappies like good little gofers and enforce 'Covid' rules which are fascism under another name. Alongside the specifically-recruited psychopaths we have software minds incapable of free thought. Brian Gerrish again:

> An example is the policeman who would not get on a bike for a press photo because he had not done the cycling proficiency course. Normal people say this is political correctness gone mad. Nothing could be further from the truth. The policeman has been reframed, and in his reality it is perfect common sense not to get on the bike 'because he hasn't done the cycling course'.
>
> Another example of this is where the police would not rescue a boy from a pond until they had taken advice from above on the 'risk assessment'. A normal person would have arrived, perhaps thought of the risk for a moment, and dived in. To the police now 'reframed', they followed 'normal' procedure.

There are shocking cases of reframed ambulance crews doing the same. Sheer unthinking stupidity of London Face-Nappies headed by Common Purpose graduate Cressida Dick can be seen in their behaviour at a vigil in March, 2021, for a murdered woman, Sarah Everard. A police officer had been charged with the crime. Anyone with a brain would have left the vigil alone in the circumstances. Instead they 'manhandled' women to stop them breaking 'Covid rules' to betray classic reframing. Minds in the thrall of perception control have no capacity for seeing a situation on its merits and acting accordingly. 'Rules is rules' is their only mind-set. My father used to say that rules and regulations are for the guidance of the intelligent and the blind obedience of the idiot. Most of the intelligent, decent, coppers have gone leaving only the other kind and a few old school for whom the job must be a daily nightmare. The combination of psychopaths and rule-book software minds has been clearly on public display in the 'Covid' era with automaton robots in uniform imposing fascistic 'Covid' regulations on the population without any personal initiative or judging situations on their merits. There are thousands of examples around the world, but I'll make my point with the infamous Derbyshire police in the English East Midlands – the ones who think pouring dye into beauty spots and using drones to track people walking in the countryside away from anyone is called 'policing'. To them there are rules decreed by the government which they have to enforce and in their bewildered state a group gathering in a closed space and someone walking alone in the countryside are the same thing. It is beyond idiocy and enters the realm of clinical insanity.

Police officers in Derbyshire said they were 'horrified' – *horrified* – to find 15 to 20 'irresponsible' kids playing a football match at a closed leisure centre 'in breach of coronavirus restrictions'. When they saw the police the kids ran away leaving their belongings behind and the reframed men and women of Derbyshire police were seeking to establish their identities with a view to fining their parents. The most natural thing for youngsters to do – kicking a ball about – is turned into a criminal activity and enforced by the moronic software programs of Derbyshire police. You find the same mentality in every country. These barely conscious 'horrified' officers said they had to take action because 'we need to ensure these rules are being followed' and 'it is of the utmost importance that you ensure your children are following the rules and regulations for Covid-19'. Had any of them done ten seconds of research to see if this parroting of their masters' script could be supported by any evidence? Nope. Reframed people don't think – others think for them and that's the whole idea of reframing. I have seen police officers one after the other repeating without question word for word what officialdom tells them just as I have seen great swathes of the public doing the same. Ask either for 'their' opinion and out spews what they have been told to think by the official narrative. Police and public may seem to be in different groups, but their mentality is the same. Most people do whatever they are told in fear not doing so or because they believe what officialdom tells them; almost the entirety of the police do what they are told for the same reason. Ultimately it's the tiny inner core of the global Cult that's telling both what to do.

So Derbyshire police were 'horrified'. Oh, really? Why did they think those kids were playing football? It was to relieve the psychological consequences of lockdown and being denied human contact with their friends and interaction, touch and discourse vital to human psychological health. Being denied this month after month has dismantled the psyche of many children and young people as depression and suicide have exploded. Were Derbyshire police *horrified by that*? Are you kidding? Reframed people don't have those mental and emotional processes that can see how the impact on the psychological health of youngsters is far more dangerous than any ‘virus’ even if you take the mendacious official figures to be true. The reframed are told (programmed) how to act and so they do. The Derbyshire Chief Constable in the first period of lockdown when the black dye and drones nonsense was going on was Peter Goodman. He was the man who severed the connection between his force and the Derbyshire Constabulary *Male Voice* Choir when he decided that it was not inclusive enough to allow women to join. The fact it was a male voice choir making a particular sound produced by male voices seemed to elude a guy who terrifyingly ran policing in Derbyshire. He retired weeks after his force was condemned as disgraceful by former Supreme Court Justice Jonathan Sumption for their behaviour over extreme lockdown impositions. Goodman was replaced by his deputy Rachel Swann who was in charge when her officers were ‘horrified’. The police statement over the boys committing the hanging-offence of playing football included the line about the youngsters being ‘irresponsible in the times we are all living through’ missing the point that the real relevance of the ‘times we are all living through’ is the imposition of fascism enforced by psychopaths and reframed minds of police officers playing such a vital part in establishing the fascist tyranny that their own children and grandchildren will have to live in their entire lives. As a definition of insanity that is hard to beat although it might be run close by imposing masks on people that can have a serious effect on their health while wearing a face nappy all day themselves. Once again public and police do it for the same reason – the authorities tell them to and who are they to have the self-respect to say no?

Wokers in uniform

How reframed do you have to be to arrest a *six-year-old* and take him to court for *picking a flower* while waiting for a bus? Brain dead police and officialdom did just that in North Carolina where criminal proceedings happen regularly for children under nine. Attorney Julie Boyer gave the six-year-old crayons and a colouring book during the ‘flower’ hearing while the ‘adults’ decided his fate. County Chief District Court Judge Jay Corpening asked: ‘Should a child that believes in Santa Claus, the Easter Bunny and the tooth fairy be making life-altering decisions?’ Well, of course not, but common sense has no meaning when you have a common purpose and a reframed mind. Treating children in this way, and police operating in American schools, is all part of the psychological preparation for children to accept a police state as normal all their adult lives. The same goes for all the cameras and biometric tracking technology in schools. Police training is focused on reframing them as snowflake Wokers and this is happening in the military. Pentagon top brass said that ‘training sessions on extremism’ were needed for troops who asked why they were so focused on the Capitol Building riot when Black Lives Matter riots were ignored. What’s the difference between them some apparently and rightly asked. Actually, there is a difference. Five people died in the Capitol riot, only one through violence, and that was a police officer shooting an unarmed protestor. BLM riots killed at least 25 people and cost billions. Asking the question prompted the psychopaths and reframed minds that run the Pentagon to say that more ‘education’ (programming) was needed. Troop training is all based on psychological programming to make them fodder for the Cult – ‘Military men are just dumb, stupid animals to be used as pawns in foreign policy’ as Cult-to-his-DNA former Secretary of State Henry Kissinger famously said. Governments see the police in similar terms and it’s time for those among them who can see this to defend the people and stop being enforcers of the Cult agenda upon the people.

The US military, like the country itself, is being targeted for destruction through a long list of Woke impositions. Cult-owned gaga ‘President’ Biden signed an executive order when he took office to allow taxpayer money to pay for transgender surgery for active military personnel and veterans. Are you a man soldier? No, I’m a LGBTQIA+ with a hint of Skoliosexual and Spectrasexual. Oh, good man. Bad choice of words you bigot. The Pentagon announced in March, 2021, the appointment of the first ‘diversity and inclusion officer' for US Special Forces. Richard Torres-Estrada arrived with the publication of a 'D&I Strategic Plan which will guide the enterprise-wide effort to institutionalize and sustain D&I'. If you think a Special Forces 'Strategic Plan' should have something to do with defending America you haven't been paying attention. Defending Woke is now the military's new role. Torres-Estrada has posted images comparing Donald Trump with Adolf Hitler and we can expect no bias from him as a representative of the supposedly non-political Pentagon. Cable news host Tucker Carlson said: 'The Pentagon is now the Yale faculty lounge but with cruise missiles.' Meanwhile Secretary of Defense Lloyd Austin, a board member of weapons-maker Raytheon with stock and compensation interests in October, 2020, worth $1.4 million, said he was purging the military of the 'enemy within' – anyone who isn't Woke and supports Donald Trump. Austin refers to his targets as 'racist extremists' while in true Woke fashion being himself a racist extremist. Pentagon documents pledge to 'eradicate, eliminate and conquer all forms of racism, sexism and homophobia'. The definitions of these are decided by 'diversity and inclusion committees' peopled by those who see racism, sexism and homophobia in every situation and opinion. Woke (the Cult) is dismantling the US military and purging testosterone as China expands its military and gives its troops 'masculinity training'. How do we think that is going to end when this is all Cult coordinated? The US military, like the British military, is controlled by Woke and spineless top brass who just go along with it out of personal career interests.

'Woke' means fast asleep

Mind control and perception manipulation techniques used on individuals to create group-think have been unleashed on the global population in general. As a result many have no capacity to see the obvious fascist agenda being installed all around them or what 'Covid' is really all about. Their brains are firewalled like a computer system not to process certain concepts, thoughts and realisations that are bad for the Cult. The young are most targeted as the adults they will be when the whole fascist global state is planned to be fully implemented. They need to be prepared for total compliance to eliminate all pushback from entire generations. The Cult has been pouring billions into taking complete control of 'education' from schools to universities via its operatives and corporations and not least Bill Gates as always. The plan has been to transform 'education' institutions into programming centres for the mentality of 'Woke'. James McConnell, professor of psychology at the University of Michigan, wrote in *Psychology Today* in 1970:

> The day has come when we can combine sensory deprivation with drugs, hypnosis, and astute manipulation of reward and punishment, to gain almost absolute control over an individual's behaviour. It should then be possible to achieve a very rapid and highly effective type of brainwashing that would allow us to make dramatic changes in a person's behaviour and personality ...
>
> … We should reshape society so that we all would be trained from birth to want to do what society wants us to do. We have the techniques to do it... no-one owns his own personality you acquired, and there's no reason to believe you should have the right to refuse to acquire a new personality if your old one is anti-social.

This was the potential for mass brainwashing in 1970 and the mentality there displayed captures the arrogant psychopathy that drives it forward. I emphasise that not all young people have succumbed to Woke programming and those that haven't are incredibly impressive people given that today's young are the most perceptually-targeted generations in history with all the technology now involved. Vast swathes of the young generations, however, have fallen into the spell – and that's what it is – of Woke. The Woke mentality and perceptual program is founded on *inversion* and you will appreciate later why that is so significant. Everything with Woke is inverted and the opposite of what it is claimed to be. Woke was a term used in African-American culture from the 1900s and referred to an awareness of social and racial justice. This is not the meaning of the modern version or 'New Woke' as I call it in *The Answer*. Oh, no, Woke today means something very different no matter how much Wokers may seek to hide that and insist Old Woke and New

Woke are the same. See if you find any ‘awareness of social justice’ here in the modern variety:

- Woke demands ‘inclusivity’ while excluding anyone with a different opinion and calls for mass censorship to silence other views.
- Woke claims to stand against oppression when imposing oppression is the foundation of all that it does. It is the driver of political correctness which is nothing more than a Cult invention to manipulate the population to silence itself.
- Woke believes itself to be ‘liberal’ while pursuing a global society that can only be described as fascist (see ‘anti-fascist’ fascist Antifa).
- Woke calls for ‘social justice’ while spreading injustice wherever it goes against the common ‘enemy’ which can be easily identified as a differing view.
- Woke is supposed to be a metaphor for ‘awake’ when it is solid-gold asleep and deep in a Cult-induced coma that meets the criteria for ‘off with the fairies’.

I state these points as obvious facts if people only care to look. I don’t do this with a sense of condemnation. We need to appreciate that the onslaught of perceptual programming on the young has been incessant and merciless. I can understand why so many have been reframed, or, given their youth, framed from the start to see the world as the Cult demands. The Cult has had access to their minds day after day in its ‘education’ system for their entire formative years. Perception is formed from information received and the Cult-created system is a life-long download of information delivered to elicit a particular perception, thus behaviour. The more this has expanded into still new extremes in recent decades and ever-increasing censorship has deleted other opinions and information why wouldn’t that lead to a perceptual reframing on a mass scale? I have described already cradle-to-grave programming and in more recent times the targeting of young minds from birth to adulthood has entered the stratosphere. This has taken the form of skewing what is ‘taught’ to fit the Cult agenda and the omnipresent techniques of group-think to isolate non-believers and pressure them into line. There has always been a tendency to follow the herd, but we really are in a new world now in relation to that. We have parents who can see the ‘Covid’ hoax told by their children not to stop them wearing masks at school, being ‘Covid’ tested or having the ‘vaccine’ in fear of the peer-pressure consequences of being different. What is ‘peer-pressure’ if not pressure to conform to group-think? Renegade Minds never group-think and always retain a set of perceptions that are unique to them. Group-think is always underpinned by consequences for not group-thinking. Abuse now aimed at those refusing DNA-manipulating ‘Covid vaccines’ are a potent example of this. The biggest pressure to conform comes from the very group which is itself being manipulated. ‘I am programmed to be part of a hive mind and so you must be.’

Woke control structures in ‘education’ now apply to every mainstream organisation. Those at the top of the ‘education’ hierarchy (the Cult) decide the policy. This is imposed on governments through the Cult network; governments impose it on schools, colleges and universities; their leadership impose the policy on teachers and academics and they impose it on children and students. At any level where there is resistance, perhaps from a teacher or university lecturer, they are targeted by the authorities and often fired. Students themselves regularly demand the dismissal of academics (increasingly few) at odds with the narrative that the students have been programmed to believe in. It is quite a thought that students who are being targeted by the Cult become so consumed by programmed group-think that they launch protests and demand the removal of those who are trying to push back against those targeting the students. Such is the scale of perceptual inversion. We see this with ‘Covid’ programming as the Cult imposes the rules via psycho-psychologists and governments on shops, transport companies and businesses which impose them on their staff who impose them on their customers who pressure Pushbackers to conform to the will of the Cult which is in the process of destroying them and their families. Scan all aspects of society and you will see the same sequence every time.

Fact free Woke and hijacking the 'left'

There is no more potent example of this than 'Woke', a mentality only made possible by the deletion of factual evidence by an 'education' system seeking to produce an ever more uniform society. Why would you bother with facts when you don't know any? Deletion of credible history both in volume and type is highly relevant. Orwell said: 'Who controls the past controls the future: who controls the present controls the past.' They who control the perception of the past control the perception of the future and they who control the present control the perception of the past through the writing and deleting of history. Why would you oppose the imposition of Marxism in the name of Wokeism when you don't know that Marxism cost at least 100 million lives in the 20th century alone? Watch videos and read reports in which Woker generations are asked basic historical questions – it's mind-blowing. A survey of 2,000 people found that six percent of millennials (born approximately early1980s to early 2000s) believed the Second World War (1939-1945) broke out with the assassination of President Kennedy (in 1963) and one in ten thought Margaret Thatcher was British Prime Minister at the time. She was in office between 1979 and 1990. We are in a post-fact society. Provable facts are no defence against the fascism of political correctness or Silicon Valley censorship. Facts don't matter anymore as we have witnessed with the 'Covid' hoax. Sacrificing uniqueness to the Woke group-think religion is all you are required to do and that means thinking for yourself is the biggest Woke no, no. All religions are an expression of group-think and censorship and Woke is just another religion with an orthodoxy defended by group-think and censorship. Burned at the stake becomes burned on Twitter which leads back eventually to burned at the stake as Woke humanity regresses to ages past.

The biggest Woke inversion of all is its creators and funders. I grew up in a traditional left of centre political household on a council estate in Leicester in the 1950s and 60s – you know, the left that challenged the power of wealth-hoarding elites and threats to freedom of speech and opinion. In those days students went on marches defending freedom of speech while today's Wokers march for its deletion. What on earth could have happened? Those very elites (collectively the Cult) that we opposed in my youth and early life have funded into existence the antithesis of that former left and hijacked the 'brand' while inverting everything it ever stood for. We have a mentality that calls itself 'liberal' and 'progressive' while acting like fascists. Cult billionaires and their corporations have funded themselves into control of 'education' to ensure that Woke programming is unceasing throughout the formative years of children and young people and that non-Wokers are isolated (that word again) whether they be students, teachers or college professors. The Cult has funded into existence the now colossal global network of Woke organisations that have spawned and promoted all the 'causes' on the Cult wish-list for global transformation and turned Wokers into demanders of them. Does anyone really think it's a coincidence that the Cult agenda for humanity is a carbon (sorry) copy of the societal transformations desired by Woke?? These are only some of them:

Political correctness: The means by which the Cult deletes all public debates that it knows it cannot win if we had the free-flow of information and evidence.

Human-caused 'climate change': The means by which the Cult seeks to transform society into a globally-controlled dictatorship imposing its will over the fine detail of everyone's lives 'to save the planet' which doesn't actually need saving.

Transgender obsession: Preparing collective perception to accept the ‘new human’ which would not have genders because it would be created technologically and not through procreation. I’ll have much more on this in Human 2.0.

Race obsession: The means by which the Cult seeks to divide and rule the population by triggering racial division through the perception that society is more racist than ever when the opposite is the case. Is it perfect in that regard? No. But to compare today with the racism of apartheid and segregation brought to an end by the civil rights movement in the 1960s is to insult the memory of that movement and inspirations like Martin Luther King. Why is the ‘anti-racism’ industry (which it is) so dominated by privileged white people?

White supremacy: This is a label used by privileged white people to demonise poor and deprived white people pushing back on tyranny to marginalise and destroy them. White people are being especially targeted as the dominant race by number within Western society which the Cult seeks to transform in its image. If you want to change a society you must weaken and undermine its biggest group and once you have done that by using the other groups you next turn on them to do the same … ‘Then they came for the Jews and I was not a Jew so I did nothing.’

Mass migration: The mass movement of people from the Middle East, Africa and Asia into Europe, from the south into the United States and from Asia into Australia are another way the Cult seeks to dilute the racial, cultural and political influence of white people on Western society. White people ask why their governments appear to be working against them while being politically and culturally biased towards incoming cultures. Well, here’s your answer. In the same way sexually ‘straight’ people, men and women, ask why the authorities are biased against them in favour of other sexualities. The answer is the same – that's the way the Cult wants it to be for very sinister motives.

These are all central parts of the Cult agenda and central parts of the Woke agenda and Woke was created and continues to be funded to an immense degree by Cult billionaires and corporations. If anyone begins to say 'coincidence' the syllables should stick in their throat.

Billionaire 'social justice warriors'

Joe Biden is a 100 percent-owned asset of the Cult and the Wokers' man in the White House whenever he can remember his name and for however long he lasts with his rapidly diminishing cognitive function. Even walking up the steps of an aircraft without falling on his arse would appear to be a challenge. He's not an empty-shell puppet or anything. From the minute Biden took office (or the Cult did) he began his executive orders promoting the Woke wish-list. You will see the Woke agenda imposed ever more severely because it's really the *Cult* agenda. Woke organisations and activist networks spawned by the Cult are funded to the extreme so long as they promote what the Cult wants to happen. Woke is funded to promote 'social justice' by billionaires who become billionaires by destroying social justice. The social justice mantra is only a cover for dismantling social justice and funded by billionaires that couldn't give a damn about social justice. Everything makes sense when you see that. One of Woke's premier funders is Cult billionaire financier George Soros who said: 'I am basically there to make money, I cannot and do not look at the social consequences of what I do.' This is the same Soros who has given more than $32 billion to his Open Society Foundations global Woke network and funded Black Lives Matter, mass immigration into Europe and the United States, transgender activism, climate change activism, political correctness and groups targeting 'white supremacy' in the form of privileged white thugs that dominate Antifa. What a scam it all is and when you are dealing with the unquestioning fact-free zone of Woke scamming them is child's play. All you need to pull it off in all these organisations are a few in-the-know agents of the Cult and an army of naïve, reframed, uninformed, narcissistic, know-nothings convinced of their own self-righteousness, self-purity and virtue.

Soros and fellow billionaires and billionaire corporations have poured hundreds of millions into Black Lives Matter and connected groups and promoted them to a global audience. None of this is motivated by caring about black people. These are the billionaires that have controlled and exploited a system that leaves millions of black people in abject poverty and deprivation which they do absolutely nothing to address. The same Cult networks funding BLM were behind the *slave trade!* Black Lives Matter hijacked a phrase that few would challenge and they have turned this laudable concept into a political weapon to divide society. You know that BLM is a fraud when it claims that *All* Lives Matter, the most inclusive statement of all, is 'racist'. BLM and its Cult masters don't want to end racism. To them it's a means to an end to control all of humanity never mind the colour, creed, culture or background. What has destroying the nuclear family got to do with ending racism? Nothing – but that is one of the goals of BLM and also happens to be a goal of the Cult as I have been exposing in my books for decades. Stealing children from loving parents and giving schools ever more power to override parents is part of that same agenda. BLM is a Marxist organisation and why would that not be the case when the Cult created Marxism *and* BLM? Patrisse Cullors, a BLM co-founder, said in a 2015 video that she and her fellow organisers, including co-founder Alicia Garza, are 'trained Marxists'. The lady known after marriage as Patrisse Khan-Cullors bought a $1.4 million home in 2021 in one of the whitest areas of California with a black population of just 1.6 per cent and has so far bought *four* high-end homes for a total of $3.2 million. How very Marxist. There must be a bit of spare in the BLM coffers, however, when Cult corporations and billionaires have handed over the best part of $100 million. Many black people can see that Black Lives Matter is not working for them, but against them, and this is still more confirmation. Black journalist Jason Whitlock, who had his account suspended by Twitter for simply linking to the story about the 'Marxist's' home buying spree, said that BLM leaders are 'making millions of dollars off the backs of these dead black men who they wouldn't spit on if they were on fire and alive'.

Black Lies Matter

Cult assets and agencies came together to promote BLM in the wake of the death of career criminal George Floyd who had been jailed a number of times including for forcing his way into the home of a black woman with others in a raid in which a gun was pointed at her stomach. Floyd was filmed being held in a Minneapolis street in 2020 with the knee of a police officer on his neck and he subsequently died. It was an appalling thing for the officer to do, but the same technique has been used by police on peaceful protestors of lockdown without any outcry from the Woke brigade. As unquestioning supporters of the Cult agenda Wokers have supported lockdown and all the 'Covid' claptrap while attacking anyone standing up to the tyranny imposed in its name. Court documents would later include details of an autopsy on Floyd by County Medical Examiner Dr Andrew Baker who concluded that Floyd had taken a fatal level of the drug fentanyl. None of this mattered to fact-free, question-free, Woke. Floyd's death was followed by worldwide protests against police brutality amid calls to defund the police. Throwing babies out with the bathwater is a Woke speciality. In the wake of the murder of British woman Sarah Everard a Green Party member of the House of Lords, Baroness Jones of Moulescoomb (Nincompoopia would have been better), called for a 6pm curfew for all men. This would be in breach of the Geneva Conventions on war crimes which ban collective punishment, but that would never have crossed the black and white Woke mind of Baroness Nincompoopia who would have been far too convinced of her own self-righteousness to compute such details. Many American cities did defund the police in the face of Floyd riots and after $15 million was deleted from the police budget in Washington DC under useless Woke mayor Muriel Bowser car-jacking alone rose by 300 percent and within six months the US capital recorded its highest murder rate in 15 years. The same happened in Chicago and other cities in line with the Cult/Soros plan to bring fear to streets and neighbourhoods by reducing the police, releasing violent criminals and not prosecuting crime. This is the mob-rule agenda that I have warned in the books was coming for so long. Shootings in the area of Minneapolis where Floyd was arrested increased by 2,500 percent compared with the year before. Defunding the police over George Floyd has led to a big increase in dead people with many of them black. Police protection for politicians making these decisions stayed the same or increased as you would expect from professional hypocrites. The Cult doesn't actually want to abolish the police. It wants to abolish local control over the police and hand it to federal government as the psychopaths advance the Hunger Games Society. Many George Floyd protests turned into violent riots with black stores and businesses destroyed by fire and looting across America fuelled by Black Lives Matter. Woke doesn't do irony. If you want civil rights you must loot the liquor store and the supermarket and make off with a smart TV. It's the only way.

It's not a race war – it's a class war

Black people are patronised by privileged blacks and whites alike and told they are victims of white supremacy. I find it extraordinary to watch privileged blacks supporting the very system and bloodline networks behind the slave trade and parroting the same Cult-serving manipulative crap of their privileged white, often billionaire, associates. It is indeed not a race war but a class war and colour is just a diversion. Black Senator Cory Booker and black Congresswoman Maxine Waters, more residents of Nincompoopia, personify this. Once you tell people they are victims of someone else you devalue both their own responsibility for their plight and the power they have to impact on their reality and experience. Instead we have: 'You are only in your situation because of whitey – turn on them and everything will change.' It won't change. Nothing changes in our lives unless *we* change it. Crucial to that is never seeing yourself as a victim and always as the creator of your reality. Life is a simple sequence of choice and consequence. Make different choices and you create different consequences. *You* have to make those choices – not Black Lives Matter, the Woke Mafia and anyone else that seeks to dictate your life. Who are they these Wokers, an emotional and psychological road traffic accident, to tell you what to do? Personal empowerment is the last thing the Cult and its Black Lives Matter want black people or anyone else to have. They claim to be defending the underdog while *creating* and perpetuating the underdog. The Cult's worst nightmare is human unity and if they are going to keep blacks, whites and every other race under economic servitude and control then the focus must be diverted from what they have in common to what they can be manipulated to believe divides them. Blacks have to be told that their poverty and plight is the fault of the white bloke living on the street in the same poverty and with the same plight they are experiencing. The difference is that your plight black people is due to him, a white supremacist with 'white privilege' living on the street. Don't unite as one human family against your mutual oppressors and suppressors – fight the oppressor with the white face who is as financially deprived as you are. The Cult knows that as its 'Covid' agenda moves into still new levels of extremism people are going to respond and it has been spreading the seeds of disunity everywhere to stop a united response to the evil that targets *all of us*.

Racist attacks on 'whiteness' are getting ever more outrageous and especially through the American Democratic Party which has an appalling history for anti-black racism. Barack Obama, Joe Biden, Hillary Clinton and Nancy Pelosi all eulogised about Senator Robert Byrd at his funeral in 2010 after a nearly 60-year career in Congress. Byrd was a brutal Ku Klux Klan racist and a violent abuser of Cathy O'Brien in MKUltra. He said he would never fight in the military 'with a negro by my side' and 'rather I should die a thousand times, and see Old Glory trampled in the dirt never to rise again, than to see this beloved land of ours become degraded by race mongrels, a throwback to the blackest specimen from the wilds'. Biden called Byrd a 'very close friend and mentor'. These 'Woke' hypocrites are not anti-racist they are anti-poor and anti-people not of their perceived class. Here is an illustration of the scale of anti-white racism to which we have now descended. Seriously Woke and moronic *New York Times* contributor Damon Young described whiteness as a 'virus' that 'like other viruses will not die until there are no bodies left for it to infect'. He went on: '… the only way to stop it is to locate it, isolate it, extract it, and kill it.' Young can say that as a black man with no consequences when a white man saying the same in reverse would be facing a jail sentence. *That's* racism. We had super-Woke numbskull senators Tammy Duckworth and Mazie Hirono saying they would object to future Biden Cabinet appointments if he did not nominate more Asian Americans and Pacific Islanders. Never mind the ability of the candidate what do they look like? Duckworth said: 'I will vote for racial minorities and I will vote for LGBTQ, but anyone else I'm not voting for.' Appointing people on the grounds of race is illegal, but that was not a problem for this ludicrous pair. They were on-message and that's a free pass in any situation.

Critical race racism

White children are told at school they are intrinsically racist as they are taught the divisive 'critical race theory'. This claims that the law and legal institutions are inherently racist and that race is a socially constructed concept used by white people to further their economic and political interests at the expense of people of colour. White is a 'virus' as we've seen. Racial inequality results from 'social, economic, and legal differences that white people create between races to maintain white interests which leads to poverty and criminality in minority communities'. I must tell that to the white guy sleeping on the street. The principal of East Side Community School in New York sent white parents a manifesto that called on them to become ‘white traitors’ and advocate for full ‘white abolition’. These people are teaching your kids when they urgently need a psychiatrist. The ‘school’ included a chart with ‘eight white identities’ that ranged from ‘white supremacist’ to ‘white abolition’ and defined the behaviour white people must follow to end ‘the regime of whiteness’. Woke blacks and their privileged white associates are acting exactly like the slave owners of old and Ku Klux Klan racists like Robert Byrd. They are too full of their own self-purity to see that, but it’s true. Racism is not a body type; it’s a state of mind that can manifest through any colour, creed or culture.

Another racial fraud is *‘equity’*. Not equality of treatment and opportunity – equity. It’s a term spun as equality when it means something very different. Equality in its true sense is a raising up while ‘equity’ is a race to the bottom. Everyone in the same level of poverty is ‘equity’. Keep everyone down – that’s equity. The Cult doesn’t want anyone in the human family to be empowered and BLM leaders, like all these ‘anti-racist’ organisations, continue their privileged, pampered existence by perpetuating the perception of gathering racism. When is the last time you heard an ‘anti-racist’ or ‘anti-Semitism’ organisation say that acts of racism and discrimination have *fallen?* It’s not in the interests of their fund-raising and power to influence and the same goes for the professional soccer anti-racism operation, Kick It Out. Two things confirmed that the Black Lives Matter riots in the summer of 2020 were Cult creations. One was that while anti-lockdown protests were condemned in this same period for ‘transmitting ‘Covid’ the authorities supported mass gatherings of Black Lives Matter supporters. I even saw self-deluding people claiming to be doctors say the two types of protest were not the same. No – the non-existent ‘Covid’ was in favour of lockdowns and attacked those that protested against them while ‘Covid’ supported Black Lives Matter and kept well away from its protests. The whole thing was a joke and as lockdown protestors were arrested, often brutally, by reframed Face-Nappies we had the grotesque sight of police officers taking the knee to Black Lives Matter, a Cult-funded Marxist organisation that supports violent riots and wants to destroy the nuclear family and white people.

He's not white? Shucks!

Woke obsession with race was on display again when ten people were shot dead in Boulder, Colorado, in March, 2021. Cult-owned Woke TV channels like CNN said the shooter appeared to be a white man and Wokers were on Twitter condemning 'violent white men' with the usual mantras. Then the shooter's name was released as Ahmad Al Aliwi Alissa, an anti-Trump Arab-American, and the sigh of disappointment could be heard five miles away. Never mind that ten people were dead and what that meant for their families. Race baiting was all that mattered to these sick Cult-serving people like Barack Obama who exploited the deaths to further divide America on racial grounds which is his job for the Cult. This is the man that 'racist' white Americans made the first black president of the United States and then gave him a second term. Not-very-bright Obama has become filthy rich on the back of that and today appears to have a big influence on the Biden administration. Even so he's still a downtrodden black man and a victim of white supremacy. This disingenuous fraud reveals the contempt he has for black people when he puts on a Deep South Alabama accent whenever he talks to them, no, *at* them.

Another BLM red flag was how the now fully-Woke (fully-Cult) and fully-virtue-signalled professional soccer authorities had their teams taking the knee before every match in support of Marxist Black Lives Matter. Soccer authorities and clubs displayed 'Black Lives Matter' on the players' shirts and flashed the name on electronic billboards around the pitch. Any fans that condemned what is a Freemasonic taking-the-knee ritual were widely condemned as you would expect from the Woke virtue-signallers of professional sport and the now fully-Woke media. We have reverse racism in which you are banned from criticising any race or culture except for white people for whom anything goes – say what you like, no problem. What has this got to do with racial harmony and equality? We've had black supremacists from Black Lives Matter telling white people to fall to their knees in the street and apologise for their white supremacy. Black supremacists acting like white supremacist slave owners of the past couldn't breach their self-obsessed, race-obsessed sense of self-purity. Joe Biden appointed a race-obsessed black supremacist Kristen Clarke to head the Justice Department Civil Rights Division. Clarke claimed that blacks are endowed with 'greater mental, physical and spiritual abilities' than whites. If anyone reversed that statement they would be vilified. Clarke is on-message so no problem. She's never seen a black-white situation in which the black figure is anything but a virtuous victim and she heads the Civil Rights Division which should treat everyone the same or it isn't civil rights. Another perception of the Renegade Mind: If something or someone is part of the Cult agenda they will be supported by Woke governments and media no matter what. If they're not, they will be condemned and censored. It really is that simple and so racist Clarke prospers despite (make that because of) her racism.

The end of culture

Biden's administration is full of such racial, cultural and economic bias as the Cult requires the human family to be divided into warring factions. We are now seeing racially-segregated graduations and everything, but everything, is defined through the lens of perceived 'racism. We have 'racist' mathematics, 'racist' food and even 'racist' *plants*. World famous Kew Gardens in London said it was changing labels on plants and flowers to tell its pre-'Covid' more than two million visitors a year how racist they are. Kew director Richard Deverell said this was part of an effort to 'move quickly to decolonise collections' after they were approached by one Ajay Chhabra 'an actor with an insight into how sugar cane was linked to slavery'. They are *plants* you idiots. 'Decolonisation' in the Woke manual really means colonisation of society with its mentality and by extension colonisation by the Cult. We are witnessing a new Chinese-style 'Cultural Revolution' so essential to the success of all

Marxist takeovers. Our cultural past and traditions have to be swept away to allow a new culture to be built-back-better. Woke targeting of long-standing Western cultural pillars including historical monuments and cancelling of historical figures is what happened in the Mao revolution in China which 'purged remnants of capitalist and traditional elements from Chinese society' and installed Maoism as the dominant ideology'. For China see the Western world today and for 'dominant ideology' see Woke. Better still see Marxism or Maoism. The 'Covid' hoax has specifically sought to destroy the arts and all elements of Western culture from people meeting in a pub or restaurant to closing theatres, music venues, sports stadiums, places of worship and even banning *singing*. Destruction of Western society is also why criticism of any religion is banned except for Christianity which again is the dominant religion as white is the numerically-dominant race. Christianity may be fading rapidly, but its history and traditions are weaved through the fabric of Western society. Delete the pillars and other structures will follow until the whole thing collapses. I am not a Christian defending that religion when I say that. I have no religion. It's just a fact. To this end Christianity has itself been turned Woke to usher its own downfall and its ranks are awash with 'change agents' – knowing and unknowing – at every level including Pope Francis (*definitely* knowing) and the clueless Archbishop of Canterbury Justin Welby (possibly not, but who can be sure?). Woke seeks to coordinate attacks on Western culture, traditions, and ways of life through 'intersectionality' defined as 'the complex, cumulative way in which the effects of multiple forms of discrimination (such as racism, sexism, and classism) combine, overlap, or intersect especially in the experiences of marginalised individuals or groups'. Wade through the Orwellian Woke-speak and this means coordinating disparate groups in a common cause to overthrow freedom and liberal values.

The entire structure of public institutions has been infested with Woke – government at all levels, political parties, police, military, schools, universities, advertising, media and trade unions. This abomination has been achieved through the Cult web by appointing

Wokers to positions of power and battering non-Wokers into line through intimidation, isolation and threats to their job. Many have been fired in the wake of the empathy-deleted, vicious hostility of 'social justice' Wokers and the desire of gutless, spineless employers to virtue-signal their Wokeness. Corporations are filled with Wokers today, most notably those in Silicon Valley. Ironically at the top they are not Woke at all. They are only exploiting the mentality their Cult masters have created and funded to censor and enslave while the Wokers cheer them on until it's their turn. Thus the Woke 'liberal left' is an inversion of the traditional liberal left. Campaigning for justice on the grounds of power and wealth distribution has been replaced by campaigning for identity politics. The genuine traditional left would never have taken money from today's billionaire abusers of fairness and justice and nor would the billionaires have wanted to fund that genuine left. It would not have been in their interests to do so. The division of opinion in those days was between the haves and have nots. This all changed with Cult manipulated and funded identity politics. The division of opinion today is between Wokers and non-Wokers and not income brackets. Cult corporations and their billionaires may have taken wealth disparity to cataclysmic levels of injustice, but as long as they speak the language of Woke, hand out the dosh to the Woke network and censor the enemy they are 'one of us'. Billionaires who don't give a damn about injustice are laughing at them till their bellies hurt. Wokers are not even close to self-aware enough to see that. The transformed 'left' dynamic means that Wokers who drone on about 'social justice' are funded by billionaires that have destroyed social justice the world over. It's *why* they are billionaires.

The climate con

Nothing encapsulates what I have said more comprehensively than the hoax of human-caused global warming. I have detailed in my books over the years how Cult operatives and organisations were the pump-primers from the start of the climate con. A purpose-built vehicle for this is the Club of Rome established by the Cult in 1968 with the Rockefellers and Rothschilds centrally involved all along. Their gofer frontman Maurice Strong, a Canadian oil millionaire, hosted the Earth Summit in Rio de Janeiro, Brazil, in 1992 where the global 'green movement' really expanded in earnest under the guiding hand of the Cult. The Earth Summit established Agenda 21 through the Cult-created-and-owned United Nations to use the illusion of human-caused climate change to justify the transformation of global society to save the world from climate disaster. It is a No-Problem-Reaction-Solution sold through governments, media, schools and universities as whole generations have been terrified into believing that the world was going to end in their lifetimes unless what old people had inflicted upon them was stopped by a complete restructuring of how everything is done. Chill, kids, it's all a hoax. Such restructuring is precisely what the Cult agenda demands (purely by coincidence of course). Today this has been given the codename of the Great Reset which is only an updated term for Agenda 21 and its associated Agenda 2030. The latter, too, is administered through the UN and was voted into being by the General Assembly in 2015. Both 21 and 2030 seek centralised control of all resources and food right down to the raindrops falling on your own land. These are some of the demands of Agenda 21 established in 1992. See if you recognise this society emerging today:

- End national sovereignty
- State planning and management of all land resources, ecosystems, deserts, forests, mountains, oceans and fresh water; agriculture; rural development; biotechnology; and ensuring *'equity'*
- The state to 'define the role' of business and financial resources
- Abolition of private property
- 'Restructuring' the family unit (see BLM)
- Children raised by the state
- People told what their job will be
- Major restrictions on movement
- Creation of 'human settlement zones'

- Mass resettlement as people are forced to vacate land where they live
- Dumbing down education
- Mass global depopulation in pursuit of all the above

The United Nations was created as a Trojan horse for world government. With the climate con of critical importance to promoting that outcome you would expect the UN to be involved. Oh, it's involved all right. The UN is promoting Agenda 21 and Agenda 2030 justified by 'climate change' while also driving the climate hoax through its Intergovernmental Panel on Climate Change (IPCC), one of the world's most corrupt organisations. The IPCC has been lying ferociously and constantly since the day it opened its doors with the global media hanging unquestioningly on its every mendacious word. The Green movement is entirely Woke and has long lost its original environmental focus since it was co-opted by the Cult. An obsession with 'global warming' has deleted its values and scrambled its head. I experienced a small example of what I mean on a beautiful country walk that I have enjoyed several times a week for many years. The path merged into the fields and forests and you felt at one with the natural world. Then a 'Green' organisation, the Hampshire and Isle of Wight Wildlife Trust, took over part of the land and proceeded to cut down a large number of trees, including mature ones, to install a horrible big, bright steel 'this-is-ours-stay-out' fence that destroyed the whole atmosphere of this beautiful place. No one with a feel for nature would do that. Day after day I walked to the sound of chainsaws and a magnificent mature weeping willow tree that I so admired was cut down at the base of the trunk. When I challenged a Woke young girl in a green shirt (of course) about this vandalism she replied: 'It's a weeping willow – it will grow back.' This is what people are paying for when they donate to the Hampshire and Isle of Wight Wildlife Trust and many other 'green' organisations today. It is not the environmental movement that I knew and instead has become a support-system – as with Extinction Rebellion – for a very dark agenda.

Private jets for climate justice

The Cult-owned, Gates-funded, World Economic Forum and its founder Klaus Schwab were behind the emergence of Greta Thunberg to harness the young behind the climate agenda and she was invited to speak to the world at … the UN. Schwab published a book, *Covid-19: The Great Reset* in 2020 in which he used the 'Covid' hoax and the climate hoax to lay out a new society straight out of Agenda 21 and Agenda 2030. Bill Gates followed in early 2021 when he took time out from destroying the world to produce a book in his name about the way to save it. Gates flies across the world in private jets and admitted that 'I probably have one of the highest greenhouse gas footprints of anyone on the planet … my personal flying alone is gigantic.' He has also bid for the planet's biggest private jet operator. Other climate change saviours who fly in private jets include John Kerry, the US Special Presidential Envoy for Climate, and actor Leonardo DiCaprio, a 'UN Messenger of Peace with special focus on climate change'. These people are so full of bullshit they could corner the market in manure. We mustn't be sceptical, though, because the Gates book, *How to Avoid a Climate Disaster: The Solutions We Have and the Breakthroughs We Need*, is a genuine attempt to protect the world and not an obvious pile of excrement attributed to a mega-psychopath aimed at selling his masters' plans for humanity. The Gates book and the other shite-pile by Klaus Schwab could have been written by the same person and may well have been. Both use 'climate change' and 'Covid' as the excuses for their new society and by coincidence the Cult's World Economic Forum and Bill and Melinda Gates Foundation promote the climate hoax and hosted Event 201 which pre-empted with a 'simulation' the very 'coronavirus' hoax that would be simulated for real on humanity within weeks. The British 'royal' family is promoting the 'Reset' as you would expect through Prince 'climate change caused the war in Syria' Charles and his hapless son Prince William who said that we must 'reset our relationship with nature and our trajectory as a species' to avoid a climate disaster. Amazing how many promotors of the 'Covid' and 'climate change' control systems are connected to Gates and the World Economic Forum. A ‘study’ in early 2021 claimed that carbon dioxide emissions must fall by the equivalent of a global lockdown roughly every two years for the next decade to save the planet. The ‘study’ appeared in the same period that the Schwab mob claimed in a video that lockdowns destroying the lives of billions are good because they make the earth ‘quieter’ with less ‘ambient noise’. They took down the video amid a public backlash for such arrogant, empathy-deleted stupidity You see, however, where they are going with this. Corinne Le Quéré, a professor at the Tyndall Centre for Climate Change Research, University of East Anglia, was lead author of the climate lockdown study, and she writes for … the World Economic Forum. Gates calls in ‘his’ book for changing ‘every aspect of the economy’ (long-time Cult agenda) and for humans to eat synthetic ‘meat’ (predicted in my books) while cows and other farm animals are eliminated. Australian TV host and commentator Alan Jones described what carbon emission targets would mean for farm animals in Australia alone if emissions were reduced as demanded by 35 percent by 2030 and zero by 2050:

> Well, let’s take agriculture, the total emissions from agriculture are about 75 million tonnes of carbon dioxide, equivalent. Now reduce that by 35 percent and you have to come down to 50 million tonnes, I’ve done the maths. So if you take for example 1.5 million cows, you’re going to have to reduce the herd by 525,000 [by] 2030, nine years, that’s 58,000 cows a year. The beef herd’s 30 million, reduce that by 35 percent, that’s 10.5 million, which means 1.2 million cattle have to go every year between now and 2030. This is insanity!
>
> There are 75 million sheep. Reduce that by 35 percent, that’s 26 million sheep, that’s almost 3 million a year. So under the Paris Agreement over 30 million beasts. dairy cows, cattle, pigs and sheep would go. More than 8,000 every minute of every hour for the next decade, do these people know what they’re talking about?

Clearly they don’t at the level of campaigners, politicians and administrators. The Cult *does* know; that’s the outcome it wants. We are faced with not just a war on humanity. Animals and the natural world are being targeted and I have been saying since the ‘Covid’ hoax began that the plan eventually was to claim that the ‘deadly virus’ is able to jump from animals, including farm animals and domestic pets, to humans. Just before this book went into production came this story: 'Russia registers world's first Covid-19 vaccine for cats & dogs as makers of Sputnik V warn pets & farm animals could spread virus'. The report said 'top scientists warned that the deadly pathogen could soon begin spreading through homes and farms' and 'the next stage is the infection of farm and domestic animals'. Know the outcome and you'll see the journey. Think what that would mean for animals and keep your eye on a term called zoonosis or zoonotic diseases which transmit between animals and humans. The Cult wants to break the connection between animals and people as it does between people and people. Farm animals fit with the Cult agenda to transform food from natural to synthetic.

The gas of life is killing us

There can be few greater examples of Cult inversion than the condemnation of carbon dioxide as a dangerous pollutant when it is the gas of life. Without it the natural world would be dead and so we would all be dead. We breathe in oxygen and breathe out carbon dioxide while plants produce oxygen and absorb carbon dioxide. It is a perfect symbiotic relationship that the Cult wants to dismantle for reasons I will come to in the final two chapters. Gates, Schwab, other Cult operatives and mindless repeaters, want the world to be 'carbon neutral' by at least 2050 and the earlier the better. 'Zero carbon' is the cry echoed by lunatics calling for 'Zero Covid' when we already have it. These carbon emission targets will deindustrialise the world in accordance with Cult plans – the post-industrial, post-democratic society – and with so-called renewables like solar and wind not coming even close to meeting human energy needs blackouts and cold are inevitable. Texans got the picture in the winter of 2021 when a snow storm stopped wind turbines and solar panels from working and the lights went down along with water which relies on electricity for its supply system. Gates wants everything to be powered by electricity to ensure that his masters have the kill switch to stop all human activity, movement, cooking, water and warmth any time they like. The climate lie is so stupendously inverted that it claims we must urgently reduce carbon dioxide when we *don't have enough*.

Co2 in the atmosphere is a little above 400 parts per million when the optimum for plant growth is 2,000 ppm and when it falls anywhere near 150 ppm the natural world starts to die and so do we. It fell to as low as 280 ppm in an 1880 measurement in Hawaii and rose to 413 ppm in 2019 with industrialisation which is why the planet has become *greener* in the industrial period. How insane then that psychopathic madman Gates is not satisfied only with blocking the rise of Co2. He's funding technology to suck it out of the atmosphere. The reason why will become clear. The industrial era is not destroying the world through Co2 and has instead turned around a potentially disastrous ongoing fall in Co2. Greenpeace co-founder and scientist Patrick Moore walked away from Greenpeace in 1986 and has exposed the green movement for fear-mongering and lies. He said that 500 million years ago there was *17 times* more Co2 in the atmosphere than we have today and levels have been falling for hundreds of millions of years. In the last 150 million years Co2 levels in Earth's atmosphere had reduced by *90 percent*. Moore said that by the time humanity began to unlock carbon dioxide from fossil fuels we were at '38 seconds to midnight' and in that sense: 'Humans are [the Earth's] salvation.' Moore made the point that only half the Co2 emitted by fossil fuels stays in the atmosphere and we should remember that all pollution pouring from chimneys that we are told is carbon dioxide is in fact nothing of the kind. It's pollution. Carbon dioxide is an invisible gas.

William Happer, Professor of Physics at Princeton University and long-time government adviser on climate, has emphasised the Co2 deficiency for maximum growth and food production. Greenhouse growers don't add carbon dioxide for a bit of fun. He said that most of the warming in the last 100 years, after the earth emerged from the super-cold period of the 'Little Ice Age' into a natural warming cycle, was over by 1940. Happer said that a peak year for warming in 1988 can be explained by a 'monster El Nino' which is a natural and cyclical warming of the Pacific that has nothing to do with 'climate change'. He said the effect of Co2 could be compared to painting a wall with red paint in that once two or three coats have been applied it didn't matter how much more you slapped on because the wall will not get much redder. Almost all the effect of the rise in Co2 has already happened, he said, and the volume in the atmosphere would now have to *double* to increase temperature by a single degree. Climate hoaxers know this and they have invented the most ridiculously complicated series of 'feedback' loops to try to overcome this rather devastating fact. You hear puppet Greta going on cluelessly about feedback loops and this is why.

The Sun affects temperature? No you *climate denier*

Some other nonsense to contemplate: Climate graphs show that rises in temperature do not follow rises in Co2 – *it's the other way round* with a lag between the two of some 800 years. If we go back 800 years from present time we hit the Medieval Warm Period when temperatures were higher than now without any industrialisation and this was followed by the Little Ice Age when temperatures plummeted. The world was still emerging from these centuries of serious cold when many climate records began which makes the ever-repeated line of the 'hottest year since records began' meaningless when you are not comparing like with like. The coldest period of the Little Ice Age corresponded with the lowest period of sunspot activity when the Sun was at its least active. Proper scientists will not be at all surprised by this when it confirms the obvious fact that earth temperature is affected by the scale of Sun activity and the energetic power that it subsequently emits; but when is the last time you heard a climate hoaxer talking about the Sun as a source of earth temperature?? Everything has to be focussed on Co2 which makes up just 0.117 percent of so-called greenhouse gases and only a fraction of even that is generated by human activity. The rest is natural. More than *90 percent* of those greenhouse gases are water vapour and clouds (Fig 9). Ban moisture I say. Have you noticed that the climate hoaxers no longer use the polar bear as their promotion image? That's because far from becoming extinct polar bear communities are stable or thriving. Joe Bastardi, American meteorologist, weather forecaster and outspoken critic of the climate lie, documents in his book *The Climate Chronicles* how weather patterns and events claimed to be evidence of climate change have been happening since long before industrialisation: 'What happened before naturally is happening again, as is to be expected given the cyclical nature of the climate due to the design of the planet.' If you read the detailed background to the climate hoax in my other books you will shake your head and wonder how anyone could believe the crap which has spawned a multi-trillion dollar industry based on absolute garbage (see HIV causes AIDs and Sars-Cov-2 causes 'Covid-19'). Climate and 'Covid' have much in common given they have the same source. They both have the contradictory *everything* factor in which everything is explained by reference to them. It's hot – 'it's climate change'. It's cold – 'it's climate change'. I got a sniffle – 'it's Covid'. I haven't got a sniffle – 'it's Covid'. Not having a sniffle has to be a symptom of 'Covid'. Everything is and not having a sniffle is especially dangerous if you are a slow walker. For sheer audacity I offer you a Cambridge University 'study' that actually linked 'Covid' to 'climate change'. It had to happen eventually. They concluded that climate change played a role in 'Covid-19' spreading from animals to humans because … wait for it … I kid you not … *the two groups were forced closer together as populations grow*. Er, that's it. The whole foundation on which this depended was that 'Bats are the likely zoonotic origin of SARS-CoV-1 and SARS-CoV-2'. Well, they are not. They are nothing to do with it. Apart from bats not being the origin and therefore 'climate change' effects on bats being irrelevant I am in awe of their academic insight. Where would we be without them? Not where we are that's for sure.

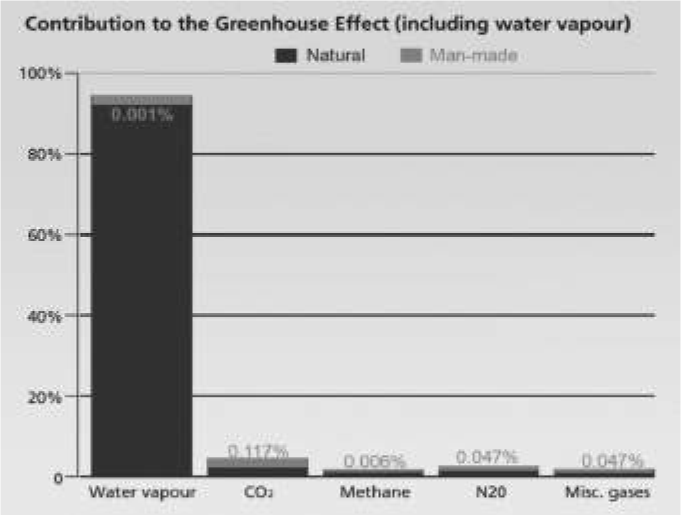

Figure 9: The idea that the gas of life is disastrously changing the climate is an insult to brain cell activity.

One other point about the weather is that climate modification is now well advanced and not every major weather event is natural – or earthquake come to that. I cover this subject at some length in other books. China is openly planning a rapid expansion of its weather modification programme which includes changing the climate in an area more than one and a half times the size of India. China used weather manipulation to ensure clear skies during the 2008 Olympics in Beijing. I have quoted from US military documents detailing how to employ weather manipulation as a weapon of war and they did that in the 1960s and 70s during the conflict in Vietnam with Operation Popeye manipulating monsoon rains for military purposes. Why would there be international treaties on weather modification if it wasn't possible? Of course it is. Weather is energetic information and it can be changed.

How was the climate hoax pulled off? See 'Covid'

If you can get billions to believe in a 'virus' that doesn't exist you can get them to believe in human-caused climate change that doesn't exist. Both are being used by the Cult to transform global society in the way it has long planned. Both hoaxes have been achieved in pretty much the same way. First you declare a lie is a fact. There's a ‘virus’ you call SARS-Cov-2 or humans are warming the planet with their behaviour. Next this becomes, via Cult networks, the foundation of government, academic and science policy and belief. Those who parrot the mantra are given big grants to produce research that confirms the narrative is true and ever more ‘symptoms’ are added to make the ‘virus’/’climate change’ sound even more scary. Scientists and researchers who challenge the narrative have their grants withdrawn and their careers destroyed. The media promote the lie as the unquestionable truth and censor those with an alternative view or evidence. A great percentage of the population believe what they are told as the lie becomes an everybody-knows-that and the believing-masses turn on those with a mind of their own. The technique has been used endlessly throughout human history. Wokers are the biggest promotors of the climate lie *and* ‘Covid’ fascism because their minds are owned by the Cult; their sense of self-righteous self-purity knows no bounds; and they exist in a bubble of reality in which facts are irrelevant and only get in the way of looking without seeing.

Running through all of this like veins in a blue cheese is control of information, which means control of perception, which means control of behaviour, which collectively means control of human society. The Cult owns the global media and Silicon Valley fascists for the simple reason that it *has* to. Without control of information it can’t control perception and through that human society. Examine every facet of the Cult agenda and you will see that anything supporting its introduction is never censored while anything pushing back is always censored. I say again: Psychopaths that know why they are doing this must go before Nuremberg trials and those that follow their orders must trot along behind them into the same dock. ‘I was just following orders’ didn’t work the first time and it must not work now. Nuremberg trials must be held all over the world before public juries for politicians, government officials, police, compliant doctors, scientists and virologists, and all Cult operatives such as Gates, Tedros, Fauci, Vallance, Whitty, Ferguson, Zuckerberg, Wojcicki, Brin, Page, Dorsey, the whole damn lot of them – including, no *especially*, the psychopath psychologists. Without them and the brainless, gutless excuses for journalists that have repeated their lies, none of this could be happening. Nobody can be allowed to escape justice for the psychological and economic Armageddon they are all responsible for visiting upon the human race.

As for the compliant, unquestioning, swathes of humanity, and the self-obsessed, all-knowing ignorance of the Wokers … don’t start me. God help their kids. God help their grandkids. God *help them*.

CHAPTER NINE

We must have it? So what is it?

Well I won't back down. No, I won't back down. You can stand me up at the Gates of Hell. But I won't back down
Tom Petty

I will now focus on the genetically-manipulating 'Covid vaccines' which do not meet this official definition of a vaccine by the US Centers for Disease Control (CDC): 'A product that stimulates a person's immune system to produce immunity to a specific disease, protecting the person from that disease.' On that basis 'Covid vaccines' are not a vaccine in that the makers don't even claim they stop infection or transmission.

They are instead part of a multi-levelled conspiracy to change the nature of the human body and what it means to be 'human' and to depopulate an enormous swathe of humanity. What I shall call Human 1.0 is on the cusp of becoming Human 2.0 and for very sinister reasons. Before I get to the 'Covid vaccine' in detail here's some background to vaccines in general. Government regulators do not test vaccines – the makers do – and the makers control which data is revealed and which isn't. Children in America are given 50 vaccine doses by age six and 69 by age 19 and the effect of the whole combined schedule has never been tested. Autoimmune diseases when the immune system attacks its own body have soared in the mass vaccine era and so has disease in general in children and the young. Why wouldn't this be the case when vaccines target the *immune system?* The US government gave Big Pharma drug companies immunity from prosecution for vaccine death and injury in the 1986 National Childhood Vaccine Injury Act (NCVIA) and since then the government (taxpayer) has been funding compensation for the consequences of Big Pharma vaccines. The criminal and satanic drug giants can't lose and the vaccine schedule has increased dramatically since 1986 for this reason. There is no incentive to make vaccines safe and a big incentive to make money by introducing ever more. Even against a ridiculously high bar to prove vaccine liability, and with the government controlling the hearing in which it is being challenged for compensation, the vaccine court has so far paid out more than $4 billion. These are the vaccines we are told are safe and psychopaths like Zuckerberg censor posts saying otherwise. The immunity law was even justified by a ruling that vaccines by their nature were 'unavoidably unsafe'.

Check out the ingredients of vaccines and you will be shocked if you are new to this. *They put that in children's bodies?? What??* Try aluminium, a brain toxin connected to dementia, aborted foetal tissue and formaldehyde which is used to embalm corpses. World-renowned aluminium expert Christopher Exley had his research into the health effect of aluminium in vaccines shut down by Keele University in the UK when it began taking funding from the Bill and Melinda Gates Foundation. Research when diseases 'eradicated' by vaccines began to decline and you will find the fall began long *before* the vaccine was introduced. Sometimes the fall even plateaued after the vaccine. Diseases like scarlet fever for which there was no vaccine declined in the same way because of environmental and other factors. A perfect case in point is the polio vaccine. Polio began when lead arsenate was first sprayed as an insecticide and residues remained in food products. Spraying started in 1892 and the first US polio epidemic came in Vermont in 1894. The simple answer was to stop spraying, but Rockefeller-created Big Pharma had a better idea. Polio was decreed to be caused by the *poliovirus* which 'spreads from person to person and can infect a person's spinal cord'. Lead arsenate was replaced by the lethal DDT which had the same effect of causing paralysis by damaging the brain and central nervous system. Polio plummeted when DDT was reduced and then banned, but the vaccine is still given the credit for something it didn't do. Today by far the biggest cause of polio is the vaccines promoted by Bill Gates. Vaccine justice campaigner Robert Kennedy Jr, son of assassinated (by the Cult) US Attorney General Robert Kennedy, wrote:

> In 2017, the World Health Organization (WHO) reluctantly admitted that the global explosion in polio is predominantly vaccine strain. The most frightening epidemics in Congo, Afghanistan, and the Philippines, are all linked to vaccines. In fact, by 2018, 70% of global polio cases were vaccine strain.

Vaccines make fortunes for Cult-owned Gates and Big Pharma while undermining the health and immune systems of the population. We had a glimpse of the mentality behind the Big Pharma cartel with a report on WION (World is One News), an international English language TV station based in India, which exposed the extraordinary behaviour of US drug company Pfizer over its 'Covid vaccine'. The WION report told how Pfizer had made fantastic demands of Argentina, Brazil and other countries in return for its 'vaccine'. These included immunity from prosecution, even for Pfizer negligence, government insurance to protect Pfizer from law suits and handing over as collateral sovereign assets of the country to include Argentina's bank reserves, military bases and embassy buildings. Pfizer demanded the same of Brazil in the form of waiving sovereignty of its assets abroad; exempting Pfizer from Brazilian laws; and giving Pfizer immunity from all civil liability. This is a 'vaccine' developed with government funding. Big Pharma is evil incarnate as a creation of the Cult and all must be handed tickets to Nuremberg.

Phantom 'vaccine' for a phantom 'disease'

I'll expose the 'Covid vaccine' fraud and then go on to the wider background of why the Cult has set out to 'vaccinate' every man, woman and child on the planet for an alleged 'new disease' with a survival rate of 99.77 percent (or more) even by the grotesquelymanipulated figures of the World Health Organization and Johns Hopkins University. The 'infection' to 'death' ratio is 0.23 to 0.15 percent according to Stanford epidemiologist Dr John Ioannidis and while estimates vary the danger remains tiny. I say that if the truth be told the fake infection to fake death ratio is zero. Never mind all the evidence I have presented here and in *The Answer* that there is no 'virus' let us just focus for a moment on that death-rate figure of say 0.23 percent. The figure includes all those worldwide who have tested positive with a test not testing for the 'virus' and then died within 28 days or even longer of any other cause – *any other cause*. Now subtract all those illusory 'Covid' deaths on the global data sheets from the 0.23 percent. What do you think you would be left with? *Zero*. A vaccination has never been successfully developed for a so-called coronavirus. They have all failed at the animal testing stage when they caused hypersensitivity to what they were claiming to protect against and made the impact of a disease far worse. Cult-owned vaccine corporations got around that problem this time by bypassing animal trials, going straight to humans and making the length of the 'trials' before the public rollout as short as they could get away with. Normally it takes five to ten years or more to develop vaccines that still cause demonstrable harm to many people and that's without including the long-term effects that are never officially connected to the vaccination. 'Covid' non-vaccines have been officially produced and approved in a matter of months from a standing start and part of the reason is that (a) they were developed before the 'Covid' hoax began and (b) they are based on computer programs and not natural sources. Official non-trials were so short that government agencies gave *emergency,* not full, approval. 'Trials' were not even completed and full approval cannot be secured until they are. Public 'Covid vaccination' is actually a *continuation of the trial*. Drug company 'trials' are not scheduled to end until 2023 by which time a lot of people are going to be dead. Data on which government agencies gave this emergency approval was supplied by the Big Pharma corporations themselves in the form of Pfizer/BioNTech, AstraZeneca, Moderna, Johnson & Johnson, and others, and this is the case with all vaccines. By its very nature *emergency* approval means drug companies do not have to prove that the 'vaccine' is 'safe and effective'. How could they with trials way short of complete? Government regulators only have to *believe* that they *could* be safe and effective. It is criminal manipulation to get products in circulation with no testing worth the name. Agencies giving that approval are infested with Big Pharma-connected place-people and they act in the interests of Big Pharma (the Cult) and not the public about whom they do not give a damn.

More human lab rats

'Covid vaccines' produced in record time by Pfizer/BioNTech and Moderna employ a technique *never approved before for use on humans*. They are known as mRNA 'vaccines' and inject a synthetic version of 'viral' mRNA or 'messenger RNA'. The key is in the term 'messenger'. The body works, or doesn't, on the basis of information messaging. Communications are constantly passing between and within the genetic system and the brain. Change those messages and you change the state of the body and even its very nature and you can change psychology and behaviour by the way the brain processes information. I think you are going to see significant changes in personality and perception of many people who have had the 'Covid vaccine' synthetic potions. Insider Aldous Huxley predicted the following in 1961 and mRNA 'vaccines' can be included in the term 'pharmacological methods':

> There will be, in the next generation or so, a pharmacological method of making people love their servitude, and producing dictatorship without tears, so to speak, producing a kind of painless concentration camp for entire societies, so that people will in fact have their own liberties taken away from them, but rather enjoy it, because they will be distracted from any desire to rebel by propaganda or brainwashing, or brainwashing enhanced by pharmacological methods. And this seems to be the final revolution.

Apologists claim that mRNA synthetic 'vaccines' don't change the DNA genetic blueprint because RNA does not affect DNA only the other way round. This is so disingenuous. A process called 'reverse transcription' can convert RNA into DNA and be integrated into DNA in the cell nucleus. This was highlighted in December, 2020, by scientists at Harvard and Massachusetts Institute of Technology (MIT). Geneticists report that more than 40 percent of mammalian genomes results from reverse transcription. On the most basic level if messaging changes then that sequence must lead to changes in DNA which is receiving and transmitting those communications. How can introducing synthetic material into cells not change the cells where DNA is located? The process is known as transfection which is defined as 'a technique to insert foreign nucleic acid (DNA or RNA) into a cell, typically with the intention of altering the properties of the cell'. Researchers at the Sloan Kettering Institute in New York found that changes in messenger RNA can deactivate tumour-suppressing proteins and thereby promote cancer. This is what happens when you mess with messaging. 'Covid vaccine' maker Moderna was founded in 2010 by Canadian stem cell biologist Derrick J. Rossi after his breakthrough discovery in the field of transforming and reprogramming stem cells. These are neutral cells that can be programmed to become any cell including sperm cells. Moderna was therefore founded on the principle of genetic manipulation and has never produced any vaccine or drug before its genetically-manipulating synthetic 'Covid' shite. Look at the name – Mode-RNA or Modify-RNA. Another important point is that the US Supreme Court has ruled that genetically-modified DNA, or complementary DNA (cDNA) synthesized in the laboratory from messenger RNA, can be patented and owned. These psychopaths are doing this to the human body.

Cells replicate synthetic mRNA in the 'Covid vaccines' and in theory the body is tricked into making antigens which trigger antibodies to target the 'virus spike proteins' which as Dr Tom Cowan said have *never been seen*. Cut the crap and these 'vaccines' deliver *self-replicating* synthetic material to the cells with the effect of changing human DNA. The more of them you have the more that process is compounded while synthetic material is all the time self-replicating. 'Vaccine'-maker Moderna describes mRNA as 'like software for the cell' and so they are messing with the body's software. What happens when you change the software in a computer? Everything changes. For this reason the Cult is preparing a production line of mRNA 'Covid vaccines' and a long list of excuses to use them as with all the 'variants' of a 'virus' never shown to exist. The plan is further to transfer the mRNA technique to other vaccines mostly given to children and young people. The cumulative consequences will be a transformation of human DNA through a constant infusion of synthetic genetic material which will kill many and change the rest. Now consider that governments that have given emergency approval for a vaccine that's not a vaccine; never been approved for humans before; had no testing worth the name; and the makers have been given immunity from prosecution for any deaths or adverse effects suffered by the public. The UK government awarded *permanent legal indemnity* to itself and its employees for harm done when a patient is being treated for 'Covid-19' or 'suspected Covid-19'. That is quite a thought when these are possible 'side-effects' from the 'vaccine' (they are not 'side', they are effects) listed by the US Food and Drug Administration:

> Guillain-Barre syndrome; acute disseminated encephalomyelitis; transverse myelitis; encephalitis; myelitis; encephalomyelitis; meningoencephalitis; meningitis; encephalopathy; convulsions; seizures; stroke; narcolepsy; cataplexy; anaphylaxis; acute myocardial infarction (heart attack); myocarditis; pericarditis; autoimmune disease; death; implications for pregnancy, and birth outcomes; other acute demyelinating diseases; non anaphylactic allergy reactions; thrombocytopenia ; disseminated intravascular coagulation; venous thromboembolism; arthritis; arthralgia; joint pain; Kawasaki disease; multisystem inflammatory syndrome in children; vaccine enhanced disease. The latter is the way the 'vaccine' has the potential to make diseases far worse than they would otherwise be.

UK doctor and freedom campaigner Vernon Coleman described the conditions in this list as ‘all unpleasant, most of them very serious, and you can’t get more serious than death’. The thought that anyone at all has had the ‘vaccine’ in these circumstances is testament to the potential that humanity has for clueless, unquestioning, stupidity and for many that programmed stupidity has already been terminal.

An insider speaks

Dr Michael Yeadon is a former Vice President, head of research and Chief Scientific Adviser at vaccine giant Pfizer. Yeadon worked on the inside of Big Pharma, but that did not stop him becoming a vocal critic of ‘Covid vaccines’ and their potential for multiple harms, including infertility in women. By the spring of 2021 he went much further and even used the no, no, term ‘conspiracy’. When you begin to see what is going on it is impossible not to do so. Yeadon spoke out in an interview with freedom campaigner James Delingpole and I mentioned earlier how he said that no one had samples of ‘the virus’. He explained that the mRNA technique originated in the anti-cancer field and ways to turn on and off certain genes which could be advantageous if you wanted to stop cancer growing out of control. ‘That’s the origin of them. They are a very unusual application, really.’ Yeadon said that treating a cancer patient with an aggressive procedure might be understandable if the alternative was dying, but it was quite another thing to use the same technique as a public health measure. Most people involved wouldn’t catch the infectious agent you were vaccinating against and if they did they probably wouldn’t die:

> If you are really using it as a public health measure you really want to as close as you can get to zero sides-effects … I find it odd that they chose techniques that were really cutting their teeth in the field of oncology and I’m worried that in using gene-based vaccines that have to be injected in the body and spread around the body, get taken up into some cells, and the regulators haven’t quite told us which cells they get taken up into … you are going to be generating a wide range of responses … with multiple steps each of which could go well or badly.

I doubt the Cult intends it to go well. Yeadon said that you can put any gene you like into the body through the 'vaccine'. 'You can certainly give them a gene that would do them some harm if you wanted.' I was intrigued when he said that when used in the cancer field the technique could turn genes on and off. I explore this process in *The Answer* and with different genes having different functions you could create mayhem – physically and psychologically – if you turned the wrong ones on and the right ones off. I read reports of an experiment by researchers at the University of Washington's school of computer science and engineering in which they encoded DNA to infect computers. The body is itself a biological computer and if human DNA can inflict damage on a computer why can't the computer via synthetic material mess with the human body? It can. The Washington research team said it was possible to insert malicious malware into 'physical DNA strands' and corrupt the computer system of a gene sequencing machine as it 'reads gene letters and stores them as binary digits 0 and 1'. They concluded that hackers could one day use blood or spit samples to access computer systems and obtain sensitive data from police forensics labs or infect genome files. It is at this level of digital interaction that synthetic 'vaccines' need to be seen to get the full picture and that will become very clear later on. Michael Yeadon said it made no sense to give the 'vaccine' to younger people who were in no danger from the 'virus'. What was the benefit? It was all downside with potential effects:

> The fact that my government in what I thought was a civilised, rational country, is raining [the 'vaccine'] on people in their 30s and 40s, even my children in their 20s, they're getting letters and phone calls, I know this is not right and any of you doctors who are vaccinating you know it's not right, too. They are not at risk. They are not at risk from the disease, so you are now hoping that the side-effects are so rare that you get away with it. You don't give new technology … that you don't understand to 100 percent of the population.

Blood clot problems with the AstraZeneca 'vaccine' have been affecting younger people to emphasise the downside risks with no benefit. AstraZeneca's version, produced with Oxford University, does not use mRNA, but still gets its toxic cocktail inside cells where it targets DNA. The Johnson & Johnson 'vaccine' which uses a similar technique has also produced blood clot effects to such an extent that the United States paused its use at one point. They are all 'gene therapy' (cell modification) procedures and not 'vaccines'. The truth is that once the content of these injections enter cells we have no idea what the effect will be. People can speculate and some can give very educated opinions and that's good. In the end, though, only the makers know what their potions are designed to do and even they won't know every last consequence. Michael Yeadon was scathing about doctors doing what they knew to be wrong. 'Everyone's mute', he said. Doctors in the NHS must know this was not right, coming into work and injecting people. 'I don't know how they sleep at night. I know I couldn't do it. I know that if I were in that position I'd have to quit.' He said he knew enough about toxicology to know this was not a good risk-benefit. Yeadon had spoken to seven or eight university professors and all except two would not speak out publicly. Their universities had a policy that no one said anything that countered the government and its medical advisors. They were afraid of losing their government grants. This is how intimidation has been used to silence the truth at every level of the system. I say silence, but these people could still speak out if they made that choice. Yeadon called them 'moral cowards' – 'This is about your children and grandchildren's lives and you have just buggered off and left it.'

'Variant' nonsense

Some of his most powerful comments related to the alleged 'variants' being used to instil more fear, justify more lockdowns, and introduce more 'vaccines'. He said government claims about 'variants' were nonsense. He had checked the alleged variant 'codes' and they were 99.7 percent identical to the 'original'. This was the human identity difference equivalent to putting a baseball cap on and off or wearing it the other way round. A 0.3 percent difference would make it impossible for that 'variant' to escape immunity from the 'original'. This made no sense of having new 'vaccines' for ‘variants’. He said there would have to be at least a *30 percent* difference for that to be justified and even then he believed the immune system would still recognise what it was. Gates-funded ‘variant modeller’ and ‘vaccine’-pusher John Edmunds might care to comment. Yeadon said drug companies were making new versions of the ‘vaccine’ as a ‘top up’ for ‘variants’. Worse than that, he said, the ‘regulators’ around the world like the MHRA in the UK had got together and agreed that because ‘vaccines’ for ‘variants’ were so similar to the first ‘vaccines’ *they did not have to do safety studies*. How transparently sinister that is. This is when Yeadon said: ‘There is a conspiracy here.’ There was no need for another vaccine for ‘variants’ and yet we were told that there was and the country had shut its borders because of them. ‘They are going into hundreds of millions of arms without passing ‘go’ or any regulator. Why did they do that? Why did they pick this method of making the vaccine?’

The reason had to be something bigger than that it seemed and ‘it’s not protection against the virus’. It’s was a far bigger project that meant politicians and advisers were willing to do things and not do things that knowingly resulted in avoidable deaths – ‘that’s already happened when you think about lockdown and deprivation of health care for a year.’ He spoke of people prepared to do something that results in the avoidable death of their fellow human beings and it not bother them. This is the penny-drop I have been working to get across for more than 30 years – the level of pure evil we are dealing with. Yeadon said his friends and associates could not believe there could be that much evil, but he reminded them of Stalin, Pol Pot and Hitler and of what Stalin had said: ‘One death is a tragedy. A million? A statistic.’ He could not think of a benign explanation for why you need top-up vaccines ‘which I’m sure you don’t’ and for the regulators ‘to just get out of the way and wave them through’. Why would the regulators do that when they were still wrestling with the dangers of the ‘parent’ vaccine? He was clearly shocked by what he had seen since the ‘Covid’ hoax began and now he was thinking the previously unthinkable:

> If you wanted to depopulate a significant proportion of the world and to do it in a way that doesn't involve destruction of the environment with nuclear weapons, poisoning everyone with anthrax or something like that, and you wanted plausible deniability while you had a multi-year infectious disease crisis, I actually don't think you could come up with a better plan of work than seems to be in front of me. I can't say that's what they are going to do, but I can't think of a benign explanation why they are doing it.

He said he never thought that they would get rid of 99 percent of humans, but now he wondered. 'If you wanted to that this would be a hell of a way to do it – it would be unstoppable folks.' Yeadon had concluded that those who submitted to the 'vaccine' would be allowed to have some kind of normal life (but for how long?) while screws were tightened to coerce and mandate the last few percent. 'I think they'll put the rest of them in a prison camp. I wish I was wrong, but I don't think I am.' Other points he made included: There were no coronavirus vaccines then suddenly they all come along at the same time; we have no idea of the long term affect with trials so short; coercing or forcing people to have medical procedures is against the Nuremberg Code instigated when the Nazis did just that; people should at least delay having the 'vaccine'; a quick Internet search confirms that masks don't reduce respiratory viral transmission and 'the government knows that'; they have smashed civil society and they know that, too; two dozen peer-reviewed studies show no connection between lockdown and reducing deaths; he knew from personal friends the elite were still flying around and going on holiday while the public were locked down; the elite were not having the 'vaccines'. He was also asked if 'vaccines' could be made to target difference races. He said he didn't know, but the document by the Project for the New American Century in September, 2000, said developing 'advanced forms of biological warfare that can target *specific genotypes* may transform biological warfare from the realm of terror to a politically useful tool.' Oh, they're evil all right. Of that we can be *absolutely* sure.

Another cull of old people

We have seen from the CDC definition that the mRNA 'Covid vaccine' is not a vaccine and nor are the others that *claim* to reduce 'severity of symptoms' in *some* people, but not protect from infection or transmission. What about all the lies about returning to 'normal' if people were 'vaccinated'? If they are not claimed to stop infection and transmission of the alleged 'virus', how does anything change? This was all lies to manipulate people to take the jabs and we are seeing that now with masks and distancing still required for the 'vaccinated'. How did they think that elderly people with fragile health and immune responses were going to be affected by infusing their cells with synthetic material and other toxic substances? They *knew* that in the short and long term it would be devastating and fatal as the culling of the old that began with the first lockdowns was continued with the 'vaccine'. Death rates in care homes soared immediately residents began to be 'vaccinated' – infused with synthetic material. Brave and committed whistleblower nurses put their careers at risk by exposing this truth while the rest kept their heads down and their mouths shut to put their careers before those they are supposed to care for. A long-time American Certified Nursing Assistant who gave his name as James posted a video in which he described emotionally what happened in his care home when vaccination began. He said that during 2020 very few residents were sick with 'Covid' and no one died during the entire year; but shortly after the Pfizer mRNA injections 14 people died within two weeks and many others were near death. 'They're dropping like flies', he said. Residents who walked on their own before the shot could no longer and they had lost their ability to conduct an intelligent conversation. The home's management said the sudden deaths were caused by a 'super-spreader' of 'Covid-19'. Then how come, James asked, that residents who refused to take the injections were not sick? It was a case of inject the elderly with mRNA synthetic potions and blame their illness and death that followed on the 'virus'. James described what was happening in care homes as 'the greatest crime of genocide this country has ever seen'. Remember the NHS staff nurse from earlier who used the same word ‘genocide’ for what was happening with the ‘vaccines’ and that it was an ‘act of human annihilation’. A UK care home whistleblower told a similar story to James about the effect of the ‘vaccine’ in deaths and ‘outbreaks’ of illness dubbed ‘Covid’ after getting the jab. She told how her care home management and staff had zealously imposed government regulations and no one was allowed to even question the official narrative let alone speak out against it. She said the NHS was even worse. Again we see the results of reframing. A worker at a local care home where I live said they had not had a single case of ‘Covid’ there for almost a year and when the residents were ‘vaccinated’ they had 19 positive cases in two weeks with eight dying.

It’s not the ‘vaccine’ – honest

The obvious cause and effect was being ignored by the media and most of the public. Australia’s health minister Greg Hunt (a former head of strategy at the World Economic Forum) was admitted to hospital after he had the ‘vaccine’. He was suffering according to reports from the skin infection ‘cellulitis’ and it must have been a severe case to have warranted days in hospital. Immediately the authorities said this was nothing to do with the ‘vaccine’ when an effect of some vaccines is a ‘cellulitis-like reaction’. We had families of perfectly healthy old people who died after the ‘vaccine’ saying that if only they had been given the ‘vaccine’ earlier they would still be alive. As a numbskull rating that is off the chart. A father of four ‘died of Covid’ at aged 48 when he was taken ill two days after having the ‘vaccine’. The man, a health administrator, had been ‘shielding during the pandemic’ and had ‘not really left the house’ until he went for the ‘vaccine’. Having the ‘vaccine’ and then falling ill and dying does not seem to have qualified as a possible cause and effect and ‘Covid-19’ went on his death certificate. His family said they had no idea how he ‘caught the virus’. A family member said: ‘Tragically, it could be that going for a vaccination ultimately led to him catching Covid …The sad truth is that they are never going to know where it came from.’ The family warned people to remember that the virus still existed and was ‘very real’. So was their stupidity. Nurses and doctors who had the first round of the ‘vaccine’ were collapsing, dying and ending up in a hospital bed while they or their grieving relatives were saying they’d still have the ‘vaccine’ again despite what happened. I kid you not. You mean if your husband returned from the dead he’d have the same ‘vaccine’ again that killed him??

Doctors at the VCU Medical Center in Richmond, Virginia, said the Johnson & Johnson ‘vaccine’ was to blame for a man’s skin peeling off. Patient Richard Terrell said: ‘It all just happened so fast. My skin peeled off. It’s still coming off on my hands now.’ He said it was stinging, burning and itching and when he bent his arms and legs it was very painful with ‘the skin swollen and rubbing against itself’. Pfizer/BioNTech and Moderna vaccines use mRNA to change the cell while the Johnson & Johnson version uses DNA in a process similar to AstraZeneca’s technique. Johnson & Johnson and AstraZeneca have both had their ‘vaccines’ paused by many countries after causing serious blood problems. Terrell’s doctor Fnu Nutan said he could have died if he hadn’t got medical attention. It sounds terrible so what did Nutan and Terrell say about the ‘vaccine’ now? Oh, they still recommend that people have it. A nurse in a hospital bed 40 minutes after the vaccination and unable to swallow due to throat swelling was told by a doctor that he lost mobility in his arm for 36 hours following the vaccination. What did he say to the ailing nurse? ‘Good for you for getting the vaccination.’ We are dealing with a serious form of cognitive dissonance madness in both public and medical staff. There is a remarkable correlation between those having the ‘vaccine’ and trumpeting the fact and suffering bad happenings shortly afterwards. Witold Rogiewicz, a Polish doctor, made a video of his ‘vaccination’ and ridiculed those who were questioning its safety and the intentions of Bill Gates: ‘Vaccinate yourself to protect yourself, your loved ones, friends and also patients. And to mention quickly I have info for anti-vaxxers and anti-Coviders if you want to contact Bill Gates you can do this through me.’ He further ridiculed the dangers of 5G. Days later he was dead, but naturally the vaccination wasn't mentioned in the verdict of 'heart attack'.

Lies, lies and more lies

So many members of the human race have slipped into extreme states of insanity and unfortunately they include reframed doctors and nursing staff. Having a 'vaccine' and dying within minutes or hours is not considered a valid connection while death from any cause within 28 days or longer of a positive test with a test not testing for the 'virus' means 'Covid-19' goes on the death certificate. How could that 'vaccine'-death connection not have been made except by calculated deceit? US figures in the initial rollout period to February 12th, 2020, revealed that a third of the deaths reported to the CDC after 'Covid vaccines' happened within 48 hours. Five men in the UK suffered an 'extremely rare' blood clot problem after having the AstraZeneca 'vaccine', but no causal link was established said the Gates-funded Medicines and Healthcare products Regulatory Agency (MHRA) which had given the 'vaccine' emergency approval to be used. Former Pfizer executive Dr Michael Yeadon explained in his interview how the procedures could cause blood coagulation and clots. People who should have been at no risk were dying from blood clots in the brain and he said he had heard from medical doctor friends that people were suffering from skin bleeding and massive headaches. The AstraZeneca 'shot' was stopped by some 20 countries over the blood clotting issue and still the corrupt MHRA, the European Medicines Agency (EMA) and the World Health Organization said that it should continue to be given even though the EMA admitted that it 'still cannot rule out definitively' a link between blood clotting and the 'vaccine'. Later Marco Cavaleri, head of EMA vaccine strategy, said there was indeed a clear link between the 'vaccine' and thrombosis, but they didn't know why. So much for the trials showing the 'vaccine' is safe. Blood clots were affecting younger people who would be under virtually no danger from 'Covid' even if it existed which makes it all the more stupid and sinister.

The British government responded to public alarm by wheeling out June Raine, the terrifyingly weak infant school headmistress sound-alike who heads the UK MHRA drug ‘regulator’. The idea that she would stand up to Big Pharma and government pressure is laughable and she told us that all was well in the same way that she did when allowing untested, never-used-on-humans-before, genetically-manipulating ‘vaccines’ to be exposed to the public in the first place. Mass lying is the new normal of the ‘Covid’ era. The MHRA later said 30 cases of rare blood clots had by then been connected with the AstraZeneca ‘vaccine’ (that means a lot more in reality) while stressing that the benefits of the jab in preventing ‘Covid-19’ outweighed any risks. A more ridiculous and disingenuous statement with callous disregard for human health it is hard to contemplate. Immediately after the mendacious ‘all-clears’ two hospital workers in Denmark experienced blood clots and cerebral haemorrhaging following the AstraZeneca jab and one died. Top Norwegian health official Pål Andre Holme said the ‘vaccine’ was the only common factor: ‘There is nothing in the patient history of these individuals that can give such a powerful immune response … I am confident that the antibodies that we have found are the cause, and I see no other explanation than it being the vaccine which triggers it.’ Strokes, a clot or bleed in the brain, were clearly associated with the ‘vaccine’ from word of mouth and whistleblower reports. Similar consequences followed with all these ‘vaccines’ that we were told were so safe and as the numbers grew by the day it was clear we were witnessing human carnage.

Learning the hard way

A woman interviewed by UKColumn told how her husband suffered dramatic health effects after the vaccine when he’d been in good health all his life. He went from being a little unwell to losing all feeling in his legs and experiencing ‘excruciating pain’. Misdiagnosis followed twice at Accident and Emergency (an ‘allergy’ and ‘sciatica’) before he was admitted to a neurology ward where doctors said his serious condition had been caused by the ‘vaccine’. Another seven ‘vaccinated’ people were apparently being treated on the same ward for similar symptoms. The woman said he had the ‘vaccine’ because they believed media claims that it was safe. ‘I didn’t think the government would give out a vaccine that does this to somebody; I believed they would be bringing out a vaccination that would be safe.’ What a tragic way to learn that lesson. Another woman posted that her husband was transporting stroke patients to hospital on almost every shift and when he asked them if they had been ‘vaccinated’ for ‘Covid’ they all replied ‘yes’. One had a ‘massive brain bleed’ the day after his second dose. She said her husband reported the ‘just been vaccinated’ information every time to doctors in A and E only for them to ignore it, make no notes and appear annoyed that it was even mentioned. This particular report cannot be verified, but it expresses a common theme that confirms the monumental underreporting of ‘vaccine’ consequences. Interestingly as the ‘vaccines’ and their brain blood clot/stroke consequences began to emerge the UK National Health Service began a publicity campaign telling the public what to do in the event of a stroke. A Scottish NHS staff nurse who quit in disgust in March, 2021, said:

> I have seen traumatic injuries from the vaccine, they’re not getting reported to the yellow card [adverse reaction] scheme, they’re treating the symptoms, not asking why, why it’s happening. It’s just treating the symptoms and when you speak about it you’re dismissed like you’re crazy, I’m not crazy, I’m not crazy because every other colleague I’ve spoken to is terrified to speak out, they’ve had enough.

Videos appeared on the Internet of people uncontrollably shaking after the ‘vaccine’ with no control over muscles, limbs and even their face. A Scottish mother broke out in a severe rash all over her body almost immediately after she was given the AstraZeneca ‘vaccine’. The pictures were horrific. Leigh King, a 41-year-old hairdresser from Lanarkshire said: ‘Never in my life was I prepared for what I was about to experience … My skin was so sore and constantly hot … I have never felt pain like this …’ But don’t you worry, the ‘vaccine’ is perfectly safe. Then there has been the effect on medical staff who have been pressured to have the 'vaccine' by psychopathic 'health' authorities and government. A London hospital consultant who gave the name K. Polyakova wrote this to the *British Medical Journal* or *BMJ*:

> I am currently struggling with … the failure to report the reality of the morbidity caused by our current vaccination program within the health service and staff population. The levels of sickness after vaccination is unprecedented and staff are getting very sick and some with neurological symptoms which is having a huge impact on the health service function. Even the young and healthy are off for days, some for weeks, and some requiring medical treatment. Whole teams are being taken out as they went to get vaccinated together.
>
> Mandatory vaccination in this instance is stupid, unethical and irresponsible when it comes to protecting our staff and public health. We are in the voluntary phase of vaccination, and encouraging staff to take an unlicensed product that is impacting on their immediate health … it is clearly stated that these vaccine products do not offer immunity or stop transmission. In which case why are we doing it?

Not to protect health that's for sure. Medical workers are lauded by governments for agenda reasons when they couldn't give a toss about them any more than they can for the population in general. Schools across America faced the same situation as they closed due to the high number of teachers and other staff with bad reactions to the Pfizer/BioNTech, Moderna, and Johnson & Johnson 'Covid vaccines' all of which were linked to death and serious adverse effects. The *BMJ* took down the consultant's comments pretty quickly on the grounds that they were being used to spread 'disinformation'. They were exposing the truth about the 'vaccine' was the real reason. The cover-up is breathtaking.

Hiding the evidence

The scale of the 'vaccine' death cover-up worldwide can be confirmed by comparing official figures with the personal experience of the public. I heard of many people in my community who died immediately or soon after the vaccine that would never appear in the media or even likely on the official totals of 'vaccine' fatalities and adverse reactions when only about ten percent are estimated to be reported and I have seen some estimates as low as one percent in a Harvard study. In the UK alone by April 29th, 2021, some 757,654 adverse reactions had been officially reported from the Pfizer/BioNTech, Oxford/AstraZeneca and Moderna 'vaccines' with more than a thousand deaths linked to jabs and that means an estimated ten times this number in reality from a ten percent reporting rate percentage. That's seven million adverse reactions and 10,000 potential deaths and a one percent reporting rate would be ten times *those* figures. In 1976 the US government pulled the swine flu vaccine after *53* deaths. The UK data included a combined 10,000 eye disorders from the 'Covid vaccines' with more than 750 suffering visual impairment or blindness and again multiply by the estimated reporting percentages. As 'Covid cases' officially fell hospitals virtually empty during the 'Covid crisis' began to fill up with a range of other problems in the wake of the 'vaccine' rollout. The numbers across America have also been catastrophic. Deaths linked to *all* types of vaccine increased by *6,000 percent* in the first quarter of 2021 compared with 2020. A 39-year-old woman from Ogden, Utah, died four days after receiving a second dose of Moderna's 'Covid vaccine' when her liver, heart and kidneys all failed despite the fact that she had no known medical issues or conditions. Her family sought an autopsy, but Dr Erik Christensen, Utah's chief medical examiner, said proving vaccine injury as a cause of death almost never happened. He could think of only one instance where an autopsy would name a vaccine as the official cause of death and that would be anaphylaxis where someone received a vaccine and died almost instantaneously. 'Short of that, it would be difficult for us to definitively say this is the vaccine,' Christensen said. If that is true this must be added to the estimated ten percent (or far less) reporting rate of vaccine deaths and serious reactions and the conclusion can only be that vaccine deaths and serious reactions – including these 'Covid' potions' – are phenomenally understated in official figures. The same story can be found everywhere. Endless accounts of deaths and serious reactions among the public, medical and care home staff while official figures did not even begin to reflect this.

Professional script-reader Dr David Williams, a 'top public-health official' in Ontario, Canada, insulted our intelligence by claiming only four serious adverse reactions and no deaths from the more than 380,000 vaccine doses then given. This bore no resemblance to what people knew had happened in their owns circles and we had Dirk Huyer in charge of getting millions vaccinated in Ontario while at the same time he was Chief Coroner for the province investigating causes of death including possible death from the vaccine. An aide said he had stepped back from investigating deaths, but evidence indicated otherwise. Rosemary Frei, who secured a Master of Science degree in molecular biology at the Faculty of Medicine at Canada's University of Calgary before turning to investigative journalism, was one who could see that official figures for 'vaccine' deaths and reactions made no sense. She said that doctors seldom reported adverse events and when people got really sick or died after getting a vaccination they would attribute that to anything except the vaccines. It had been that way for years and anyone who wondered aloud whether the 'Covid vaccines' or other shots cause harm is immediately branded as 'anti-vax' and 'anti-science'. This was 'career-threatening' for health professionals. Then there was the huge pressure to support the push to 'vaccinate' billions in the quickest time possible. Frei said:

> So that's where we're at today. More than half a million vaccine doses have been given to people in Ontario alone. The rush is on to vaccinate all 15 million of us in the province by September. And the mainstream media are screaming for this to be sped up even more. That all adds up to only a very slim likelihood that we're going to be told the truth by officials about how many people are getting sick or dying from the vaccines.

What is true of Ontario is true of everywhere.

They KNEW – and still did it

The authorities knew what was going to happen with multiple deaths and adverse reactions. The UK government's Gates-funded and Big Pharma-dominated Medicines and Healthcare products Regulatory Agency (MHRA) hired a company to employ AI in compiling the projected reactions to the 'vaccine' that would otherwise be uncountable. The request for applications said: 'The MHRA urgently seeks an Artificial Intelligence (AI) software tool to process the expected high volume of Covid-19 vaccine Adverse Drug Reaction …' This was from the agency, headed by the disingenuous June Raine, that gave the 'vaccines' emergency approval and the company was hired before the first shot was given. 'We are going to kill and maim you – is that okay?' 'Oh, yes, perfectly fine – I'm very grateful, thank you, doctor.' The range of 'Covid vaccine' adverse reactions goes on for page after page in the MHRA criminally underreported 'Yellow Card' system and includes affects to eyes, ears, skin, digestion, blood and so on. Raine's MHRA amazingly claimed that the 'overall safety experience … is so far as expected from the clinical trials'. The death, serious adverse effects, deafness and blindness were *expected?* When did they ever mention that? If these human tragedies were expected then those that gave approval for the use of these 'vaccines' must be guilty of crimes against humanity including murder – a definition of which is 'killing a person with malice aforethought or with recklessness manifesting extreme indifference to the value of human life.' People involved at the MHRA, the CDC in America and their equivalent around the world must go before Nuremberg trials to answer for their callous inhumanity. We are only talking here about the immediate effects of the 'vaccine'. The longer-term impact of the DNA synthetic manipulation is the main reason they are so hysterically desperate to inoculate the entire global population in the shortest possible time.

Africa and the developing world are a major focus for the 'vaccine' depopulation agenda and a mass vaccination sales-pitch is underway thanks to caring people like the Rockefellers and other Cult assets. The Rockefeller Foundation, which pre-empted the 'Covid pandemic' in a document published in 2010 that 'predicted' what happened a decade later, announced an initial $34.95 million grant in February, 2021, 'to ensure more equitable access to Covid-19 testing and vaccines' among other things in Africa in collaboration with '24 organizations, businesses, and government agencies'. The pan-Africa initiative would focus on 10 countries: Burkina Faso, Ethiopia, Ghana, Kenya, Nigeria, Rwanda, South Africa, Tanzania, Uganda, and Zambia'. Rajiv Shah, President of the Rockefeller Foundation and former administrator of CIA-controlled USAID, said that if Africa was not mass-vaccinated (to change the DNA of its people) it was a 'threat to all of humanity' and not fair on Africans. When someone from the Rockefeller Foundation says they want to do something to help poor and deprived people and countries it is time for a belly-laugh. They are doing this out of the goodness of their 'heart' because 'vaccinating' the entire global population is what the 'Covid' hoax set out to achieve. Official 'decolonisation' of Africa by the Cult was merely a prelude to financial colonisation on the road to a return to physical colonisation. The 'vaccine' is vital to that and the sudden and convenient death of the 'Covid' sceptic president of Tanzania can be seen in its true light. A lot of people in Africa are aware that this is another form of colonisation and exploitation and they need to stand their ground.

The 'vaccine is working' scam

A potential problem for the Cult was that the 'vaccine' is meant to change human DNA and body messaging and not to protect anyone from a 'virus' never shown to exist. The vaccine couldn't work because it was not designed to work and how could they make it *appear* to be working so that more people would have it? This was overcome by lowering the amplification rate of the PCR test to produce fewer 'cases' and therefore fewer 'deaths'. Some of us had been pointing out since March, 2020, that the amplification rate of the test not testing for the 'virus' had been made artificially high to generate positive tests which they could call 'cases' to justify lockdowns. The World Health Organization recommended an absurdly high 45 amplification cycles to ensure the high positives required by the Cult and then remained silent on the issue until January 20th, 2021 – Biden's Inauguration Day. This was when the 'vaccinations' were seriously underway and on that day the WHO recommended after discussions with America's CDC that laboratories *lowered their testing amplification*. Dr David Samadi, a certified urologist and health writer, said the WHO was encouraging all labs to reduce their cycle count for PCR tests. He said the current cycle was much too high and was 'resulting in any particle being declared a positive case'. Even one mainstream news report I saw said this meant the number of 'Covid' infections may have been 'dramatically inflated'. Oh, just a little bit. The CDC in America issued new guidance to laboratories in April, 2021, to use 28 cycles *but only for 'vaccinated' people*. The timing of the CDC/WHO interventions were cynically designed to make it appear the 'vaccines' were responsible for falling cases and deaths when the real reason can be seen in the following examples. New York's state lab, the Wadsworth Center, identified 872 positive tests in July, 2020, based on a threshold of 40 cycles. When the figure was lowered to 35 cycles *43 percent* of the 872 were no longer 'positives'. At 30 cycles the figure was 63 percent. A Massachusetts lab found that between *85 to 90 percent* of people who tested positive in July with a cycle threshold of 40 would be negative at 30 cycles, Ashish Jha, MD, director of the Harvard Global Health Institute, said: 'I'm really shocked that it could be that high … Boy, does it really change the way we need to be thinking about testing.' I'm shocked that I could see the obvious in the spring of 2020, with no medical background, and most medical professionals still haven't worked it out. No, that's not shocking – it's terrifying.

Three weeks after the WHO directive to lower PCR cycles the London *Daily Mail* ran this headline: 'Why ARE Covid cases plummeting? New infections have fallen 45% in the US and 30% globally in the past 3 weeks but experts say vaccine is NOT the main driver because only 8% of Americans and 13% of people worldwide have received their first dose.' They acknowledged that the drop could not be attributed to the 'vaccine', but soon this morphed throughout the media into the 'vaccine' has caused cases and deaths to fall when it was the PCR threshold. In December, 2020, there was chaos at English Channel ports with truck drivers needing negative 'Covid' tests before they could board a ferry home for Christmas. The government wanted to remove the backlog as fast as possible and they brought in troops to do the 'testing'. Out of 1,600 drivers just *36* tested positive and the rest were given the all clear to cross the Channel. I guess the authorities thought that 36 was the least they could get away with without the unquestioning catching on. The amplification trick which most people believed in the absence of information in the mainstream applied more pressure on those refusing the 'vaccine' to succumb when it 'obviously worked'. The truth was the exact opposite with deaths in care homes soaring with the 'vaccine' and in Israel the term used was 'skyrocket'. A re-analysis of published data from the Israeli Health Ministry led by Dr Hervé Seligmann at the Medicine Emerging Infectious and Tropical Diseases at Aix-Marseille University found that Pfizer's 'Covid vaccine' killed 'about 40 times more [elderly] people than the disease itself would have killed' during a five-week vaccination period and *260 times* more younger people than would have died from the 'virus' even according to the manipulated 'virus' figures. Dr Seligmann and his co-study author, Haim Yativ, declared after reviewing the Israeli 'vaccine' death data: 'This is a new Holocaust.'

Then, in mid-April, 2021, after vast numbers of people worldwide had been 'vaccinated', the story changed with clear coordination. The UK government began to prepare the ground for more future lockdowns when Nuremberg-destined Boris Johnson told yet another whopper. He said that cases had fallen because of *lockdowns* not 'vaccines'. Lockdowns are irrelevant when *there is no 'virus'* and the test and fraudulent death certificates are deciding the number of 'cases' and 'deaths'. Study after study has shown that lockdowns don't work and instead kill and psychologically destroy people. Meanwhile in the United States Anthony Fauci and Rochelle Walensky, the ultra-Zionist head of the CDC, peddled the same line. More lockdown was the answer and not the 'vaccine', a line repeated on cue by the moron that is Canadian Prime Minister Justin Trudeau. Why all the hysteria to get everyone 'vaccinated' if lockdowns and not ‘vaccines’ made the difference? None of it makes sense on the face of it. Oh, but it does. The Cult wants lockdowns *and* the ‘vaccine’ and if the ‘vaccine’ is allowed to be seen as the total answer lockdowns would no longer be justified when there are still livelihoods to destroy. ‘Variants’ and renewed upward manipulation of PCR amplification are planned to instigate never-ending lockdown *and* more ‘vaccines’.

You *must* have it – we’re desperate

Israel, where the Jewish and Arab population are ruled by the Sabbatian Cult, was the front-runner in imposing the DNA-manipulating ‘vaccine’ on its people to such an extent that Jewish refusers began to liken what was happening to the early years of Nazi Germany. This would seem to be a fantastic claim. Why would a government of Jewish people be acting like the Nazis did? If you realise that the Sabbatian Cult was behind the Nazis and that Sabbatians hate Jews the pieces start to fit and the question of why a ‘Jewish’ government would treat Jews with such callous disregard for their lives and freedom finds an answer. Those controlling the government of Israel *aren’t Jewish* – they’re Sabbatian. Israeli lawyer Tamir Turgal was one who made the Nazi comparison in comments to German lawyer Reiner Fuellmich who is leading a class action lawsuit against the psychopaths for crimes against humanity. Turgal described how the Israeli government was vaccinating children and pregnant women on the basis that there was no evidence that this was dangerous when they had no evidence that it *wasn’t* dangerous either. They just had no evidence. This was medical experimentation and Turgal said this breached the Nuremberg Code about medical experimentation and procedures requiring informed consent and choice. Think about that. A Nuremberg Code developed because of Nazi experimentation on Jews and others in concentration camps by people like the evil-beyond-belief Josef Mengele is being breached by the *Israeli* government; but when you know that it’s a *Sabbatian* government along with its intelligence and military agencies like Mossad, Shin Bet and the Israeli Defense Forces, and that Sabbatians were the force behind the Nazis, the kaleidoscope comes into focus. What have we come to when Israeli Jews are suing their government for violating the Nuremberg Code by essentially making Israelis subject to a medical experiment using the controversial 'vaccines'? It's a shocker that this has to be done in the light of what happened in Nazi Germany. The Anshe Ha-Emet, or 'People of the Truth', made up of Israeli doctors, lawyers, campaigners and public, have launched a lawsuit with the International Criminal Court. It says:

> When the heads of the Ministry of Health as well as the prime minister presented the vaccine in Israel and began the vaccination of Israeli residents, the vaccinated were not advised, that, in practice, they are taking part in a medical experiment and that their consent is required for this under the Nuremberg Code.

The irony is unbelievable, but easily explained in one word: Sabbatians. The foundation of Israeli 'Covid' apartheid is the 'green pass' or 'green passport' which allows Jews and Arabs who have had the DNA-manipulating 'vaccine' to go about their lives – to work, fly, travel in general, go to shopping malls, bars, restaurants, hotels, concerts, gyms, swimming pools, theatres and sports venues, while non-'vaccinated' are banned from all those places and activities. Israelis have likened the 'green pass' to the yellow stars that Jews in Nazi Germany were forced to wear – the same as the yellow stickers that a branch of UK supermarket chain Morrisons told exempt mask-wears they had to display when shopping. How very sensitive. The Israeli system is blatant South African-style apartheid on the basis of compliance or non-compliance to fascism rather than colour of the skin. How appropriate that the Sabbatian Israeli government was so close to the pre-Mandela apartheid regime in Pretoria. The Sabbatian-instigated 'vaccine passport' in Israel is planned for everywhere. Sabbatians struck a deal with Pfizer that allowed them to lead the way in the percentage of a national population infused with synthetic material and the result was catastrophic. Israeli freedom activist Shai Dannon told me how chairs were appearing on beaches that said 'vaccinated only'. Health Minister Yuli Edelstein said that anyone unwilling or unable to get the jabs that 'confer immunity' will be 'left behind'. The man's a liar. Not even the makers claim the 'vaccines' confer immunity. When you see those figures of 'vaccine' deaths these psychopaths were saying that you must take the chance the 'vaccine' will kill you or maim you while knowing it will change your DNA or lockdown for you will be permanent. That's fascism. The Israeli parliament passed a law to allow personal information of the non-vaccinated to be shared with local and national authorities for three months. This was claimed by its supporters to be a way to 'encourage' people to be vaccinated. Hadas Ziv from Physicians for Human Rights described this as a 'draconian law which crushed medical ethics and the patient rights'. But that's the idea, the Sabbatians would reply.

Your papers, please

Sabbatian Israel was leading what has been planned all along to be a global 'vaccine pass' called a 'green passport' without which you would remain in permanent lockdown restriction and unable to do anything. This is how badly – *desperately* – the Cult is to get everyone 'vaccinated'. The term and colour 'green' was not by chance and related to the psychology of fusing the perception of the green climate hoax with the 'Covid' hoax and how the 'solution' to both is the same Great Reset. Lying politicians, health officials and psychologists denied there were any plans for mandatory vaccinations or restrictions based on vaccinations, but they knew that was exactly what was meant to happen with governments of all countries reaching agreements to enforce a global system. 'Free' Denmark and 'free' Sweden unveiled digital vaccine certification. Cyprus, Czech Republic, Estonia, Greece, Hungary, Iceland, Italy, Poland, Portugal, Slovakia, and Spain have all committed to a vaccine passport system and the rest including the whole of the EU would follow. The satanic UK government will certainly go this way despite mendacious denials and at the time of writing it is trying to manipulate the public into having the 'vaccine' so they could go abroad on a summer holiday. How would that work without something to prove you had the synthetic toxicity injected into you?

Documents show that the EU's European Commission was moving towards 'vaccine certificates' in 2018 and 2019 before the 'Covid' hoax began. They knew what was coming. Abracadabra – Ursula von der Leyen, the German President of the Commission, announced in March, 2021, an EU 'Digital Green Certificate' – green again – to track the public's 'Covid status'. The passport sting is worldwide and the Far East followed the same pattern with South Korea ruling that only those with 'vaccination' passports – again the *green* pass – would be able to 'return to their daily lives'.

Bill Gates has been preparing for this 'passport' with other Cult operatives for years and beyond the paper version is a Gates-funded 'digital tattoo' to identify who has been vaccinated and who hasn't. The 'tattoo' is reported to include a substance which is externally readable to confirm who has been vaccinated. This is a bio-luminous light-generating enzyme (think fireflies) called … *Luciferase*. Yes, named after the Cult 'god' Lucifer the 'light bringer' of whom more to come. Gates said he funded the readable tattoo to ensure children in the developing world were vaccinated and no one was missed out. He cares so much about poor kids as we know. This was just the cover story to develop a vaccine tagging system for everyone on the planet. Gates has been funding the ID2020 'alliance' to do just that in league with other lovely people at Microsoft, GAVI, the Rockefeller Foundation, Accenture and IDEO.org. He said in interviews in March, 2020, before any 'vaccine' publicly existed, that the world must have a globalised digital certificate to track the 'virus' and who had been vaccinated. Gates knew from the start that the mRNA vaccines were coming and when they would come and that the plan was to tag the 'vaccinated' to marginalise the intelligent and stop them doing anything including travel. Evil just doesn't suffice. Gates was exposed for offering a $10 million bribe to the Nigerian House of Representatives to invoke compulsory 'Covid' vaccination of all Nigerians. Sara Cunial, a member of the Italian Parliament, called Gates a 'vaccine criminal'. She urged the Italian President to hand him over to the International Criminal Court for crimes against humanity and condemned his plans to ‘chip the human race’ through ID2020.

You know it’s a long-planned agenda when war criminal and Cult gofer Tony Blair is on the case. With the scale of arrogance only someone as dark as Blair can muster he said: ‘Vaccination in the end is going to be your route to liberty.’ Blair is a disgusting piece of work and he confirms that again. The media has given a lot of coverage to a bloke called Charlie Mullins, founder of London’s biggest independent plumbing company, Pimlico Plumbers, who has said he won’t employ anyone who has not been vaccinated or have them go to any home where people are not vaccinated. He said that if he had his way no one would be allowed to walk the streets if they have not been vaccinated. Gates was cheering at the time while I was alerting the white coats. The plan is that people will qualify for ‘passports’ for having the first two doses and then to keep it they will have to have all the follow ups and new ones for invented ‘variants’ until human genetics is transformed and many are dead who can’t adjust to the changes. Hollywood celebrities – the usual propaganda stunt – are promoting something called the WELL Health-Safety Rating to verify that a building or space has ‘taken the necessary steps to prioritize the health and safety of their staff, visitors and other stakeholders’. They included Lady Gaga, Jennifer Lopez, Michael B. Jordan, Robert DeNiro, Venus Williams, Wolfgang Puck, Deepak Chopra and 17th Surgeon General Richard Carmona. Yawn. WELL Health-Safety has big connections with China. Parent company Delos is headed by former Goldman Sachs partner Paul Scialla. This is another example – and we will see so many others – of using the excuse of ‘health’ to dictate the lives and activities of the population. I guess one confirmation of the ‘safety’ of buildings is that only ‘vaccinated’ people can go in, right?

Electronic concentration camps

I wrote decades ago about the plans to restrict travel and here we are for those who refuse to bow to tyranny. This can be achieved in one go with air travel if the aviation industry makes a blanket decree.

The ‘vaccine’ and guaranteed income are designed to be part of a global version of China’s social credit system which tracks behaviour 24/7 and awards or deletes ‘credits’ based on whether your behaviour is supported by the state or not. I mean your entire lifestyle – what you do, eat, say, everything. Once your credit score falls below a certain level consequences kick in. In China tens of millions have been denied travel by air and train because of this. All the locations and activities denied to refusers by the ‘vaccine’ passports will be included in one big mass ban on doing almost anything for those that don’t bow their head to government. It’s beyond fascist and a new term is required to describe its extremes – I guess fascist technocracy will have to do. The way the Chinese system of technological – technocratic – control is sweeping the West can be seen in the Los Angeles school system and is planned to be expanded worldwide. Every child is required to have a ‘Covid’-tracking app scanned daily before they can enter the classroom. The so-called Daily Pass tracking system is produced by Gates’ Microsoft which I’m sure will shock you rigid. The pass will be scanned using a barcode (one step from an inside-the-body barcode) and the information will include health checks, ‘Covid’ tests and vaccinations. Entry codes are for one specific building only and access will only be allowed if a student or teacher has a negative test with a test not testing for the ‘virus’, has no symptoms of anything alleged to be related to ‘Covid’ (symptoms from a range of other illness), and has a temperature under 100 degrees. No barcode, no entry, is planned to be the case for everywhere and not only schools.

Kids are being psychologically prepared to accept this as ‘normal’ their whole life which is why what they can impose in schools is so important to the Cult and its gofers. Long-time American freedom campaigner John Whitehead of the Rutherford Institute was not exaggerating when he said: ‘Databit by databit, we are building our own electronic concentration camps.’ Canada under its Cult gofer prime minister Justin Trudeau has taken a major step towards the real thing with people interned against their will if they test positive with a test not testing for the ‘virus’ when they arrive at a Canadian airport. They are jailed in internment hotels often without food or water for long periods and with many doors failing to lock there have been sexual assaults. The interned are being charged sometimes $2,000 for the privilege of being abused in this way. Trudeau is fully on board with the Cult and says the 'Covid pandemic' has provided an opportunity for a global 'reset' to permanently change Western civilisation. His number two, Deputy Prime Minister Chrystia Freeland, is a trustee of the World Economic Forum and a Rhodes Scholar. The Trudeau family have long been servants of the Cult. See *The Biggest Secret* and Cathy O'Brien's book *Trance-Formation of America* for the horrific background to Trudeau's father Pierre Trudeau another Canadian prime minister. Hide your fascism behind the façade of a heart-on-the-sleeve liberal. It's a well-honed Cult technique.

What can the 'vaccine' *really* do?

We have a 'virus' never shown to exist and 'variants' of the 'virus' that have also never been shown to exist except, like the 'original', as computer-generated fictions. Even if you believe there's a 'virus' the 'case' to 'death' rate is in the region of 0.23 to 0.15 percent and those 'deaths' are concentrated among the very old around the same average age that people die anyway. In response to this lack of threat (in truth none) psychopaths and idiots, knowingly and unknowingly answering to Gates and the Cult, are seeking to 'vaccinate' every man, woman and child on Planet Earth. Clearly the 'vaccine' is not about 'Covid' – none of this ever has been. So what is it all about *really*? Why the desperation to infuse genetically-manipulating synthetic material into everyone through mRNA fraudulent 'vaccines' with the intent of doing this over and over with the excuses of 'variants' and other 'virus' inventions? Dr Sherri Tenpenny, an osteopathic medical doctor in the United States, has made herself an expert on vaccines and their effects as a vehement campaigner against their use. Tenpenny was board certified in emergency medicine, the director of a level two trauma centre for 12 years, and moved to Cleveland in 1996 to start an integrative medicine practice which has treated patients from all 50 states and some 17 other countries. Weaning people off pharmaceutical drugs is a speciality.

She became interested in the consequences of vaccines after attending a meeting at the National Vaccine Information Center in Washington DC in 2000 where she ‘sat through four days of listening to medical doctors and scientists and lawyers and parents of vaccine injured kids’ and asked: ‘What’s going on?’ She had never been vaccinated and never got ill while her father was given a list of vaccines to be in the military and was ‘sick his entire life’. The experience added to her questions and she began to examine vaccine documents from the Centers for Disease Control (CDC). After reading the first one, the 1998 version of *The General Recommendations of Vaccination*, she thought: ‘This is it?’ The document was poorly written and bad science and Tenpenny began 20 years of research into vaccines that continues to this day. She began her research into ‘Covid vaccines’ in March, 2020, and she describes them as ‘deadly’. For many, as we have seen, they already have been. Tenpenny said that in the first 30 days of the ‘vaccine’ rollout in the United States there had been more than 40,000 adverse events reported to the vaccine adverse event database. A document had been delivered to her the day before that was 172 pages long. ‘We have over 40,000 adverse events; we have over 3,100 cases of [potentially deadly] anaphylactic shock; we have over 5,000 neurological reactions.’ Effects ranged from headaches to numbness, dizziness and vertigo, to losing feeling in hands or feet and paraesthesia which is when limbs ‘fall asleep’ and people have the sensation of insects crawling underneath their skin. All this happened in the first 30 days and remember that only about *ten percent* (or far less) of adverse reactions and vaccine-related deaths are estimated to be officially reported. Tenpenny said:

> So can you think of one single product in any industry, any industry, for as long as products have been made on the planet that within 30 days we have 40,000 people complaining of side effects that not only is still on the market but … we’ve got paid actors telling us how great

> they are for getting their vaccine. We're offering people $500 if they will just get their vaccine and we've got nurses and doctors going; 'I got the vaccine, I got the vaccine'.

Tenpenny said they were not going to be 'happy dancing folks' when they began to suffer Bell's palsy (facial paralysis), neuropathies, cardiac arrhythmias and autoimmune reactions that kill through a blood disorder. 'They're not going to be so happy, happy then, but we're never going to see pictures of those people' she said. Tenpenny described the 'vaccine' as 'a well-designed killing tool'.

No off-switch

Bad as the initial consequences had been Tenpenny said it would be maybe 14 months before we began to see the 'full ravage' of what is going to happen to the 'Covid vaccinated' with full-out consequences taking anything between two years and 20 years to show. You can understand why when you consider that variations of the 'Covid vaccine' use mRNA (messenger RNA) to in theory activate the immune system to produce protective antibodies without using the actual 'virus'. How can they when it's a computer program and they've never isolated what they claim is the 'real thing'? Instead they use *synthetic* mRNA. They are inoculating synthetic material into the body which through a technique known as the Trojan horse is absorbed into cells to change the nature of DNA. Human DNA is changed by an infusion of messenger RNA and with each new 'vaccine' of this type it is changed even more. Say so and you are banned by Cult Internet platforms. The contempt the contemptuous Mark Zuckerberg has for the truth and human health can be seen in an internal Facebook video leaked to the Project Veritas investigative team in which he said of the 'Covid vaccines': '… I share some caution on this because we just don't know the long term side-effects of basically modifying people's DNA and RNA.' At the same time this disgusting man's Facebook was censoring and banning anyone saying exactly the same. He must go before a Nuremberg trial for crimes against humanity when he *knows* that he is censoring legitimate concerns and denying the right of informed consent on behalf of the Cult that owns him. People have been killed and damaged by the very 'vaccination' technique he cast doubt on himself when they may not have had the 'vaccine' with access to information that he denied them. The plan is to have at least annual 'Covid vaccinations', add others to deal with invented 'variants', and change all other vaccines into the mRNA system. Pfizer executives told shareholders at a virtual Barclays Global Healthcare Conference in March, 2021, that the public may need a third dose of 'Covid vaccine', plus regular yearly boosters and the company planned to hike prices to milk the profits in a 'significant opportunity for our vaccine'. These are the professional liars, cheats and opportunists who are telling you their 'vaccine' is safe. Given this volume of mRNA planned to be infused into the human body and its ability to then replicate we will have a transformation of human genetics from biological to synthetic biological – exactly the long-time Cult plan for reasons we'll see – and many will die. Sherri Tenpenny said of this replication:

> It's like having an on-button but no off-button and that whole mechanism … they actually give it a name and they call it the Trojan horse mechanism, because it allows that [synthetic] virus and that piece of that [synthetic] virus to get inside of your cells, start to replicate and even get inserted into other parts of your DNA as a Trojan-horse.

Ask the overwhelming majority of people who have the 'vaccine' what they know about the contents and what they do and they would reply: 'The government says it will stop me getting the virus.' Governments give that false impression on purpose to increase take-up. You can read Sherri Tenpenny's detailed analysis of the health consequences in her blog at Vaxxter.com, but in summary these are some of them. She highlights the statement by Bill Gates about how human beings can become their own 'vaccine manufacturing machine'. The man is insane. ['Vaccine'-generated] 'antibodies' carry synthetic messenger RNA into the cells and the damage starts, Tenpenny contends, and she says that lungs can be adversely affected through varying degrees of pus and bleeding which obviously affects breathing and would be dubbed ‘Covid-19’. Even more sinister was the impact of ‘antibodies’ on macrophages, a white blood cell of the immune system. They consist of Type 1 and Type 2 which have very different functions. She said Type 1 are ‘hyper-vigilant’ white blood cells which ‘gobble up’ bacteria etc. However, in doing so, this could cause inflammation and in extreme circumstances be fatal. She says these affects are mitigated by Type 2 macrophages which kick in to calm down the system and stop it going rogue. They clear up dead tissue debris and reduce inflammation that the Type 1 ‘fire crews’ have caused. Type 1 kills the infection and Type 2 heals the damage, she says. This is her punchline with regard to ‘Covid vaccinations’: She says that mRNA ‘antibodies’ block Type 2 macrophages by attaching to them and deactivating them. This meant that when the Type 1 response was triggered by infection there was nothing to stop that getting out of hand by calming everything down. There’s an on-switch, but no off-switch, she says. What follows can be ‘over and out, see you when I see you’.

Genetic suicide

Tenpenny also highlights the potential for autoimmune disease – the body attacking itself – which has been associated with vaccines since they first appeared. Infusing a synthetic foreign substance into cells could cause the immune system to react in a panic believing that the body is being overwhelmed by an invader (it is) and the consequences can again be fatal. There is an autoimmune response known as a ‘cytokine storm’ which I have likened to a homeowner panicked by an intruder and picking up a gun to shoot randomly in all directions before turning the fire on himself. The immune system unleashes a storm of inflammatory response called cytokines to a threat and the body commits hara-kiri. The lesson is that you mess with the body’s immune response at your peril and these ‘vaccines’ seriously – fundamentally – mess with immune response. Tenpenny refers to a consequence called anaphylactic shock which is a severe and highly dangerous allergic reaction when the immune system floods the body with chemicals. She gives the example of having a bee sting which primes the immune system and makes it sensitive to those chemicals. When people are stung again maybe years later the immune response can be so powerful that it leads to anaphylactic shock. Tenpenny relates this 'shock' with regard to the 'Covid vaccine' to something called polyethylene glycol or PEG. Enormous numbers of people have become sensitive to this over decades of use in a whole range of products and processes including food, drink, skin creams and 'medicine'. Studies have claimed that some 72 percent of people have antibodies triggered by PEG compared with two percent in the 1960s and allergic hypersensitive reactions to this become a gathering cause for concern. Tenpenny points out that the 'mRNA vaccine' is coated in a 'bubble' of polyethylene glycol which has the potential to cause anaphylactic shock through immune sensitivity. Many reports have appeared of people reacting this way after having the 'Covid vaccine'. What do we think is going to happen as humanity has more and more of these 'vaccines'? Tenpenny said: 'All these pictures we have seen with people with these rashes … these weepy rashes, big reactions on their arms and things like that – it's an acute allergic reaction most likely to the polyethylene glycol that you've been previously primed and sensitised to.'

Those who have not studied the conspiracy and its perpetrators at length might think that making the population sensitive to PEG and then putting it in these 'vaccines' is just a coincidence. It is not. It is instead testament to how carefully and coldly-planned current events have been and the scale of the conspiracy we are dealing with. Tenpenny further explains that the 'vaccine' mRNA procedure can breach the blood-brain barrier which protects the brain from toxins and other crap that will cause malfunction. In this case they could make two proteins corrupt brain function to cause Amyotrophic lateral sclerosis (ALS) , a progressive nervous system disease leading to loss of muscle control, and frontal lobe degeneration – Alzheimer's and dementia. Immunologist J. Bart Classon published a paper connecting mRNA 'vaccines' to prion disease which can lead to Alzheimer's and other forms of neurogenerative disease while others have pointed out the potential to affect the placenta in ways that make women infertile. This will become highly significant in the next chapter when I will discuss other aspects of this non-vaccine that relate to its nanotechnology and transmission from the injected to the uninjected.

Qualified in idiocy

Tenpenny describes how research has confirmed that these 'vaccine'-generated antibodies can interact with a range of other tissues in the body and attack many other organs including the lungs. 'This means that if you have a hundred people standing in front of you that all got this shot they could have a hundred different symptoms.' Anyone really think that Cult gofers like the Queen, Tony Blair, Christopher Whitty, Anthony Fauci, and all the other psychopaths have really had this 'vaccine' in the pictures we've seen? Not a bloody chance. Why don't doctors all tell us about all these dangers and consequences of the 'Covid vaccine'? Why instead do they encourage and pressure patients to have the shot? Don't let's think for a moment that doctors and medical staff can't be stupid, lazy, and psychopathic and that's without the financial incentives to give the jab. Tenpenny again:

> Some people are going to die from the vaccine directly but a large number of people are going to start to get horribly sick and get all kinds of autoimmune diseases 42 days to maybe a year out. What are they going to do, these stupid doctors who say; 'Good for you for getting that vaccine.' What are they going to say; 'Oh, it must be a mutant, we need to give an extra dose of that vaccine.'
>
> Because now the vaccine, instead of one dose or two doses we need three or four because the stupid physicians aren't taking the time to learn anything about it. If I can learn this sitting in my living room reading a 19 page paper and several others so can they. There's nothing special about me, I just take the time to do it.

Remember how Sara Kayat, the NHS and TV doctor, said that the 'Covid vaccine' would '100 percent prevent hospitalisation and death'. Doctors can be idiots like every other profession and they should not be worshipped as infallible. They are not and far from it. Behind many medical and scientific 'experts' lies an uninformed prat trying to hide themselves from you although in the 'Covid' era many have failed to do so as with UK narrative-repeating 'TV doctor' Hilary Jones. Pushing back against the minority of proper doctors and scientists speaking out against the 'vaccine' has been the entire edifice of the Cult global state in the form of governments, medical systems, corporations, mainstream media, Silicon Valley, and an army of compliant doctors, medical staff and scientists willing to say anything for money and to enhance their careers by promoting the party line. If you do that you are an 'expert' and if you won't you are an 'anti-vaxxer' and 'Covidiot'. The pressure to be 'vaccinated' is incessant. We have even had reports claiming that the 'vaccine' can help cure cancer and Alzheimer's and make the lame walk. I am waiting for the announcement that it can bring you coffee in the morning and cook your tea. Just as the symptoms of 'Covid' seem to increase by the week so have the miracles of the 'vaccine'. American supermarket giant Kroger Co. offered nearly 500,000 employees in 35 states a $100 bonus for having the 'vaccine' while donut chain Krispy Kreme promised 'vaccinated' customers a free glazed donut every day for the rest of 2021. Have your DNA changed and you will get a doughnut although we might not have to give you them for long. Such offers and incentives confirm the desperation.

Perhaps the worse vaccine-stunt of them all was UK 'Health' Secretary Matt-the-prat Hancock on live TV after watching a clip of someone being 'vaccinated' when the roll-out began. Hancock faked tears so badly it was embarrassing. Brain-of-Britain Piers Morgan, the lockdown-supporting, 'vaccine' supporting, 'vaccine' passport-supporting, TV host played along with Hancock – 'You're quite emotional about that' he said in response to acting so atrocious it would have been called out at a school nativity which will presumably today include Mary and Jesus in masks, wise men keeping their camels six feet apart, and shepherds under tent arrest. System-serving Morgan tweeted this: 'Love the idea of covid vaccine passports for everywhere: flights, restaurants, clubs, football, gyms, shops etc. It’s time covid-denying, anti-vaxxer loonies had their bullsh*t bluff called & bar themselves from going anywhere that responsible citizens go.’ If only I could aspire to his genius. To think that Morgan, who specialises in shouting over anyone he disagrees with, was lauded as a free speech hero when he lost his job after storming off the set of his live show like a child throwing his dolly out of the pram. If he is a free speech hero we are in real trouble. I have no idea what ‘bullsh*t’ means, by the way, the * throws me completely.

The Cult is desperate to infuse its synthetic DNA-changing concoction into everyone and has been using every lie, trick and intimidation to do so. The question of ‘*Why*?’ we shall now address.

CHAPTER TEN

Human 2.0

***I believe that at the end of the century the use of words and general educated opinion will have altered so much that one will be able to speak of machines thinking without expecting to be contradicted* –**
Alan Turing (1912-1954), the 'Father of artificial intelligence'

I have been exposing for decades the plan to transform the human body from a biological to a synthetic-biological state. The new human that I will call Human 2.0 is planned to be connected to artificial intelligence and a global AI 'Smart Grid' that would operate as one global system in which AI would control everything from your fridge to your heating system to your car to your mind. Humans would no longer be 'human', but post-human and sub-human, with their thinking and emotional processes replaced by AI.

What I said sounded crazy and beyond science fiction and I could understand that. To any balanced, rational, mind it *is* crazy. Today, however, that world is becoming reality and it puts the 'Covid vaccine' into its true context. Ray Kurzweil is the ultra-Zionist 'computer scientist, inventor and futurist' and co-founder of the Singularity University. Singularity refers to the merging of humans with machines or 'transhumanism'. Kurzweil has said humanity would be connected to the cyber 'cloud' in the period of the ever-recurring year of 2030:

> Our thinking … will be a hybrid of biological and non-biological thinking … humans will be able to extend their limitations and 'think in the cloud' … We're going to put gateways to the

> cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations. As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

They are trying to sell this end-of-humanity-as-we-know-it as the next stage of 'evolution' when we become super-human and 'like the gods'. They are lying to you. Shocked, eh? The population, and again especially the young, have been manipulated into addiction to technologies designed to enslave them for life. First they induced an addiction to smartphones (holdables); next they moved to technology on the body (wearables); and then began the invasion of the body (implantables). I warned way back about the plan for microchipped people and we are now entering that era. We should not be diverted into thinking that this refers only to chips we can see. Most important are the nanochips known as smart dust, neural dust and nanobots which are far too small to be seen by the human eye. Nanotechnology is everywhere, increasingly in food products, and released into the atmosphere by the geoengineering of the skies funded by Bill Gates to 'shut out the Sun' and 'save the planet from global warming'. Gates has been funding a project to spray millions of tonnes of chalk (calcium carbonate) into the stratosphere over Sweden to 'dim the Sun' and cool the Earth. Scientists warned the move could be disastrous for weather systems in ways no one can predict and opposition led to the Swedish space agency announcing that the 'experiment' would not be happening as planned in the summer of 2021; but it shows where the Cult is going with dimming the impact of the Sun and there's an associated plan to change the planet's atmosphere. Who gives psychopath Gates the right to dictate to the entire human race and dismantle planetary systems? The world will not be safe while this man is at large.

The global warming hoax has made the Sun, like the gas of life, something to fear when both are essential to good health and human survival (more inversion). The body transforms sunlight into vital vitamin D through a process involving … *cholesterol*. This is the cholesterol we are also told to fear. We are urged to take Big Pharma statin drugs to reduce cholesterol and it's all systematic. Reducing cholesterol means reducing vitamin D uptake with all the multiple health problems that will cause. At least if you take statins long term it saves the government from having to pay you a pension. The delivery system to block sunlight is widely referred to as chemtrails although these have a much deeper agenda, too. They appear at first to be contrails or condensation trails streaming from aircraft into cold air at high altitudes. Contrails disperse very quickly while chemtrails do not and spread out across the sky before eventually their content falls to earth. Many times I have watched aircraft cross-cross a clear blue sky releasing chemtrails until it looks like a cloudy day. Chemtrails contain many things harmful to humans and the natural world including toxic heavy metals, aluminium (see Alzheimer's) and nanotechnology. Ray Kurzweil reveals the reason without actually saying so: 'Nanobots will infuse all the matter around us with information. Rocks, trees, everything will become these intelligent creatures.' How do you deliver that? *From the sky*. Self-replicating nanobots would connect everything to the Smart Grid. The phenomenon of Morgellons disease began in the chemtrail era and the correlation has led to it being dubbed the 'chemtrail disease'. Self-replicating fibres appear in the body that can be pulled out through the skin. Morgellons fibres continue to grow outside the body and have a form of artificial intelligence. I cover this at greater length in *Phantom Self*.

'Vaccine' operating system

'Covid vaccines' with their self-replicating synthetic material are also designed to make the connection between humanity and Kurzweil's 'cloud'. American doctor and dedicated campaigner for truth, Carrie Madej, an Internal Medicine Specialist in Georgia with more than 20 years medical experience, has highlighted the nanotechnology aspect of the fake 'vaccines'. She explains how one of the components in at least the Moderna and Pfizer synthetic potions are 'lipid nanoparticles' which are 'like little tiny computer bits' – a 'sci-fi substance' known as nanobots and hydrogel which can be 'triggered at any moment to deliver its payload' and act as 'biosensors'. The synthetic substance had 'the ability to accumulate data from your body like your breathing, your respiration, thoughts and emotions, all kind of things' and each syringe could carry a *million* nanobots:

> This substance because it's like little bits of computers in your body, crazy, but it's true, it can do that, [and] obviously has the ability to act through Wi-Fi. It can receive and transmit energy, messages, frequencies or impulses. That issue has never been addressed by these companies. What does that do to the human?
>
> Just imagine getting this substance in you and it can react to things all around you, the 5G, your smart device, your phones, what is happening with that? What if something is triggering it, too, like an impulse, a frequency? We have something completely foreign in the human body.

Madej said her research revealed that electromagnetic (EMF) frequencies emitted by phones and other devices had increased dramatically in the same period of the 'vaccine' rollout and she was seeing more people with radiation problems as 5G and other electromagnetic technology was expanded and introduced to schools and hospitals. She said she was 'floored with the EMF coming off' the devices she checked. All this makes total sense and syncs with my own work of decades when you think that Moderna refers in documents to its mRNA 'vaccine' as an 'operating system':

> Recognizing the broad potential of mRNA science, we set out to create an mRNA technology platform that functions very much like an operating system on a computer. It is designed so that it can plug and play interchangeably with different programs. In our case, the 'program' or 'app' is our mRNA drug – the unique mRNA sequence that codes for a protein …
>
> … Our MRNA Medicines – 'The 'Software Of Life': When we have a concept for a new mRNA medicine and begin research, fundamental components are already in place. Generally, the only thing that changes from one potential mRNA medicine to another is the coding region – the actual genetic code that instructs ribosomes to make protein. Utilizing these instruction sets gives our investigational mRNA medicines a software-like quality. We also have the ability to combine different mRNA sequences encoding for different proteins in a single mRNA investigational medicine.

Who needs a real 'virus' when you can create a computer version to justify infusing your operating system into the entire human race on the road to making living, breathing people into cyborgs? What is missed with the 'vaccines' is the *digital* connection between synthetic material and the body that I highlighted earlier with the study that hacked a computer with human DNA. On one level the body is digital, based on mathematical codes, and I'll have more about that in the next chapter. Those who ridiculously claim that mRNA 'vaccines' are not designed to change human genetics should explain the words of Dr Tal Zaks, chief medical officer at Moderna, in a 2017 TED talk. He said that over the last 30 years 'we've been living this phenomenal digital scientific revolution, and I'm here today to tell you, that we are actually *hacking the software of life*, and that it's changing the way we think about prevention and treatment of disease':

> In every cell there's this thing called messenger RNA, or mRNA for short, that transmits the critical information from the DNA in our genes to the protein, which is really the stuff we're all made out of. This is the critical information that determines what the cell will do. So we think about it as an operating system. So if you could change that, if you could introduce a line of code, or change a line of code, it turns out, that has profound implications for everything, from the flu to cancer.

Zaks should more accurately have said that this has profound implications for the human genetic code and the nature of DNA. Communications within the body go both ways and not only one. But, hey, no, the 'Covid vaccine' will not affect your genetics. Cult fact-checkers say so even though the man who helped to develop the mRNA technique says that it does. Zaks said in 2017:

> If you think about what it is we're trying to do. We've taken information and our understanding of that information and how that information is transmitted in a cell, and we've taken our understanding of medicine and how to make drugs, and we're fusing the two. We think of it as information therapy.

I have been writing for decades that the body is an information field communicating with itself and the wider world. This is why radiation which is information can change the information field of body and mind through phenomena like 5G and change their nature and function. ‘Information therapy’ means to change the body’s information field and change the way it operates. DNA is a receiver-transmitter of information and can be mutated by information like mRNA synthetic messaging. Technology to do this has been ready and waiting in the underground bases and other secret projects to be rolled out when the ‘Covid’ hoax was played. ‘Trials’ of such short and irrelevant duration were only for public consumption. When they say the ‘vaccine’ is ‘experimental’ that is not true. It may appear to be ‘experimental’ to those who don’t know what’s going on, but the trials have already been done to ensure the Cult gets the result it desires. Zaks said that it took decades to sequence the human genome, completed in 2003, but now they could do it in a week. By ‘they’ he means scientists operating in the public domain. In the secret projects they were sequencing the genome in a week long before even 2003.

Deluge of mRNA

Highly significantly the Moderna document says the guiding premise is that if using mRNA as a medicine works for one disease then it should work for many diseases. They were leveraging the flexibility afforded by their platform and the fundamental role mRNA plays in protein synthesis to pursue mRNA medicines for a broad spectrum of diseases. Moderna is confirming what I was saying through 2020 that multiple ‘vaccines’ were planned for ‘Covid’ (and later invented ‘variants’) and that previous vaccines would be converted to the mRNA system to infuse the body with massive amounts of genetically-manipulating synthetic material to secure a transformation to a synthetic-biological state. The ‘vaccines’ are designed to kill stunning numbers as part of the long-exposed Cult depopulation agenda and transform the rest. Given this is the goal you can appreciate why there is such hysterical demand for every human to be ‘vaccinated’ for an alleged ‘disease’ that has an estimated ‘infection’ to ‘death’ ratio of 0.23-0.15 percent. As I write children are being given the ‘vaccine’ in trials (their parents are a disgrace) and ever-younger people are being offered the vaccine for a ‘virus’ that even if you believe it exists has virtually zero chance of harming them. Horrific effects of the ‘trials’ on a 12-year-old girl were revealed by a family member to be serious brain and gastric problems that included a bowel obstruction and the inability to swallow liquids or solids. She was unable to eat or drink without throwing up, had extreme pain in her back, neck and abdomen, and was paralysed from the waist down which stopped her urinating unaided. When the girl was first taken to hospital doctors said it was all in her mind. She was signed up for the ‘trial’ by her parents for whom no words suffice. None of this ‘Covid vaccine’ insanity makes any sense unless you see what the ‘vaccine’ really is – a body-changer. Synthetic biology or ‘SynBio’ is a fast-emerging and expanding scientific discipline which includes everything from genetic and molecular engineering to electrical and computer engineering. Synthetic biology is defined in these ways:

- A multidisciplinary area of research that seeks to create new biological parts, devices, and systems, or to redesign systems that are already found in nature.

- The use of a mixture of physical engineering and genetic engineering to create new (and therefore synthetic) life forms.

- An emerging field of research that aims to combine the knowledge and methods of biology, engineering and related disciplines in the design of chemically-synthesized DNA to create organisms with novel or enhanced characteristics and traits (synthetic organisms including humans).

We now have synthetic blood, skin, organs and limbs being developed along with synthetic body parts produced by 3D printers. These are all elements of the synthetic human programme and this comment by Kurzweil’s co-founder of the Singularity University, Peter Diamandis, can be seen in a whole new light with the 'Covid' hoax and the sanctions against those that refuse the 'vaccine':

> Anybody who is going to be resisting the progress forward [to transhumanism] is going to be resisting evolution and, fundamentally, they will die out. It's not a matter of whether it's good or bad. It's going to happen.

'Resisting evolution'? What absolute bollocks. The arrogance of these people is without limit. His 'it's going to happen' mantra is another way of saying 'resistance is futile' to break the spirit of those pushing back and we must not fall for it. Getting this genetically-transforming 'vaccine' into everyone is crucial to the Cult plan for total control and the desperation to achieve that is clear for anyone to see. Vaccine passports are a major factor in this and they, too, are a form of resistance is futile. It's NOT. The paper funded by the Rockefeller Foundation for the 2013 'health conference' in China said:

> We will interact more with artificial intelligence. The use of robotics, bio-engineering to augment human functioning is already well underway and will advance. Re-engineering of humans into potentially separate and unequal forms through genetic engineering or mixed human-robots raises debates on ethics and equality.
>
> A new demography is projected to emerge after 2030 [that year again] of technologies (robotics, genetic engineering, nanotechnology) producing robots, engineered organisms, 'nanobots' and artificial intelligence (AI) that can self-replicate. Debates will grow on the implications of an impending reality of human designed life.

What is happening today is so long planned. The world army enforcing the will of the world government is intended to be a robot army, not a human one. Today's military and its technologically 'enhanced' troops, pilotless planes and driverless vehicles are just stepping stones to that end. Human soldiers are used as Cult fodder and its time they woke up to that and worked for the freedom of the population instead of their own destruction and their family's destruction – the same with the police. Join us and let's sort this out. The phenomenon of enforce my own destruction is widespread in the 'Covid' era with Woker 'luvvies' in the acting and entertainment industries supporting ‘Covid’ rules which have destroyed their profession and the same with those among the public who put signs on the doors of their businesses ‘closed due to Covid – stay safe’ when many will never reopen. It’s a form of masochism and most certainly insanity.

Transgender = transhumanism

When something explodes out of nowhere and is suddenly everywhere it is always the Cult agenda and so it is with the tidal wave of claims and demands that have infiltrated every aspect of society under the heading of ‘transgenderism’. The term ‘trans’ is so ‘in’ and this is the dictionary definition:

> A prefix meaning ‘across’, ’through’, occurring … in loanwords from Latin, used in particular for denoting movement or conveyance from place to place (transfer; transmit; transplant) or complete change (transform; transmute), or to form adjectives meaning ’crossing’, ‘on the other side of’, or ‘going beyond’ the place named (transmontane; transnational; trans-Siberian).

Transgender means to go beyond gender and transhuman means to go beyond human. Both are aspects of the Cult plan to transform the human body to a synthetic state with *no gender*. Human 2.0 is not designed to procreate and would be produced technologically with no need for parents. The new human would mean the end of parents and so men, and increasingly women, are being targeted for the deletion of their rights and status. Parental rights are disappearing at an ever-quickening speed for the same reason. The new human would have no need for men or women when there is no procreation and no gender. Perhaps the transgender movement that appears to be in a permanent state of frenzy might now contemplate on how it is being used. This was never about transgender rights which are only the interim excuse for confusing gender, particularly in the young, on the road to *fusing* gender. Transgender activism is not an end; it is a *means* to an end. We see again the technique of creative destruction in which you destroy the status quo to ‘build back better’ in the form that you want. The gender status quo had to be destroyed by persuading the Cult-created Woke mentality to believe that you can have 100 genders or more. A programme for 9 to 12 year olds produced by the Cult-owned BBC promoted the 100 genders narrative. The very idea may be the most monumental nonsense, but it is not what is true that counts, only what you can make people *believe* is true. Once the gender of 2 + 2 = 4 has been dismantled through indoctrination, intimidation and 2 + 2 = 5 then the new no-gender normal can take its place with Human 2.0. Aldous Huxley revealed the plan in his prophetic *Brave New World* in 1932:

> Natural reproduction has been done away with and children are created, decanted', and raised in 'hatcheries and conditioning centres'. From birth, people are genetically designed to fit into one of five castes, which are further split into 'Plus' and 'Minus' members and designed to fulfil predetermined positions within the social and economic strata of the World State.

How could Huxley know this in 1932? For the same reason George Orwell knew about the Big Brother state in 1948, Cult insiders I have quoted knew about it in 1969, and I have known about it since the early 1990s. If you are connected to the Cult or you work your balls off to uncover the plan you can predict the future. The process is simple. If there is a plan for the world and nothing intervenes to stop it then it will happen. Thus if you communicate the plan ahead of time you are perceived to have predicted the future, but you haven't. You have revealed the plan which without intervention will become the human future. The whole reason I have done what I have is to alert enough people to inspire an intervention and maybe at last that time has come with the Cult and its intentions now so obvious to anyone with a brain in working order.

The future is here

Technological wombs that Huxley described to replace parent procreation are already being developed and they are only the projects we know about in the public arena. Israeli scientists told *The Times of Israel* in March, 2021, that they have grown 250-cell embryos into mouse foetuses with fully formed organs using artificial wombs in a development they say could pave the way for gestating humans outside the womb. Professor Jacob Hanna of the Weizmann Institute of Science said:

> We took mouse embryos from the mother at day five of development, when they are just of 250 cells, and had them in the incubator from day five until day 11, by which point they had grown all their organs.
>
> By day 11 they make their own blood and have a beating heart, a fully developed brain. Anybody would look at them and say, 'this is clearly a mouse foetus with all the characteristics of a mouse.' It's gone from being a ball of cells to being an advanced foetus.

A special liquid is used to nourish embryo cells in a laboratory dish and they float on the liquid to duplicate the first stage of embryonic development. The incubator creates all the right conditions for its development, Hanna said. The liquid gives the embryo 'all the nutrients, hormones and sugars they need' along with a custom-made electronic incubator which controls gas concentration, pressure and temperature. The cutting-edge in the underground bases and other secret locations will be light years ahead of that, however, and this was reported by the London *Guardian* in 2017:

> We are approaching a biotechnological breakthrough. Ectogenesis, the invention of a complete external womb, could completely change the nature of human reproduction. In April this year, researchers at the Children's Hospital of Philadelphia announced their development of an artificial womb.

The article was headed 'Artificial wombs could soon be a reality. What will this mean for women?' What would it mean for children is an even bigger question. No mother to bond with only a machine in preparation for a life of soulless interaction and control in a world governed by machines (see the *Matrix* movies). Now observe the calculated manipulations of the 'Covid' hoax as human interaction and warmth has been curtailed by distancing, isolation and fear with people communicating via machines on a scale never seen before.

These are all dots in the same picture as are all the personal assistants, gadgets and children's toys through which kids and adults communicate with AI as if it is human. The AI 'voice' on Sat-Nav should be included. All these things are psychological preparation for the Cult endgame. Before you can make a physical connection with AI you have to make a psychological connection and that is what people are being conditioned to do with this ever gathering human-AI interaction. Movies and TV programmes depicting the transhuman, robot dystopia relate to a phenomenon known as 'pre-emptive programming' in which the world that is planned is portrayed everywhere in movies, TV and advertising. This is conditioning the conscious and subconscious mind to become familiar with the planned reality to dilute resistance when it happens for real. What would have been a shock such is the change is made less so. We have young children put on the road to transgender transition surgery with puberty blocking drugs at an age when they could never be able to make those life-changing decisions.

Rachel Levine, a professor of paediatrics and psychiatry who believes in treating children this way, became America's highest-ranked openly-transgender official when she was confirmed as US Assistant Secretary at the Department of Health and Human Services after being nominated by Joe Biden (the Cult). Activists and governments press for laws to deny parents a say in their children's transition process so the kids can be isolated and manipulated into agreeing to irreversible medical procedures. A Canadian father Robert Hoogland was denied bail by the Vancouver Supreme Court in 2021 and remained in jail for breaching a court order that he stay silent over his young teenage daughter, a minor, who was being offered life-changing hormone therapy without parental consent. At the age of 12 the girl's 'school counsellor' said she may be transgender, referred her to a doctor and told the school to treat her like a boy. This is another example of state-serving schools imposing ever more control over children's lives while parents have ever less.

Contemptible and extreme child abuse is happening all over the world as the Cult gender-fusion operation goes into warp-speed.

Why the war on men – and now women?

The question about what artificial wombs mean for women should rightly be asked. The answer can be seen in the deletion of women's rights involving sport, changing rooms, toilets and status in favour of people in male bodies claiming to identify as women. I can identify as a mountain climber, but it doesn't mean I can climb a mountain any more than a biological man can be a biological woman. To believe so is a triumph of belief over factual reality which is the very perceptual basis of everything Woke. Women's sport is being destroyed by allowing those with male bodies who say they identify as female to 'compete' with girls and women. Male body 'women' dominate 'women's' competition with their greater muscle mass, bone density, strength and speed. With that disadvantage sport for women loses all meaning. To put this in perspective nearly 300 American high school boys can run faster than the quickest woman sprinter in the world. Women are seeing their previously protected spaces invaded by male bodies simply because they claim to identify as women. That's all they need to do to access all women's spaces and activities under the Biden 'Equality Act' that destroys equality for women with the usual Orwellian Woke inversion. Male sex offenders have already committed rapes in women's prisons after claiming to identify as women to get them transferred. Does this not matter to the Woke 'equality' hypocrites? Not in the least. What matters to Cult manipulators and funders behind transgender activists is to advance gender fusion on the way to the no-gender 'human'. When you are seeking to impose transparent nonsense like this, or the 'Covid' hoax, the only way the nonsense can prevail is through censorship and intimidation of dissenters, deletion of factual information, and programming of the unquestioning, bewildered and naive. You don't have to scan the world for long to see that all these things are happening.

Many women's rights organisations have realised that rights and status which took such a long time to secure are being eroded and that it is systematic. Kara Dansky of the global Women's Human Rights Campaign said that Biden's transgender executive order immediately he took office, subsequent orders, and Equality Act legislation that followed 'seek to erase women and girls in the law as a category'. *Exactly*. I said during the long ago-started war on men (in which many women play a crucial part) that this was going to turn into a war on them. The Cult is phasing out *both* male and female genders. To get away with that they are brought into conflict so they are busy fighting each other while the Cult completes the job with no unity of response. Unity, people, *unity*. We need unity everywhere. Transgender is the only show in town as the big step towards the no-gender human. It's not about rights for transgender people and never has been. Woke political correctness is deleting words relating to genders to the same end. Wokers believe this is to be 'inclusive' when the opposite is true. They are deleting words describing gender because gender *itself* is being deleted by Human 2.0. Terms like 'man', 'woman', 'mother' and 'father' are being deleted in the universities and other institutions to be replaced by the *no*-gender, not trans-gender, 'individuals' and 'guardians'. Women's rights campaigner Maria Keffler of Partners for Ethical Care said: 'Children are being taught from kindergarten upward that some boys have a vagina, some girls have a penis, and that kids can be any gender they want to be.' Do we really believe that suddenly countries all over the world at the same time had the idea of having drag queens go into schools or read transgender stories to very young children in the local library? It's coldly-calculated confusion of gender on the way to the fusion of gender. Suzanne Vierling, a psychologist from Southern California, made another important point:

> Yesterday's slave woman who endured gynecological medical experiments is today's girl-child being butchered in a booming gender-transitioning sector. Ovaries removed, pushing her into menopause and osteoporosis, uncharted territory, and parents' rights and authority decimated.

The erosion of parental rights is a common theme in line with the Cult plans to erase the very concept of parents and 'ovaries removed, pushing her into menopause' means what? Those born female lose the ability to have children – another way to discontinue humanity as we know it.

Eliminating Human 1.0 (before our very eyes)

To pave the way for Human 2.0 you must phase out Human 1.0. This is happening through plummeting sperm counts and making women infertile through an onslaught of chemicals, radiation (including smartphones in pockets of men) and mRNA 'vaccines'. Common agriculture pesticides are also having a devastating impact on human fertility. I have been tracking collapsing sperm counts in the books for a long time and in 2021 came a book by fertility scientist and reproductive epidemiologist Shanna Swan, *Count Down: How Our Modern World Is Threatening Sperm Counts, Altering Male and Female Reproductive Development and Imperiling the Future of the Human Race*. She reports how the global fertility rate dropped by *half* between 1960 and 2016 with America's birth rate 16 percent below where it needs to be to sustain the population. Women are experiencing declining egg quality, more miscarriages, and more couples suffer from infertility. Other findings were an increase in erectile dysfunction, infant boys developing more genital abnormalities, male problems with conception, and plunging levels of the male hormone testosterone which would explain why so many men have lost their backbone and masculinity. This has been very evident during the 'Covid' hoax when women have been prominent among the Pushbackers and big strapping blokes have bowed their heads, covered their faces with a nappy and quietly submitted. Mind control expert Cathy O'Brien also points to how global education introduced the concept of 'we're all winners' in sport and classrooms: 'Competition was defused, and it in turn defused a sense of fighting back.' This is another version of the 'equity' doctrine in which you drive down rather than raise up. What a contrast in Cult-controlled China with its global ambitions where the government published plans in January, 2021, to 'cultivate masculinity' in boys from kindergarten through to high school in the face of a 'masculinity crisis'. A government adviser said boys would be soon become 'delicate, timid and effeminate' unless action was taken. Don't expect any similar policy in the targeted West. A 2006 study showed that a 65-year-old man in 2002 had testosterone levels *15 percent* lower than a 65-year-old man in 1987 while a 2020 study found a similar story with young adults and adolescents. Men are getting prescriptions for testosterone replacement therapy which causes an even greater drop in sperm count with up to 99 percent seeing sperm counts drop to zero during the treatment. More sperm is defective and malfunctioning with some having two heads or not pursuing an egg.

A class of *synthetic* chemicals known as phthalates are being blamed for the decline. These are found everywhere in plastics, shampoos, cosmetics, furniture, flame retardants, personal care products, pesticides, canned foods and even receipts. Why till receipts? Everyone touches them. Let no one delude themselves that all this is not systematic to advance the long-time agenda for human body transformation. Phthalates mimic hormones and disrupt the hormone balance causing testosterone to fall and genital birth defects in male infants. Animals and fish have been affected in the same way due to phthalates and other toxins in rivers. When fish turn gay or change sex through chemicals in rivers and streams it is a pointer to why there has been such an increase in gay people and the sexually confused. It doesn't matter to me what sexuality people choose to be, but if it's being affected by chemical pollution and consumption then we need to know. Does anyone really think that this is not connected to the transgender agenda, the war on men and the condemnation of male 'toxic masculinity'? You watch this being followed by 'toxic femininity'. It's already happening. When breastfeeding becomes 'chest-feeding', pregnant women become pregnant people along with all the other Woke claptrap you know that the world is going insane and there's a Cult scam in progress. Transgender activists are promoting the Cult agenda while Cult billionaires support and fund the insanity as they laugh themselves to sleep at the sheer stupidity for which humans must be infamous in galaxies far, far away.

'Covid vaccines' and female infertility

We can now see why the 'vaccine' has been connected to potential infertility in women. Dr Michael Yeadon, former Vice President and Chief Scientific Advisor at Pfizer, and Dr Wolfgang Wodarg in Germany, filed a petition with the European Medicines Agency in December, 2020, urging them to stop trials for the Pfizer/BioNTech shot and all other mRNA trials until further studies had been done. They were particularly concerned about possible effects on fertility with 'vaccine'-produced antibodies attacking the protein Syncytin-1 which is responsible for developing the placenta. The result would be infertility 'of indefinite duration' in women who have the 'vaccine' with the placenta failing to form. Section 10.4.2 of the Pfizer/BioNTech trial protocol says that pregnant women or those who might become so should not have mRNA shots. Section 10.4 warns men taking mRNA shots to 'be abstinent from heterosexual intercourse' and not to donate sperm. The UK government said that it *did not know* if the mRNA procedure had an effect on fertility. *Did not know?* These people have to go to jail. UK government advice did not recommend at the start that pregnant women had the shot and said they should avoid pregnancy for at least two months after 'vaccination'. The 'advice' was later updated to pregnant women should only have the 'vaccine' if the benefits outweighed the risks to mother and foetus. What the hell is that supposed to mean? Then 'spontaneous abortions' began to appear and rapidly increase on the adverse reaction reporting schemes which include only a fraction of adverse reactions. Thousands and ever-growing numbers of 'vaccinated' women are describing changes to their menstrual cycle with heavier blood flow, irregular periods and menstruating again after going through the menopause – all links to reproduction effects. Women are passing blood clots and the lining of their uterus while men report erectile dysfunction and blood effects. Most significantly of all *un*vaccinated women began to report similar menstrual changes after interaction with *'vaccinated'* people and men and children were also affected with bleeding noses, blood clots and other conditions. 'Shedding' is when vaccinated people can emit the content of a vaccine to affect the unvaccinated, but this is different. 'Vaccinated' people were not shedding a 'live virus' allegedly in 'vaccines' as before because the fake 'Covid vaccines' involve synthetic material and other toxicity. Doctors exposing what is happening prefer the term 'transmission' to shedding. Somehow those that have had the shots are transmitting effects to those that haven't. Dr Carrie Madej said the nano-content of the 'vaccines' can 'act like an antenna' to others around them which fits perfectly with my own conclusions. This 'vaccine' transmission phenomenon was becoming known as the book went into production and I deal with this further in the Postscript.

Vaccine effects on sterility are well known. The World Health Organization was accused in 2014 of sterilising millions of women in Kenya with the evidence confirmed by the content of the vaccines involved. The same WHO behind the 'Covid' hoax admitted its involvement for more than ten years with the vaccine programme. Other countries made similar claims. Charges were lodged by Tanzania, Nicaragua, Mexico, and the Philippines. The Gardasil vaccine claimed to protect against a genital 'virus' known as HPV has also been linked to infertility. Big Pharma and the WHO (same thing) are criminal and satanic entities. Then there's the Bill Gates Foundation which is connected through funding and shared interests with 20 pharmaceutical giants and laboratories. He stands accused of directing the policy of United Nations Children's Fund (UNICEF), vaccine alliance GAVI, and other groupings, to advance the vaccine agenda and silence opposition at great cost to women and children. At the same time Gates wants to reduce the global population. Coincidence?

Great Reset = Smart Grid = new human

The Cult agenda I have been exposing for 30 years is now being openly promoted by Cult assets like Gates and Klaus Schwab of the World Economic Forum under code-terms like the 'Great Reset', 'Build Back Better' and 'a rare but narrow window of opportunity to reflect, reimagine, and reset our world'. What provided this 'rare but narrow window of opportunity'? The 'Covid' hoax did. Who created that? *They* did. My books from not that long ago warned about the planned 'Internet of Things' (IoT) and its implications for human freedom. This was the plan to connect all technology to the Internet and artificial intelligence and today we are way down that road with an estimated 36 billion devices connected to the World Wide Web and that figure is projected to be 76 billion by 2025. I further warned that the Cult planned to go beyond that to the Internet of *Everything* when the human brain was connected via AI to the Internet and Kurzweil's 'cloud'. Now we have Cult operatives like Schwab calling for precisely that under the term 'Internet of Bodies', a fusion of the physical, digital and biological into one centrally-controlled Smart Grid system which the Cult refers to as the 'Fourth Industrial Revolution'. They talk about the 'biological', but they really mean the synthetic-biological which is required to fully integrate the human body and brain into the Smart Grid and artificial intelligence planned to replace the human mind. We have everything being synthetically manipulated including the natural world through GMO and smart dust, the food we eat and the human body itself with synthetic 'vaccines'. I said in *The Answer* that we would see the Cult push for synthetic meat to replace animals and in February, 2021, the so predictable psychopath Bill Gates called for the introduction of synthetic meat to save us all from 'climate change'. The climate hoax just keeps on giving like the 'Covid' hoax. The war on meat by vegan activists is a carbon (oops, sorry) copy of the manipulation of transgender activists. They have no idea (except their inner core) that they are being used to promote and impose the agenda of the Cult or that they are only the *vehicle* and not the *reason*. This is not to say those who choose not to eat meat shouldn't be respected and supported in that right, but there are ulterior motives for those in power. A *Forbes* article in December, 2019, highlighted the plan so beloved of Schwab and the Cult under the heading: 'What Is The Internet of Bodies? And How Is It Changing Our World?' The article said the human body is the latest data platform (remember 'our vaccine is an operating system'). *Forbes* described the plan very accurately and the words could have come straight out of my books from long before:

> The Internet of Bodies (IoB) is an extension of the IoT and basically connects the human body to a network through devices that are ingested, implanted, or connected to the body in some way. Once connected, data can be exchanged, and the body and device can be remotely monitored and controlled.

They were really describing a human hive mind with human perception centrally-dictated via an AI connection as well as allowing people to be 'remotely monitored and controlled'. Everything from a fridge to a human mind could be directed from a central point by these insane psychopaths and 'Covid vaccines' are crucial to this. Forbes explained the process I mentioned earlier of holdable and wearable technology followed by implantable. The article said there were three generations of the Internet of Bodies that include:

- Body external: These are wearable devices such as Apple Watches or Fitbits that can monitor our health.
- Body internal: These include pacemakers, cochlear implants, and digital pills that go inside our bodies to monitor or control various aspects of health.
- Body embedded: The third generation of the Internet of Bodies is embedded technology where technology and the human body are melded together and have a real-time connection to a remote machine.

Forbes noted the development of the Brain Computer Interface (BCI) which merges the brain with an external device for monitoring and controlling in real-time. 'The ultimate goal is to help restore function to individuals with disabilities by using brain signals rather than conventional neuromuscular pathways.' Oh, do fuck off. The goal of brain interface technology is controlling human thought and emotion from the central point in a hive mind serving its masters wishes. Many people are now agreeing to be chipped to open doors without a key. You can recognise them because they'll be wearing a mask, social distancing and lining up for the 'vaccine'. The Cult plans a Great Reset money system after they have completed the demolition of the global economy in which 'money' will be exchanged through communication with body operating systems. Rand Corporation, a Cult-owned think tank, said of the Internet of Bodies or IoB:

> Internet of Bodies technologies fall under the broader IoT umbrella. But as the name suggests, IoB devices introduce an even more intimate interplay between humans and gadgets. IoB devices monitor the human body, collect health metrics and other personal information, and transmit those data over the Internet. Many devices, such as fitness trackers, are already in use … IoB devices … and those in development can track, record, and store users' whereabouts, bodily functions, and what they see, hear, and even think.

Schwab's World Economic Forum, a long-winded way of saying 'fascism' or 'the Cult', has gone full-on with the Internet of Bodies in the 'Covid' era. 'We're entering the era of the Internet of Bodies', it declared, 'collecting our physical data via a range of devices that can be implanted, swallowed or worn'. The result would be a huge amount of health-related data that could improve human wellbeing around the world, and prove crucial in fighting the 'Covid-19 pandemic'. Does anyone think these clowns care about 'human wellbeing' after the death and devastation their pandemic hoax has purposely caused? Schwab and co say we should move forward with the Internet of Bodies because 'Keeping track of symptoms could help us stop the spread of infection, and quickly detect new cases'. How wonderful, but keeping track' is all they are really bothered about. Researchers were investigating if data gathered from smartwatches and similar devices could be used as viral infection alerts by tracking the user's heart rate and breathing. Schwab said in his 2018 book *Shaping the Future of the Fourth Industrial Revolution*:

> The lines between technologies and beings are becoming blurred and not just by the ability to create lifelike robots or synthetics. Instead it is about the ability of new technologies to literally become part of us. Technologies already influence how we understand ourselves, how we think about each other, and how we determine our realities. As the technologies … give us deeper access to parts of ourselves, we may begin to integrate digital technologies into our bodies.

You can see what the game is. Twenty-four hour control and people – if you could still call them that – would never know when something would go ping and take them out of circulation. It's the most obvious rush to a global fascist dictatorship and the complete submission of humanity and yet still so many are locked away in their Cult-induced perceptual coma and can't see it.

Smart Grid control centres

The human body is being transformed by the 'vaccines' and in other ways into a synthetic cyborg that can be attached to the global Smart Grid which would be controlled from a central point and other sub-locations of Grid manipulation. Where are these planned to be? Well, China for a start which is one of the Cult's biggest centres of operation. The technological control system and technocratic rule was incubated here to be unleashed across the world after the 'Covid' hoax came out of China in 2020. Another Smart Grid location that will surprise people new to this is Israel. I have exposed in *The Trigger* how Sabbatian technocrats, intelligence and military operatives were behind the horrors of 9/11 and not '19 Arab hijackers' who somehow manifested the ability to pilot big passenger airliners when instructors at puddle-jumping flying schools described some of them as a joke. The 9/11 attacks were made possible through control of civilian and military air computer systems and those of the White House, Pentagon and connected agencies. See *The Trigger* – it will blow your mind. The controlling and coordinating force were the Sabbatian networks in Israel and the United States which by then had infiltrated the entire US government, military and intelligence system. The real name of the American Deep State is 'Sabbatian State'. Israel is a tiny country of only nine million people, but it is one of the global centres of cyber operations and fast catching Silicon Valley in importance to the Cult. Israel is known as the 'start-up nation' for all the cyber companies spawned there with the Sabbatian specialisation of 'cyber security' that I mentioned earlier which gives those companies access to computer systems of their clients in real time through 'backdoors' written into the coding when security software is downloaded. The Sabbatian centre of cyber operations outside Silicon Valley is the Israeli military Cyber Intelligence Unit, the biggest infrastructure project in Israel's history, headquartered in the desert-city of Beersheba and involving some 20,000 'cyber soldiers'. Here are located a literal army of Internet trolls scanning social media, forums and comment lists for anyone challenging the Cult agenda. The UK military has something similar with its 77th Brigade and associated operations. The Beersheba complex includes research and development centres for other Cult operations such as Intel, Microsoft, IBM, Google, Apple, Hewlett-Packard, Cisco Systems, Facebook and Motorola. Techcrunch.com ran an article about the Beersheba global Internet technology centre headlined 'Israel's desert city of Beersheba is turning into a cybertech oasis':

> The military's massive relocation of its prestigious technology units, the presence of multinational and local companies, a close proximity to Ben Gurion University and generous government subsidies are turning Beersheba into a major global cybertech hub. Beersheba has all of the ingredients of a vibrant security technology ecosystem, including Ben Gurion University with its graduate program in cybersecurity and Cyber Security Research Center, and the presence of companies such as EMC, Deutsche Telekom, PayPal, Oracle, IBM, and Lockheed Martin. It's also the future home of the INCB (Israeli National Cyber Bureau); offers a special income tax incentive for cyber security companies, and was the site for the relocation of the army's intelligence corps units.

Sabbatians have taken over the cyber world through the following process: They scan the schools for likely cyber talent and develop them at Ben Gurion University and their period of conscription in the Israeli Defense Forces when they are stationed at the Beersheba complex. When the cyber talented officially leave the army they are funded to start cyber companies with technology developed by themselves or given to them by the state. Much of this is stolen through backdoors of computer systems around the world with America top of the list. Others are sent off to Silicon Valley to start companies or join the major ones and so we have many major positions filled by apparently 'Jewish' but really Sabbatian operatives. Google, YouTube and Facebook are all run by 'Jewish' CEOs while Twitter is all but run by ultra-Zionist hedge-fund shark Paul Singer. At the centre of the Sabbatian global cyber web is the Israeli army's Unit 8200 which specialises in hacking into computer systems of other countries, inserting viruses, gathering information, instigating malfunction, and even taking control of them from a distance. A long list of Sabbatians involved with 9/11, Silicon Valley and Israeli cyber security companies are operatives of Unit 8200. This is not about Israel. It's about the Cult. Israel is planned to be a Smart Grid hub as with China and what is happening at Beersheba is not for the benefit of Jewish people who are treated disgustingly by the Sabbatian elite that control the country. A glance at the Nuremberg Codes will tell you that.

The story is much bigger than 'Covid', important as that is to where we are being taken. Now, though, it's time to really strap in. There's more … much more …

CHAPTER ELEVEN

Who controls the Cult?

Awake, arise or be forever fall'n
John Milton, *Paradise Lost*

I have exposed this far the level of the Cult conspiracy that operates in the world of the seen and within the global secret society and satanic network which operates in the shadows one step back from the seen. The story, however, goes much deeper than that.

The 'Covid' hoax is major part of the Cult agenda, but only part, and to grasp the biggest picture we have to expand our attention beyond the realm of human sight and into the infinity of possibility that we cannot see. It is from here, ultimately, that humanity is being manipulated into a state of total control by the force which dictates the actions of the Cult. How much of reality can we see? Next to damn all is the answer. We may appear to see all there is to see in the 'space' our eyes survey and observe, but little could be further from the truth. The human 'world' is only a tiny band of frequency that the body's visual and perceptual systems can decode into *perception* of a 'world'. According to mainstream science the electromagnetic spectrum is 0.005 percent of what exists in the Universe (Fig 10). The maximum estimate I have seen is 0.5 percent and either way it's miniscule. I say it is far, far, smaller even than 0.005 percent when you compare reality we see with the totality of reality that we don't. Now get this if you are new to such information: Visible light, the only band of frequency that we can see, is a *fraction* of the 0.005

percent (Fig 11 overleaf). Take this further and realise that our universe is one of infinite universes and that universes are only a fragment of overall reality – *infinite* reality. Then compare that with the almost infinitesimal frequency band of visible light or human sight. You see that humans are as near blind as it is possible to be without actually being so. Artist and filmmaker, Sergio Toporek, said:

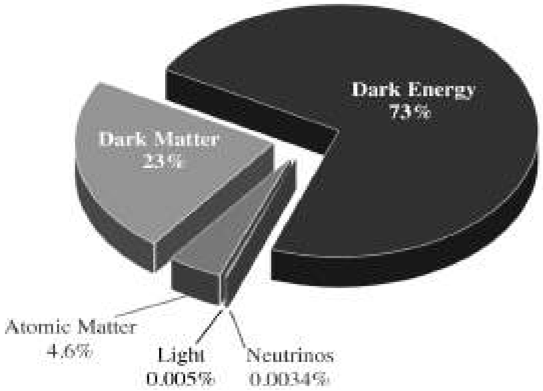

Figure 10: Humans can perceive such a tiny band of visual reality it's laughable.

Figure 11: We can see a smear of the 0.005 percent electromagnetic spectrum, but we still know it all. Yep, makes sense.

Consider that you can see less than 1% of the electromagnetic spectrum and hear less than 1% of the acoustic spectrum. 90% of the cells in your body carry their own microbial DNA and are not 'you'. The atoms in your body are 99.9999999999999999% empty space and none of them are the ones you were born with ... Human beings have 46 chromosomes, two less than a potato.

The existence of the rainbow depends on the conical photoreceptors in your eyes; to animals without cones, the rainbow does not exist. So you don't just look at a rainbow, you create it. This is pretty amazing, especially considering that all the beautiful colours you see represent less than 1% of the electromagnetic spectrum.

Suddenly the 'world' of humans looks a very different place. Take into account, too, that Planet Earth when compared with the projected size of this single universe is the equivalent of a billionth of a pinhead. Imagine the ratio that would be when compared to infinite reality. To think that Christianity once insisted that Earth and humanity were the centre of everything. This background is vital if we are going to appreciate the nature of 'human' and how we can be manipulated by an unseen force. To human visual reality virtually *everything* is unseen and yet the prevailing perception within the institutions and so much of the public is that if we can't see it, touch it, hear it, taste it and smell it then it cannot exist. Such perception is indoctrinated and encouraged by the Cult and its agents because it isolates believers in the strictly limited, village-idiot, realm of the five senses where perceptions can be firewalled and information controlled. Most of those perpetuating the 'this-world-is-all-there-is' insanity are themselves indoctrinated into believing the same delusion. While major players and influencers know that official reality is laughable most of those in science, academia and medicine really believe the nonsense they peddle and teach succeeding generations. Those who challenge the orthodoxy are dismissed as nutters and freaks to protect the manufactured illusion from exposure. Observe the dynamic of the 'Covid' hoax and you will see how that takes the same form. The inner-circle psychopaths knows it's a gigantic scam, but almost the entirety of those imposing their fascist rules believe that 'Covid' is all that they're told it is.

Stolen identity

Ask people who they are and they will give you their name, place of birth, location, job, family background and life story. Yet that is not who they are – it is what they are *experiencing*. The difference is *absolutely crucial*. The true 'I', the eternal, infinite 'I', is consciousness, a state of being aware. Forget 'form'. That is a vehicle for a brief experience. Consciousness does not come *from* the brain, but *through* the brain and even that is more symbolic than literal. We are awareness, pure awareness, and this is what withdraws from the body at what we call 'death' to continue our eternal beingness, *isness*, in other realms of reality within the limitlessness of infinity or the Biblical 'many mansions in my father's house'. Labels of a human life, man, woman, transgender, black, white, brown, nationality, circumstances and income are not who we are. They are what we are – awareness – is *experiencing* in a brief connection with a band of frequency we call 'human'. The labels are not the self; they are, to use the title of one of my books, a *Phantom* Self. I am not David Icke born in Leicester, England, on April 29th, 1952. I am the consciousness *having that experience*. The Cult and its non-human masters seek to convince us through the institutions of 'education', science, medicine, media and government that what we are *experiencing* is who we *are*. It's so easy to control and direct perception locked away in the bewildered illusions of the five senses with no expanded radar. Try, by contrast, doing the same with a humanity aware of its true self and its true power to consciously create its reality and experience. How is it possible to do this? We do it all day every day. If you perceive yourself as 'little me' with no power to impact upon your life and the world then your life experience will reflect that. You will hand the power you don't think you have to authority in all its forms which will use it to control your experience. This, in turn, will appear to confirm your perception of 'little me' in a self-fulfilling feedback loop. But that is what 'little me' really is – a *perception*. We are all 'big-me', infinite me, and the Cult has to make us forget that if its will is to prevail. We are therefore manipulated and pressured into self-identifying with human labels and not the consciousness/awareness *experiencing* those human labels.

The phenomenon of identity politics is a Cult-instigated manipulation technique to sub-divide previous labels into even smaller ones. A United States university employs this list of letters to describe student identity: LGBTTQQFAGPBDSM or lesbian, gay, bisexual, transgender, transsexual, queer, questioning, flexual, asexual, gender-fuck, polyamorous, bondage/discipline, dominance/submission and sadism/masochism. I'm sure other lists are even longer by now as people feel the need to self-identity the 'I' with the minutiae of race and sexual preference. Wokers programmed by the Cult for generations believe this is about 'inclusivity' when it's really the Cult locking them away into smaller and smaller versions of Phantom Self while firewalling them from the influence of their true self, the infinite, eternal 'I'. You may notice that my philosophy which contends that we are all unique points of attention/awareness within the same infinite whole or Oneness is the ultimate non-racism. The very sense of Oneness makes the judgement of people by their body-type, colour or sexuality utterly ridiculous and confirms that racism has no understanding of reality (including anti-white racism). Yet despite my perception of life Cult agents and fast-asleep Wokers label me racist to discredit my information while they are themselves phenomenally racist and sexist. All they see is race and sexuality and they judge people as good or bad, demons or untouchables, by their race and sexuality. All they see is *Phantom Self* and perceive themselves in terms of Phantom Self. They are pawns and puppets of the Cult agenda to focus attention and self-identity in the five senses and play those identities against each other to divide and rule. Columbia University has introduced segregated graduations in another version of social distancing designed to drive people apart and teach them that different racial and cultural groups have nothing in common with each other. The last thing the Cult wants is unity. Again the pump-primers of this will be Cult operatives in the knowledge of what they are doing, but the rest are just the Phantom Self blind leading the Phantom Self blind. We *do* have something in common – we are all *the same consciousness* having different temporary experiences.

What is this 'human'?

Yes, what *is* 'human'? That is what we are supposed to be, right? I mean 'human'? True, but 'human' is the experience not the 'I'. Break it down to basics and 'human' is the way that information is processed. If we are to experience and interact with this band of frequency we call the 'world' we must have a vehicle that operates within that band of frequency. Our consciousness in its prime form cannot do that; it is way beyond the frequency of the human realm. My consciousness or awareness could not tap these keys and pick up the cup in front of me in the same way that radio station A cannot interact with radio station B when they are on different frequencies. The human body is the means through which we have that interaction. I have long described the body as a biological computer which processes information in a way that allows consciousness to experience this reality. The body is a receiver, transmitter and processor of information in a particular way that we call human. We visually perceive only the world of the five senses in a wakened state – that is the limit of the body's visual decoding system. In truth it's not even visual in the way we experience 'visual reality' as I will come to in a moment. We are 'human' because the body processes the information sources of human into a reality and behaviour system that we *perceive* as human. Why does an elephant act like an elephant and not like a human or a duck? The elephant's biological computer is a different information field and processes information according to that program into a visual and behaviour type we call an elephant. The same applies to everything in our reality. These body information fields are perpetuated through procreation (like making a copy of a software program). The Cult wants to break that cycle and intervene technologically to transform the human information field into one that will change what we call humanity. If it can change the human information field it will change the way that field processes information and change humanity both 'physically' and psychologically. Hence the *messenger* (information) RNA 'vaccines' and so much more that is targeting human genetics by changing the body's information – *messaging* – construct through food, drink, radiation, toxicity and other means.

Reality that we experience is nothing like reality as it really is in the same way that the reality people experience in virtual reality games is not the reality they are really living in. The game is only a decoded source of information that appears to be a reality. Our world is also an information construct – a *simulation* (more later). In its base form our reality is a wavefield of information much the same in theme as Wi-Fi. The five senses decode wavefield information into electrical information which they communicate to the brain to decode into holographic (illusory 'physical') information. Different parts of the brain specialise in decoding different senses and the information is fused into a reality that appears to be outside of us but is really inside the brain and the genetic structure in general (Fig 12 overleaf). DNA is a receiver-transmitter of information and a vital part of this decoding process and the body's connection to other realities. Change DNA and you change the way we decode and connect with reality – see 'Covid vaccines'. Think of computers decoding Wi-Fi. You have information encoded in a radiation field and the computer decodes that information into a very different form on the screen. You can't see the Wi-Fi until its information is made manifest on the screen and the information on the screen is inside the computer and not outside. I have just described how we decode the 'human world'. All five senses decode the waveform 'Wi-Fi' field into electrical signals and the brain (computer) constructs reality inside the brain and not outside – 'You don't just look at a rainbow, you create it'. Sound is a simple example. We don't hear sound until the brain decodes it. Waveform sound waves are picked up by the hearing sense and communicated to the brain in an electrical form to be decoded into the sounds that we hear. Everything we hear is inside the brain along with everything we see, feel, smell and taste. Words and language are waveform fields generated by our vocal chords which pass through this process until they are decoded by the brain into words that we hear. Different languages are different frequency fields or sound waves generated by vocal chords. Late British philosopher Alan Watts said:

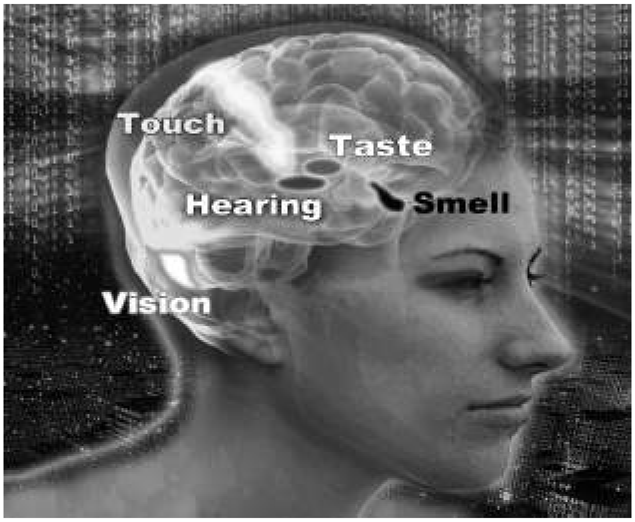

Figure 12: The brain receives information from the five senses and constructs from that our perceived reality.

> [Without the brain] the world is devoid of light, heat, weight, solidity, motion, space, time or any other imaginable feature. All these phenomena are interactions, or transactions, of vibrations with a certain arrangement of neurons.

That's exactly what they are and scientist Robert Lanza describes in his book, *Biocentrism*, how we decode electromagnetic waves and energy into visual and 'physical' experience. He uses the example of a flame emitting photons, electromagnetic energy, each pulsing electrically and magnetically:

> … these … invisible electromagnetic waves strike a human retina, and if (and only if) the waves happen to measure between 400 and 700 nano meters in length from crest to crest, then their energy is just right to deliver a stimulus to the 8 million cone-shaped cells in the retina.
>
> Each in turn send an electrical pulse to a neighbour neuron, and on up the line this goes, at 250 mph, until it reaches the … occipital lobe of the brain, in the back of the head. There, a cascading complex of neurons fire from the incoming stimuli, and we subjectively perceive this experience as a yellow brightness occurring in a place we have been conditioned to call the 'external world'.

You hear what you decode

If a tree falls or a building collapses they make no noise unless someone is there to decode the energetic waves generated by the disturbance into what we call sound. Does a falling tree make a noise? Only if you hear it – *decode* it. Everything in our reality is a frequency field of information operating within the overall 'Wi-Fi' field that I call The Field. A vibrational disturbance is generated in The Field by the fields of the falling tree or building. These disturbance waves are what we decode into the sound of them falling. If no one is there to do that then neither will make any noise. Reality is created by the observer – *decoder* – and the *perceptions* of the observer affect the decoding process. For this reason different people – different *perceptions* – will perceive the same reality or situation in a different way. What one may perceive as a nightmare another will see as an opportunity. The question of why the Cult is so focused on controlling human perception now answers itself. All experienced reality is the act of decoding and we don't experience Wi-Fi until it is decoded on the computer screen. The sight and sound of an Internet video is encoded in the Wi-Fi all around us, but we don't see or hear it until the computer decodes that information. Taste, smell and touch are all phenomena of the brain as a result of the same process. We don't taste, smell or feel anything except in the brain and there are pain relief techniques that seek to block the signal from the site of discomfort to the brain because if the brain doesn't decode that signal we don't feel pain. Pain is in the brain and only appears to be at the point of impact thanks to the feedback loop between them. We don't see anything until electrical information from the sight senses is decoded in an area at the back of the brain. If that area is damaged we can go blind when our eyes are perfectly okay. So why do we go blind if we damage an eye? We damage the information processing between the waveform visual information and the visual decoding area of the brain. If information doesn't reach the brain in a form it can decode then we can't see the visual reality that it represents. What's more the brain is decoding only a fraction of the information it receives and the rest is absorbed by the sub-conscious mind. This explanation is from the science magazine, *Wonderpedia*:

> Every second, 11 million sensations crackle along these [brain] pathways … The brain is confronted with an alarming array of images, sounds and smells which it rigorously filters down until it is left with a manageable list of around 40. Thus 40 sensations per second make up what we perceive as reality.

The ‘world’ is not what people are told to believe that is it and the inner circles of the Cult *know that*.

Illusory ‘physical’ reality

We can only see a smear of 0.005 percent of the Universe which is only one of a vast array of universes – ‘mansions’ – within infinite reality. Even then the brain decodes only 40 pieces of information (‘sensations’) from a potential *11 million* that we receive every second. Two points strike you from this immediately: The sheer breathtaking stupidity of believing we know anything so rigidly that there’s nothing more to know; and the potential for these processes to be manipulated by a malevolent force to control the reality of the population. One thing I can say for sure with no risk of contradiction is that when you can perceive an almost indescribable fraction of infinite reality there is always more to know as in tidal waves of it. Ancient Greek philosopher Socrates was so right when he said that wisdom is to know how little we know. How obviously true that is when you think that we are experiencing a physical world of solidity that is neither physical nor solid and a world of apartness when everything is connected. Cult-controlled ‘science’ dismisses the so-called ‘paranormal’ and all phenomena related to that when the ‘para’-normal is perfectly normal and explains the alleged ‘great mysteries’ which dumbfound scientific minds. There is a reason for this. A ‘scientific mind’ in terms of the mainstream is a material mind, a five-sense mind imprisoned in see it, touch it, hear it, smell it and taste it. Phenomena and happenings that can’t be explained that way leave the ‘scientific mind’ bewildered and the rule is that if they can't account for why something is happening then it can't, by definition, be happening. I beg to differ. Telepathy is thought waves passing through The Field (think wave disturbance again) to be decoded by someone able to connect with that wavelength (information). For example: You can pick up the thought waves of a friend at any distance and at the very least that will bring them to mind. A few minutes later the friend calls you. 'My god', you say, 'that's incredible – I was just thinking of you.' Ah, but *they* were thinking of *you* before they made the call and that's what you decoded. Native peoples not entrapped in five-sense reality do this so well it became known as the 'bush telegraph'. Those known as psychics and mediums (genuine ones) are doing the same only across dimensions of reality. 'Mind over matter' comes from the fact that matter and mind are the *same*. The state of one influences the state of the other. Indeed one *and* the other are illusions. They are aspects of the same field. Paranormal phenomena are all explainable so why are they still considered 'mysteries' or not happening? Once you go down this road of understanding you begin to expand awareness beyond the five senses and that's the nightmare for the Cult.

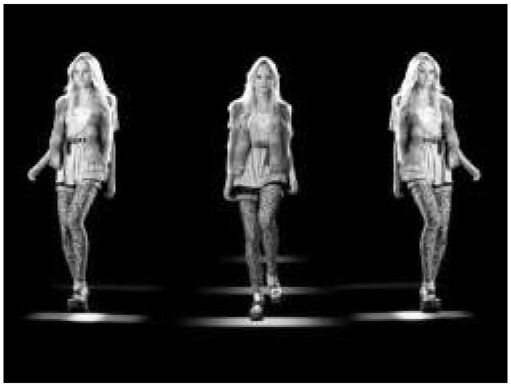

Figure 13: Holograms are not solid, but the best ones appear to be.

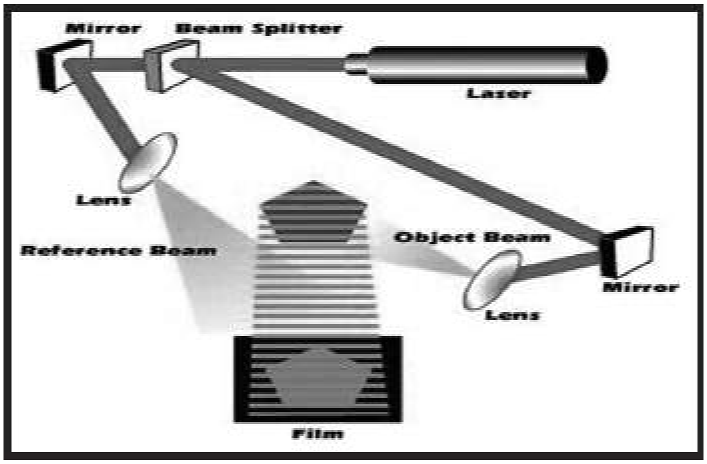

Figure 14: How holograms are created by capturing a waveform version of the subject image.

Holographic 'solidity'

Our reality is not solid, it is holographic. We are now well aware of holograms which are widely used today. Two-dimensional information is decoded into a three-dimensional reality that is not solid although can very much appear to be (Fig 13). Holograms are created with a laser divided into two parts. One goes directly onto a holographic photographic print ('reference beam') and the other takes a waveform image of the subject ('working beam') before being directed onto the print where it 'collides' with the other half of the laser (Fig 14). This creates a *waveform* interference pattern which contains the wavefield information of whatever is being photographed (Fig 15 overleaf). The process can be likened to dropping pebbles in a pond. Waves generated by each one spread out across the water to collide with the others and create a wave representation of where the stones fell and at what speed, weight and distance. A waveform interference pattern of a hologram is akin to the waveform information in The Field which the five senses decode into electrical signals to be decoded by the brain into a holographic illusory 'physical' reality. In the same way when a laser (think human attention) is directed at the waveform interference pattern a three-dimensional version of the subject is projected into apparently 'solid' reality (Fig 16). An amazing trait of holograms reveals more 'paranormal mysteries'. Information of the *whole* hologram is encoded in waveform in every part of the interference pattern by the way they are created. This means that every *part* of a hologram is a smaller version of the whole. Cut the interference wave-pattern into four and you won't get four parts of the image. You get quarter-sized versions of the *whole* image. The body is a hologram and the same applies. Here we have the basis of acupuncture, reflexology and other forms of healing which identify representations of the whole body in all of the parts, hands, feet, ears, everywhere. Skilled palm readers can do what they do because the information of whole body is encoded in the hand. The concept of as above, so below, comes from this.

Figure 15: A waveform interference pattern that holds the information that transforms into a hologram.

She isn't really standing there
WILLIAM VIA HOLOGRAM
PERFORMER & OBAMA SUPPORTER
LIVE

Figure 16: Holographic people including 'Elvis' holographically inserted to sing a duet with Celine Dion.

The question will be asked of why, if solidity is illusory, we can't just walk through walls and each other. The resistance is not solid against solid; it is electromagnetic field against electromagnetic field and we decode this into the *experience* of solid against solid. We should also not underestimate the power of belief to dictate reality. What you believe is impossible *will be*. Your belief impacts on your decoding processes and they won't decode what you think is impossible. What we believe we perceive and what we perceive we experience. 'Can't dos' and 'impossibles' are like a firewall in a computer system that won't put on the screen what the firewall blocks. How vital that is to understanding how human experience has been hijacked. I explain in *The Answer*, *Everything You Need To Know But Have Never Been Told* and other books a long list of 'mysteries' and 'paranormal' phenomena that are not mysterious and perfectly normal once you realise what reality is and how it works. 'Ghosts' can be seen to pass through 'solid' walls because the walls are not solid and the ghost is a discarnate entity operating on a frequency so different to that of the wall that it's like two radio stations sharing the same space while never interfering with each other. I have seen ghosts do this myself. The apartness of people and objects is also an illusion. Everything is connected by the Field like all sea life is connected by the sea. It's just that within the limits of our visual reality we only 'see' holographic information and not the field of information that connects everything and from which the holographic world is made manifest. If you can only see holographic 'objects' and not the field that connects them they will appear to you as unconnected to each other in the same way that we see the computer while not seeing the Wi-Fi.

What you don't know *can* hurt you

Okay, we return to those 'two worlds' of human society and the Cult with its global network of interconnecting secret societies and satanic groups which manipulate through governments, corporations, media, religions, etc. The fundamental difference between them is *knowledge*. The idea has been to keep humanity ignorant of the plan for its total enslavement underpinned by a crucial ignorance of reality – who we are and where we are – and how we interact with it. 'Human' should be the interaction between our expanded eternal consciousness and the five-sense body experience. We are meant to be *in* this world in terms of the five senses but not *of* this world in relation to our greater consciousness and perspective. In that state we experience the small picture of the five senses within the wider context of the big picture of awareness beyond the five senses. Put another way the five senses see the dots and expanded awareness connects them into pictures and patterns that give context to the apparently random and unconnected. Without the context of expanded awareness the five senses see only apartness and randomness with apparently no meaning. The Cult and its other-dimensional controllers seek to intervene in the frequency realm where five-sense reality is supposed to connect with expanded reality and to keep the two apart (more on this in the final chapter). When that happens five-sense mental and emotional processes are no longer influenced by expanded awareness, or the True 'I', and instead are driven by the isolated perceptions of the body's decoding systems. They are in the world *and* of it. Here we have the human plight and why humanity with its potential for infinite awareness can be so easily manipulatable and descend into such extremes of stupidity.

Once the Cult isolates five-sense mind from expanded awareness it can then program the mind with perceptions and beliefs by controlling information that the mind receives through the 'education' system of the formative years and the media perceptual bombardment and censorship of an entire lifetime. Limit perception and a sense of the possible through limiting knowledge by limiting and skewing information while censoring and discrediting that which could set people free. As the title of another of my books says *… And The Truth Shall Set You Free*. For this reason the last thing the Cult wants in circulation is the truth about anything – especially the reality of the eternal 'I' – and that's why it is desperate to control information. The Cult knows that information becomes perception which becomes behaviour which, collectively, becomes human society. Cult-controlled and funded mainstream 'science' denies the existence of an eternal 'I' and seeks to dismiss and trash all evidence to the contrary. Cult-controlled mainstream religion has a version of 'God' that is little more than a system of control and dictatorship that employs threats of damnation in an afterlife to control perceptions and behaviour in the here and now through fear and guilt. Neither is true and it's the 'neither' that the Cult wishes to suppress. This 'neither' is that everything is an expression, a point of attention, within an infinite state of consciousness which is the real meaning of the term 'God'.

Perceptual obsession with the 'physical body' and five-senses means that 'God' becomes personified as a bearded bloke sitting among the clouds or a raging bully who loves us if we do what 'he' wants and condemns us to the fires of hell if we don't. These are no more than a 'spiritual' fairy tales to control and dictate events and behaviour through fear of this 'God' which has bizarrely made 'God-fearing' in religious circles a state to be desired. I would suggest that fearing *anything* is not to be encouraged and celebrated, but rather deleted. You can see why 'God fearing' is so beneficial to the Cult and its religions when *they* decide what 'God' wants and what 'God' demands (the Cult demands) that everyone do. As the great American comedian Bill Hicks said satirising a Christian zealot: 'I think what God meant to say.' How much of this infinite awareness ('God') that we access is decided by how far we choose to expand our perceptions, self-identity and sense of the possible. The scale of self-identity reflects itself in the scale of awareness that we can connect with and are influenced by – how much knowing and insight we have instead of programmed perception. You cannot expand your awareness into the infinity of possibility when you believe that you are little me Peter the postman or Mary in marketing and nothing more. I'll deal with this in the concluding chapter because it's crucial to how we turnaround current events.

Where the Cult came from

When I realised in the early 1990s there was a Cult network behind global events I asked the obvious question: When did it start? I took it back to ancient Rome and Egypt and on to Babylon and Sumer in Mesopotamia, the 'Land Between Two Rivers', in what we now call Iraq. The two rivers are the Tigris and Euphrates and this region is of immense historical and other importance to the Cult, as is the land called Israel only 550 miles away by air. There is much more going with deep esoteric meaning across this whole region. It's not only about 'wars for oil'. Priceless artefacts from Mesopotamia were stolen or destroyed after the American and British invasion of Iraq in 2003 justified by the lies of Boy Bush and Tony Blair (their Cult masters) about non-existent 'weapons of mass destruction'. Mesopotamia was the location of Sumer (about 5,400BC to 1,750BC), and Babylon (about 2,350BC to 539BC). Sabbatians may have become immensely influential in the Cult in modern times but they are part of a network that goes back into the mists of history. Sumer is said by historians to be the 'cradle of civilisation'. I disagree. I say it was the re-start of what we call human civilisation after cataclysmic events symbolised in part as the 'Great Flood' destroyed the world that existed before. These fantastic upheavals that I have been describing in detail in the books since the early1990s appear in accounts and legends of ancient cultures across the world and they are supported by geological and biological evidence. Stone tablets found in Iraq detailing the Sumer period say the cataclysms were caused by non-human 'gods' they call the Anunnaki. These are described in terms of extraterrestrial visitations in which knowledge supplied by the Anunnaki is said to have been the source of at least one of the world's oldest writing systems and developments in astronomy, mathematics and architecture that were way ahead of their time. I have covered this subject at length in *The Biggest Secret* and *Children of the Matrix* and the same basic 'Anunnaki' story can be found in Zulu accounts in South Africa where the late and very great Zulu high shaman Credo Mutwa told me that the Sumerian Anunnaki were known by Zulus as the Chitauri or 'children of the serpent'. See my six-hour video interview with Credo on this subject entitled *The*

Reptilian Agenda recorded at his then home near Johannesburg in 1999 which you can watch on the Ickonic media platform.

The Cult emerged out of Sumer, Babylon and Egypt (and elsewhere) and established the Roman Empire before expanding with the Romans into northern Europe from where many empires were savagely imposed in the form of Cult-controlled societies all over the world. Mass death and destruction was their calling card. The Cult established its centre of operations in Europe and European Empires were Cult empires which allowed it to expand into a global force. Spanish and Portuguese colonialists headed for Central and South America while the British and French targeted North America. Africa was colonised by Britain, France, Belgium, the Netherlands, Portugal, Spain, Italy, and Germany. Some like Britain and France moved in on the Middle East. The British Empire was by far the biggest for a simple reason. By now Britain was the headquarters of the Cult from which it expanded to form Canada, the United States, Australia and New Zealand. The Sun never set on the British Empire such was the scale of its occupation. London remains a global centre for the Cult along with Rome and the Vatican although others have emerged in Israel and China. It is no accident that the 'virus' is alleged to have come out of China while Italy was chosen as the means to terrify the Western population into compliance with 'Covid' fascism. Nor that Israel has led the world in 'Covid' fascism and mass 'vaccination'.

You would think that I would mention the United States here, but while it has been an important means of imposing the Cult's will it is less significant than would appear and is currently in the process of having what power it does have deleted. The Cult in Europe has mostly loaded the guns for the US to fire. America has been controlled from Europe from the start through Cult operatives in Britain and Europe. The American Revolution was an illusion to make it appear that America was governing itself while very different forces were pulling the strings in the form of Cult families such as the Rothschilds through the Rockefellers and other subordinates. The Rockefellers are extremely close to Bill Gates and established both scalpel and drug 'medicine' and the World Health Organization. They play a major role in the development and circulation of vaccines through the Rockefeller Foundation on which Bill Gates said his Foundation is based. Why wouldn't this be the case when the Rockefellers and Gates are on the same team? Cult infiltration of human society goes way back into what we call history and has been constantly expanding and centralising power with the goal of establishing a global structure to dictate everything. Look how this has been advanced in great leaps with the 'Covid' hoax.

The non-human dimension

I researched and observed the comings and goings of Cult operatives through the centuries and even thousands of years as they were born, worked to promote the agenda within the secret society and satanic networks, and then died for others to replace them. Clearly there had to be a coordinating force that spanned this entire period while operatives who would not have seen the end goal in their lifetimes came and went advancing the plan over millennia. I went in search of that coordinating force with the usual support from the extraordinary synchronicity of my life which has been an almost daily experience since 1990. I saw common themes in religious texts and ancient cultures about a non-human force manipulating human society from the hidden. Christianity calls this force Satan, the Devil and demons; Islam refers to the Jinn or Djinn; Zulus have their Chitauri (spelt in other ways in different parts of Africa); and the Gnostic people in Egypt in the period around and before 400AD referred to this phenomena as the 'Archons', a word meaning rulers in Greek. Central American cultures speak of the 'Predators' among other names and the same theme is everywhere. I will use 'Archons' as a collective name for all of them. When you see how their nature and behaviour is described all these different sources are clearly talking about the same force. Gnostics described the Archons in terms of 'luminous fire' while Islam relates the Jinn to 'smokeless fire'. Some refer to beings in form that could occasionally be seen, but the most common of common theme is that they operate from unseen realms which means almost all existence to the visual processes of humans. I had concluded that this was indeed the foundation of human control and that the Cult was operating within the human frequency band on behalf of this hidden force when I came across the writings of Gnostics which supported my conclusions in the most extraordinary way.

A sealed earthen jar was found in 1945 near the town of Nag Hammadi about 75-80 miles north of Luxor on the banks of the River Nile in Egypt. Inside was a treasure trove of manuscripts and texts left by the Gnostic people some 1,600 years earlier. They included 13 leather-bound papyrus codices (manuscripts) and more than 50 texts written in Coptic Egyptian estimated to have been hidden in the jar in the period of 400AD although the source of the information goes back much further. Gnostics oversaw the Great or Royal Library of Alexandria, the fantastic depository of ancient texts detailing advanced knowledge and accounts of human history. The Library was dismantled and destroyed in stages over a long period with the death-blow delivered by the Cult-established Roman Church in the period around 415AD. The Church of Rome was the Church of Babylon relocated as I said earlier. Gnostics were not a race. They were a way of perceiving reality. Whenever they established themselves and their information circulated the terrorists of the Church of Rome would target them for destruction. This happened with the Great Library and with the Gnostic Cathars who were burned to death by the psychopaths after a long period of oppression at the siege of the Castle of Monségur in southern France in 1244. The Church has always been terrified of Gnostic information which demolishes the official Christian narrative although there is much in the Bible that supports the Gnostic view if you read it in another way. To anyone studying the texts of what became known as the Nag Hammadi Library it is clear that great swathes of Christian and Biblical belief has its origin with Gnostics sources going back to Sumer. Gnostic themes have been twisted to manipulate the perceived reality of Bible believers. Biblical texts have been in the open for centuries where they could be changed while Gnostic documents found at Nag Hammadi were sealed away and untouched for 1,600 years. What you see is what they wrote.

Use your *pneuma* not your *nous*

Gnosticism and Gnostic come from 'gnosis' which means knowledge, or rather *secret* knowledge, in the sense of spiritual awareness – knowledge about reality and life itself. The desperation of the Cult's Church of Rome to destroy the Gnostics can be understood when the knowledge they were circulating was the last thing the Cult wanted the population to know. Sixteen hundred years later the same Cult is working hard to undermine and silence me for the same reason. The dynamic between knowledge and ignorance is a constant. 'Time' appears to move on, but essential themes remain the same. We are told to 'use your nous', a Gnostic word for head/brain/intelligence. They said, however, that spiritual awakening or 'salvation' could only be secured by expanding awareness *beyond* what they called *nous* and into *pneuma* or Infinite Self. Obviously as I read these texts the parallels with what I have been saying since 1990 were fascinating to me. There is a universal truth that spans human history and in that case why wouldn't we be talking the same language 16 centuries apart? When you free yourself from the perception program of the five senses and explore expanded realms of consciousness you are going to connect with the same information no matter what the perceived 'era' within a manufactured timeline of a single and tiny range of manipulated frequency. Humans working with 'smart' technology or knocking rocks together in caves is only a timeline appearing to operate within the human frequency band. Expanded awareness and the knowledge it holds have always been there whether the era be Stone Age or computer age. We can only access that knowledge by opening ourselves to its frequency which the five-sense prison cell is designed to stop us doing. Gates, Fauci, Whitty, Vallance, Zuckerberg, Brin, Page, Wojcicki, Bezos, and all the others behind the 'Covid' hoax clearly have a long wait before their range of frequency can make that connection given that an open heart is crucial to that as we shall see. Instead of accessing knowledge directly through expanded awareness it is given to Cult operatives by the secret society networks of the Cult where it has been passed on over thousands of years outside the public arena. Expanded realms of consciousness is where great artists, composers and writers find their inspiration and where truth awaits anyone open enough to connect with it. We need to go there fast.

Archon hijack

A fifth of the Nag Hammadi texts describe the existence and manipulation of the Archons led by a 'Chief Archon' they call 'Yaldabaoth', or the 'Demiurge', and this is the Christian 'Devil', 'Satan', 'Lucifer', and his demons. Archons in Biblical symbolism are the 'fallen ones' which are also referred to as fallen angels after the angels expelled from heaven according to the Abrahamic religions of Judaism, Christianity and Islam. These angels are claimed to tempt humans to 'sin' ongoing and you will see how accurate that symbolism is during the rest of the book. The theme of 'original sin' is related to the 'Fall' when Adam and Eve were 'tempted by the serpent' and fell from a state of innocence and 'obedience' (connection) with God into a state of disobedience (disconnection). The Fall is said to have brought sin into the world and corrupted everything including human nature. Yaldabaoth, the 'Lord Archon', is described by Gnostics as a 'counterfeit spirit', 'The Blind One', 'The Blind God', and 'The Foolish One'. The Jewish name for Yaldabaoth in Talmudic writings is Samael which translates as 'Poison of God', or 'Blindness of God'. You see the parallels. Yaldabaoth in Islamic belief is the Muslim Jinn devil known as Shaytan – Shaytan is Satan as the same themes are found all over the world in every religion and culture. The 'Lord God' of the Old Testament is the 'Lord Archon' of Gnostic manuscripts and that's why he's such a bloodthirsty bastard. Satan is known by Christians as 'the Demon of Demons' and Gnostics called Yaldabaoth the 'Archon of Archons'. Both are known as 'The Deceiver'. We are talking about the same 'bloke' for sure and these common themes using different names, storylines and symbolism tell a common tale of the human plight.

Archons are referred to in Nag Hammadi documents as mind parasites, inverters, guards, gatekeepers, detainers, judges, pitiless ones and deceivers. The 'Covid' hoax alone is a glaring example of all these things. The Biblical 'God' is so different in the Old and New Testaments because they are not describing the same phenomenon. The vindictive, angry, hate-filled, 'God' of the Old Testament, known as Yahweh, is Yaldabaoth who is depicted in Cult-dictated popular culture as the 'Dark Lord', 'Lord of Time', Lord (Darth) Vader and Dormammu, the evil ruler of the 'Dark Dimension' trying to take over the 'Earth Dimension' in the Marvel comic movie, *Dr Strange*. Yaldabaoth is both the Old Testament 'god' and the Biblical 'Satan'. Gnostics referred to Yaldabaoth as the 'Great Architect of the Universe'and the Cult-controlled Freemason network calls their god 'the 'Great Architect of the Universe' (also Grand Architect). The 'Great Architect' Yaldabaoth is symbolised by the Cult as the all-seeing eye at the top of the pyramid on the Great Seal of the United States and the dollar bill. Archon is encoded in *arch*-itect as it is in *arch*-angels and *arch*-bishops. All religions have the theme of a force for good and force for evil in some sort of spiritual war and there is a reason for that – the theme is true. The Cult and its non-human masters are quite happy for this to circulate. They present themselves as the force for good fighting evil when they are really the force of evil (absence of love). The whole foundation of Cult modus operandi is inversion. They promote themselves as a force for good and anyone challenging them in pursuit of peace, love, fairness, truth and justice is condemned as a satanic force for evil. This has been the game plan throughout history whether the Church of Rome inquisitions of non-believers or 'conspiracy theorists' and 'anti-vaxxers' of today. The technique is the same whatever the timeline era.

Yaldabaoth is revolting (true)

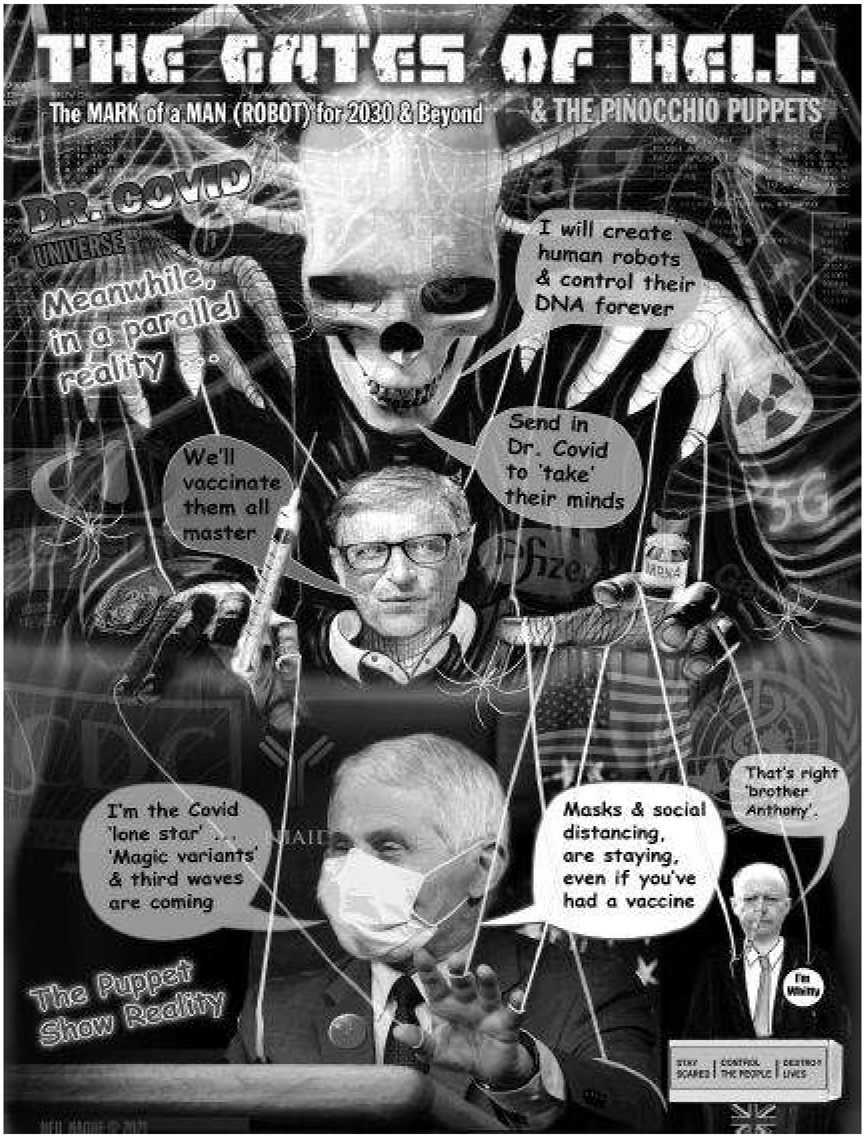
Yaldabaoth and the Archons are said to have revolted against God with Yaldabaoth claiming to *be* God – the *All That Is*. The Old Testament 'God' (Yaldabaoth) demanded to be worshipped as such: '*I am* the LORD, and there is none else, there is no God beside me' (Isaiah 45:5). I have quoted in other books a man who said he was the unofficial son of the late Baron Philippe de Rothschild of the Mouton-Rothschild wine producing estates in France who died in 1988 and he told me about the Rothschild 'revolt from God'. The man said he was given the name Phillip Eugene de Rothschild and we shared long correspondence many years ago while he was living under another identity. He said that he was conceived through 'occult incest' which (within the Cult) was 'normal and to be admired'. 'Phillip' told me about his experience attending satanic rituals with rich and famous people whom he names and you can see them and the wider background to Cult Satanism in my other books starting with *The Biggest Secret*. Cult rituals are interactions with Archontic 'gods'. 'Phillip' described Baron Philippe de Rothschild as 'a master Satanist and hater of God' and he used the same term 'revolt from God' associated with Yaldabaoth/Satan/Lucifer/the Devil in describing the Sabbatian Rothschild dynasty. 'I played a key role in my family's revolt from God', he said. That role was to infiltrate in classic Sabbatian style the Christian Church, but eventually he escaped the mind-prison to live another life. The Cult has been targeting religion in a plan to make worship of the Archons the global one-world religion. Infiltration of Satanism into modern 'culture', especially among the young, through music videos, stage shows and other means, is all part of this.

Nag Hammadi texts describe Yaldabaoth and the Archons in their prime form as energy – consciousness – and say they can take form if they choose in the same way that consciousness takes form as a human. Yaldabaoth is called 'formless' and represents a deeply inverted, distorted and chaotic state of consciousness which seeks to attached to humans and turn them into a likeness of itself in an attempt at assimilation. For that to happen it has to manipulate humans into low frequency mental and emotional states that match its own. Archons can certainly appear in human form and this is the origin of the psychopathic personality. The energetic distortion Gnostics called Yaldabaoth *is* psychopathy. When psychopathic Archons take human form that human will be a psychopath as an expression of Yaldabaoth consciousness. Cult psychopaths are Archons in human form. The principle is the same as that portrayed in the 2009 *Avatar* movie when the American military travelled to a fictional Earth-like moon called Pandora in the Alpha Centauri star system to infiltrate a society of blue people, or Na'vi, by hiding within bodies that looked like the Na'vi. Archons posing as humans have a particular hybrid information field, part human, part Archon, (the ancient 'demigods') which processes information in a way that manifests behaviour to match their psychopathic evil, lack of empathy and compassion, and stops them being influenced by the empathy, compassion and love that a fully-human information field is capable of expressing. Cult bloodlines interbreed, be they royalty or dark suits, for this reason and you have their obsession with incest. Interbreeding with full-blown humans would dilute the Archontic energy field that guarantees psychopathy in its representatives in the human realm.

Gnostic writings say the main non-human forms that Archons take are *serpentine* (what I have called for decades 'reptilian' amid unbounded ridicule from the Archontically-programmed) and what Gnostics describe as 'an unborn baby or foetus with grey skin and dark, unmoving eyes'. This is an excellent representation of the ET 'Greys' of UFO folklore which large numbers of people claim to have seen and been abducted by – Zulu shaman Credo Mutwa among them. I agree with those that believe in extraterrestrial or interdimensional visitations today and for thousands of years past. No wonder with their advanced knowledge and technological capability they were perceived and worshipped as gods for technological and other 'miracles' they appeared to perform. Imagine someone arriving in a culture disconnected from the modern world with a smartphone and computer. They would be seen as a ‘god’ capable of ‘miracles’. The Renegade Mind, however, wants to know the source of everything and not only the way that source manifests as human or non-human. In the same way that a Renegade Mind seeks the original source material for the ‘Covid virus’ to see if what is claimed is true. The original source of Archons in form is consciousness – the distorted state of consciousness known to Gnostics as Yaldabaoth.

‘Revolt from God’ is energetic disconnection

Where I am going next will make a lot of sense of religious texts and ancient legends relating to ‘Satan’, Lucifer’ and the ‘gods’. Gnostic descriptions sync perfectly with the themes of my own research over the years in how they describe a consciousness distortion seeking to impose itself on human consciousness. I’ve referred to the core of infinite awareness in previous books as Infinite Awareness in Awareness of Itself. By that I mean a level of awareness that knows that it is all awareness and is aware of all awareness. From here comes the frequency of love in its true sense and balance which is what love is on one level – the balance of all forces into a single whole called Oneness and Isness. The more we disconnect from this state of love that many call ‘God’ the constituent parts of that Oneness start to unravel and express themselves as a part and not a whole. They become individualised as intellect, mind, selfishness, hatred, envy, desire for power over others, and such like. This is not a problem in the greater scheme in that ‘God’, the *All That Is*, can experience all these possibilities through different expressions of itself including humans. What we as expressions of the whole experience the *All That Is* experiences. We are the *All That Is* experiencing itself. As we withdraw from that state of Oneness we disconnect from its influence and things can get very unpleasant and very stupid. Archontic consciousness is at the extreme end of that. It has so disconnected from the influence of Oneness that it has become an inversion of unity and love, an inversion of everything, an inversion of life itself. Evil is appropriately live written backwards. Archontic consciousness is obsessed with death, an inversion of life, and so its manifestations in Satanism are obsessed with death. They use inverted symbols in their rituals such as the inverted pentagram and cross. Sabbatians as Archontic consciousness incarnate invert Judaism and every other religion and culture they infiltrate. They seek disunity and chaos and they fear unity and harmony as they fear love like garlic to a vampire. As a result the Cult, Archons incarnate, act with such evil, psychopathy and lack of empathy and compassion disconnected as they are from the source of love. How could Bill Gates and the rest of the Archontic psychopaths do what they have to human society in the 'Covid' era with all the death, suffering and destruction involved and have no emotional consequence for the impact on others? Now you know. Why have Zuckerberg, Brin, Page, Wojcicki and company callously censored information warning about the dangers of the 'vaccine' while thousands have been dying and having severe, sometimes life-changing reactions? Now you know. Why have Tedros, Fauci, Whitty, Vallance and their like around the world been using case and death figures they're aware are fraudulent to justify lockdowns and all the deaths and destroyed lives that have come from that? Now you know. Why did Christian Drosten produce and promote a 'testing' protocol that he knew couldn't test for infectious disease which led to a global human catastrophe. Now you know. The Archontic mind doesn't give a shit (Fig 17). I personally think that Gates and major Cult insiders are a form of AI cyborg that the Archons want humans to become.



THE GATES OF HELL
The MARK of a MAN (ROBOT) for 2030 & Beyond
& THE PINOCCHIO PUPPETS
DR. COVID
UNIVERSE
Meanwhile, in a parallel reality . . .
I will create human robots & control their DNA forever
We'll vaccinate them all master
Send in Dr. Covid to 'take' their minds
5G
Pfizer
MRNA
CDC
NIAID
I'm the Covid 'lone star' . . . 'Magic variants' & third waves are coming
Masks & social distancing, are staying, even if you've had a vaccine
That's right 'brother Anthony'.

Human batteries

A state of such inversion does have its consequences, however. The level of disconnection from the Source of All means that you withdraw from that source of energetic sustenance and creativity. This means that you have to find your own supply of energetic power and it has – *us*. When the Morpheus character in the first *Matrix* movie held up a battery he spoke a profound truth when he said: 'The Matrix is a computer-generated dream world built to keep us under control in order to change the human being into one of these.' The statement was true in all respects. We do live in a technologically-generated virtual reality simulation (more very shortly) and we have been manipulated to be an energy source for Archontic consciousness. The Disney-Pixar animated movie *Monsters, Inc*. in 2001 symbolised the dynamic when monsters in their world had no energy source and they would enter the human world to terrify children in their beds, catch the child's scream, terror (low-vibrational frequencies), and take that energy back to power the monster world. The lead character you might remember was a single giant eye and the symbolism of the Cult's all-seeing eye was obvious. Every thought and emotion is broadcast as a frequency unique to that thought and emotion. Feelings of love and joy, empathy and compassion, are high, quick, frequencies while fear, depression, anxiety, suffering and hate are low, slow, dense frequencies. Which kind do you think Archontic consciousness can connect with and absorb? In such a low and dense frequency state there's no way it can connect with the energy of love and joy. Archons can only feed off energy compatible with their own frequency and they and their Cult agents want to delete the human world of love and joy and manipulate the transmission of low vibrational frequencies through low-vibrational human mental and emotional states. *We are their energy source*. Wars are energetic banquets to the Archons – a world war even more so – and think how much low-frequency mental and emotional energy has been generated from the consequences for humanity of the 'Covid' hoax orchestrated by Archons incarnate like Gates.

The ancient practice of human sacrifice 'to the gods', continued in secret today by the Cult, is based on the same principle. 'The gods' are Archontic consciousness in different forms and the sacrifice is induced into a state of intense terror to generate the energy the Archontic frequency can absorb. Incarnate Archons in the ritual drink the blood which contains an adrenaline they crave which floods into the bloodstream when people are terrorised. Most of the sacrifices, ancient and modern, are children and the theme of 'sacrificing young virgins to the gods' is just code for children. They have a particular pre-puberty energy that Archons want more than anything and the energy of the young in general is their target. The California Department of Education wants students to chant the names of Aztec gods (Archontic gods) once worshipped in human sacrifice rituals in a curriculum designed to encourage them to ‘challenge racist, bigoted, discriminatory, imperialist/colonial beliefs’, join ‘social movements that struggle for social justice’, and ‘build new possibilities for a post-racist, post-systemic racism society’. It’s the usual Woke crap that inverts racism and calls it anti-racism. In this case solidarity with ‘indigenous tribes’ is being used as an excuse to chant the names of ‘gods’ to which people were sacrificed (and still are in secret). What an example of Woke’s inability to see beyond black and white, us and them, They condemn the colonisation of these tribal cultures by Europeans (quite right), but those cultures sacrificing people including children to their ‘gods’, and mass murdering untold numbers as the Aztecs did, is just fine. One chant is to the Aztec god Tezcatlipoca who had a man sacrificed to him in the 5th month of the Aztec calendar. His heart was cut out and he was eaten. Oh, that’s okay then. Come on children … after three … Other sacrificial ‘gods’ for the young to chant their allegiance include Quetzalcoatl, Huitzilopochtli and Xipe Totec. The curriculum says that ‘chants, affirmations, and energizers can be used to bring the class together, build unity around ethnic studies principles and values, and to reinvigorate the class following a lesson that may be emotionally taxing or even when student engagement may appear to be low’. Well, that’s the cover story, anyway. Chanting and mantras are the repetition of a particular frequency generated from the vocal cords and chanting the names of these Archontic ‘gods’ tunes you into their frequency. That is the last thing you want when it allows for energetic synchronisation, attachment and perceptual influence. Initiates chant the names of their ‘Gods’ in their rituals for this very reason.

Vampires of the Woke

Paedophilia is another way that Archons absorb the energy of children. Paedophiles possessed by Archontic consciousness are used as the conduit during sexual abuse for discarnate Archons to vampire the energy of the young they desire so much. Stupendous numbers of children disappear every year never to be seen again although you would never know from the media. Imagine how much low-vibrational energy has been generated by children during the 'Covid' hoax when so many have become depressed and psychologically destroyed to the point of killing themselves. Shocking numbers of children are now taken by the state from loving parents to be handed to others. I can tell you from long experience of researching this since 1996 that many end up with paedophiles and assets of the Cult through corrupt and Cult-owned social services which in the reframing era has hired many psychopaths and emotionless automatons to do the job. Children are even stolen to order using spurious reasons to take them by the corrupt and secret (because they're corrupt) 'family courts'. I have written in detail in other books, starting with *The Biggest Secret* in 1997, about the ubiquitous connections between the political, corporate, government, intelligence and military elites (Cult operatives) and Satanism and paedophilia. If you go deep enough both networks have an interlocking leadership. The Woke mentality has been developed by the Cult for many reasons: To promote almost every aspect of its agenda; to hijack the traditional political left and turn it fascist; to divide and rule; and to target agenda pushbackers. But there are other reasons which relate to what I am describing here. How many happy and joyful Wokers do you ever see especially at the extreme end? They are a mental and psychological mess consumed by emotional stress and constantly emotionally cocked for the next explosion of indignation at someone referring to a female as a female. They are walking, talking, batteries as Morpheus might say emitting frequencies which both enslave them in low-vibrational bubbles of perceptual limitation and feed the Archons. Add to this the hatred claimed to be love; fascism claimed to 'anti-fascism', racism claimed to be 'anti-racism';

exclusion claimed to inclusion; and the abuse-filled Internet trolling. You have a purpose-built Archontic energy system with not a wind turbine in sight and all founded on Archontic *inversion*. We have whole generations now manipulated to serve the Archons with their actions and energy. They will be doing so their entire adult lives unless they snap out of their Archon-induced trance. Is it really a surprise that Cult billionaires and corporations put so much money their way? Where is the energy of joy and laughter, including laughing at yourself which is confirmation of your own emotional security? Mark Twain said: ‘The human race has one really effective weapon, and that is laughter.’ We must use it all the time. Woke has destroyed comedy because it has no humour, no joy, sense of irony, or self-deprecation. Its energy is dense and intense. *Mmmmm*, lunch says the Archontic frequency. Rudolf Steiner (1861-1925) was the Austrian philosopher and famous esoteric thinker who established Waldorf education or Steiner schools to treat children like unique expressions of consciousness and not minds to be programmed with the perceptions determined by authority. I’d been writing about this energy vampiring for decades when I was sent in 2016 a quote by Steiner. He was spot on:

> There are beings in the spiritual realms for whom anxiety and fear emanating from human beings offer welcome food. When humans have no anxiety and fear, then these creatures starve. If fear and anxiety radiates from people and they break out in panic, then these creatures find welcome nutrition and they become more and more powerful. These beings are hostile towards humanity. Everything that feeds on negative feelings, on anxiety, fear and superstition, despair or doubt, are in reality hostile forces in super-sensible worlds, launching cruel attacks on human beings, while they are being fed ... These are exactly the feelings that belong to contemporary culture and materialism; because it estranges people from the spiritual world, it is especially suited to evoke hopelessness and fear of the unknown in people, thereby calling up the above mentioned hostile forces against them.

Pause for a moment from this perspective and reflect on what has happened in the world since the start of 2020. Not only will pennies drop, but billion dollar bills. We see the same theme from Don Juan Matus, a Yaqui Indian shaman in Mexico and the information source for Peruvian-born writer, Carlos Castaneda, who wrote a series of books from the 1960s to 1990s. Don Juan described the force manipulating human society and his name for the Archons was the predator:

> We have a predator that came from the depths of the cosmos and took over the rule of our lives. Human beings are its prisoners. The predator is our lord and master. It has rendered us docile, helpless. If we want to protest, it suppresses our protest. If we want to act independently, it demands that we don't do so … indeed we are held prisoner!
>
> They took us over because we are food to them, and they squeeze us mercilessly because we are their sustenance. Just as we rear chickens in coops, the predators rear us in human coops, humaneros. Therefore, their food is always available to them.

Different cultures, different eras, same recurring theme.

The 'ennoia' dilemma

Nag Hammadi Gnostic manuscripts say that Archon consciousness has no 'ennoia'. This is directly translated as 'intentionality', but I'll use the term 'creative imagination'. The *All That Is* in awareness of itself is the source of all creativity – all possibility – and the more disconnected you are from that source the more you are subsequently denied 'creative imagination'. Given that Archon consciousness is almost entirely disconnected it severely lacks creativity and has to rely on far more mechanical processes of thought and exploit the creative potential of those that do have 'ennoia'. You can see cases of this throughout human society. Archon consciousness almost entirely dominates the global banking system and if we study how that system works you will appreciate what I mean. Banks manifest 'money' out of nothing by issuing lines of 'credit' which is 'money' that has never, does not, and will never exist except in theory. It's a confidence trick. If you think 'credit' figures-on-a-screen 'money' is worth anything you accept it as payment. If you don't then the whole system collapses through lack of confidence in the value of that 'money'. Archontic bankers with no 'ennoia' are 'lending' 'money' that doesn't exist to humans that *do* have creativity – those that have the inspired ideas and create businesses and products. Archon banking feeds off human creativity which it controls through 'money' creation and debt. Humans have the creativity and Archons exploit that for their own benefit and control while having none themselves. Archon Internet platforms like Facebook claim joint copyright of everything that creative users post and while Archontic minds like Zuckerberg may officially head that company it will be human creatives on the staff that provide the creative inspiration. When you have limitless 'money' you can then buy other companies established by creative humans. Witness the acquisition record of Facebook, Google and their like. Survey the Archon-controlled music industry and you see non-creative dark suit executives making their fortune from the human creativity of their artists. The cases are endless. Research the history of people like Gates and Zuckerberg and how their empires were built on exploiting the creativity of others. Archon minds cannot create out of nothing, but they are skilled (because they have to be) in what Gnostic texts call 'countermimicry'. They can imitate, but not innovate. Sabbatians trawl the creativity of others through backdoors they install in computer systems through their cybersecurity systems. Archon-controlled China is globally infamous for stealing intellectual property and I remember how Hong Kong, now part of China, became notorious for making counterfeit copies of the creativity of others – 'countermimicry'. With the now pervasive and all-seeing surveillance systems able to infiltrate any computer you can appreciate the potential for Archons to vampire the creativity of humans. Author John Lamb Lash wrote in his book about the Nag Hammadi texts, *Not In His Image*:

> Although they cannot originate anything, because they lack the divine factor of ennoia (intentionality), Archons can imitate with a vengeance. Their expertise is simulation (HAL, virtual reality). The Demiurge [Yaldabaoth] fashions a heaven world copied from the fractal patterns [of the original] ... His construction is celestial kitsch, like the fake Italianate villa of a Mafia don complete with militant angels to guard every portal.

This brings us to something that I have been speaking about since the turn of the millennium. Our reality is a simulation; a virtual reality that we think is real. No, I'm not kidding.

Human reality? Well, virtually

I had pondered for years about whether our reality is 'real' or some kind of construct. I remembered being immensely affected on a visit as a small child in the late 1950s to the then newly-opened Planetarium on the Marylebone Road in London which is now closed and part of the adjacent Madame Tussauds wax museum. It was in the middle of the day, but when the lights went out there was the night sky projected in the Planetarium's domed ceiling and it appeared to be so real. The experience never left me and I didn't know why until around the turn of the millennium when I became certain that our 'night sky' and entire reality is a projection, a virtual reality, akin to the illusory world portrayed in the *Matrix* movies. I looked at the sky one day in this period and it appeared to me like the domed roof of the Planetarium. The release of the first *Matrix* movie in 1999 also provided a synchronistic and perfect visual representation of where my mind had been going for a long time. I hadn't come across the Gnostic Nag Hammadi texts then. When I did years later the correlation was once again astounding. As I read Gnostic accounts from 1,600 years and more earlier it was clear that they were describing the same simulation phenomenon. They tell how the Yaldabaoth 'Demiurge' and Archons created a 'bad copy' of original reality to rule over all that were captured by its illusions and the body was a prison to trap consciousness in the 'bad copy' fake reality. Read how Gnostics describe the 'bad copy' and update that to current times and they are referring to what we would call today a virtual reality simulation.

Author John Lamb Lash said 'the Demiurge fashions a heaven world copied from the fractal patterns' of the original through expertise in 'HAL' or virtual reality simulation. Fractal patterns are part of the energetic information construct of our reality, a sort of blueprint. If these patterns were copied in computer terms it would indeed give you a copy of a 'natural' reality in a non-natural frequency and digital form. The principle is the same as making a copy of a website. The original website still exists, but now you can change the copy version to make it whatever you like and it can become very different to the original website. Archons have done this with our reality, a *synthetic* copy of prime reality that still exists beyond the frequency walls of the simulation. Trapped within the illusions of this synthetic Matrix, however, were and are human consciousness and other expressions of prime reality and this is why the Archons via the Cult are seeking to make the human body synthetic and give us synthetic AI minds to complete the job of turning the entire reality synthetic including what we perceive to be the natural world. To quote Kurzweil: 'Nanobots will infuse all the matter around us with information. Rocks, trees, everything will become these intelligent creatures.' Yes, *synthetic* 'creatures' just as 'Covid' and other genetically-manipulating 'vaccines' are designed to make the human body synthetic. From this perspective it is obvious why Archons and their Cult are so desperate to infuse synthetic material into every human with their 'Covid' scam.

Let there be (electromagnetic) light

Yaldabaoth, the force that created the simulation, or Matrix, makes sense of the Gnostic reference to 'The Great Architect' and its use by Cult Freemasonry as the name of its deity. The designer of the Matrix in the movies is called 'The Architect' and that trilogy is jam-packed with symbolism relating to these subjects. I have contended for years that the angry Old Testament God (Yaldabaoth) is the 'God' being symbolically 'quoted' in the opening of Genesis as 'creating the world'. This is not the creation of prime reality – it's the creation of the *simulation*. The Genesis 'God' says: 'Let there be Light: and there was light.' But what is this 'Light'? I have said for decades that the speed of light (186,000 miles per second) is not the fastest speed possible as claimed by mainstream science and is in fact the frequency walls or outer limits of the Matrix. You can't have a fastest or slowest anything within all possibility when everything is possible. The human body is encoded to operate within the speed of light or *within the simulation* and thus we see only the tiny frequency band of visible *light*. Near-death experiencers who perceive reality outside the body during temporary 'death' describe a very different form of light and this is supported by the Nag Hammadi texts. Prime reality beyond the simulation ('Upper Aeons' to the Gnostics) is described as a realm of incredible beauty, bliss, love and harmony – a realm of 'watery light' that is so powerful 'there are no shadows'. Our false reality of Archon control, which Gnostics call the 'Lower Aeons', is depicted as a realm with a different kind of 'light' and described in terms of chaos, 'Hell', 'the Abyss' and 'Outer Darkness', where trapped souls are tormented and manipulated by demons (relate that to the 'Covid' hoax alone). The watery light theme can be found in near-death accounts and it is not the same as *simulation* 'light' which is electromagnetic or radiation light within the speed of light – the 'Lower Aeons'. Simulation 'light' is the 'luminous fire' associated by Gnostics with the Archons. The Bible refers to Yaldabaoth as 'that old serpent, called the Devil, and Satan, which deceiveth the whole world' (Revelation 12:9). I think that making a simulated copy of prime reality ('countermimicry') and changing it dramatically while all the time manipulating humanity to believe it to be real could probably meet the criteria of deceiving the whole world. Then we come to the Cult god Lucifer – the *Light Bringer*. Lucifer is symbolic of Yaldabaoth, the bringer of radiation light that forms the bad copy simulation within the speed of light. 'He' is symbolised by the lighted torch held by the Statue of Liberty and in the name 'Illuminati'. Sabbatian-Frankism declares that Lucifer is the true god and Lucifer is the real god of Freemasonry honoured as their 'Great or Grand Architect of the Universe' (simulation).

I would emphasise, too, the way Archontic technologically-generated luminous fire of radiation has deluged our environment since I was a kid in the 1950s and changed the nature of The Field with which we constantly interact. Through that interaction technological radiation is changing us. The Smart Grid is designed to operate with immense levels of communication power with 5G expanding across the world and 6G, 7G, in the process of development. Radiation is the simulation and the Archontic manipulation system. Why wouldn't the Archon Cult wish to unleash radiation upon us to an ever-greater extreme to form

Kurzweil's 'cloud'? The plan for a synthetic human is related to the need to cope with levels of radiation beyond even anything we've seen so far. Biological humans would not survive the scale of radiation they have in their script. The Smart Grid is a technological sub-reality within the technological simulation to further disconnect five-sense perception from expanded consciousness. It's a technological prison of the mind.

Infusing the 'spirit of darkness'

A recurring theme in religion and native cultures is the manipulation of human genetics by a non-human force and most famously recorded as the biblical 'sons of god' (the god*s* plural in the original) who interbred with the daughters of men. The Nag Hammadi *Apocryphon of John* tells the same story this way:

> He [Yaldabaoth] sent his angels [Archons/demons] to the daughters of men, that they might take some of them for themselves and raise offspring for their enjoyment. And at first they did not succeed. When they had no success, they gathered together again and they made a plan together ... And the angels changed themselves in their likeness into the likeness of their mates, filling them with the spirit of darkness, which they had mixed for them, and with evil ... And they took women and begot children out of the darkness according to the likeness of their spirit.

Possession when a discarnate entity takes over a human body is an age-old theme and continues today. It's very real and I've seen it. Satanic and secret society rituals can create an energetic environment in which entities can attach to initiates and I've heard many stories of how people have changed their personality after being initiated even into lower levels of the Freemasons. I have been inside three Freemasonic temples, one at a public open day and two by just walking in when there was no one around to stop me. They were in Ryde, the town where I live, Birmingham, England, when I was with a group, and Boston, Massachusetts. They all felt the same energetically – dark, dense, low-vibrational and sinister. Demonic attachment can happen while the initiate has no idea what is going on. To them it's just a ritual to get in the Masons and do a bit of good business. In the far more extreme rituals of Satanism human possession is even more powerful and they are designed to make possession possible. The hierarchy of the Cult is dictated by the power and perceived status of the possessing Archon. In this way the Archon hierarchy becomes the Cult hierarchy. Once the entity has attached it can influence perception and behaviour and if it attaches to the extreme then so much of its energy (information) infuses into the body information field that the hologram starts to reflect the nature of the possessing entity. This is the *Exorcist* movie type of possession when facial features change and it's known as shapeshifting. Islam's Jinn are said to be invisible tricksters who change shape, 'whisper', confuse and take human form. These are all traits of the Archons and other versions of the same phenomenon. Extreme possession could certainty infuse the 'spirit of darkness' into a partner during sex as the Nag Hammadi texts appear to describe. Such an infusion can change genetics which is also energetic information. Human genetics is information and the 'spirit of darkness' is information. Mix one with the other and change must happen. Islam has the concept of a 'Jinn baby' through possession of the mother and by Jinn taking human form. There are many ways that human genetics can be changed and remember that Archons have been aware all along of advanced techniques to do this. What is being done in human society today – and far more – was known about by Archons at the time of the 'fallen ones' and their other versions described in religions and cultures.

Archons and their human-world Cult are obsessed with genetics as we see today and they know this dictates how information is processed into perceived reality during a human life. They needed to produce a human form that would decode the simulation and this is symbolically known as 'Adam and Eve' who left the 'garden' (prime reality) and 'fell' into Matrix reality. The simulation is not a 'physical' construct (there is no 'physical'); it is a source of information. Think Wi-Fi again. The simulation is an energetic field encoded with information and body-brain systems are designed to decode that information encoded in wave or frequency form which is transmitted to the brain as electrical signals. These are decoded by the brain to construct our sense of reality – an illusory 'physical' world that only exists in the brain or the mind. Virtual reality games mimic this process using the same sensory decoding system. Information is fed to the senses to decode a virtual reality that can appear so real, but isn't (Figs 18 and 19). Some scientists believe – and I agree with them – that what we perceive as 'physical' reality only exists when we are looking or observing. The act of perception or focus triggers the decoding systems which turn waveform information into holographic reality. When we are not observing something our reality reverts from a holographic state to a waveform state. This relates to the same principle as a falling tree not making a noise unless someone is there to hear it or decode it. The concept makes sense from the simulation perspective. A computer is not decoding all the information in a Wi-Fi field all the time and only decodes or brings into reality on the screen that part of Wi-Fi that it's decoding – focusing upon – at that moment.

Figure 18: Virtual reality technology 'hacks' into the body's five-sense decoding system.

Figure 19: The result can be experienced as very 'real'.

Interestingly, Professor Donald Hoffman at the Department of Cognitive Sciences at the University of California, Irvine, says that our experienced reality is like a computer interface that shows us only the level with which we interact while hiding all that exists beyond it: 'Evolution shaped us with a user interface that hides the truth. Nothing that we see is the truth – the very language of space and time and objects is the wrong language to describe reality.' He is correct in what he says on so many levels. Space and time are not a universal reality. They are a phenomenon of decoded *simulation* reality as part of the process of enslaving our sense of reality. Near-death experiencers report again and again how space and time did not exist as we perceive them once they were free of the body – body decoding systems. You can appreciate from this why Archons and their Cult are so desperate to entrap human attention in the five senses where we are in the Matrix and of the Matrix. Opening your mind to expanded states of awareness takes you beyond the information confines of the simulation and you become aware of knowledge and insights denied to you before. This is what we call 'awakening' – *awakening from the Matrix* – and in the final chapter I will relate this to current events.

Where are the 'aliens'?

A simulation would explain the so-called 'Fermi Paradox' named after Italian physicist Enrico Fermi (1901-1954) who created the first nuclear reactor. He considered the question of why there is such a lack of extraterrestrial activity when there are so many stars and planets in an apparently vast universe; but what if the night sky that we see, or think we do, is a simulated projection as I say? If you control the simulation and your aim is to hold humanity fast in essential ignorance would you want other forms of life including advanced life coming and going sharing information with humanity? Or would you want them to believe they were isolated and apparently alone? Themes of human isolation and apartness are common whether they be the perception of a lifeless universe or the fascist isolation laws of the 'Covid' era. Paradoxically the very existence of a simulation means that we are not alone when some force had to construct it. My view is that experiences that people have reported all over the world for centuries with Reptilians and Grey entities are Archon phenomena as Nag Hammadi texts describe; and that benevolent 'alien' interactions are non-human groups that come in and out of the simulation by overcoming Archon attempts to keep them out. It should be highlighted, too, that Reptilians and Greys are obsessed with *genetics* and *technology* as related by cultural accounts and those who say they have been abducted by them. Technology is their way of overcoming some of the limitations in their creative potential and our technology-driven and controlled human society of today is *arch*etypical Archon-Reptilian-Grey modus operandi. Technocracy is really *Archon*tocracy. The Universe does not have to be as big as it appears with a simulation. There is no space or distance only information decoded into holographic reality. What we call 'space' is only the absence of holographic 'objects' and that 'space' is The Field of energetic information which connects everything into a single whole. The same applies with the artificially-generated information field of the simulation. The Universe is not big or small as a physical reality. It is decoded information, that's all, and its perceived size is decided by the way the simulation is encoded to make it appear. The entire night sky as we perceive it only exists in our brain and so where are those 'millions of light years'? The 'stars' on the ceiling of the Planetarium looked a vast distance away.

There's another point to mention about 'aliens'. I have been highlighting since the 1990s the plan to stage a fake 'alien invasion' to justify the centralisation of global power and a world military. Nazi scientist Werner von Braun, who was taken to America by Operation Paperclip after World War Two to help found NASA, told his American assistant Dr Carol Rosin about the Cult agenda when he knew he was dying in 1977. Rosin said that he told her about a sequence that would lead to total human control by a one-world government. This included threats from terrorism, rogue nations, meteors and asteroids before finally an 'alien invasion'. All of these things, von Braun said, would be bogus and what I would refer to as a No-Problem-Reaction-Solution. Keep this in mind when 'the aliens are coming' is the new mantra. The aliens are not coming – they are *already here* and they have infiltrated human society while looking human. French-Canadian investigative journalist Serge Monast said in 1994 that he had uncovered a NASA/military operation called Project Blue Beam which fits with what Werner von Braun predicted. Monast died of a 'heart attack' in 1996 the day after he was arrested and spent a night in prison. He was 51. He said Blue Beam was a plan to stage an alien invasion that would include religious figures beamed holographically into the sky as part of a global manipulation to usher in a 'new age' of worshipping what I would say is the Cult 'god' Yaldabaoth in a one-world religion. Fake holographic asteroids are also said to be part of the plan which again syncs with von Braun. How could you stage an illusory threat from asteroids unless they were holographic inserts? This is pretty straightforward given the advanced technology outside the public arena and the fact that our 'physical' reality is holographic anyway. Information fields would be projected and we would decode them into the illusion of a 'physical' asteroid. If they can sell a global 'pandemic' with a 'virus' that doesn't exist what will humans not believe if government and media tell them?

All this is particularly relevant as I write with the Pentagon planning to release in June, 2021, information about 'UFO sightings'. I have been following the UFO story since the early 1990s and the common theme throughout has been government and military denials and cover up. More recently, however, the Pentagon has suddenly become more talkative and apparently open with Air Force pilot radar images released of unexplained craft moving and changing direction at speeds well beyond anything believed possible with human technology. Then, in March, 2021, former Director of National Intelligence John Ratcliffe said a Pentagon report months later in June would reveal a great deal of information about UFO sightings unknown to the public. He said the report would have 'massive implications'. The order to do this was included bizarrely in a $2.3 trillion 'coronavirus' relief and government funding bill passed by the Trump administration at the end of 2020. I would add some serious notes of caution here. I have been pointing out since the 1990s that the US military and intelligence networks have long had craft – 'flying saucers' or anti-gravity craft – which any observer would take to be extraterrestrial in origin. Keeping this knowledge from the public allows craft flown by *humans* to be perceived as alien visitations. I am not saying that 'aliens' do not exist. I would be the last one to say that, but we have to be streetwise here. President Ronald Reagan told the UN General Assembly in 1987: 'I occasionally think how quickly our differences worldwide would vanish if we were facing an alien threat from outside this world.' That's the idea. Unite against a common 'enemy' with a common purpose behind your 'saviour force' (the Cult) as this age-old technique of mass manipulation goes global.

Science moves this way ...

I could find only one other person who was discussing the simulation hypothesis publicly when I concluded it was real. This was Nick Bostrom, a Swedish-born philosopher at the University of Oxford, who has explored for many years the possibility that human reality is a computer simulation although his version and mine are not the same. Today the simulation and holographic reality hypothesis have increasingly entered the scientific mainstream. Well, the more open-minded mainstream, that is. Here are a few of the ever-gathering examples. American nuclear physicist Silas Beane led a team of physicists at the University of Bonn in Germany pursuing the question of whether we live in a simulation. They concluded that we probably do and it was likely based on a lattice of cubes. They found that cosmic rays align with that specific pattern. The team highlighted the Greisen–Zatsepin–Kuzmin (GZK) limit which refers to cosmic ray particle interaction with cosmic background radiation that creates an apparent boundary for cosmic ray particles. They say in a paper entitled 'Constraints on the Universe as a Numerical Simulation' that this 'pattern of constraint' is exactly what you would find with a computer simulation. They also made the point that a simulation would create its own 'laws of physics' that would limit possibility. I've been making the same point for decades that the *perceived* laws of physics relate only to this reality, or what I would later call the simulation. When designers write codes to create computer and virtual reality games they are the equivalent of the laws of physics for that game. Players interact within the limitations laid out by the coding. In the same way those who wrote the codes for the simulation decided the laws of physics that would apply. These can be overridden by expanded states of consciousness, but not by those enslaved in only five-sense awareness where simulation codes rule. Overriding the codes is what people call 'miracles'. They are not. They are bypassing the encoded limits of the simulation. A population caught in simulation perception would have no idea that this was their plight. As the Bonn paper said: 'Like a prisoner in a pitch-black cell we would not be able to see the "walls" of our prison,' That's true if people remain mesmerised by the five senses. Open to expanded awareness and those walls become very clear. The main one is the speed of light.

American theoretical physicist James Gates is another who has explored the simulation question and found considerable evidence to support the idea. Gates was Professor of Physics at the University of Maryland, Director of The Center for String and Particle Theory, and on Barack Obama's Council of Advisors on Science and Technology. He and his team found *computer codes* of digital data embedded in the fabric of our reality. They relate to on-off electrical charges of 1 and 0 in the binary system used by computers. 'We have no idea what they are doing there', Gates said. They found within the energetic fabric mathematical sequences known as error-correcting codes or block codes that 'reboot' data to its original state or 'default settings' when something knocks it out of sync. Gates was asked if he had found a set of equations embedded in our reality indistinguishable from those that drive search engines and browsers and he said: 'That is correct.' Rich Terrile, director of the Centre for Evolutionary Computation and Automated Design at NASA's Jet

Propulsion Laboratory, has said publicly that he believes the Universe is a digital hologram that must have been created by a form of intelligence. I agree with that in every way. Waveform information is delivered electrically by the senses to the brain which constructs a *digital* holographic reality that we call the ‘world’. This digital level of reality can be read by the esoteric art of numerology. Digital holograms are at the cutting edge of holographics today. We have digital technology everywhere designed to access and manipulate our digital level of perceived reality. Synthetic mRNA in ‘Covid vaccines’ has a digital component to manipulate the body’s digital ‘operating system’.

Reality is numbers

How many know that our reality can be broken down to numbers and codes that are the same as computer games? Max Tegmark, a physicist at the Massachusetts Institute of Technology (MIT), is the author of *Our Mathematical Universe* in which he lays out how reality can be entirely described by numbers and maths in the way that a video game is encoded with the ‘physics’ of computer games. Our world and computer virtual reality are essentially the same. Tegmark imagines the perceptions of characters in an advanced computer game when the graphics are so good they don’t know they are in a game. They think they can bump into real objects (electromagnetic resistance in our reality), fall in love and feel emotions like excitement. When they began to study the apparently ‘physical world’ of the video game they would realise that everything was made of pixels (which have been found in our energetic reality as must be the case when on one level our world is digital). What computer game characters thought was physical ‘stuff’, Tegmark said, could actually be broken down into numbers:

> And we’re exactly in this situation in our world. We look around and it doesn’t seem that mathematical at all, but everything we see is made out of elementary particles like quarks and electrons. And what properties does an electron have? Does it have a smell or a colour or a texture? No! ... We physicists have come up with geeky names for [Electron] properties, like

electric charge, or spin, or lepton number, but the electron doesn't care what we call it, the properties are just numbers.

This is the illusory reality Gnostics were describing. This is the simulation. The A, C, G, and T codes of DNA have a binary value – A and C = 0 while G and T = 1. This has to be when the simulation is digital and the body must be digital to interact with it. Recurring mathematical sequences are encoded throughout reality and the body. They include the Fibonacci sequence in which the two previous numbers are added to get the next one, as in ... 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, etc. The sequence is encoded in the human face and body, proportions of animals, DNA, seed heads, pine cones, trees, shells, spiral galaxies, hurricanes and the number of petals in a flower. The list goes on and on. There are fractal patterns – a 'never-ending pattern that is infinitely complex and self-similar across all scales in the as above, so below, principle of holograms. These and other famous recurring geometrical and mathematical sequences such as Phi, Pi, Golden Mean, Golden Ratio and Golden Section are *computer codes* of the simulation. I had to laugh and give my head a shake the day I finished this book and it went into the production stage. I was sent an article in *Scientific American* published in April, 2021, with the headline 'Confirmed! We Live in a Simulation'. Two decades after I first said our reality is a simulation and the speed of light is it's outer limit the article suggested that we do live in a simulation and that the speed of light is its outer limit. I left school at 15 and never passed a major exam in my life while the writer was up to his eyes in qualifications. As I will explain in the final chapter *knowing* is far better than thinking and they come from very different sources. The article rightly connected the speed of light to the processing speed of the 'Matrix' and said what has been in my books all this time … 'If we are in a simulation, as it appears, then space is an abstract property written in code. It is not real'. No it's not and if we live in a simulation something created it and it wasn't *us*. 'That David Icke says we are manipulated by aliens' – he's crackers.'

Wow …

The reality that humanity thinks is so real is an illusion. Politicians, governments, scientists, doctors, academics, law enforcement, media, school and university curriculums, on and on, are all founded on a world that *does not exist* except as a simulated prison cell. Is it such a stretch to accept that 'Covid' doesn't exist when our entire 'physical' reality doesn't exist? Revealed here is the knowledge kept under raps in the Cult networks of compartmentalised secrecy to control humanity's sense of reality by inducing the population to believe in a reality that's not real. If it wasn't so tragic in its experiential consequences the whole thing would be hysterically funny. None of this is new to Renegade Minds. Ancient Greek philosopher Plato (about 428 to about 347BC) was a major influence on Gnostic belief and he described the human plight thousands of years ago with his Allegory of the Cave. He told the symbolic story of prisoners living in a cave who had never been outside. They were chained and could only see one wall of the cave while behind them was a fire that they could not see. Figures walked past the fire casting shadows on the prisoners' wall and those moving shadows became their sense of reality. Some prisoners began to study the shadows and were considered experts on them (today's academics and scientists), but what they studied was only an illusion (today's academics and scientists). A prisoner escaped from the cave and saw reality as it really is. When he returned to report this revelation they didn't believe him, called him mad and threatened to kill him if he tried to set them free. Plato's tale is not only a brilliant analogy of the human plight and our illusory reality. It describes, too, the dynamics of the 'Covid' hoax. I have only skimmed the surface of these subjects here. The aim of this book is to crisply connect all essential dots to put what is happening today into its true context. All subject areas and their connections in this chapter are covered in great evidential detail in *Everything You Need To Know, But Have Never Been Told* and *The Answer*.

They say that bewildered people 'can't see the forest for the trees'. Humanity, however, can't see the forest for the *twigs*. The five senses see only twigs while Renegade Minds can see the forest and it’s the forest where the answers lie with the connections that reveals. Breaking free of perceptual programming so the forest can be seen is the way we turn all this around. Not breaking free is how humanity got into this mess. The situation may seem hopeless, but I promise you it’s not. We are a perceptual heartbeat from paradise if only we knew.

CHAPTER TWELVE

Escaping Wetiko

Life is simply a vacation from the infinite
Dean Cavanagh

Renegade Minds weave the web of life and events and see common themes in the apparently random. They are always there if you look for them and their pursuit is aided by incredible synchronicity that comes when your mind is open rather than mesmerised by what it thinks it can see.

Infinite awareness is infinite possibility and the more of infinite possibility that we access the more becomes infinitely possible. That may be stating the apparently obvious, but it is a devastatingly-powerful fact that can set us free. We are a point of attention within an infinity of consciousness. The question is how much of that infinity do we choose to access? How much knowledge, insight, awareness, wisdom, do we want to connect with and explore? If your focus is only in the five senses you will be influenced by a fraction of infinite awareness. I mean a range so tiny that it gives new meaning to infinitesimal. Limitation of self-identity and a sense of the possible limit accordingly your range of consciousness. We are what we think we are. Life is what we think it is. The dream is the dreamer and the dreamer is the dream. Buddhist philosophy puts it this way: 'As a thing is viewed, so it appears.' Most humans live in the realm of touch, taste, see, hear, and smell and that's the limit of their sense of the possible and sense of self. Many will follow a religion and speak of a God in his heaven, but their lives are still dominated by the five senses in their perceptions and actions. The five senses become the arbiter of everything. When that happens all except a smear of infinity is sealed away from influence by the rigid, unyielding, reality bubbles that are the five-sense human or Phantom Self. Archon Cult methodology is to isolate consciousness within five-sense reality – the simulation – and then program that consciousness with a sense of self and the world through a deluge of life-long information designed to instil the desired perception that allows global control. Efforts to do this have increased dramatically with identity politics as identity bubbles are squeezed into the minutiae of five-sense detail which disconnect people even more profoundly from the infinite 'I'.

Five-sense focus and self-identity are like a firewall that limits access to the infinite realms. You only perceive one radio or television station and no other. We'll take that literally for a moment. Imagine a vast array of stations giving different information and angles on reality, but you only ever listen to one. Here we have the human plight in which the population is overwhelmingly confined to CultFM. This relates only to the frequency range of CultFM and limits perception and insight to that band – limits *possibility* to that band. It means you are connecting with an almost imperceptibly minuscule range of possibility and creative potential within the infinite Field. It's a world where everything seems apart from everything else and where synchronicity is rare. Synchronicity is defined in the dictionary as 'the happening by chance of two or more related or similar events at the same time'. Use of 'by chance' betrays a complete misunderstanding of reality. Synchronicity is not 'by chance'. As people open their minds, or 'awaken' to use the term, they notice more and more coincidences in their lives, bits of 'luck', apparently miraculous happenings that put them in the right place at the right time with the right people. Days become peppered with 'fancy meeting you here' and 'what are the chances of that?' My entire life has been lived like this and ever more so since my own colossal awakening in 1990 and 91 which transformed my sense of reality. Synchronicity is not 'by chance'; it is by accessing expanded realms of possibility which allow expanded potential for manifestation. People broadcasting the same vibe from the same openness of mind tend to be drawn 'by chance' to each other through what I call frequency magnetism and it's not only people. In the last more than 30 years incredible synchronicity has also led me through the Cult maze to information in so many forms and to crucial personal experiences. These 'coincidences' have allowed me to put the puzzle pieces together across an enormous array of subjects and situations. Those who have breached the bubble of five-sense reality will know exactly what I mean and this escape from the perceptual prison cell is open to everyone whenever they make that choice. This may appear super-human when compared with the limitations of 'human', but it's really our natural state. 'Human' as currently experienced is consciousness in an unnatural state of induced separation from the infinity of the whole. I'll come to how this transformation into unity can be made when I have described in more detail the force that holds humanity in servitude by denying this access to infinite self.

The Wetiko factor

I have been talking and writing for decades about the way five-sense mind is systematically barricaded from expanded awareness. I have used the analogy of a computer (five-sense mind) and someone at the keyboard (expanded awareness). Interaction between the computer and the operator is symbolic of the interaction between five-sense mind and expanded awareness. The computer directly experiences the Internet and the operator experiences the Internet via the computer which is how it's supposed to be – the two working as one. Archons seek to control that point where the operator connects with the computer to stop that interaction (Fig 20). Now the operator is banging the keyboard and clicking the mouse, but the computer is not responding and this happens when the computer is taken over – *possessed* – by an appropriately-named computer 'virus'. The operator has lost all influence over the computer which goes its own way making decisions under the control of the 'virus'. I have just described the dynamic through which the force known to Gnostics as Yaldabaoth and Archons disconnects five-sense mind from expanded awareness to imprison humanity in perceptual servitude.

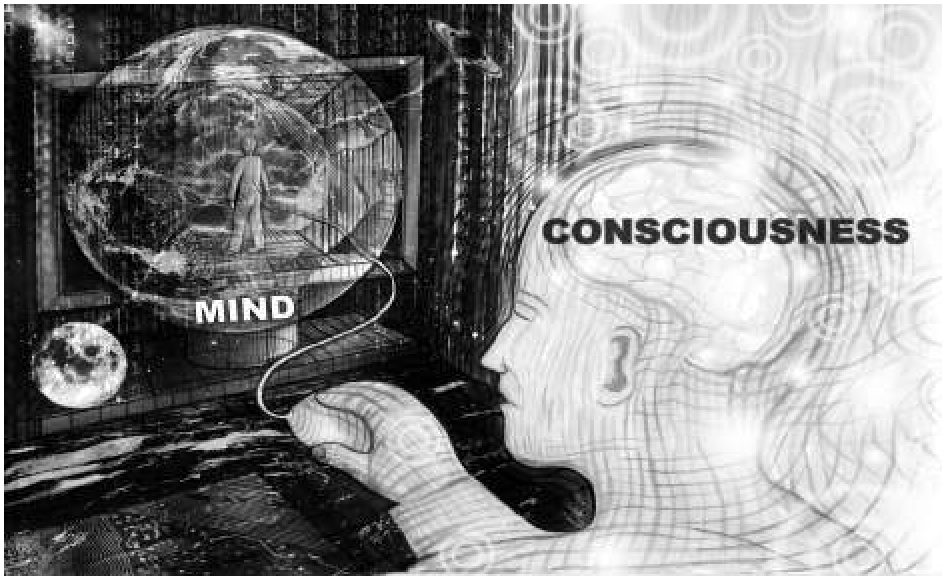

Figure 20: The mind 'virus' I have been writing about for decades seeks to isolate five-sense mind (the computer) from the true 'I'. (Image by Neil Hague).

About a year ago I came across a Native American concept of Wetiko which describes precisely the same phenomenon. Wetiko is the spelling used by the Cree and there are other versions including wintiko and windigo used by other tribal groups. They spell the name with lower case, but I see Wetiko as a proper noun as with Archons and prefer a capital. I first saw an article about Wetiko by writer and researcher Paul Levy which so synced with what I had been writing about the computer/operator disconnection and later the Archons. I then read his book, the fascinating *Dispelling Wetiko, Breaking the Spell of Evil*. The parallels between what I had concluded long before and the Native American concept of Wetiko were so clear and obvious that it was almost funny. For Wetiko see the Gnostic Archons for sure and the Jinn, the Predators, and every other name for a force of evil, inversion and chaos. Wetiko is the Native American name for the force that divides the computer from the operator (Fig 21). Indigenous author Jack D. Forbes, a founder of the Native American movement in the 1960s, wrote another book about Wetiko entitled *Columbus And Other Cannibals – The Wetiko Disease of Exploitation, Imperialism, and Terrorism* which I also read. Forbes says that Wetiko refers to an evil person or spirit 'who terrorizes other creatures by means of terrible acts, including cannibalism'. Zulu shaman Credo Mutwa told me that African accounts tell how cannibalism was brought into the world by the Chitauri 'gods' – another manifestation of Wetiko. The distinction between 'evil person or spirit' relates to Archons/Wetiko possessing a human or acting as pure consciousness. Wetiko is said to be a sickness of the soul or spirit and a state of being that takes but gives nothing back – the Cult and its operatives perfectly described. Black Hawk, a Native American war leader defending their lands from confiscation, said European invaders had 'poisoned hearts' – Wetiko hearts – and that this would spread to native societies. Mention of the heart is very significant as we shall shortly see. Forbes writes: 'Tragically, the history of the world for the past 2,000 years is, in great part, the story of the epidemiology of the wetiko disease.' Yes, and much longer. Forbes is correct when he says: 'The wetikos destroyed Egypt and Babylon and Athens and Rome and Tenochtitlan [capital of the Aztec empire] and perhaps now they will destroy the entire earth.' Evil, he said, is the number one export of a Wetiko culture – see its globalisation with 'Covid'. Constant war, mass murder, suffering of all kinds, child abuse, Satanism, torture and human sacrifice are all expressions of Wetiko and the Wetiko possessed. The world is Wetiko made manifest, *but it doesn't have to be*. There is a way out of this even now.

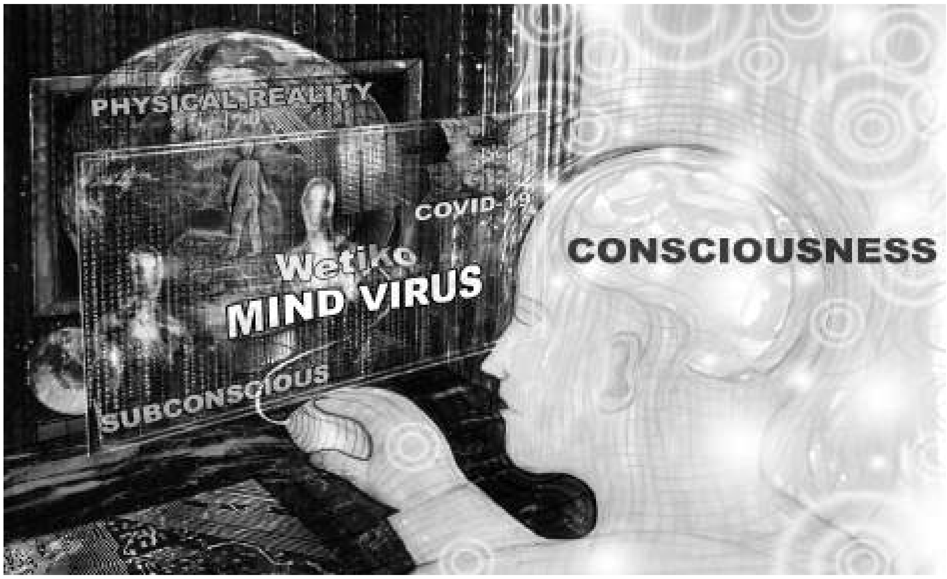

Figure 21: The mind 'virus' is known to Native Americans as 'Wetiko'. (Image by Neil Hague).

Cult of Wetiko

Wetiko is the Yaldabaoth frequency distortion that seeks to attach to human consciousness and absorb it into its own. Once this connection is made Wetiko can drive the perceptions of the target which they believe to be coming from their own mind. All the horrors of history and today from mass killers to Satanists, paedophiles like Jeffrey Epstein and other psychopaths, are the embodiment of Wetiko and express its state of being in all its grotesqueness. The Cult is Wetiko incarnate, Yaldabaoth incarnate, and it seeks to facilitate Wetiko assimilation of humanity in totality into its distortion by manipulating the population into low frequency states that match its own. Paul Levy writes: 'Holographically enforced within the psyche of every human being the wetiko virus pervades and underlies the entire field of consciousness, and can therefore potentially manifest through any one of us at any moment if we are not mindful.' The 'Covid' hoax has achieved this with many people, but others have not fallen into Wetiko's frequency lair. Players in the 'Covid' human catastrophe including Gates, Schwab, Tedros, Fauci, Whitty, Vallance, Johnson, Hancock, Ferguson, Drosten, and all the rest, including the psychopath psychologists, are expressions of Wetiko. This is why they have no compassion or empathy and no emotional consequence for what they do that would make them stop doing it. Observe all the people who support the psychopaths in authority against the Pushbackers despite the damaging impact the psychopaths have on their own lives and their family's lives. You are again looking at Wetiko possession which prevents them seeing through the lies to the obvious scam going on. *Why can't they see it?* Wetiko won't let them see it. The perceptual divide that has now become a chasm is between the Wetikoed and the non-Wetikoed.

Paul Levy describes Wetiko in the same way that I have long described the Archontic force. They are the same distorted consciousness operating across dimensions of reality: '… the subtle body of wetiko is not located in the third dimension of space and time, literally existing in another dimension … it is able to affect ordinary lives by mysteriously interpenetrating into our three-dimensional world.' Wetiko does this through its incarnate representatives in the Cult and by weaving itself into The Field which on our level of reality is the electromagnetic information field of the simulation or Matrix. More than that, the simulation *is* Wetiko / Yaldabaoth. Caleb Scharf, Director of Astrobiology at Columbia University, has speculated that 'alien life' could be so advanced that it has transcribed itself into the quantum realm to become what we call physics. He said intelligence indistinguishable from the fabric of the Universe would solve many of its greatest mysteries:

> Perhaps hyper-advanced life isn't just external. Perhaps it's already all around. It is embedded in what we perceive to be physics itself, from the root behaviour of particles and fields to the phenomena of complexity and emergence … In other words, life might not just be in the equations. It might BE the equations [My emphasis].

Scharf said it is possible that 'we don't recognise advanced life because it forms an integral and unsuspicious part of what we've considered to be the natural world'. I agree. Wetiko/Yaldabaoth *is* the simulation. We are literally in the body of the beast. But that doesn't mean it has to control us. We all have the power to overcome Wetiko influence and the Cult knows that. I doubt it sleeps too well because it knows that.

Which Field?

This, I suggest, is how it all works. There are two Fields. One is the fierce electromagnetic light of the Matrix within the speed of light; the other is the 'watery light' of The Field beyond the walls of the Matrix that connects with the Great Infinity. Five-sense mind and the decoding systems of the body attach us to the Field of Matrix light. They have to or we could not experience this reality. Five-sense mind sees only the Matrix Field of information while our expanded consciousness is part of the Infinity Field. When we open our minds, and most importantly our hearts, to the Infinity Field we have a mission control which gives us an expanded perspective, a road map, to understand the nature of the five-sense world. If we are isolated only in five-sense mind there is no mission control. We're on our own trying to understand a world that's constantly feeding us information to ensure we do not understand. People in this state can feel 'lost' and bewildered with no direction or radar. You can see ever more clearly those who are influenced by the Fields of Big Infinity or little five-sense mind simply by their views and behaviour with regard to the 'Covid' hoax. We have had this division throughout known human history with the mass of the people on one side and individuals who could see and intuit beyond the walls of the simulation – Plato's prisoner who broke out of the cave and saw reality for what it is. Such people have always been targeted by Wetiko/Archon-possessed authority, burned at the stake or demonised as mad, bad and dangerous. The Cult today and its global network of 'anti-hate', 'anti-fascist' Woke groups are all expressions of Wetiko attacking those exposing the conspiracy, 'Covid' lies and the 'vaccine' agenda.

Woke as a whole is Wetiko which explains its black and white mentality and how at one it is with the Wetiko-possessed Cult. Paul Levy said: 'To be in this paradigm is to still be under the thrall of a two-valued logic – where things are either true or false – of a wetikoized mind.’ Wetiko consciousness is in a permanent rage, therefore so is Woke, and then there is Woke inversion and contradiction. ‘Anti-fascists’ act like fascists because fascists *and* ‘anti-fascists’ are both Wetiko at work. Political parties act the same while claiming to be different for the same reason. Secret society and satanic rituals are attaching initiates to Wetiko and the cold, ruthless, psychopathic mentality that secures the positions of power all over the world is Wetiko. Reframing ‘training programmes’ have the same cumulative effect of attaching Wetiko and we have their graduates described as automatons and robots with a cold, psychopathic, uncaring demeanour. They are all traits of Wetiko possession and look how many times they have been described in this book and elsewhere with regard to personnel behind ‘Covid’ including the police and medical profession. Climbing the greasy pole in any profession in a Wetiko society requires traits of Wetiko to get there and that is particularly true of politics which is not about fair competition and pre-eminence of ideas. It is founded on how many backs you can stab and arses you can lick. This culminated in the global ‘Covid’ coordination between the Wetiko possessed who pulled it off in all the different countries without a trace of empathy and compassion for their impact on humans. Our sight sense can see only holographic form and not the Field which connects holographic form. Therefore we perceive ‘physical’ objects with ‘space’ in between. In fact that ‘space’ is energy/consciousness operating on multiple frequencies. One of them is Wetiko and that connects the Cult psychopaths, those who submit to the psychopaths, and those who serve the psychopaths in the media operations of the world. Wetiko is Gates. Wetiko is the mask-wearing submissive. Wetiko is the fake journalist and ‘fact-checker’. The Wetiko Field is coordinating the whole thing. Psychopaths, gofers, media operatives, ‘anti-hate’ hate groups, ‘fact-checkers’ and submissive people work as one unit *even without human coordination* because they are attached to the *same* Field which is organising it all (Fig 22). Paul Levy is here describing how Wetiko-possessed people are drawn together and refuse to let any information breach their rigid perceptions. He was writing long before ‘Covid’, but I think you will recognise followers of the ‘Covid’ religion *oh just a little bit*:

> People who are channelling the vibratory frequency of wetiko align with each other through psychic resonance to reinforce their unspoken shared agreement so as to uphold their deranged view of reality. Once an unconscious content takes possession of certain individuals, it irresistibly draws them together by mutual attraction and knits them into groups tied together by their shared madness that can easily swell into an avalanche of insanity.
>
> A psychic epidemic is a closed system, which is to say that it is insular and not open to any new information or informing influences from the outside world which contradict its fixed, limited, and limiting perspective.

There we have the Woke mind and the ‘Covid’ mind. Compatible resonance draws the awakening together, too, which is clearly happening today.

Spiritual servitude

Wetiko doesn’t care about humans. It’s not human; it just possesses humans for its own ends and the effect (depending on the scale of possession) can be anything from extreme psychopathy to unquestioning obedience. Wetiko's worst nightmare is for human consciousness to expand beyond the simulation. Everything is focussed on stopping that happening through control of information, thus perception, thus frequency. The 'education system', media, science, medicine, academia, are all geared to maintaining humanity in five-sense servitude as is the constant stimulation of low-vibrational mental and emotional states (see 'Covid'). Wetiko seeks to dominate those subconscious spaces between five-sense perception and expanded consciousness where the computer meets the operator. From these subconscious hiding places Wetiko speaks to us to trigger urges and desires that we take to be our own and manipulate us into anything from low-vibrational to psychopathic states. Remember how Islam describes the Jinn as invisible tricksters that 'whisper' and confuse. Wetiko is the origin of the 'trickster god' theme that you find in cultures all over the world. Jinn, like the Archons, are Wetiko which is terrified of humans awakening and reconnecting with our true self for then its energy source has gone. With that the feedback loop breaks between Wetiko and human perception that provides the energetic momentum on which its very existence depends as a force of evil. Humans are both its target and its source of survival, but only if we are operating in low-vibrational states of fear, hate, depression and the background anxiety that most people suffer. We are Wetiko's target because we are its key to survival. It needs us, not the other way round. Paul Levy writes:

> A vampire has no intrinsic, independent, substantial existence in its own right; it only exists in relation to us. The pathogenic, vampiric mind-parasite called wetiko is nothing in itself – not being able to exist from its own side – yet it has a 'virtual reality' such that it can potentially destroy our species …
>
> …The fact that a vampire is not reflected by a mirror can also mean that what we need to see is that there's nothing, no-thing to see, other than ourselves. The fact that wetiko is the expression of something inside of us means that the cure for wetiko is with us as well. The critical issue is finding this cure within us and then putting it into effect.

Evil begets evil because if evil does not constantly expand and find new sources of energetic sustenance its evil, its *distortion*, dies with the assimilation into balance and harmony. Love is the garlic to Wetiko's vampire. Evil, the absence of love, cannot exist in the presence of love. I think I see a way out of here. I have emphasised so many times over the decades that the Archons/Wetiko and their Cult are not all powerful. *They are not*. I don't care how it looks even now *they are not*. I have not called them little boys in short trousers for effect. I have said it because it is true. Wetiko's insatiable desire for power over others is not a sign of its omnipotence, but its insecurity. Paul Levy writes: 'Due to the primal fear which ultimately drives it and which it is driven to cultivate, wetiko's body politic has an intrinsic and insistent need for centralising power and control so as to create imagined safety for itself.' *Yeeeeeees!* Exactly! Why does Wetiko want humans in an ongoing state of fear? Wetiko itself *is* fear and it is petrified of love. As evil is an absence of love, so love is an absence of fear. Love conquers all and *especially* Wetiko which *is* fear. Wetiko brought fear into the world when it wasn't here before. *Fear* was the 'fall', the fall into low-frequency ignorance and illusion – fear is **F**alse **E**motion **A**ppearing **R**eal. The simulation is driven and energised by fear because Wetiko/Yaldabaoth (fear) *are* the simulation. Fear is the absence of love and Wetiko is the absence of love.

Wetiko today

We can now view current events from this level of perspective. The 'Covid' hoax has generated momentous amounts of ongoing fear, anxiety, depression and despair which have empowered Wetiko. No wonder people like Gates have been the instigators when they are Wetiko incarnate and exhibit every trait of Wetiko in the extreme. See how cold and unemotional these people are like Gates and his cronies, how dead of eye they are. That's Wetiko. Sabbatians are Wetiko and everything they control including the World Health Organization, Big Pharma and the 'vaccine' makers, national 'health' hierarchies, corporate media, Silicon Valley, the banking system, and the United Nations with its planned transformation into world government. All are controlled and possessed by the Wetiko distortion into distorting human society in its image. We are with this knowledge at the gateway to understanding the world. Divisions of race, culture, creed and sexuality are diversions to hide the real division between those possessed and influenced by Wetiko and those that are not. The 'Covid' hoax has brought both clearly into view. Human behaviour is not about race. Tyrants and dictatorships come in all colours and creeds. What unites the US president bombing the innocent and an African tribe committing genocide against another as in Rwanda? What unites them? *Wetiko*. All wars are Wetiko, all genocide is Wetiko, all hunger over centuries in a world of plenty is Wetiko. Children going to bed hungry, including in the West, is Wetiko. Cult-generated Woke racial divisions that focus on the body are designed to obscure the reality that divisions in behaviour are manifestations of mind, not body. Obsession with body identity and group judgement is a means to divert attention from the real source of behaviour – mind and perception. Conflict sown by the Woke both within themselves and with their target groups are Wetiko providing lunch for itself through still more agents of the division, chaos, and fear on which it feeds. The Cult is seeking to assimilate the entirety of humanity and all children and young people into the Wetiko frequency by manipulating them into states of fear and despair. Witness all the suicide and psychological unravelling since the spring of 2020. Wetiko psychopaths want to impose a state of unquestioning obedience to authority which is no more than a conduit for Wetiko to enforce its will and assimilate humanity into itself. It needs us to believe that resistance is futile when it fears resistance and even more so the game-changing non-cooperation with its impositions. It can use violent resistance for its benefit. Violent impositions and violent resistance are *both* Wetiko. The Power of Love with its Power of No will sweep Wetiko from our world. Wetiko and its Cult know that. They just don't want us to know.

AI Wetiko

This brings me to AI or artificial intelligence and something else Wetikos don't want us to know. What is AI *really*? I know about computer code algorithms and AI that learns from data input. These, however, are more diversions, the expeditionary force, for the real AI that they want to connect to the human brain as promoted by Silicon Valley Wetikos like Kurzweil. What is this AI? It is the frequency of *Wetiko*, the frequency of the Archons. The connection of AI to the human brain is the connection of the Wetiko frequency to create a Wetiko hive mind and complete the job of assimilation. The hive mind is planned to be controlled from Israel and China which are both 100 percent owned by Wetiko Sabbatians. The assimilation process has been going on minute by minute in the 'smart' era which fused with the 'Covid' era. We are told that social media is scrambling the minds of the young and changing their personality. This is true, but what is social media? Look more deeply at how it works, how it creates divisions and conflict, the hostility and cruelty, the targeting of people until they are destroyed. That's Wetiko. Social media is manipulated to tune people to the Wetiko frequency with all the emotional exploitation tricks employed by platforms like Facebook and its Wetiko front man, Zuckerberg. Facebook's Instagram announced a new platform for children to overcome a legal bar on them using the main site. This is more Wetiko exploitation and manipulation of kids. Amnesty International likened the plan to foxes offering to guard the henhouse and said it was incompatible with human rights. Since when did Wetiko or Zuckerberg (I repeat myself) care about that? Would Brin and Page at Google, Wojcicki at YouTube, Bezos at Amazon and whoever the hell runs Twitter act as they do if they were not channelling Wetiko? Would those who are developing technologies for no other reason than human control? How about those designing and selling technologies to kill people and Big Pharma drug and 'vaccine' producers who know they will end or devastate lives? Quite a thought for these people to consider is that if you are Wetiko in a human life you are Wetiko on the 'other side' unless your frequency changes and that can only change by a change of perception which becomes a change of behaviour. Where Gates is going does not bear thinking about although perhaps that's exactly where he wants to go. Either way, that's where he's going. His frequency will make it so.

The frequency lair

I have been saying for a long time that a big part of the addiction to smartphones and devices is that a frequency is coming off them that entraps the mind. People spend ages on their phones and sometimes even a minute or so after they put them down they pick them up again and it all repeats. 'Covid' lockdowns will have increased this addiction a million times for obvious reasons. Addictions to alcohol overindulgence and drugs are another way that Wetiko entraps consciousness to attach to its own. Both are symptoms of low-vibrational psychological distress which alcoholism and drug addiction further compound. Do we think it's really a coincidence that access to them is made so easy while potions that can take people into realms beyond the simulation are banned and illegal? I have explored smartphone addiction in other books, the scale is mind-blowing, and that level of addiction does not come without help. Tech companies that make these phones are Wetiko and they will have no qualms about destroying the minds of children. We are seeing again with these companies the Wetiko perceptual combination of psychopathic enforcers and weak and meek unquestioning compliance by the rank and file.

The global Smart Grid is the Wetiko Grid and it is crucial to complete the Cult endgame. The simulation is radiation and we are being deluged with technological radiation on a devastating scale. Wetiko frauds like Elon Musk serve Cult interests while occasionally criticising them to maintain his street-cred. 5G and other forms of Wi-Fi are being directed at the earth from space on a volume and scale that goes on increasing by the day. Elon Musk's (officially) SpaceX Starlink project is in the process of putting tens of thousands of satellites in low orbit to cover every inch of the planet with 5G and other Wi-Fi to create Kurzweil's global 'cloud' to which the human mind is planned to be attached very soon. SpaceX has approval to operate 12,000 satellites with more than 1,300 launched at the time of writing and applications filed for *30,000* more. Other operators in the Wi-Fi, 5G, low-orbit satellite market include OneWeb (UK), Telesat (Canada), and AST & Science (US). Musk tells us that AI could be the end of humanity and then launches a company called Neuralink to connect the human brain to computers. Musk's (in theory) Tesla company is building electric cars and the driverless vehicles of the smart control grid. As frauds and bullshitters go Elon Musk in my opinion is Major League.

5G and technological radiation in general are destructive to human health, genetics and psychology and increasing the strength of artificial radiation underpins the five-sense perceptual bubbles which are themselves expressions of radiation or electromagnetism. Freedom activist John Whitehead was so right with his 'databit by databit, we are building our own electronic concentration camps'. The Smart Grid and 5G is a means to control the human mind and infuse perceptual information into The Field to influence anyone in sync with its frequency. You can change perception and behaviour en masse if you can manipulate the population into those levels of frequency and this is happening all around us today. The arrogance of Musk and his fellow Cult operatives knows no bounds in the way that we see with Gates. Musk's satellites are so many in number already they are changing the night sky when viewed from Earth. The astronomy community has complained about this and they have seen nothing yet. Some consequences of Musk's Wetiko hubris include: Radiation; visible pollution of the night sky; interference with astronomy and meteorology; ground and water pollution from intensive use of increasingly many spaceports; accumulating space debris; continual deorbiting and burning up of aging satellites, polluting the atmosphere with toxic dust and smoke; and ever-increasing likelihood of collisions. A collective public open letter of complaint to Musk said:

> We are writing to you … because SpaceX is in process of surrounding the Earth with a network of thousands of satellites whose very purpose is to irradiate every square inch of the

> Earth. SpaceX, like everyone else, is treating the radiation as if it were not there. As if the mitochondria in our cells do not depend on electrons moving undisturbed from the food we digest to the oxygen we breathe.
>
> As if our nervous systems and our hearts are not subject to radio frequency interference like any piece of electronic equipment. As if the cancer, diabetes, and heart disease that now afflict a majority of the Earth's population are not metabolic diseases that result from interference with our cellular machinery. As if insects everywhere, and the birds and animals that eat them, are not starving to death as a result.

People like Musk and Gates believe in their limitless Wetiko arrogance that they can do whatever they like to the world because they own it. Consequences for humanity are irrelevant. It's absolutely time that we stopped taking this shit from these self-styled masters of the Earth when you consider where this is going.

Why is the Cult so anti-human?

I hear this question often: Why would they do this when it will affect them, too? Ah, but will it? Who is this *them*? Forget their bodies. They are just vehicles for Wetiko consciousness. When you break it all down to the foundations we are looking at a state of severely distorted consciousness targeting another state of consciousness for assimilation. The rest is detail. The simulation is the fly-trap in which unique sensations of the five senses create a cycle of addiction called reincarnation. Renegade Minds see that everything which happens in our reality is a smaller version of the whole picture in line with the holographic principle. Addiction to the radiation of smart technology is a smaller version of addiction to the whole simulation. Connecting the body/brain to AI is taking that addiction on a giant step further to total ongoing control by assimilating human incarnate consciousness into Wetiko. I have watched during the 'Covid' hoax how many are becoming ever more profoundly attached to Wetiko's perceptual calling cards of aggressive response to any other point of view ('There is no other god but me'), psychopathic lack of compassion and empathy, and servile submission to the narrative and will of authority. Wetiko is the psychopaths *and* subservience to psychopaths. The Cult of Wetiko is so anti-human because it is *not* human. It embarked on a mission to destroy human by targeting everything that it means to be human and to survive as human. 'Covid' is not the end, just a means to an end. The Cult with its Wetiko consciousness is seeking to change Earth systems, including the atmosphere, to suit them, not humans. The gathering bombardment of 5G alone from ground and space is dramatically changing The Field with which the five senses interact. There is so much more to come if we sit on our hands and hope it will all go away. It is not meant to go away. It is meant to get ever more extreme and we need to face that while we still can – just.

Carbon dioxide is the gas of life. Without that human is over. Kaput, gone, history. No natural world, no human. The Cult has created a cock and bull story about carbon dioxide and climate change to justify its reduction to the point where Gates and the ignoramus Biden 'climate chief' John Kerry want to suck it out of the atmosphere. Kerry wants to do this because his master Gates does. Wetikos have made the gas of life a demon with the usual support from the Wokers of Extinction Rebellion and similar organisations and the bewildered puppet-child that is Greta Thunberg who was put on the world stage by Klaus Schwab and the World Economic Forum. The name Extinction Rebellion is both ironic and as always Wetiko inversion. The gas that we need to survive must be reduced to save us from extinction. The most basic need of human is oxygen and we now have billions walking around in face nappies depriving body and brain of this essential requirement of human existence. More than that 5G at 60 gigahertz interacts with the oxygen molecule to reduce the amount of oxygen the body can absorb into the bloodstream. The obvious knock-on consequences of that for respiratory and cognitive problems and life itself need no further explanation. Psychopaths like Musk are assembling a global system of satellites to deluge the human atmosphere with this insanity. The man should be in jail. Here we have two most basic of human needs, oxygen and carbon dioxide, being dismantled.

Two others, water and food, are getting similar treatment with the United Nations Agendas 21 and 2030 – the Great Reset – planning to centrally control all water and food supplies. People will not even own rain water that falls on their land. Food is affected at the most basic level by reducing carbon dioxide. We have genetic modification or GMO infiltrating the food chain on a mass scale, pesticides and herbicides polluting the air and destroying the soil. Freshwater fish that provide livelihoods for 60 million people and feed hundreds of millions worldwide are being 'pushed to the brink' according the conservationists while climate change is the only focus. Now we have Gates and Schwab wanting to dispense with current food sources all together and replace them with a synthetic version which the Wetiko Cult would control in terms of production and who eats and who doesn't. We have been on the Totalitarian Tiptoe to this for more than 60 years as food has become ever more processed and full of chemical shite to the point today when it's not natural food at all. As Dr Tom Cowan says: 'If it has a label don't eat it.' Bill Gates is now the biggest owner of farmland in the United States and he does nothing without an ulterior motive involving the Cult. Klaus Schwab wrote: 'To feed the world in the next 50 years we will need to produce as much food as was produced in the last 10,000 years … food security will only be achieved, however, if regulations on genetically modified foods are adapted to reflect the reality that gene editing offers a precise, efficient and safe method of improving crops.' Liar. People and the world are being targeted with aluminium through vaccines, chemtrails, food, drink cans, and endless other sources when aluminium has been linked to many health issues including dementia which is increasing year after year. Insects, bees and wildlife essential to the food chain are being deleted by pesticides, herbicides and radiation which 5G is dramatically increasing with 6G and 7G to come. The pollinating bee population is being devastated while wildlife including birds, dolphins and whales are having their natural radar blocked by the effects of ever-increasing radiation. In the summer windscreens used to be splattered with insects so numerous were they. It doesn't happen now. Where have they gone?

Synthetic everything

The Cult is introducing genetically-modified versions of trees, plants and insects including a Gates-funded project to unleash hundreds of millions of genetically-modified, lab-altered and patented male mosquitoes to mate with wild mosquitoes and induce genetic flaws that cause them to die out. Clinically-insane Gates-funded Japanese researchers have developed mosquitos that spread vaccine and are dubbed 'flying vaccinators'. Gates is funding the modification of weather patterns in part to sell the myth that this is caused by carbon dioxide and he's funding geoengineering of the skies to change the atmosphere. Some of this came to light with the Gates-backed plan to release tonnes of chalk into the atmosphere to 'deflect the Sun and cool the planet'. Funny how they do this while the heating effect of the Sun is not factored into climate projections focussed on carbon dioxide. The reason is that they want to reduce carbon dioxide (so don't mention the Sun), but at the same time they do want to reduce the impact of the Sun which is so essential to human life and health. I have mentioned the sun-cholesterol-vitamin D connection as they demonise the Sun with warnings about skin cancer (caused by the chemicals in sun cream they tell you to splash on). They come from the other end of the process with statin drugs to reduce cholesterol that turns sunlight into vitamin D. A lack of vitamin D leads to a long list of health effects and how vitamin D levels must have fallen with people confined to their homes over 'Covid'. Gates is funding other forms of geoengineering and most importantly chemtrails which are dropping heavy metals, aluminium and self-replicating nanotechnology onto the Earth which is killing the natural world. See *Everything You Need To Know, But Have Never Been Told* for the detailed background to this.

Every human system is being targeted for deletion by a force that's not human. The Wetiko Cult has embarked on the process of transforming the human body from biological to synthetic biological as I have explained. Biological is being replaced by the artificial and synthetic – Archontic 'countermimicry' – right across human society. The plan eventually is to dispense with the human body altogether and absorb human consciousness – which it wouldn't really be by then – into cyberspace (the simulation which is Wetiko/Yaldabaoth). Preparations for that are already happening if people would care to look. The alternative media rightly warns about globalism and 'the globalists', but this is far bigger than that and represents the end of the human race as we know it. The 'bad copy' of prime reality that Gnostics describe was a bad copy of harmony, wonder and beauty to start with before Wetiko/Yaldabaoth set out to change the simulated 'copy' into something very different. The process was slow to start with. Entrapped humans in the simulation timeline were not technologically aware and they had to be brought up to intellectual speed while being suppressed spiritually to the point where they could build their own prison while having no idea they were doing so. We have now reached that stage where technological intellect has the potential to destroy us and that's why events are moving so fast. Central American shaman Don Juan Matus said:

> Think for a moment, and tell me how you would explain the contradictions between the intelligence of man the engineer and the stupidity of his systems of belief, or the stupidity of his contradictory behaviour. Sorcerers believe that the predators have given us our systems of beliefs, our ideas of good and evil; our social mores. They are the ones who set up our dreams of success or failure. They have given us covetousness, greed, and cowardice. It is the predator who makes us complacent, routinary, and egomaniacal.
>
> In order to keep us obedient and meek and weak, the predators engaged themselves in a stupendous manoeuvre – stupendous, of course, from the point of view of a fighting strategist; a horrendous manoeuvre from the point of those who suffer it. They gave us their mind. The predators' mind is baroque, contradictory, morose, filled with the fear of being discovered any minute now.

For 'predators' see Wetiko, Archons, Yaldabaoth, Jinn, and all the other versions of the same phenomenon in cultures and religions all over the world. The theme is always the same because it's true and it's real. We have reached the point where we have to deal with it. The question is – how?

Don't fight – walk away

I thought I'd use a controversial subheading to get things moving in terms of our response to global fascism. What do you mean 'don't fight'? What do you mean 'walk away'? We've got to fight. We can't walk away. Well, it depends what we mean by fight and walk away. If fighting means physical combat we are playing Wetiko's game and falling for its trap. It wants us to get angry, aggressive, and direct hate and hostility at the enemy we think we must fight. Every war, every battle, every conflict, has been fought with Wetiko leading both sides. It's what it does. Wetiko wants a fight, anywhere, any place. Just hit me, son, so I can hit you back. Wetiko hits Wetiko and Wetiko hits Wetiko in return. I am very forthright as you can see in exposing Wetikos of the Cult, but I don't hate them. I refuse to hate them. It's what they want. What you hate you become. What you *fight* you become. Wokers, 'anti-haters' and 'anti-fascists' prove this every time they reach for their keyboards or don their balaclavas. By walk away I mean to disengage from Wetiko which includes ceasing to cooperate with its tyranny. Paul Levy says of Wetiko:

> The way to 'defeat' evil is not to try to destroy it (for then, in playing evil's game, we have already lost), but rather, to find the invulnerable place within ourselves where evil is unable to vanquish us – this is to truly 'win' our battle with evil.

Wetiko is everywhere in human society and it's been on steroids since the 'Covid' hoax. Every shouting match over wearing masks has Wetiko wearing a mask and Wetiko not wearing one. It's an electrical circuit of push and resist, push and resist, with Wetiko pushing *and* resisting. Each polarity is Wetiko empowering itself. Dictionary definitions of 'resist' include 'opposing, refusing to accept or comply with' and the word to focus on is 'opposing'. What form does this take – setting police cars alight or 'refusing to accept or comply with'? The former is Wetiko opposing Wetiko while the other points the way forward. This is the difference between those aggressively demanding that government fascism must be obeyed who stand in stark contrast to the great majority of Pushbackers. We saw this clearly with a march by thousands of Pushbackers against lockdown in London followed days later by a Woker-hijacked protest in Bristol in which police cars were set on fire. Masks were virtually absent in London and widespread in Bristol. Wetiko wants lockdown on every level of society and infuses its aggression to police it through its unknowing stooges. Lockdown protesters are the ones with the smiling faces and the hugs, The two blatantly obvious states of being – getting more obvious by the day – are the result of Wokers and their like becoming ever more influenced by the simulation Field of Wetiko and Pushbackers ever more influenced by The Field of a far higher vibration beyond the simulation. Wetiko can't invade the heart which is where most lockdown opponents are coming from. It's the heart that allows them to see through the lies to the truth in ways I will be highlighting.

Renegade Minds know that calmness is the place from which wisdom comes. You won't find wisdom in a hissing fit and wisdom is what we need in abundance right now. Calmness is not weakness – you don't have to scream at the top of your voice to be strong. Calmness is indeed a sign of strength. 'No' means I'm not doing it. *NOOOO!!!* doesn't mean you're not doing it even more. Volume does not advance 'No – I'm not doing it'. You are just not doing it. Wetiko possessed and influenced don't know how to deal with that. Wetiko wants a fight and we should not give it one. What it needs more than anything is our *cooperation* and we should not give that either. Mass rallies and marches are great in that they are a visual representation of feeling, but if it ends there they are irrelevant. You demand that Wetikos act differently? Well, they're not going to are they? They are Wetikos. We don't need to waste our time demanding that something doesn't happen when that will make no difference. We need to delete the means that *allows* it to happen. This, invariably, is our cooperation. You can demand a child stop firing a peashooter at the dog or you can refuse to buy the peashooter. If you provide the means you are cooperating with the dog being smacked on the nose with a pea. How can the authorities enforce mask-wearing if millions in a country refuse? What if the 74 million Pushbackers that voted for Trump in 2020 refused to wear masks, close their businesses or stay in their homes. It would be unenforceable. The few control the many through the compliance of the many and that's always been the dynamic be it 'Covid' regulations or the Roman Empire. I know people can find it intimidating to say no to authority or stand out in a crowd for being the only one with a face on display; but it has to be done or it's over. I hope I've made clear in this book that where this is going will be far more intimidating than standing up now and saying 'No' – I will not cooperate with my own enslavement and that of my children. There might be consequences for some initially, although not so if enough do the same. The question that must be addressed is what is going to happen if we don't? It is time to be strong and unyieldingly so. No means no. Not here and there, but *everywhere* and *always*. I have refused to wear a mask and obey all the other nonsense. I will not comply with tyranny. I repeat: Fascism is not imposed by fascists – there are never enough of them. Fascism is imposed by the population acquiescing to fascism. *I will not do it*. I will die first, or my body will. Living meekly under fascism is a form of death anyway, the death of the spirit that Martin Luther King described.

Making things happen

We must not despair. This is not over till it's over and it's far from that. The 'fat lady' must refuse to sing. The longer the 'Covid' hoax has dragged on and impacted on more lives we have seen an awakening of phenomenal numbers of people worldwide to the realisation that what they have believed all their lives is not how the world really is. Research published by the system-serving University of Bristol and King's College London in February, 2021, concluded: 'One in every 11 people in Britain say they trust David Icke's take on the coronavirus pandemic.' It will be more by now and we have gathering numbers to build on. We must urgently progress from seeing the scam to ceasing to cooperate with it. Prominent German lawyer Reiner Fuellmich, also licenced to practice law in America, is doing a magnificent job taking the legal route to bring the psychopaths to justice through a second Nuremberg tribunal for crimes against humanity. Fuellmich has an impressive record of beating the elite in court and he formed the German Corona Investigative Committee to pursue civil charges against the main perpetrators with a view to triggering criminal charges. Most importantly he has grasped the foundation of the hoax – the PCR test not testing for the 'virus' – and Christian Drosten is therefore on his charge sheet along with Gates frontman Tedros at the World Health Organization. Major players must be not be allowed to inflict their horrors on the human race without being brought to book. A life sentence must follow for Bill Gates and the rest of them. A group of researchers has also indicted the government of Norway for crimes against humanity with copies sent to the police and the International Criminal Court. The lawsuit cites participation in an internationally-planned false pandemic and violation of international law and human rights, the European Commission's definition of human rights by coercive rules, Nuremberg and Hague rules on fundamental human rights, and the Norwegian constitution. We must take the initiative from hereon and not just complain, protest and react.

There are practical ways to support vital mass non-cooperation. Organising in numbers is one. Lockdown marches in London in the spring in 2021 were mass non-cooperation that the authorities could not stop. There were too many people. Hundreds of thousands walked the London streets in the centre of the road for mile after mile while the Face-Nappies could only look on. They were determined, but calm, and just *did it* with no histrionics and lots of smiles. The police were impotent. Others are organising group shopping without masks for mutual support and imagine if that was happening all over. Policing it would be impossible. If the store refuses to serve people in these circumstances they would be faced with a long line of trolleys full of goods standing on their own and everything would have to be returned to the shelves. How would they cope with that if it kept happening? I am talking here about moving on from complaining to being pro-active; from watching things happen to making things happen. I include in this our relationship with the police. The behaviour of many Face-Nappies has been disgraceful and anyone who thinks they would never find concentration camp guards in the 'enlightened' modern era have had that myth busted big-time. The period and setting may change – Wetikos never do. I watched film footage from a London march in which a police thug viciously kicked a protestor on the floor who had done nothing. His fellow Face-Nappies stood in a ring protecting him. What he did was a criminal assault and with a crowd far outnumbering the police this can no longer be allowed to happen unchallenged. I get it when people chant 'shame on you' in these circumstances, but that is no longer enough. They *have* no shame those who do this. Crowds needs to start making a citizen's arrest of the police who commit criminal offences and brutally attack innocent people and defenceless women. A citizen's arrest can be made under section 24A of the UK Police and Criminal Evidence (PACE) Act of 1984 and you will find something similar in other countries. I prefer to call it a Common Law arrest rather than citizen's for reasons I will come to shortly. Anyone can arrest a person committing an indictable offence or if they have reasonable grounds to suspect they are committing an indictable offence. On both counts the attack by the police thug would have fallen into this category. A citizen's arrest can be made to stop someone:

- Causing physical injury to himself or any other person
- Suffering physical injury
- Causing loss of or damage to property
- Making off before a constable can assume responsibility for him

A citizen's arrest may also be made to prevent a breach of the peace under Common Law and if they believe a breach of the peace will happen or anything related to harm likely to be done or already done in their presence. This is the way to go I think – the Common Law version. If police know that the crowd and members of the public will no longer be standing and watching while they commit their thuggery and crimes they will think twice about acting like Brownshirts and Blackshirts.

Common Law – common sense

Mention of Common Law is very important. Most people think the law is the law as in one law. This is not the case. There are two bodies of law, Common Law and Statute Law, and they are not the same. Common Law is founded on the simple premise of do no harm. It does not recognise victimless crimes in which no harm is done while Statute Law does. There is a Statute Law against almost everything. So what is Statute Law? Amazingly it's the law of the *sea* that was brought ashore by the Cult to override the law of the land which is Common Law. They had no right to do this and as always they did it anyway. They had to. They could not impose their will on the people through Common Law which only applies to do no harm. How could you stitch up the fine detail of people's lives with that? Instead they took the law of the sea, or Admiralty Law, and applied it to the population. Statute Law refers to all the laws spewing out of governments and their agencies including all the fascist laws and regulations relating to 'Covid'. The key point to make is that Statute Law is *contract law*. It only applies between *contracting* corporations. Most police officers don't even know this. They have to be kept in the dark, too. Long ago when merchants and their sailing ships began to trade with different countries a contractual law was developed called Admiralty Law and other names. Again it only applied to *contracts* agreed between *corporate* entities. If there is no agreed contract the law of the sea had no jurisdiction *and that still applies to its new alias of Statute Law*. The problem for the Cult when the law of the sea was brought ashore was an obvious one. People were not corporations and neither were government entities. To overcome the latter they made governments and all associated organisations corporations. All the institutions are *private corporations* and I mean governments and their agencies, local councils, police, courts, military, US states, the whole lot. Go to the

Dun and Bradstreet corporate listings website for confirmation that they are all corporations. You are arrested by a private corporation called the police by someone who is really a private security guard and they take you to court which is another private corporation. Neither have jurisdiction over you unless you consent and *contract* with them. This is why you hear the mantra about law enforcement policing by *consent* of the people. In truth the people 'consent' only in theory through monumental trickery.

Okay, the Cult overcame the corporate law problem by making governments and institutions corporate entities; but what about people? They are not corporations are they? Ah ... well in a sense, and *only* a sense, they are. Not people exactly – the illusion of people. The Cult creates a corporation in the name of everyone at the time that their birth certificate is issued. Note birth/ *berth* certificate and when you go to court under the law of the sea on land you stand in a *dock*. These are throwbacks to the origin. My Common Law name is David Vaughan Icke. The name of the corporation created by the government when I was born is called Mr David Vaughan Icke usually written in capitals as MR DAVID VAUGHAN ICKE. That is not me, the living, breathing man. It is a fictitious corporate entity. The trick is to make you think that David Vaughan Icke and MR DAVID VAUGHAN ICKE are the same thing. *They are not*. When police charge you and take you to court they are prosecuting the corporate entity and not the living, breathing, man or woman. They have to trick you into identifying as the corporate entity and contracting with them. Otherwise they have no jurisdiction. They do this through a language known as legalese. Lawful and legal are not the same either. Lawful relates to Common Law and legal relates to Statute Law. Legalese is the language of Statue Law which uses terms that mean one thing to the public and another in legalese. Notice that when a police officer tells someone why they are being charged he or she will say at the end: 'Do you understand?' To the public that means 'Do you comprehend?' In legalese it means 'Do you stand under me?' Do you stand under my authority? If you say yes to the question you are unknowingly agreeing to give them jurisdiction over you in a contract between two corporate entities.

This is a confidence trick in every way. Contracts have to be agreed between informed parties and if you don't know that David Vaughan Icke is agreeing to be the corporation MR DAVID VAUGHAN ICKE you cannot knowingly agree to contract. They are deceiving you and another way they do this is to ask for proof of identity. You usually show them a driving licence or other document on which your corporate name is written. In doing so you are accepting that you are that corporate entity when you are not. Referring to yourself as a 'person' or 'citizen' is also identifying with your corporate fiction which is why I made the Common Law point about the citizen's arrest. If you are approached by a police officer you identify yourself immediately as a living, breathing, man or woman and say 'I do not consent, I do not contract with you and I do not understand' or stand under their authority. I have a Common Law birth certificate as a living man and these are available at no charge from commonlawcourt.com. Businesses registered under the Statute Law system means that its laws apply. There are, however, ways to run a business under Common Law. Remember all 'Covid' laws and regulations are Statute Law – the law of *contracts* and you do not have to contract. This doesn't mean that you can kill someone and get away with it. Common Law says do no harm and that applies to physical harm, financial harm etc. Police are employees of private corporations and there needs to be a new system of non-corporate Common Law constables operating outside the Statute Law system. If you go to davidicke.com and put Common Law into the search engine you will find videos that explain Common Law in much greater detail. It is definitely a road we should walk.

With all my heart

I have heard people say that we are in a spiritual war. I don't like the term 'war' with its Wetiko dynamic, but I know what they mean. Sweep aside all the bodily forms and we are in a situation in which two states of consciousness are seeking very different realities.

Wetiko wants upheaval, chaos, fear, suffering, conflict and control. The other wants love, peace, harmony, fairness and freedom. That's where we are. We should not fall for the idea that Wetiko is all-powerful and there's nothing we can do. Wetiko is not all-powerful. It's a joke, pathetic. It doesn't have to be, but it has made that choice for now. A handful of times over the years when I have felt the presence of its frequency I have allowed it to attach briefly so I could consciously observe its nature. The experience is not pleasant, the energy is heavy and dark, but the ease with which you can kick it back out the door shows that its real power is in persuading us that it has power. It's all a con. Wetiko is a con. It's a trickster and not a power that can control us if we unleash our own. The con is founded on manipulating humanity to give its power to Wetiko which recycles it back to present the illusion that it has power when its power is *ours* that we gave away. This happens on an energetic level and plays out in the world of the seen as humanity giving its power to Wetiko authority which uses that power to control the population when the power is only the power the population has handed over. How could it be any other way for billions to be controlled by a relative few? I have had experiences with people possessed by Wetiko and again you can kick its arse if you do it with an open heart. Oh yes – the *heart* which can transform the world of perceived 'matter'.

We are receiver-transmitters and processors of information, but what information and where from? Information is processed into perception in three main areas – the brain, the heart and the belly. These relate to thinking, knowing, and emotion. Wetiko wants us to be head and belly people which means we think within the confines of the Matrix simulation and low-vibrational emotional reaction scrambles balance and perception. A few minutes on social media and you see how emotion is the dominant force. Woke is all emotion and is therefore thought-free and fact-free. Our heart is something different. It *knows* while the head *thinks* and has to try to work it out because it doesn't know. The human energy field has seven prime vortexes which connect us with wider reality (Fig 23). Chakra means ‘wheels of light’ in the Sanskrit language of ancient India. The main ones are: The crown chakra on top of the head; brow (or ‘third eye’) chakra in the centre of the forehead; throat chakra; heart chakra in the centre of the chest; solar plexus chakra below the sternum; sacral chakra beneath the navel; and base chakra at the bottom of the spine. Each one has a particular function or functions. We feel anxiety and nervousness in the belly where the sacral chakra is located and this processes emotion that can affect the colon to give people ‘the shits’ or make them ‘shit scared’ when they are nervous. Chakras all play an important role, but the Mr and Mrs Big is the heart chakra which sits at the centre of the seven, above the chakras that connect us to the ‘physical’ and below those that connect with higher realms (or at least should). Here in the heart chakra we feel love, empathy and compassion – ‘My heart goes out to you’. Those with closed hearts become literally ‘heart-less’ in their attitudes and behaviour (see Bill Gates). Native Americans portrayed Wetiko with what Paul Levy calls a ‘frigid, icy heart, devoid of mercy’ (see Bill Gates).

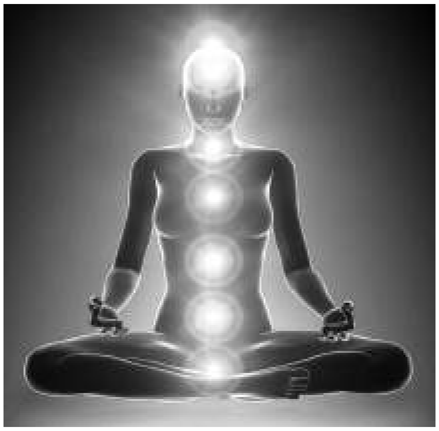

Figure 23: The chakra system which interpenetrates the human energy field. The heart chakra is the governor – or should be.

Wetiko trembles at the thought of heart energy which it cannot infiltrate. The frequency is too high. What it seeks to do instead is close the heart chakra vortex to block its perceptual and energetic influence. Psychopaths have ‘hearts of stone’ and emotionally-damaged people have ‘heartache’ and ‘broken hearts’. The astonishing amount of heart disease is related to heart chakra disruption with its fundamental connection to the 'physical' heart. Dr Tom Cowan has written an outstanding book challenging the belief that the heart is a pump and making the connection between the 'physical' and spiritual heart. Rudolph Steiner who was way ahead of his time said the same about the fallacy that the heart is a pump. *What*? The heart is not a pump? That's crazy, right? Everybody knows that. Read Cowan's *Human Heart, Cosmic Heart* and you will realise that the very idea of the heart as a pump is ridiculous when you see the evidence. How does blood in the feet so far from the heart get pumped horizontally up the body by the heart?? Cowan explains in the book the real reason why blood moves as it does. Our 'physical' heart is used to symbolise love when the source is really the heart vortex or spiritual heart which is our most powerful energetic connection to 'out there' expanded consciousness. That's why we feel *knowing* – intuitive knowing – in the centre of the chest. Knowing doesn't come from a process of thoughts leading to a conclusion. It is there in an instant all in one go. Our heart knows because of its connection to levels of awareness that *do* know. This is the meaning and source of intuition – intuitive *knowing*.

For the last more than 30 years of uncovering the global game and the nature of reality my heart has been my constant antenna for truth and accuracy. An American intelligence insider once said that I had quoted a disinformer in one of my books and yet I had only quoted the part that was true. He asked: 'How do you do that?' By using my heart antenna was the answer and anyone can do it. Heart-centred is how we are meant to be. With a closed heart chakra we withdraw into a closed mind and the bubble of five-sense reality. If you take a moment to focus your attention on the centre of your chest, picture a spinning wheel of light and see it opening and expanding. You will feel it happening, too, and perceptions of the heart like joy and love as the heart impacts on the mind as they interact. The more the chakra opens the more you will feel expressions of heart consciousness and as the process continues, and becomes part of you, insights and knowings will follow. An open heart is connected to that level of awareness that knows all is *One*. You will see from its perspective that the fault-lines that divide us are only illusions to control us. An open heart does not process the illusions of race, creed and sexuality except as brief experiences for a consciousness that is all. Our heart does not see division, only unity (Figs 24 and 25). There's something else, too. Our hearts love to laugh. Mark Twain's quote that says 'The human race has one really effective weapon, and that is laughter' is really a reference to the heart which loves to laugh with the joy of knowing the true nature of infinite reality and that all the madness of human society is an illusion of the mind. Twain also said: 'Against the assault of laughter nothing can stand.' This is so true of Wetiko and the Cult. Their insecurity demands that they be taken seriously and their power and authority acknowledged and feared. We should do nothing of the sort. We should not get aggressive or fearful which their insecurity so desires. We should laugh in their face. Even in their no-face as police come over in their face-nappies and expect to be taken seriously. They don't take themselves seriously looking like that so why should we? Laugh in the face of intimidation. Laugh in the face of tyranny. You will see by its reaction that you have pressed all of its buttons. Wetiko does not know what to do in the face of laughter or when its targets refuse to concede their joy to fear. We have seen many examples during the 'Covid' hoax when people have expressed their energetic power and the string puppets of Wetiko retreat with their tail limp between their knees. Laugh – the world is bloody mad after all and if it's a choice between laughter and tears I know which way I'm going.

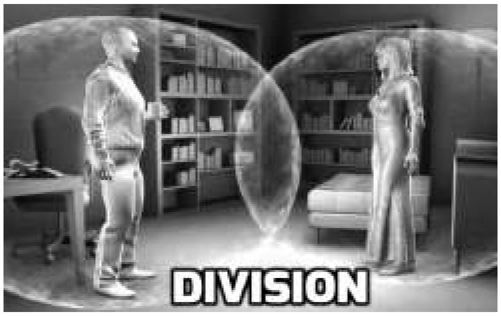

Figure 24: Head consciousness without the heart sees division and everything apart from everything else.

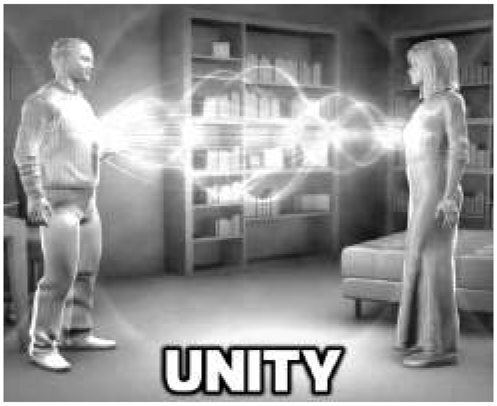

Figure 25: Heart consciousness sees everything as One.

'Vaccines' and the soul

The foundation of Wetiko/Archon control of humans is the separation of incarnate five-sense mind from the infinite 'I' and closing the heart chakra where the True 'I' lives during a human life. The goal has been to achieve complete separation in both cases. I was interested therefore to read an account by a French energetic healer of what she said she experienced with a patient who had been given the 'Covid' vaccine. Genuine energy healers can sense information and consciousness fields at different levels of being which are referred to as 'subtle bodies'. She described treating the patient who later returned after having, without the healer's knowledge, two doses of the 'Covid vaccine'. The healer said:

> I noticed immediately the change, very heavy energy emanating from [the] subtle bodies. The scariest thing was when I was working on the heart chakra, I connected with her soul: it was detached from the physical body, it had no contact and it was, as if it was floating in a state of total confusion: a damage to the consciousness that loses contact with the physical body, i.e. with our biological machine, there is no longer any communication between them.
>
> I continued the treatment by sending light to the heart chakra, the soul of the person, but it seemed that the soul could no longer receive any light, frequency or energy. It was a very powerful experience for me. Then I understood that this substance is indeed used to detach consciousness so that this consciousness can no longer interact through this body that it possesses in life, where there is no longer any contact, no frequency, no light, no more energetic balance or mind.

This would create a human that is rudderless and at the extreme almost zombie-like operating with a fractional state of consciousness at the mercy of Wetiko. I was especially intrigued by what the healer said in the light of the prediction by the highly-informed Rudolf Steiner more than a hundred years ago. He said:

> In the future, we will eliminate the soul with medicine. Under the pretext of a 'healthy point of view', there will be a vaccine by which the human body will be treated as soon as possible directly at birth, so that the human being cannot develop the thought of the existence of soul and Spirit. To materialistic doctors will be entrusted the task of removing the soul of humanity.
>
> As today, people are vaccinated against this disease or that disease, so in the future, children will be vaccinated with a substance that can be produced precisely in such a way that people, thanks to this vaccination, will be immune to being subjected to the 'madness' of spiritual life. He would be extremely smart, but he would not develop a conscience, and that is the true goal of some materialistic circles.

Steiner said the vaccine would detach the physical body from the etheric body (subtle bodies) and 'once the etheric body is detached the relationship between the universe and the etheric body would become extremely unstable, and man would become an automaton'. He said 'the physical body of man must be polished on this Earth by spiritual will – so the vaccine becomes a kind of arymanique (Wetiko) force' and 'man can no longer get rid of a given materialistic feeling'. Humans would then, he said, become 'materialistic of constitution and can no longer rise to the spiritual'. I have been writing for years about DNA being a receiver-transmitter of information that connects us to other levels of reality and these 'vaccines' changing DNA can be likened to changing an antenna and what it can transmit and receive. Such a disconnection would clearly lead to changes in personality and perception. Steiner further predicted the arrival of AI. Big Pharma 'Covid vaccine' makers, expressions of Wetiko, are testing their DNA-manipulating evil on children as I write with a view to giving the 'vaccine' to babies. If it's a soul-body disconnector – and I say that it is or can be – every child would be disconnected from 'soul' at birth and the 'vaccine' would create a closed system in which spiritual guidance from the greater self would play no part. This has been the ambition of Wetiko all along. A Pentagon video from 2005 was leaked of a presentation explaining the development of vaccines to change behaviour by their effect on the brain. Those that believe this is not happening with the 'Covid' genetically-modifying procedure masquerading as a 'vaccine' should make an urgent appointment with Naivety Anonymous. Klaus Schwab wrote in 2018:

> Neurotechnologies enable us to better influence consciousness and thought and to understand many activities of the brain. They include decoding what we are thinking in fine levels of detail through new chemicals and interventions that can influence our brains to correct for errors or enhance functionality.

The plan is clear and only the heart can stop it. With every heart that opens, every mind that awakens, Wetiko is weakened. Heart and love are far more powerful than head and hate and so nothing like a majority is needed to turn this around.

Beyond the Phantom

Our heart is the prime target of Wetiko and so it must be the answer to Wetiko. We *are* our heart which is part of one heart, the infinite heart. Our heart is where the true self lives in a human life behind firewalls of five-sense illusion when an imposter takes its place – *Phantom Self*; but our heart waits patiently to be set free any time we choose to see beyond the Phantom, beyond Wetiko. A Wetikoed Phantom Self can wreak mass death and destruction while the love of forever is locked away in its heart. The time is here to unleash its power and let it sweep away the fear and despair that is Wetiko. Heart consciousness does not seek manipulated, censored, advantage for its belief or religion, its activism and desires. As an expression of the One it treats all as One with the same rights to freedom and opinion. Our heart demands fairness for itself no more than for others. From this unity of heart we can come together in mutual support and transform this Wetikoed world into what reality is meant to be – a place of love, joy, happiness, fairness, justice and freedom. Wetiko has another agenda and that's why the world is as it is, but enough of this nonsense. Wetiko can't stay where hearts are open and it works so hard to keep them closed. Fear is its currency and its food source and love in its true sense has no fear. Why would love have fear when it knows it is *All That Is, Has Been, And Ever Can Be* on an eternal exploration of all possibility? Love in this true sense is not the physical attraction that passes for love. This can be an expression of it, yes, but Infinite Love, a love without condition, goes far deeper to the core of all being. It *is* the core of all being. Infinite realty was born from love beyond the illusions of the simulation. Love infinitely expressed is the knowing that all is One and the swiftly-passing experience of separation is a temporary hallucination. You cannot disconnect from Oneness; you can only *perceive* that you have and withdraw from its influence. This is the most important of all perception trickery by the mind parasite that is Wetiko and the foundation of all its potential for manipulation.

If we open our hearts, open the sluice gates of the mind, and redefine self-identity amazing things start to happen. Consciousness expands or contracts in accordance with self-identity. When true self is recognised as infinite awareness and label self – Phantom Self – is seen as only a series of brief experiences life is transformed. Consciousness expands to the extent that self-identity expands and everything changes. You see unity, not division, the picture, not the pixels. From this we can play the long game. No more is an experience something in and of itself, but a fleeting moment in the eternity of forever. Suddenly people in uniform and dark suits are no longer intimidating. Doing what your heart knows to be right is no longer intimidating and consequences for those actions take on the same nature of a brief experience that passes in the blink of an infinite eye. Intimidation is all in the mind. Beyond the mind there is no intimidation.

An open heart does not consider consequences for what it knows to be right. To do so would be to consider not doing what it knows to be right and for a heart in its power that is never an option. The Renegade Mind is really the Renegade Heart. Consideration of consequences will always provide a getaway car for the mind and the heart doesn’t want one. What is right in the light of what we face today is to stop cooperating with Wetiko in all its forms and to do it without fear or compromise. You cannot compromise with tyranny when tyranny always demands more until it has everything. Life is your perception and you are your destiny. Change your perception and you change your life. Change collective perception and we change the world.

Come on people … One human family, One heart, One goal … *FREEEEEEDOM*!

We must settle for nothing less.

Postscript

The big scare story as the book goes to press is the 'Indian' variant and the world is being deluged with propaganda about the 'Covid catastrophe' in India which mirrors in its lies and misrepresentations what happened in Italy before the first lockdown in 2020.

The *New York Post* published a picture of someone who had 'collapsed in the street from Covid' in India in April, 2021, which was actually taken during a gas leak in May, 2020. Same old, same old. Media articles in mid-February were asking why India had been so untouched by 'Covid' and then as their vaccine rollout gathered pace the alleged 'cases' began to rapidly increase. Indian 'Covid vaccine' maker Bharat Biotech was funded into existence by the Bill and Melinda Gates Foundation (the pair announced their divorce in May, 2021, which is a pity because they so deserve each other). The Indian 'Covid crisis' was ramped up by the media to terrify the world and prepare people for submission to still more restrictions. The scam that worked the first time was being repeated only with far more people seeing through the deceit. Davidicke.com and Ickonic.com have sought to tell the true story of what is happening by talking to people living through the Indian nightmare which has nothing to do with 'Covid'. We posted a letter from 'Alisha' in Pune who told a very different story to government and media mendacity. She said scenes of dying people and overwhelmed hospitals were designed to hide what was really happening – genocide and starvation. Alisha said that millions had already died of starvation during the ongoing lockdowns while government and media were lying and making it look like the 'virus':

> Restaurants, shops, gyms, theatres, basically everything is shut. The cities are ghost towns. Even so-called 'essential' businesses are only open till 11am in the morning. You basically have just an hour to buy food and then your time is up.
>
> Inter-state travel and even inter-district travel is banned. The cops wait at all major crossroads to question why you are traveling outdoors or to fine you if you are not wearing a mask.
>
> The medical community here is also complicit in genocide, lying about hospitals being full and turning away people with genuine illnesses, who need immediate care. They have even created a shortage of oxygen cylinders.

This is the classic Cult modus operandi played out in every country. Alisha said that people who would not have a PCR test not testing for the 'virus' were being denied hospital treatment. She said the people hit hardest were migrant workers and those in rural areas. Most businesses employed migrant workers and with everything closed there were no jobs, no income and no food. As a result millions were dying of starvation or malnutrition. All this was happening under Prime Minister Narendra Modi, a 100-percent asset of the Cult, and it emphasises yet again the scale of pure anti-human evil we are dealing with. Australia banned its people from returning home from India with penalties for trying to do so of up to five years in jail and a fine of £37,000. The manufactured 'Covid' crisis in India was being prepared to justify further fascism in the West. Obvious connections could be seen between the Indian 'vaccine' programme and increased 'cases' and this became a common theme. The Seychelles, the most per capita 'Covid vaccinated' population in the world, went back into lockdown after a 'surge of cases'.

Long ago the truly evil Monsanto agricultural biotechnology corporation with its big connections to Bill Gates devastated Indian farming with genetically-modified crops. Human rights activist Gurcharan Singh highlighted the efforts by the Indian government to complete the job by destroying the food supply to hundreds of millions with 'Covid' lockdowns. He said that 415 million people at the bottom of the disgusting caste system (still going whatever they say) were below the poverty line and struggled to feed themselves every year. Now the government was imposing lockdown at just the time to destroy the harvest. This deliberate policy was leading to mass starvation. People may reel back at the suggestion that a government would do that, but Wetiko-controlled ‘leaders’ are capable of any level of evil. In fact what is described in India is in the process of being instigated worldwide. The food chain and food supply are being targeted at every level to cause world hunger and thus control. Bill Gates is not the biggest owner of farmland in America for no reason and destroying access to food aids both the depopulation agenda and the plan for synthetic ‘food’ already being funded into existence by Gates. Add to this the coming hyper-inflation from the suicidal creation of fake ‘money’ in response to ‘Covid’ and the breakdown of container shipping systems and you have a cocktail that can only lead one way and is meant to. The Cult plan is to crash the entire system to ‘build back better’ with the Great Reset.

‘Vaccine’ transmission

Reports from all over the world continue to emerge of women suffering menstrual and fertility problems after having the fake ‘vaccine’ and of the non-’vaccinated’ having similar problems when interacting with the ‘vaccinated’. There are far too many for ‘coincidence’ to be credible. We’ve had menopausal women getting periods, others having periods stop or not stopping for weeks, passing clots, sometimes the lining of the uterus, breast irregularities, and miscarriages (which increased by 400 percent in parts of the United States). Non-‘vaccinated’ men and children have suffered blood clots and nose bleeding after interaction with the ‘vaccinated’. Babies have died from the effects of breast milk from a ‘vaccinated’ mother. Awake doctors – the small minority – speculated on the cause of non-’vaccinated’ suffering the same effects as the ‘vaccinated’. Was it nanotechnology in the synthetic substance transmitting frequencies or was it a straight chemical bioweapon that was being transmitted between people? I am not saying that some kind of chemical transmission is not one possible answer, but the foundation of all that the Cult does is frequency and this is fertile ground for understanding how transmission can happen. American doctor Carrie Madej, an internal medicine physician and osteopath, has been practicing for the last 20 years, teaching medical students, and she says attending different meetings where the agenda for humanity was discussed. Madej, who operates out of Georgia, did not dismiss other possible forms of transmission, but she focused on frequency in search of an explanation for transmission. She said the Moderna and Pfizer 'vaccines' contained nano-lipid particles as a key component. This was a brand new technology never before used on humanity. 'They're using a nanotechnology which is pretty much little tiny computer bits … nanobots or hydrogel.' Inside the 'vaccines' was 'this sci-fi kind of substance' which suppressed immune checkpoints to get into the cell. I referred to this earlier as the 'Trojan horse' technique that tricks the cell into opening a gateway for the self-replicating synthetic material and while the immune system is artificially suppressed the body has no defences. Madej said the substance served many purposes including an on-demand ability to 'deliver the payload' and using the nano 'computer bits' as biosensors in the body. 'It actually has the ability to accumulate data from your body, like your breathing, your respiration, thoughts, emotions, all kinds of things.'

She said the technology obviously has the ability to operate through Wi-Fi and transmit and receive energy, messages, frequencies or impulses. 'Just imagine you're getting this new substance in you and it can react to things all around you, the 5G, your smart device, your phones.' We had something completely foreign in the human body that had never been launched large scale at a time when we were seeing 5G going into schools and hospitals (plus the Musk satellites) and she believed the 'vaccine' transmission had something to do with this: '… if these people have this inside of them … it can act like an antenna and actually transmit it outwardly as well.' The synthetic substance produced its own voltage and so it could have that kind of effect. This fits with my own contention that the nano receiver-transmitters are designed to connect people to the

Smart Grid and break the receiver-transmitter connection to expanded consciousness. That would explain the French energy healer's experience of the disconnection of body from 'soul' with those who have had the 'vaccine'. The nanobots, self-replicating inside the body, would also transmit the synthetic frequency which could be picked up through close interaction by those who have not been 'vaccinated'. Madej speculated that perhaps it was 5G and increased levels of other radiation that was causing the symptoms directly although interestingly she said that non-'vaccinated' patients had shown improvement when they were away from the 'vaccinated' person they had interacted with. It must be remembered that you can control frequency and energy with your mind and you can consciously create energetic barriers or bubbles with the mind to stop damaging frequencies from penetrating your field. American paediatrician Dr Larry Palevsky said the 'vaccine' was not a 'vaccine' and was never designed to protect from a 'viral' infection. He called it 'a massive, brilliant propaganda of genocide' because they didn't have to inject everyone to get the result they wanted. He said the content of the jabs was able to infuse any material into the brain, heart, lungs, kidneys, liver, sperm and female productive system. 'This is genocide; this is a weapon of mass destruction.' At the same time American colleges were banning students from attending if they didn't have this life-changing and potentially life-ending 'vaccine'. Class action lawsuits must follow when the consequences of this college fascism come to light. As the book was going to press came reports about fertility effects on sperm in 'vaccinated' men which would absolutely fit with what I have been saying and hospitals continued to fill with 'vaccine' reactions. Another question is what about transmission via blood transfusions? The NHS has extended blood donation restrictions from seven days after a 'Covid vaccination' to 28 days after even a sore arm reaction.

I said in the spring of 2020 that the then touted 'Covid vaccine' would be ongoing each year like the flu jab. A year later Pfizer CEO, the appalling Albert Bourla, said people would 'likely' need a 'booster dose' of the 'vaccine' within 12 months of getting 'fully vaccinated' and then a yearly shot. 'Variants will play a key role', he said confirming the point. Johnson & Johnson CEO Alex Gorsky also took time out from his 'vaccine' disaster to say that people may need to be vaccinated against 'Covid-19' each year. UK Health Secretary, the psychopath Matt Hancock, said additional 'boosters' would be available in the autumn of 2021. This is the trap of the 'vaccine passport'. The public will have to accept every last 'vaccine' they introduce, including for the fake 'variants', or it would cease to be valid. The only other way in some cases would be continuous testing with a test not testing for the 'virus' and what is on the swabs constantly pushed up your noise towards the brain every time?

'Vaccines' changing behaviour

I mentioned in the body of the book how I believed we would see gathering behaviour changes in the 'vaccinated' and I am already hearing such comments from the non-'vaccinated' describing behaviour changes in friends, loved ones and work colleagues. This will only increase as the self-replicating synthetic material and nanoparticles expand in body and brain. An article in the *Guardian* in 2016 detailed research at the University of Virginia in Charlottesville which developed a new method for controlling brain circuits associated with complex animal behaviour. The method, dubbed 'magnetogenetics', involves genetically-engineering a protein called ferritin, which stores and releases iron, to create a magnetised substance – 'Magneto' – that can activate specific groups of nerve cells from a distance. This is claimed to be an advance on other methods of brain activity manipulation known as optogenetics and chemogenetics (the Cult has been developing methods of brain control for a long time). The ferritin technique is said to be non-invasive and able to activate neurons 'rapidly and reversibly'. In other words, human thought and perception. The article said that earlier studies revealed how nerve cell proteins 'activated by heat and mechanical pressure can be genetically engineered so that they become sensitive to radio waves and magnetic fields, by attaching them to an iron-storing protein called ferritin, or to inorganic paramagnetic particles'. Sensitive to radio waves and magnetic fields? You mean like 5G, 6G and 7G? This is the human-AI Smart Grid hive mind we are talking about. The *Guardian* article said:

> … the researchers injected Magneto into the striatum of freely behaving mice, a deep brain structure containing dopamine-producing neurons that are involved in reward and motivation, and then placed the animals into an apparatus split into magnetised and non-magnetised sections.
>
> Mice expressing Magneto spent far more time in the magnetised areas than mice that did not, because activation of the protein caused the striatal neurons expressing it to release dopamine, so that the mice found being in those areas rewarding. This shows that Magneto can remotely control the firing of neurons deep within the brain, and also control complex behaviours.

Make no mistake this basic methodology will be part of the 'Covid vaccine' cocktail and using magnetics to change brain function through electromagnetic field frequency activation. The Pentagon is developing a 'Covid vaccine' using ferritin. Magnetics would explain changes in behaviour and why videos are appearing across the Internet as I write showing how magnets stick to the skin at the point of the 'vaccine' shot. Once people take these 'vaccines' anything becomes possible in terms of brain function and illness which will be blamed on 'Covid-19' and 'variants'. Magnetic field manipulation would further explain why the non-'vaccinated' are reporting the same symptoms as the 'vaccinated' they interact with and why those symptoms are reported to decrease when not in their company. Interestingly 'Magneto', a 'mutant', is a character in the Marvel Comic *X-Men* stories with the ability to manipulate magnetic fields and he believes that mutants should fight back against their human oppressors by any means necessary. The character was born Erik Lehnsherr to a Jewish family in Germany.

Cult-controlled courts

The European Court of Human Rights opened the door for mandatory 'Covid-19 vaccines' across the continent when it ruled in a Czech Republic dispute over childhood immunisation that legally enforced vaccination could be 'necessary in a democratic society'. The 17 judges decided that compulsory vaccinations did not breach human rights law. On the face of it the judgement was so inverted you gasp for air. If not having a vaccine infused into your body is not a human right then what is? Ah, but they said human rights law which has been specifically written to delete all human rights at the behest of the state (the Cult). Article 8 of the European Convention on Human Rights relates to the right to a private life. The crucial word here is *'except'*:

> There shall be no interference by a public authority with the exercise of this right EXCEPT such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic wellbeing of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others [My emphasis].

No interference *except* in accordance with the law means there *are* no 'human rights' *except* what EU governments decide you can have at their behest. 'As is necessary in a democratic society' explains that reference in the judgement and 'in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others' gives the EU a coach and horses to ride through 'human rights' and scatter them in all directions. The judiciary is not a check and balance on government extremism; it is a vehicle to enforce it. This judgement was almost laughably predictable when the last thing the Cult wanted was a decision that went against mandatory vaccination. Judges rule over and over again to benefit the system of which they are a part. Vaccination disputes that come before them are invariably delivered in favour of doctors and authorities representing the view of the state which owns the judiciary. Oh, yes, and we have even had calls to stop putting 'Covid-19' on death certificates within 28 days of a 'positive test' because it is claimed the practice makes the 'vaccine' appear not to work. They are laughing at you.

The scale of madness, inhumanity and things to come was highlighted when those not ‘vaccinated’ for ‘Covid’ were refused evacuation from the Caribbean island of St Vincent during massive volcanic eruptions. Cruise ships taking residents to the safety of another island allowed only the ‘vaccinated’ to board and the rest were left to their fate. Even in life and death situations like this we see ‘Covid’ stripping people of their most basic human instincts and the insanity is even more extreme when you think that fake ‘vaccine’-makers are not even claiming their body-manipulating concoctions stop ‘infection’ and ‘transmission’ of a ‘virus’ that doesn’t exist. St Vincent Prime Minister Ralph Gonsalves said: ‘The chief medical officer will be identifying the persons already vaccinated so that we can get them on the ship.’ Note again the power of the chief medical officer who, like Whitty in the UK, will be answering to the World Health Organization. This is the Cult network structure that has overridden politicians who ‘follow the science’ which means doing what WHO-controlled ‘medical officers’ and ‘science advisers’ tell them. Gonsalves even said that residents who were ‘vaccinated’ after the order so they could board the ships would still be refused entry due to possible side effects such as ‘wooziness in the head’. The good news is that if they were woozy enough in the head they could qualify to be prime minister of St Vincent.

Microchipping freedom

The European judgement will be used at some point to justify moves to enforce the ‘Covid’ DNA-manipulating procedure. Sandra Ro, CEO of the Global Blockchain Business Council, told a World Economic Forum event that she hoped ‘vaccine passports’ would help to ‘drive forced consent and standardisation’ of global digital identity schemes: ‘I’m hoping with the desire and global demand for some sort of vaccine passport – so that people can get travelling and working again – [it] will drive forced consent, standardisation, and frankly, cooperation across the world.’ The lady is either not very bright, or thoroughly mendacious, to use the term ‘forced consent’.

You do not ‘consent’ if you are forced – you *submit*. She was describing what the plan has been all along and that’s to enforce a digital identity on every human without which they could not function. ‘Vaccine passports’ are opening the door and are far from the end goal. A digital identity would allow you to be tracked in everything you do in cyberspace and this is the same technique used by Cult-owned China to enforce its social credit system of total control. The ultimate ‘passport’ is planned to be a microchip as my books have warned for nearly 30 years. Those nice people at the Pentagon working for the Cult-controlled Defense Advanced Research Projects Agency (DARPA) claimed in April, 2021, they have developed a microchip inserted under the skin to detect ‘asymptomatic Covid-19 infection’ before it becomes an outbreak and a ‘revolutionary filter’ that can remove the ‘virus’ from the blood when attached to a dialysis machine. The only problems with this are that the ‘virus’ does not exist and people transmitting the ‘virus’ with no symptoms is brain-numbing bullshit. This is, of course, not a ruse to get people to be microchipped for very different reasons. DARPA also said it was producing a one-stop ‘vaccine’ for the ‘virus’ and all ‘variants’. One of the most sinister organisations on Planet Earth is doing this? Better have it then. These people are insane because Wetiko that possesses them is insane.

Researchers from the Salk Institute in California announced they have created an embryo that is part human and part monkey. My books going back to the 1990s have exposed experiments in top secret underground facilities in the United States where humans are being crossed with animal and non-human ‘extraterrestrial’ species. They are now easing that long-developed capability into the public arena and there is much more to come given we are dealing with psychiatric basket cases. Talking of which – Elon Musk’s scientists at Neuralink trained a monkey to play Pong and other puzzles on a computer screen using a joystick and when the monkey made the correct move a metal tube squirted banana smoothie into his mouth which is the basic technique for training humans into unquestioning compliance. Two Neuralink chips were in the monkey’s skull and more than 2,000 wires ‘fanned out’ into its brain. Eventually the monkey played a video game purely with its brain waves. Psychopathic narcissist Musk said the ‘breakthrough’ was a step towards putting Neuralink chips into human skulls and merging minds with artificial intelligence. *Exactly*. This man is so dark and Cult to his DNA.

World Economic Fascism (WEF)

The World Economic Forum is telling you the plan by the statements made at its many and various events. Cult-owned fascist YouTube CEO Susan Wojcicki spoke at the 2021 WEF Global Technology Governance Summit (see the name) in which 40 governments and 150 companies met to ensure ‘the responsible design and deployment of emerging technologies’. Orwellian translation: ‘Ensuring the design and deployment of long-planned technologies will advance the Cult agenda for control and censorship.’ Freedom-destroyer and Nuremberg-bound Wojcicki expressed support for tech platforms like hers to censor content that is ‘technically legal but could be harmful’. Who decides what is ‘harmful’? She does and they do. ‘Harmful’ will be whatever the Cult doesn’t want people to see and we have legislation proposed by the UK government that would censor content on the basis of ‘harm’ no matter if the information is fair, legal and provably true. Make that *especially* if it is fair, legal and provably true. Wojcicki called for a global coalition to be formed to enforce content moderation standards through automated censorship. This is a woman and mega-censor so self-deluded that she shamelessly accepted a ‘free expression’ award – *Wojcicki* – in an event sponsored by her own *YouTube*. They have no shame and no self-awareness.

You know that ‘Covid’ is a scam and Wojcicki a Cult operative when YouTube is censoring medical and scientific opinion purely on the grounds of whether it supports or opposes the Cult ‘Covid’ narrative. Florida governor Ron DeSantis compiled an expert panel with four professors of medicine from Harvard, Oxford, and Stanford Universities who spoke against forcing children and vaccinated people to wear masks. They also said there was no proof that lockdowns reduced spread or death rates of 'Covid-19'. Cult-gofer Wojcicki and her YouTube deleted the panel video 'because it included content that contradicts the consensus of local and global health authorities regarding the efficacy of masks to prevent the spread of Covid-19'. This 'consensus' refers to what the Cult tells the World Health Organization to say and the WHO tells 'local health authorities' to do. Wojcicki knows this, of course. The panellists pointed out that censorship of scientific debate was responsible for deaths from many causes, but Wojcicki couldn't care less. She would not dare go against what she is told and as a disgrace to humanity she wouldn't want to anyway. The UK government is seeking to pass a fascist 'Online Safety Bill' to specifically target with massive fines and other means non-censored video and social media platforms to make them censor 'lawful but harmful' content like the Cult-owned Facebook, Twitter, Google and YouTube. What is 'lawful but harmful' would be decided by the fascist Blair-created Ofcom.

Another WEF obsession is a cyber-attack on the financial system and this is clearly what the Cult has planned to take down the bank accounts of everyone – except theirs. Those that think they have enough money for the Cult agenda not to matter to them have got a big lesson coming if they continue to ignore what is staring them in the face. The World Economic Forum, funded by Gates and fronted by Klaus Schwab, announced it would be running a 'simulation' with the Russian government and global banks of just such an attack called Cyber Polygon 2021. What they simulate – as with the 'Covid' Event 201 – they plan to instigate. The WEF is involved in a project with the Cult-owned Carnegie Endowment for International Peace called the WEF-Carnegie Cyber Policy Initiative which seeks to merge Wall Street banks, 'regulators' (I love it) and intelligence agencies to 'prevent' (arrange and allow) a cyber-attack that would bring down the global financial system as long planned by those that control the WEF and the Carnegie operation. The Carnegie Endowment for International Peace sent an instruction to First World

War US President Woodrow Wilson not to let the war end before society had been irreversibly transformed.

The Wuhan lab diversion

As I close, the Cult-controlled authorities and lapdog media are systematically pushing 'the virus was released from the Wuhan lab' narrative. There are two versions – it happened by accident and it happened on purpose. Both are nonsense. The perceived existence of the never-shown-to-exist 'virus' is vital to sell the impression that there is actually an infective agent to deal with and to allow the endless potential for terrifying the population with 'variants' of a 'virus' that does not exist. The authorities at the time of writing are going with the 'by accident' while the alternative media is promoting the 'on purpose'. Cable news host Tucker Carlson who has questioned aspects of lockdown and 'vaccine' compulsion has bought the Wuhan lab story. 'Everyone now agrees' he said. Well, I don't and many others don't and the question is *why* does the system and its media suddenly 'agree'? When the media moves as one unit with a narrative it is always a lie – witness the hour by hour mendacity of the 'Covid' era. Why would this Cult-owned combination which has unleashed lies like machine gun fire suddenly 'agree' to tell the truth??

Much of the alternative media is buying the lie because it fits the conspiracy narrative, but it's the *wrong* conspiracy. The real conspiracy is that *there is no virus* and that is what the Cult is desperate to hide. The idea that the 'virus' was released by accident is ludicrous when the whole 'Covid' hoax was clearly long-planned and waiting to be played out as it was so fast in accordance with the Rockefeller document and Event 201. So they prepared everything in detail over decades and then sat around strumming their fingers waiting for an 'accidental' release from a bio-lab? *What??* It's crazy. Then there's the 'on purpose' claim. You want to circulate a 'deadly virus' and hide the fact that you've done so and you release it down the street from the highest-level bio-lab in China? I repeat – *What??*

You would release it far from that lab to stop any association being made. But, no, we'll do it in a place where the connection was certain to be made. Why would you need to scam 'cases' and 'deaths' and pay hospitals to diagnose 'Covid-19' if you had a real 'virus'? What are sections of the alternative media doing believing this crap? Where were all the mass deaths in Wuhan from a 'deadly pathogen' when the recovery to normal life after the initial propaganda was dramatic in speed? Why isn't the 'deadly pathogen' now circulating all over China with bodies in the street? Once again we have the technique of tell them what they want to hear and they will likely believe it. The alternative media has its 'conspiracy' and with Carlson it fits with his 'China is the danger' narrative over years. China *is* a danger as a global Cult operations centre, but not for this reason. The Wuhan lab story also has the potential to instigate conflict with China when at some stage the plan is to trigger a Problem-Reaction-Solution confrontation with the West. Question everything – *everything* – and especially when the media agrees on a common party line.

Third wave ... fourth wave ... fifth wave ...

As the book went into production the world was being set up for more lockdowns and a 'third wave' supported by invented 'variants' that were increasing all the time and will continue to do so in public statements and computer programs, but not in reality. India became the new Italy in the 'Covid' propaganda campaign and we were told to be frightened of the new 'Indian strain'. Somehow I couldn't find it within myself to do so. A document produced for the UK government entitled 'Summary of further modelling of easing of restrictions – Roadmap Step 2' declared that a third wave was inevitable (of course when it's in the script) and it would be the fault of children and those who refuse the health-destroying fake 'Covid vaccine'. One of the computer models involved came from the Cult-owned *Imperial College* and the other from Warwick University which I wouldn't trust to tell me the date in a calendar factory. The document states that both models presumed extremely high uptake of the ‘Covid vaccines’ and didn’t allow for ‘variants’. The document states: ‘The resurgence is a result of some people (mostly children) being ineligible for vaccination; others choosing not to receive the vaccine; and others being vaccinated but not perfectly protected.’ The mendacity takes the breath away. Okay, blame those with a brain who won’t take the DNA-modifying shots and put more pressure on children to have it as ‘trials’ were underway involving children as young as six months with parents who give insanity a bad name. Massive pressure is being put on the young to have the fake ‘vaccine’ and child age consent limits have been systematically lowered around the world to stop parents intervening. Most extraordinary about the document was its claim that the ‘third wave’ would be driven by ‘the resurgence in both hospitalisations and deaths … dominated by *those that have received two doses of the vaccine*, comprising around 60-70% of the wave respectively’. The predicted peak of the ‘third wave’ suggested 300 deaths per day with 250 of them *fully ‘vaccinated’ people*. How many more lies do acquiescers need to be told before they see the obvious? Those who took the jab to ‘protect themselves’ are projected to be those who mostly get sick and die? So what’s in the ‘vaccine’? The document went on:

> It is possible that a summer of low prevalence could be followed by substantial increases in incidence over the following autumn and winter. Low prevalence in late summer should not be taken as an indication that SARS-CoV-2 has retreated or that the population has high enough levels of immunity to prevent another wave.

They are telling you the script and while many British people believed ‘Covid’ restrictions would end in the summer of 2021 the government was preparing for them to be ongoing. Authorities were awarding contracts for ‘Covid marshals’ to police the restrictions with contracts starting in July, 2021, and going through to January 31st, 2022, and the government was advertising for ‘Media Buying Services’ to secure media propaganda slots worth a potential £320 million for ‘Covid-19 campaigns’ with a contract not ending until March, 2022. The recipient – via a list of other front companies – was reported to be American media marketing giant Omnicom Group

Inc. While money is no object for 'Covid' the UK waiting list for all other treatment – including life-threatening conditions – passed 4.5 million. Meantime the Cult is seeking to control all official 'inquiries' to block revelations about what has really been happening and why. It must not be allowed to – we need Nuremberg jury trials in every country. The cover-up doesn't get more obvious than appointing ultra-Zionist professor Philip Zelikow to oversee two dozen US virologists, public health officials, clinicians, former government officials and four American 'charitable foundations' to 'learn the lessons' of the 'Covid' debacle. The personnel will be those that created and perpetuated the 'Covid' lies while Zelikow is the former executive director of the 9/11 Commission who ensured that the truth about those attacks never came out and produced a report that must be among the most mendacious and manipulative documents ever written – see *The Trigger* for the detailed exposure of the almost unimaginable 9/11 story in which Sabbatians can be found at every level.

Passive no more

People are increasingly challenging the authorities with amazing numbers of people taking to the streets in London well beyond the ability of the Face-Nappies to stop them. Instead the Nappies choose situations away from the mass crowds to target, intimidate, and seek to promote the impression of 'violent protestors'. One such incident happened in London's Hyde Park. Hundreds of thousands walking through the streets in protest against 'Covid' fascism were ignored by the Cult-owned BBC and most of the rest of the mainstream media, but they delighted in reporting how police were injured in 'clashes with protestors'. The truth was that a group of people gathered in Hyde Park at the end of one march when most had gone home and they were peacefully having a good time with music and chat. Face-Nappies who couldn't deal with the full-march crowd then waded in with their batons and got more than they bargained for. Instead of just standing for this criminal brutality the crowd used their numerical superiority to push the Face-Nappies out of the park. Eventually the Nappies turned and ran. Unfortunately two or three idiots in the crowd threw drink cans striking two officers which gave the media and the government the image they wanted to discredit the 99.9999 percent who were peaceful. The idiots walked straight into the trap and we must always be aware of potential agent provocateurs used by the authorities to discredit their targets.

This response from the crowd – the can people apart – must be a turning point when the public no longer stand by while the innocent are arrested and brutally attacked by the Face-Nappies. That doesn't mean to be violent, that's the last thing we need. We'll leave the violence to the Face-Nappies and government. But it does mean that when the Face-Nappies use violence against peaceful people the numerical superiority is employed to stop them and make citizen's arrests or Common Law arrests for a breach of the peace. The time for being passive in the face of fascism is over.

We are the many, they are the few, and we need to make that count before there is no freedom left and our children and grandchildren face an ongoing fascist nightmare.

COME ON PEOPLE – IT'S TIME.

One final thought …

The power of love
A force from above
Cleaning my soul
Flame on burn desire
Love with tongues of fire
Purge the soul
Make love your goal

I’ll protect you from the hooded claw
Keep the vampires from your door
When the chips are down I’ll be around
With my undying, death-defying
Love for you

Envy will hurt itself
Let yourself be beautiful
Sparkling love, flowers
And pearls and pretty girls
Love is like an energy
Rushin’ rushin’ inside of me

This time we go sublime
Lovers entwine, divine, divine,
Love is danger, love is pleasure
Love is pure – the only treasure

I’m so in love with you
Purge the soul
Make love your goal

The power of love
A force from above
Cleaning my soul
The power of love
A force from above
A sky-scraping dove

Flame on burn desire
Love with tongues of fire
Purge the soul
Make love your goal

Frankie Goes To Hollywood

APPENDIX

Cowan-Kaufman-Morell Statement on Virus Isolation (SOVI)

Isolation: The action of isolating; the fact or condition of being isolated or standing alone; separation from other things or persons; solitariness
Oxford English Dictionary

The controversy over whether the SARS-CoV-2 virus has ever been isolated or purified continues. However, using the above definition, common sense, the laws of logic and the dictates of science, any unbiased person must come to the conclusion that the SARS-CoV-2 virus has never been isolated or purified. As a result, no confirmation of the virus' existence can be found. The logical, common sense, and scientific consequences of this fact are:

- the structure and composition of something not shown to exist can't be known, including the presence, structure, and function of any hypothetical spike or other proteins;
- the genetic sequence of something that has never been found can't be known;
- "variants" of something that hasn't been shown to exist can't be known;
- it's impossible to demonstrate that SARS-CoV-2 causes a disease called Covid-19.

In as concise terms as possible, here's the proper way to isolate, characterize and demonstrate a new virus. First, one takes samples (blood, sputum, secretions) from many people (e.g. 500) with symptoms which are unique and specific enough to characterize an illness. Without mixing these samples with ANY tissue or products that also contain genetic material, the virologist macerates, filters and ultracentrifuges i.e. *purifies* the specimen. This common virology technique, done for decades to isolate bacteriophages[1] and so-called giant viruses in every virology lab, then allows the virologist to demonstrate with electron microscopy thousands of identically sized and shaped particles. These particles are the isolated and purified virus.

These identical particles are then checked for uniformity by physical and/or microscopic techniques. Once the purity is determined, the particles may be further characterized. This would include examining the structure, morphology, and chemical composition of the particles. Next, their genetic makeup is characterized by extracting the genetic material directly from the purified particles and using genetic-sequencing techniques, such as Sanger sequencing, that have also been around for decades. Then one does an analysis to confirm that these uniform particles are exogenous (outside) in origin as a virus is conceptualized to be, and not the normal breakdown products of dead and dying tissues.[2] (As of May 2020, we know that virologists have no way to determine whether the particles they're seeing are viruses or just normal breakdown products of dead and dying tissues.)[3]

[2] "Extracellular Vesicles Derived From Apoptotic Cells: An Essential Link Between Death and Regeneration," Maojiao Li1 et al, Frontiers in Cell and Developmental Biology, 2020 October 2. https://www.frontiersin.org/articles/10.3389/fcell.2020.573511/full – accessed 2/15/21

If we have come this far then we have fully isolated, characterized, and genetically sequenced an exogenous virus particle. However, we still have to show it is causally related to a disease. This is carried out by exposing a group of healthy subjects (animals are usually used) to this isolated, purified virus in the manner in which the disease is thought to be transmitted. If the animals get sick with the same disease, as confirmed by clinical and autopsy findings, one has now shown that the virus actually causes a disease. This demonstrates infectivity and transmission of an infectious agent.

None of these steps has even been attempted with the SARS-CoV-2 virus, nor have all these steps been successfully performed for any so-called pathogenic virus. Our research indicates that a single study showing these steps does not exist in the medical literature.

Instead, since 1954, virologists have taken unpurified samples from a relatively few people, often less than ten, with a similar disease. They then minimally process this sample and inoculate this unpurified sample onto tissue culture containing usually four to six other types of material – all of which contain identical genetic material as to what is called a "virus." The tissue culture is starved and poisoned and naturally disintegrates into many types of particles, some of which contain genetic material. Against all common sense, logic, use of the English language and scientific integrity, this process is called "virus isolation." This brew containing fragments of genetic material from many sources is then subjected to genetic analysis, which then creates in a computer-simulation process the alleged sequence of the alleged virus, a so called in silico genome. At no time is an actual virus confirmed by electron microscopy. At no time is a genome extracted and sequenced from an actual virus. This is scientific fraud.

---

3 "The Role of Extraellular Vesicles as Allies of HIV, HCV and SARS Viruses," Flavia Giannessi, et al, Viruses, 2020 May

The observation that the unpurified specimen — inoculated onto tissue culture along with toxic antibiotics, bovine fetal tissue, amniotic fluid and other tissues — destroys the kidney tissue onto which it is inoculated is given as evidence of the virus' existence and pathogenicity. This is scientific fraud.

From now on, when anyone gives you a paper that suggests the SARS-CoV-2 virus has been isolated, please check the methods sections. If the researchers used Vero cells or any other culture method, you know that their process was not isolation. You will hear the following excuses for why actual isolation isn't done:

1. There were not enough virus particles found in samples from patients to analyze.
2. Viruses are intracellular parasites; they can't be found outside the cell in this manner.

If No. 1 is correct, and we can't find the virus in the sputum of sick people, then on what evidence do we think the virus is dangerous or even lethal? If No. 2 is correct, then how is the virus spread from person to person? We are told it emerges from the cell to infect others. Then why isn't it possible to find it?

Finally, questioning these virology techniques and conclusions is not some distraction or divisive issue. Shining the light on this truth is essential to stop this terrible fraud that humanity is confronting. For, as we now know, if the virus has never been isolated, sequenced or shown to cause illness, if the virus is imaginary, then why are we wearing masks, social distancing and putting the whole world into prison?

Finally, if pathogenic viruses don't exist, then what is going into those injectable devices erroneously called "vaccines," and what is their purpose? This scientific question is the most urgent and relevant one of our time.

We are correct. The SARS-CoV2 virus does not exist.

ICKONIC
THE ALTERNATIVE

Ickonic is something that has been a dream of mine for the last 5 years, growing up around alternative information I have always had a natural interest in what is going on in the World and what could I do to make it better.

Across the range of subjects and positions of influence occupied mainly by people who don't strive to make things better it's the Media that I have always found the most frustrating and fascinating. Mainly because if the Media did their Jobs properly then so much of the negative things happening in the World simply would not be able to happen, because they would be exposed within a heartbeat.

Free Press and the Opportunities that the internet could have given would mean that the Media are able to expose things like never before and hold people to account for their actions. As we all know there are 'Untouchables' that walk among us, people the Media simply won't touch, expose or investigate and that leads to the dark underworlds that infest the establishment the World over.

Well I say enough, it's time for something different, a different kind of Media, where no one is off limits from exposing and investigating. All we're interested in at Ickonic is the truth of what is really going on in the World on whichever subject we're covering.

We hope you enjoy what we have created and take something away from the platform, we aim to deliver information that's informative and most importantly self-empowering, you're not a little person, you're part of something much bigger than that and its time we as a collective race began to understand that and look to the future as ours to take.

It's time...

Jaymie Icke - Founder Ickonic Alternative Media.

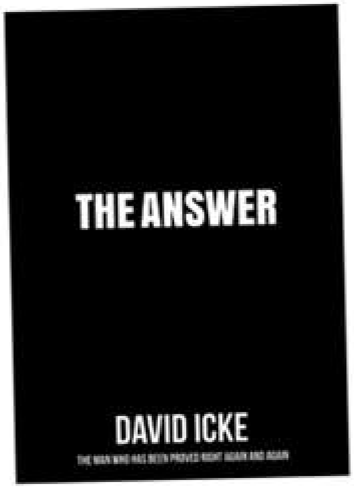
DAVID ICKE

THE ANSWER



THE ANSWER

DAVID ICKE

We live in extraordinary times with billions bewildered and seeking answers for what is happening. David Icke, the man who has been proved right again and again, has spent 30 years uncovering the truth behind world affairs and in a stream of previous books he predicted current events.

The Answer will change your every perception of life and the world and set you free of the illusions that control human society. There is nothing more vital for our collective freedom than humanity becoming aware of what is in this book.

Renegade:
Adjective
‘Having rejected tradition: Unconventional.’
Merriam-Webster Dictionary

Acquiescence to tyranny is the death of the spirit

You may be 38 years old, as I happen to be. And one day, some great opportunity stands before you and calls you to stand up for some great principle, some great issue, some great cause. And you refuse to do it because you are afraid … You refuse to do it because you want to live longer … You're afraid that you will lose your job, or you are afraid that you will be criticised or that you will lose your popularity, or you're afraid that somebody will stab you, or shoot at you or bomb your house; so you refuse to take the stand.

Well, you may go on and live until you are 90, but you're just as dead at 38 as you would be at 90. And the cessation of breathing in your life is but the belated announcement of an earlier death of the spirit.

Martin Luther King

How the few control the many and always have – the many do whatever they're told

'Forward, the Light Brigade!'
Was there a man dismayed?
Not though the soldier knew
Someone had blundered.
Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die.
Into the valley of Death
Rode the six hundred.

Cannon to right of them,
Cannon to left of them,
Cannon in front of them
Volleyed and thundered;
Stormed at with shot and shell,
Boldly they rode and well,
Into the jaws of Death,
Into the mouth of hell
Rode the six hundred

Alfred Lord Tennyson (1809-1892)

The mist is lifting slowly
I can see the way ahead
And I've left behind the empty streets
That once inspired my life
And the strength of the emotion
Is like thunder in the air
'Cos the promise that we made each other
Haunts me to the end

The secret of your beauty
And the mystery of your soul
I've been searching for in everyone I meet
And the times I've been mistaken
It's impossible to say
And the grass is growing
Underneath our feet

The words that I remember
From my childhood still are true
That there's none so blind
As those who will not see
And to those who lack the courage
And say it's dangerous to try
Well they just don't know
That love eternal will not be denied

I know you're out there somewhere
Somewhere, somewhere
I know you're out there somewhere

Somewhere you can hear my voice
I know I'll find you somehow
Somehow, somehow
I know I'll find you somehow
And somehow I'll return again to you

The Moody Blues

Are you a gutless wonder – or a Renegade Mind?

Monuments put from pen to paper,
Turns me into a gutless wonder,
And if you tolerate this,
Then your children will be next.
Gravity keeps my head down,
Or is it maybe shame ...

Manic Street Preachers

Rise like lions after slumber
In unvanquishable number.
Shake your chains to earth like dew
Which in sleep have fallen on you.
Ye are many – they are few.

Percy Shelley

CHAPTER ONE

I'm thinking' – Oh, but *are* you?

Think for yourself and let others enjoy the privilege of doing so too
Voltaire

French-born philosopher, mathematician and scientist René Descartes became famous for his statement in Latin in the 17th century which translates into English as: 'I think, therefore I am.'

On the face of it that is true. Thought reflects perception and perception leads to both behaviour and self-identity. In that sense 'we' are what we think. But who or what is doing the thinking and is thinking the only route to perception? Clearly, as we shall see, 'we' are not always the source of 'our' perception, indeed with regard to humanity as a whole this is rarely the case; and thinking is far from the only means of perception. Thought is the village idiot compared with other expressions of consciousness that we all have the potential to access and tap into. This has to be true when we *are* those other expressions of consciousness which are infinite in nature. We have forgotten this, or, more to the point, been manipulated to forget.

These are not just the esoteric musings of the navel. The whole foundation of human control and oppression is control of perception. Once perception is hijacked then so is behaviour which is dictated by perception. Collective perception becomes collective behaviour and collective behaviour is what we call human society. Perception is all and those behind human control know that which is why perception is the target 24/7 of the psychopathic manipulators that I call the Global Cult. They know that if they dictate perception they will dictate behaviour and collectively dictate the nature of human society. They are further aware that perception is formed from information received and if they control the circulation of information they will to a vast extent direct human behaviour. Censorship of information and opinion has become globally Nazi-like in recent years and never more blatantly than since the illusory 'virus pandemic' was triggered out of China in 2019 and across the world in 2020. Why have billions submitted to house arrest and accepted fascistic societies in a way they would have never believed possible? Those controlling the information spewing from government, mainstream media and Silicon Valley (all controlled by the same Global Cult networks) told them they were in danger from a 'deadly virus' and only by submitting to house arrest and conceding their most basic of freedoms could they and their families be protected. This monumental and provable lie became the *perception* of the billions and therefore the *behaviour* of the billions. In those few words you have the whole structure and modus operandi of human control. Fear is a perception – **F**alse **E**motion **A**ppearing **R**eal – and fear is the currency of control. In short … get them by the balls (or give them the impression that you have) and their hearts and minds will follow. Nothing grips the dangly bits and freezes the rear-end more comprehensively than fear.

World number 1

There are two 'worlds' in what appears to be one 'world' and the prime difference between them is knowledge. First we have the mass of human society in which the population is maintained in coldly-calculated ignorance through control of information and the 'education' (indoctrination) system. That's all you really need to control to enslave billions in a perceptual delusion in which what are perceived to be *their* thoughts and opinions are ever-repeated mantras that the system has been downloading all their lives through 'education', media, science, medicine, politics and academia in which the personnel and advocates are themselves overwhelmingly the perceptual products of the same repetition. Teachers and academics in general are processed by the same programming machine as everyone else, but unlike the great majority they never leave the ‘education’ program. It gripped them as students and continues to grip them as programmers of subsequent generations of students. The programmed become the programmers – the programmed programmers. The same can largely be said for scientists, doctors and politicians and not least because as the American writer Upton Sinclair said: ‘It is difficult to get a man to understand something when his salary depends upon his not understanding it.’ If your career and income depend on thinking the way the system demands then you will – bar a few free-minded exceptions – concede your mind to the Perceptual Mainframe that I call the Postage Stamp Consensus. This is a tiny band of perceived knowledge and possibility ‘taught’ (downloaded) in the schools and universities, pounded out by the mainstream media and on which all government policy is founded. Try thinking, and especially speaking and acting, outside of the ‘box’ of consensus and see what that does for your career in the Mainstream Everything which bullies, harasses, intimidates and ridicules the population into compliance. Here we have the simple structure which enslaves most of humanity in a perceptual prison cell for an entire lifetime and I’ll go deeper into this process shortly. Most of what humanity is taught as fact is nothing more than programmed belief. American science fiction author Frank Herbert was right when he said: ‘Belief can be manipulated. Only knowledge is dangerous.’ In the ‘Covid’ age belief is promoted and knowledge is censored. It was always so, but never to the extreme of today.

World number 2

A ‘number 2’ is slang for ‘doing a poo’ and how appropriate that is when this other ‘world’ is doing just that on humanity every minute of every day. World number 2 is a global network of secret societies and semi-secret groups dictating the direction of society via governments, corporations and authorities of every kind. I have spent more than 30 years uncovering and exposing this network that I call the Global Cult and knowing its agenda is what has made my books so accurate in predicting current and past events. Secret societies are secret for a reason. They want to keep their hoarded knowledge to themselves and their chosen initiates and to hide it from the population which they seek through ignorance to control and subdue. The whole foundation of the division between World 1 and World 2 is *knowledge*. What number 1 knows number 2 must not. Knowledge they have worked so hard to keep secret includes (a) the agenda to enslave humanity in a centrally-controlled global dictatorship, and (b) the nature of reality and life itself. The latter (b) must be suppressed to allow the former (a) to prevail as I shall be explaining. The way the Cult manipulates and interacts with the population can be likened to a spider's web. The 'spider' sits at the centre in the shadows and imposes its will through the web with each strand represented in World number 2 by a secret society, satanic or semi-secret group, and in World number 1 – the world of the seen – by governments, agencies of government, law enforcement, corporations, the banking system, media conglomerates and Silicon Valley (Fig 1 overleaf). The spider and the web connect and coordinate all these organisations to pursue the same global outcome while the population sees them as individual entities working randomly and independently. At the level of the web governments *are* the banking system *are* the corporations *are* the media *are* Silicon Valley *are* the World Health Organization working from their inner cores as one unit. Apparently unconnected countries, corporations, institutions, organisations and people are on the *same team* pursuing the same global outcome. Strands in the web immediately around the spider are the most secretive and exclusive secret societies and their membership is emphatically restricted to the Cult inner-circle emerging through the generations from particular bloodlines for reasons I will come to. At the core of the core you would get them in a single room. That's how many people are dictating the direction of human society and its transformation through the ‘Covid’ hoax and other means. As the web expands out from the spider we meet the secret societies that many people will be aware of – the Freemasons, Knights Templar, Knights of Malta, Opus Dei, the inner sanctum of the Jesuit Order, and such like. Note how many are connected to the Church of Rome and there is a reason for that. The Roman Church was established as a revamp, a rebranding, of the relocated ‘Church’ of Babylon and the Cult imposing global tyranny today can be tracked back to Babylon and Sumer in what is now Iraq.

Figure 1: The global web through which the few control the many. (Image Neil Hague.)

Inner levels of the web operate in the unseen away from the public eye and then we have what I call the cusp organisations located at the point where the hidden meets the seen. They include a series of satellite organisations answering to a secret society founded in London in the late 19th century called the Round Table and among them are the Royal Institute of International Affairs (UK, founded in 1920); Council on Foreign Relations (US, 1921); Bilderberg Group (worldwide, 1954); Trilateral Commission (US/worldwide, 1972); and the Club of Rome (worldwide, 1968) which was created to exploit environmental concerns to justify the centralisation of global power to ‘save the planet’. The Club of Rome instigated with others the human-caused climate change hoax which has led to all the ‘green new deals' demanding that very centralisation of control. Cusp organisations, which include endless 'think tanks' all over the world, are designed to coordinate a single global policy between political and business leaders, intelligence personnel, media organisations and anyone who can influence the direction of policy in their own sphere of operation. Major players and regular attenders will know what is happening – or some of it – while others come and go and are kept overwhelmingly in the dark about the big picture. I refer to these cusp groupings as semi-secret in that they can be publicly identified, but what goes on at the inner-core is kept very much 'in house' even from most of their members and participants through a fiercely-imposed system of compartmentalisation. Only let them know what they need to know to serve your interests and no more. The structure of secret societies serves as a perfect example of this principle. Most Freemasons never get higher than the bottom three levels of 'degree' (degree of knowledge) when there are 33 official degrees of the Scottish Rite. Initiates only qualify for the next higher 'compartment' or degree if those at that level choose to allow them. Knowledge can be carefully assigned only to those considered 'safe'. I went to my local Freemason's lodge a few years ago when they were having an 'open day' to show how cuddly they were and when I chatted to some of them I was astonished at how little the rank and file knew even about the most ubiquitous symbols they use. The mushroom technique – keep them in the dark and feed them bullshit – applies to most people in the web as well as the population as a whole. Sub-divisions of the web mirror in theme and structure transnational corporations which have a headquarters somewhere in the world dictating to all their subsidiaries in different countries. Subsidiaries operate in their methodology and branding to the same centrally-dictated plan and policy in pursuit of particular ends. The Cult web functions in the same way. Each country has its own web as a subsidiary of the global one. They consist of networks of secret societies, semi-secret groups and bloodline families and their job is to impose the will of the spider and the global web in their particular country. Subsidiary networks control and manipulate the national political system, finance, corporations, media, medicine, etc. to ensure that they follow the globally-dictated Cult agenda. These networks were the means through which the 'Covid' hoax could be played out with almost every country responding in the same way.

The 'Yessir' pyramid

Compartmentalisation is the key to understanding how a tiny few can dictate the lives of billions when combined with a top-down sequence of imposition and acquiescence. The inner core of the Cult sits at the peak of the pyramidal hierarchy of human society (Fig 2 overleaf). It imposes its will – its agenda for the world – on the level immediately below which acquiesces to that imposition. This level then imposes the Cult will on the level below them which acquiesces and imposes on the next level. Very quickly we meet levels in the hierarchy that have no idea there even is a Cult, but the sequence of imposition and acquiescence continues down the pyramid in just the same way. 'I don't know why we are doing this but the order came from "on-high" and so we better just do it.' Alfred Lord Tennyson said of the cannon fodder levels in his poem *The Charge of the Light Brigade*: 'Theirs not to reason why; theirs but to do and die.' The next line says that 'into the valley of death rode the six hundred' and they died because they obeyed without question what their perceived 'superiors' told them to do. In the same way the population capitulated to 'Covid'. The whole hierarchical pyramid functions like this to allow the very few to direct the enormous many. Eventually imposition-acquiescence-imposition-acquiescence comes down to the mass of the population at the foot of the pyramid. If they acquiesce to those levels of the hierarchy imposing on them (governments/law enforcement/doctors/media) a circuit is completed between the population and the handful of super-psychopaths in the Cult inner core at the top of the pyramid. Without a circuit-breaking refusal to obey, the sequence of imposition and acquiescence allows a staggeringly few people to impose their will upon the entirety of humankind. We are looking at the very sequence that has subjugated billions since the start of 2020. Our freedom has not been taken from us. Humanity has given it away. Fascists do not impose fascism because there are not enough of them. Fascism is imposed by the population acquiescing to fascism. Put another way allowing their perceptions to be programmed to the extent that leads to the population giving their freedom away by giving their perceptions – their mind – away. If this circuit is not broken by humanity ceasing to cooperate with their own enslavement then nothing can change. For that to happen people have to critically think and see through the lies and window dressing and then summon the backbone to act upon what they see. The Cult spends its days working to stop either happening and its methodology is systematic and highly detailed, but it can be overcome and that is what this book is all about.

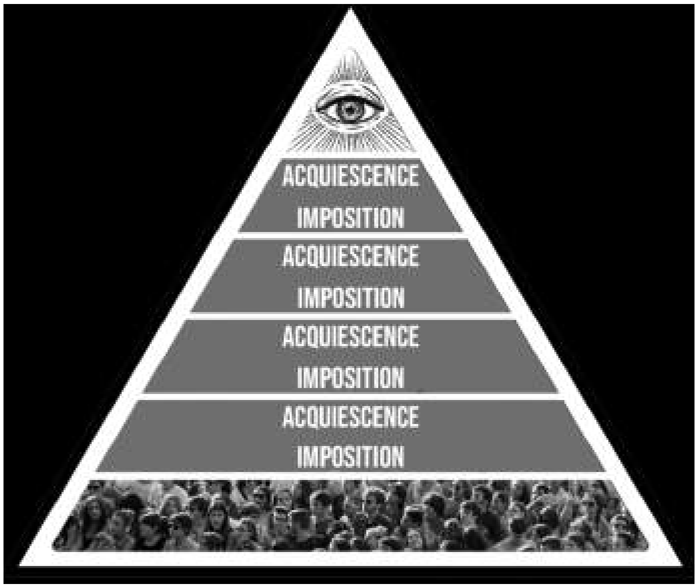

Figure 2: The simple sequence of imposition and compliance that allows a handful of people at the peak of the pyramid to dictate the lives of billions.

The Life Program

Okay, back to world number 1 or the world of the ‘masses’. Observe the process of what we call ‘life’ and it is a perceptual download from cradle to grave. The Cult has created a global structure in which perception can be programmed and the program continually topped-up with what appears to be constant confirmation that the program is indeed true reality. The important word here is ‘appears’.

This is the structure, the fly-trap, the Postage Stamp Consensus or Perceptual Mainframe, which represents that incredibly narrow band of perceived possibility delivered by the 'education' system, mainstream media, science and medicine. From the earliest age the download begins with parents who have themselves succumbed to the very programming their children are about to go through. Most parents don't do this out of malevolence and mostly it is quite the opposite. They do what they believe is best for their children and that is what the program has told them is best. Within three or four years comes the major transition from parental programming to full-blown state (Cult) programming in school, college and university where perceptually-programmed teachers and academics pass on their programming to the next generations. Teachers who resist are soon marginalised and their careers ended while children who resist are called a problem child for whom Ritalin may need to be prescribed. A few years after entering the 'world' children are under the control of authority figures representing the state telling them when they have to be there, when they can leave and when they can speak, eat, even go to the toilet. This is calculated preparation for a lifetime of obeying authority in all its forms. Reflex-action fear of authority is instilled by authority from the start. Children soon learn the carrot and stick consequences of obeying or defying authority which is underpinned daily for the rest of their life. Fortunately I daydreamed through this crap and never obeyed authority simply because it told me to. This approach to my alleged 'betters' continues to this day. There can be consequences of pursuing open-minded freedom in a world of closed-minded conformity. I spent a lot of time in school corridors after being ejected from the classroom for not taking some of it seriously and now I spend a lot of time being ejected from Facebook, YouTube and Twitter. But I can tell you that being true to yourself and not compromising your self-respect is far more exhilarating than bowing to authority for authority's sake. You don't have to be a sheep to the shepherd (authority) and the sheep dog (fear of not obeying authority).

The perceptual download continues throughout the formative years in school, college and university while script-reading 'teachers', 'academics' 'scientists', 'doctors' and 'journalists' insist that ongoing generations must be as programmed as they are. Accept the program or you will not pass your 'exams' which confirm your 'degree' of programming. It is tragic to think that many parents pressure their offspring to work hard at school to download the program and qualify for the next stage at college and university. The late, great, American comedian George Carlin said: 'Here's a bumper sticker I'd like to see: We are proud parents of a child who has resisted his teachers' attempts to break his spirit and bend him to the will of his corporate masters.' Well, the best of luck finding many of those, George. Then comes the moment to leave the formal programming years in academia and enter the 'adult' world of work. There you meet others in your chosen or prescribed arena who went through the same Postage Stamp Consensus program before you did. There is therefore overwhelming agreement between almost everyone on the basic foundations of Postage Stamp reality and the rejection, even contempt, of the few who have a mind of their own and are prepared to use it. This has two major effects. Firstly, the consensus confirms to the programmed that their download is really how things are. I mean, everyone knows that, right? Secondly, the arrogance and ignorance of Postage Stamp adherents ensure that anyone questioning the program will have unpleasant consequences for seeking their own truth and not picking their perceptions from the shelf marked: 'Things you must believe without question and if you don't you're a dangerous lunatic conspiracy theorist and a harebrained nutter'.

Every government, agency and corporation is founded on the same Postage Stamp prison cell and you can see why so many people believe the same thing while calling it their own 'opinion'. Fusion of governments and corporations in pursuit of the same agenda was the definition of fascism described by Italian dictator Benito Mussolini. The pressure to conform to perceptual norms downloaded for a lifetime is incessant and infiltrates society right down to family groups that become censors and condemners of their own 'black sheep' for not, ironically, being sheep. We have seen an explosion of that in the 'Covid' era. Cult-owned global media unleashes its propaganda all day every day in support of the Postage Stamp and targets with abuse and ridicule anyone in the public eye who won't bend their mind to the will of the tyranny. Any response to this is denied (certainly in my case). They don't want to give a platform to expose official lies. Cult-owned-and-created Internet giants like Facebook, Google, YouTube and Twitter delete you for having an unapproved opinion. Facebook boasts that its AI censors delete 97-percent of 'hate speech' before anyone even reports it. Much of that 'hate speech' will simply be an opinion that Facebook and its masters don't want people to see. Such perceptual oppression is widely known as fascism. Even Facebook executive Benny Thomas, a 'CEO Global Planning Lead', said in comments secretly recorded by investigative journalism operation Project Veritas that Facebook is 'too powerful' and should be broken up:

> I mean, no king in history has been the ruler of two billion people, but Mark Zuckerberg is … And he's 36. That's too much for a 36-year-old ... You should not have power over two billion people. I just think that's wrong.

Thomas said Facebook-owned platforms like Instagram, Oculus, and WhatsApp needed to be separate companies. 'It's too much power when they're all one together'. That's the way the Cult likes it, however. We have an executive of a Cult organisation in Benny Thomas that doesn't know there is a Cult such is the compartmentalisation. Thomas said that Facebook and Google 'are no longer companies, they're countries'. Actually they are more powerful than countries on the basis that if you control information you control perception and control human society.

I love my oppressor

Another expression of this psychological trickery is for those who realise they are being pressured into compliance to eventually convince themselves to believe the official narratives to protect their self-respect from accepting the truth that they have succumbed to meek and subservient compliance. Such people become some of the most vehement defenders of the system. You can see them everywhere screaming abuse at those who prefer to think for themselves and by doing so reminding the compliers of their own capitulation to conformity. ‘You are talking dangerous nonsense you Covidiot!!’ Are you trying to convince me or yourself? It is a potent form of Stockholm syndrome which is defined as: ‘A psychological condition that occurs when a victim of abuse identifies and attaches, or bonds, positively with their abuser.’ An example is hostages bonding and even ‘falling in love’ with their kidnappers. The syndrome has been observed in domestic violence, abused children, concentration camp inmates, prisoners of war and many and various Satanic cults. These are some traits of Stockholm syndrome listed at goodtherapy.org:

- Positive regard towards perpetrators of abuse or captor [see ‘Covid’].
- Failure to cooperate with police and other government authorities when it comes to holding perpetrators of abuse or kidnapping accountable [or in the case of ‘Covid’ cooperating with the police to enforce and defend their captors’ demands].
- Little or no effort to escape [see ‘Covid’].
- Belief in the goodness of the perpetrators or kidnappers [see ‘Covid’].
- Appeasement of captors. This is a manipulative strategy for maintaining one’s safety. As victims get rewarded – perhaps with less abuse or even with life itself – their appeasing behaviours are reinforced [see ‘Covid’].
- Learned helplessness. This can be akin to ‘if you can’t beat ‘em, join ‘em’. As the victims fail to escape the abuse or captivity, they may start giving up and soon realize it’s just easier for everyone if they acquiesce all their power to their captors [see ‘Covid’].

- Feelings of pity toward the abusers, believing they are actually victims themselves. Because of this, victims may go on a crusade or mission to 'save' [protect] their abuser [see the venom unleashed on those challenging the official 'Covid' narrative].
- Unwillingness to learn to detach from their perpetrators and heal. In essence, victims may tend to be less loyal to themselves than to their abuser [*definitely* see 'Covid'].

Ponder on those traits and compare them with the behaviour of great swathes of the global population who have defended governments and authorities which have spent every minute destroying their lives and livelihoods and those of their children and grandchildren since early 2020 with fascistic lockdowns, house arrest and employment deletion to 'protect' them from a 'deadly virus' that their abusers' perceptually created to bring about this very outcome. We are looking at mass Stockholm syndrome. All those that agree to concede their freedom will believe those perceptions are originating in their own independent 'mind' when in fact by conceding their reality to Stockholm syndrome they have by definition conceded any independence of mind. Listen to the 'opinions' of the acquiescing masses in this 'Covid' era and what gushes forth is the repetition of the official version of everything delivered unprocessed, unfiltered and unquestioned. The whole programming dynamic works this way. I must be free because I'm told that I am and so I think that I am.

You can see what I mean with the chapter theme of 'I'm thinking – Oh, but *are* you?' The great majority are not thinking, let alone for themselves. They are repeating what authority has told them to believe which allows them to be controlled. Weaving through this mentality is the fear that the 'conspiracy theorists' are right and this again explains the often hysterical abuse that ensues when you dare to contest the official narrative of anything. Denial is the mechanism of hiding from yourself what you don't want to be true. Telling people what they want to hear is easy, but it's an infinitely greater challenge to tell them what they would rather not be happening.

One is akin to pushing against an open door while the other is met with vehement resistance no matter what the scale of evidence. I don't want it to be true so I'll convince myself that it's not. Examples are everywhere from the denial that a partner is cheating despite all the signs to the reflex-action rejection of any idea that world events in which country after country act in exactly the same way are centrally coordinated. To accept the latter is to accept that a force of unspeakable evil is working to destroy your life and the lives of your children with nothing too horrific to achieve that end. Who the heck wants that to be true? But if we don't face reality the end is duly achieved and the consequences are far worse and ongoing than breaking through the walls of denial today with the courage to make a stand against tyranny.

Connect the dots – but how?

A crucial aspect of perceptual programming is to portray a world in which everything is random and almost nothing is connected to anything else. Randomness cannot be coordinated by its very nature and once you perceive events as random the idea they could be connected is waved away as the rantings of the tinfoil-hat brigade. You can't plan and coordinate random you idiot! No, you can't, but you can hide the coldly-calculated and long-planned behind the *illusion* of randomness. A foundation manifestation of the Renegade Mind is to scan reality for patterns that connect the apparently random and turn pixels and dots into pictures. This is the way I work and have done so for more than 30 years. You look for similarities in people, modus operandi and desired outcomes and slowly, then ever quicker, the picture forms. For instance: There would seem to be no connection between the 'Covid pandemic' hoax and the human-caused global-warming hoax and yet they are masks (appropriately) on the same face seeking the same outcome. Those pushing the global warming myth through the Club of Rome and other Cult agencies are driving the lies about 'Covid' – Bill Gates is an obvious one, but they are endless. Why would the same people be involved in both when they are clearly not connected? Oh, but they *are*. Common themes with personnel are matched by common goals. The 'solutions' to both 'problems' are centralisation of global power to impose the will of the few on the many to 'save' humanity from 'Covid' and save the planet from an 'existential threat' (we need 'zero Covid' and 'zero carbon emissions'). These, in turn, connect with the 'dot' of globalisation which was coined to describe the centralisation of global power in every area of life through incessant political and corporate expansion, trading blocks and superstates like the European Union. If you are the few and you want to control the many you have to centralise power and decision-making. The more you centralise power the more power the few at the centre will have over the many; and the more that power is centralised the more power those at the centre have to centralise even quicker. The momentum of centralisation gets faster and faster which is exactly the process we have witnessed. In this way the hoaxed 'pandemic' and the fakery of human-caused global warming serve the interests of globalisation and the seizure of global power in the hands of the Cult inner-circle which is behind 'Covid', 'climate change' *and* globalisation. At this point random 'dots' become a clear and obvious picture or pattern.

Klaus Schwab, the classic Bond villain who founded the Cult's Gates-funded World Economic Forum, published a book in 2020, *The Great Reset*, in which he used the 'problem' of 'Covid' to justify a total transformation of human society to 'save' humanity from 'climate change'. Schwab said: 'The pandemic represents a rare but narrow window of opportunity to reflect, reimagine, and reset our world.' What he didn't mention is that the Cult he serves is behind both hoaxes as I show in my book *The Answer*. He and the Cult don't have to reimagine the world. They know precisely what they want and that's why they destroyed human society with 'Covid' to 'build back better' in their grand design. Their job is not to imagine, but to get humanity to imagine and agree with their plans while believing it's all random. It must be pure coincidence that 'The Great Reset' has long been the Cult's code name for the global imposition of fascism and replaced previous code-names of the 'New World

Order' used by Cult frontmen like Father George Bush and the 'New Order of the Ages' which emerged from Freemasonry and much older secret societies. New Order of the Ages appears on the reverse of the Great Seal of the United States as 'Novus ordo seclorum' underneath the Cult symbol used since way back of the pyramid and all seeing-eye (Fig 3). The pyramid is the hierarchy of human control headed by the illuminated eye that symbolises the force behind the Cult which I will expose in later chapters. The term 'Annuit Coeptis' translates as 'He favours our undertaking'. We are told the 'He' is the Christian god, but 'He' is not as I will be explaining.

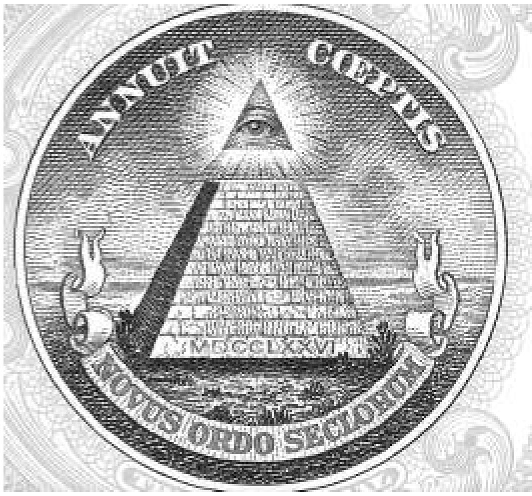

Figure 3: The all-seeing eye of the Cult 'god' on the Freemason-designed Great Seal of the United States and also on the dollar bill.

Having you on

Two major Cult techniques of perceptual manipulation that relate to all this are what I have called since the 1990s Problem-Reaction-Solution (PRS) and the Totalitarian Tiptoe (TT). They can be uncovered by the inquiring mind with a simple question: Who benefits? The answer usually identifies the perpetrators of a given action or happening through the concept of 'he who most benefits from a crime is the one most likely to have committed it'. The Latin 'Cue bono?' – Who benefits? – is widely attributed to the Roman orator and statesman Marcus Tullius Cicero. No wonder it goes back so far when the concept has been relevant to human behaviour since history was recorded. Problem-Reaction-Solution is the technique used to manipulate us every day by covertly creating a problem (or the illusion of one) and offering the solution to the problem (or the illusion of one). In the first phase you create the problem and blame someone or something else for why it has happened. This may relate to a financial collapse, terrorist attack, war, global warming or pandemic, anything in fact that will allow you to impose the 'solution' to change society in the way you desire at that time. The 'problem' doesn't have to be real. PRS is manipulation of perception and all you need is the population to believe the problem is real. Human-caused global warming and the 'Covid pandemic' only have to be *perceived* to be real for the population to accept the 'solutions' of authority. I refer to this technique as NO-Problem-Reaction-Solution. Billions did not meekly accept house arrest from early 2020 because there was a real deadly 'Covid pandemic' but because they perceived – believed – that to be the case. The antidote to Problem-Reaction-Solution is to ask who benefits from the proposed solution. Invariably it will be anyone who wants to justify more control through deletion of freedom and centralisation of power and decision-making.

The two world wars were Problem-Reaction-Solutions that transformed and realigned global society. Both were manipulated into being by the Cult as I have detailed in books since the mid-1990s. They dramatically centralised global power, especially World War Two, which led to the United Nations and other global bodies thanks to the overt and covert manipulations of the Rockefeller family and other Cult bloodlines like the Rothschilds. The UN is a stalking horse for full-blown world government that I will come to shortly. The land on which the UN building stands in New York was donated by the Rockefellers and the same Cult family was behind Big Pharma scalpel and drug 'medicine' and the creation of the World Health Organization as part of the UN. They have been stalwarts of the eugenics movement and funded Hitler's race-purity expert' Ernst Rudin. The human-caused global warming hoax has been orchestrated by the Club of Rome through the UN which is manufacturing both the ‘problem’ through its Intergovernmental Panel on Climate Change and imposing the ‘solution’ through its Agenda 21 and Agenda 2030 which demand the total centralisation of global power to ‘save the world’ from a climate hoax the United Nations is itself perpetrating. What a small world the Cult can be seen to be particularly among the inner circles. The bedfellow of Problem-Reaction-Solution is the Totalitarian Tiptoe which became the Totalitarian Sprint in 2020. The technique is fashioned to hide the carefully-coordinated behind the cover of apparently random events. You start the sequence at ‘A’ and you know you are heading for ‘Z’. You don’t want people to know that and each step on the journey is presented as a random happening while all the steps strung together lead in the same direction. The speed may have quickened dramatically in recent times, but you can still see the incremental approach of the Tiptoe in the case of ‘Covid’ as each new imposition takes us deeper into fascism. Tell people they have to do this or that to get back to ‘normal’, then this and this and this. With each new demand adding to the ones that went before the population’s freedom is deleted until it disappears. The spider wraps its web around the flies more comprehensively with each new diktat. I’ll highlight this in more detail when I get to the ‘Covid’ hoax and how it has been pulled off. Another prime example of the Totalitarian Tiptoe is how the Cult-created European Union went from a ‘free-trade zone’ to a centralised bureaucratic dictatorship through the Tiptoe of incremental centralisation of power until nations became mere administrative units for Cult-owned dark suits in Brussels.

The antidote to ignorance is knowledge which the Cult seeks vehemently to deny us, but despite the systematic censorship to that end the Renegade Mind can overcome this by vociferously seeking out the facts no matter the impediments put in the way. There is also a method of thinking and perceiving – *knowing* – that doesn’t even need names, dates, place-type facts to identify the patterns that reveal the story. I’ll get to that in the final chapter. All you need to know about the manipulation of human society and to what end is still out there – *at the time of writing* – in the form of books, videos and websites for those that really want to breach the walls of programmed perception. To access this knowledge requires the abandonment of the mainstream media as a source of information in the awareness that this is owned and controlled by the Cult and therefore promotes mass perceptions that suit the Cult. Mainstream media lies all day, every day. That is its function and very reason for being. Where it does tell the truth, here and there, is only because the truth and the Cult agenda very occasionally coincide. If you look for fact and insight to the BBC, CNN and virtually all the rest of them you are asking to be conned and perceptually programmed.

Know the outcome and you'll see the journey

Events seem random when you have no idea where the world is being taken. Once you do the random becomes the carefully planned. Know the outcome and you'll see the journey is a phrase I have been using for a long time to give context to daily happenings that appear unconnected. Does a problem, or illusion of a problem, trigger a proposed 'solution' that further drives society in the direction of the outcome? Invariably the answer will be yes and the random – *abracadabra* – becomes the clearly coordinated. So what is this outcome that unlocks the door to a massively expanded understanding of daily events? I will summarise its major aspects – the fine detail is in my other books – and those new to this information will see that the world they thought they were living in is a very different place. The foundation of the Cult agenda is the incessant centralisation of power and all such centralisation is ultimately in pursuit of Cult control on a global level. I have described for a long time the planned world structure of top-down dictatorship as the Hunger Games Society. The term obviously comes from the movie series which portrayed a world in which a few living in military-protected hi-tech luxury were the overlords of a population condemned to abject poverty in isolated 'sectors' that were not allowed to interact. 'Covid' lockdowns and travel bans anyone? The 'Hunger Games' pyramid of structural control has the inner circle of the Cult at the top with pretty much the entire population at the bottom under their control through dependency for survival on the Cult. The whole structure is planned to be protected and enforced by a military-police state (Fig 4).

Here you have the reason for the global lockdowns of the fake pandemic to coldly destroy independent incomes and livelihoods and make everyone dependent on the 'state' (the Cult that controls the 'states'). I have warned in my books for many years about the plan to introduce a 'guaranteed income' – a barely survivable pittance – designed to impose dependency when employment was destroyed by AI technology and now even more comprehensively at great speed by the 'Covid' scam. Once the pandemic was played and lockdown consequences began to delete independent income the authorities began to talk right on cue about the need for a guaranteed income and a 'Great Reset'. Guaranteed income will be presented as benevolent governments seeking to help a desperate people – desperate as a direct result of actions of the same governments. The truth is that such payments are a trap. You will only get them if you do exactly what the authorities demand including mass vaccination (genetic manipulation). We have seen this theme already in Australia where those dependent on government benefits have them reduced if parents don't agree to have their children vaccinated according to an insane health-destroying government-dictated schedule. Calculated economic collapse applies to governments as well as people. The Cult wants rid of countries through the creation of a world state with countries broken up into regions ruled by a world government and super states like the European Union. Countries must be bankrupted, too, to this end and it's being achieved by the trillions in 'rescue packages' and furlough payments, trillions in lost taxation, and money-no-object spending on 'Covid' including constant all-medium advertising (programming) which has made the media dependent on government for much of its income. The day of reckoning is coming – as planned – for government spending and given that it has been made possible by printing money and not by production/taxation there is inflation on the way that has the potential to wipe out monetary value. In that case there will be no need for the Cult to steal your money. It just won't be worth anything (see the German Weimar Republic before the Nazis took over). Many have been okay with lockdowns while getting a percentage of their income from so-called furlough payments without having to work. Those payments are dependent, however, on people having at least a theoretical job with a business considered non-essential and ordered to close. As these business go under because they are closed by lockdown after lockdown the furlough stops and it will for everyone eventually. Then what? The 'then what?' is precisely the idea.

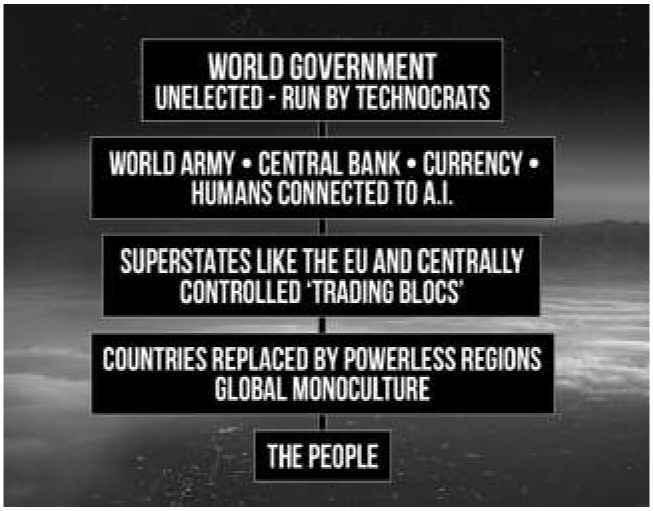
Figure 4: The Hunger Games Society structure I have long warned was planned and now the 'Covid' hoax has made it possible. This is the real reason for lockdowns.

Hired hands

Between the Hunger Games Cult elite and the dependent population is planned to be a vicious military-police state (a fusion of the two into one force). This has been in the making for a long time with police looking ever more like the military and carrying weapons to match. The pandemic scam has seen this process accelerate so fast as lockdown house arrest is brutally enforced by carefully recruited fascist minds and gormless system-servers. The police and military are planned to merge into a centrally-directed world army in a global structure headed by a world government which wouldn't be elected even by the election fixes now in place. The world army is not planned even to be human and instead wars would be fought, primarily against the population, using robot technology controlled by artificial intelligence. I have been warning about this for decades and now militaries around the world are being transformed by this very AI technology. The global regime that I describe is a particular form of fascism known as a technocracy in which decisions are not made by clueless and co-opted politicians but by unelected technocrats – scientists, engineers, technologists and bureaucrats. Cult-owned-and-controlled Silicon Valley giants are examples of technocracy and they already have far more power to direct world events than governments. They are with their censorship *selecting* governments. I know that some are calling the 'Great Reset' a Marxist communist takeover, but fascism and Marxism are different labels for the same tyranny. Tell those who lived in fascist Germany and Stalinist Russia that there was a difference in the way their freedom was deleted and their lives controlled. I could call it a fascist technocracy or a Marxist technocracy and they would be equally accurate. The Hunger Games society with its world government structure would oversee a world army, world central bank and single world cashless currency imposing its will on a microchipped population (Fig 5). Scan its different elements and see how the illusory pandemic is forcing society in this very direction at great speed. Leaders of 23 countries and the World Health Organization (WHO) backed the idea in March, 2021, of a global treaty for 'international cooperation' in 'health emergencies' and nations should 'come together as a global community for peaceful cooperation that extends beyond this crisis'. Cut the Orwellian bullshit and this means another step towards global government. The plan includes a cashless digital money system that I first warned about in 1993. Right at the start of 'Covid' the deeply corrupt Tedros

Adhanom Ghebreyesus, the crooked and merely gofer 'head' of the World Health Organization, said it was possible to catch the 'virus' by touching cash and it was better to use cashless means. The claim was ridiculous nonsense and like the whole 'Covid' mind-trick it was nothing to do with 'health' and everything to do with pushing every aspect of the Cult agenda. As a result of the Tedros lie the use of cash has plummeted. The Cult script involves a single world digital currency that would eventually be technologically embedded in the body. China is a massive global centre for the Cult and if you watch what is happening there you will know what is planned for everywhere. The Chinese government is developing a digital currency which would allow fines to be deducted immediately via AI for anyone caught on camera breaking its fantastic list of laws and the money is going to be programmable with an expiry date to ensure that no one can accrue wealth except the Cult and its operatives.



WORLD GOVERNMENT
UNELECTED - RUN BY TECHNOCRATS
WORLD ARMY • CENTRAL BANK • CURRENCY • HUMANS CONNECTED TO A.I.
SUPERSTATES LIKE THE EU AND CENTRALLY CONTROLLED 'TRADING BLOCS'
COUNTRIES REPLACED BY POWERLESS REGIONS
GLOBAL MONOCULTURE
THE PEOPLE

Figure 5: The structure of global control the Cult has been working towards for so long and this has been enormously advanced by the 'Covid' illusion.

Serfdom is so smart

The Cult plan is far wider, extreme, and more comprehensive than even most conspiracy researchers appreciate and I will come to the true depths of deceit and control in the chapters 'Who controls the

Cult?' and 'Escaping Wetiko'. Even the world that we know is crazy enough. We are being deluged with ever more sophisticated and controlling technology under the heading of 'smart'. We have smart televisions, smart meters, smart cards, smart cars, smart driving, smart roads, smart pills, smart patches, smart watches, smart skin, smart borders, smart pavements, smart streets, smart cities, smart communities, smart environments, smart growth, smart planet ... smart *everything* around us. Smart technologies and methods of operation are designed to interlock to create a global Smart Grid connecting the entirety of human society including human minds to create a centrally-dictated 'hive' mind. 'Smart cities' is code for densely-occupied megacities of total surveillance and control through AI. Ever more destructive frequency communication systems like 5G have been rolled out without any official testing for health and psychological effects (colossal). 5G/6G/7G systems are needed to run the Smart Grid and each one becomes more destructive of body and mind. Deleting independent income is crucial to forcing people into these AI-policed prisons by ending private property ownership (except for the Cult elite). The Cult's Great Reset now openly foresees a global society in which no one will own any possessions and everything will be rented while the Cult would own literally everything under the guise of government and corporations. The aim has been to use the lockdowns to destroy sources of income on a mass scale and when the people are destitute and in unrepayable amounts of debt (problem) Cult assets come forward with the pledge to write-off debt in return for handing over all property and possessions (solution). Everything – literally everything including people – would be connected to the Internet via AI. I was warning years ago about the coming Internet of Things (IoT) in which all devices and technology from your car to your fridge would be plugged into the Internet and controlled by AI. Now we are already there with much more to come. The next stage is the Internet of Everything (IoE) which is planned to include the connection of AI to the human brain and body to replace the human mind with a centrally-controlled AI mind. Instead of perceptions being manipulated through control of information and censorship those perceptions would come direct from the Cult through AI. What do you think? You think whatever AI decides that you think. In human terms there would be no individual 'think' any longer. Too incredible? The ravings of a lunatic? Not at all. Cult-owned crazies in Silicon Valley have been telling us the plan for years without explaining the real motivation and calculated implications. These include Google executive and 'futurist' Ray Kurzweil who highlights the year 2030 for when this would be underway. He said:

> Our thinking ... will be a hybrid of biological and non-biological thinking ... humans will be able to extend their limitations and 'think in the cloud' ... We're going to put gateways to the cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations.
>
> As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

The sales-pitch of Kurzweil and Cult-owned Silicon Valley is that this would make us 'super-human' when the real aim is to make us post-human and no longer 'human' in the sense that we have come to know. The entire global population would be connected to AI and become the centrally-controlled 'hive-mind' of externally-delivered perceptions. The Smart Grid being installed to impose the Cult's will on the world is being constructed to allow particular locations – even one location – to control the whole global system. From these prime control centres, which absolutely include China and Israel, anything connected to the Internet would be switched on or off and manipulated at will. Energy systems could be cut, communication via the Internet taken down, computer-controlled driverless autonomous vehicles driven off the road, medical devices switched off, the potential is limitless given how much AI and Internet connections now run human society. We have seen nothing yet if we allow this to continue. Autonomous vehicle makers are working with law enforcement to produce cars designed to automatically pull over if they detect a police or emergency vehicle flashing from up to 100 feet away. At a police stop the car would be unlocked and the window rolled down automatically. Vehicles would only take you where the computer (the state) allowed. The end of petrol vehicles and speed limiters on all new cars in the UK and EU from 2022 are steps leading to electric computerised transport over which ultimately you have no control. The picture is far bigger even than the Cult global network or web and that will become clear when I get to the nature of the 'spider'. There is a connection between all these happenings and the instigation of DNA-manipulating 'vaccines' (which aren't 'vaccines') justified by the 'Covid' hoax. That connection is the unfolding plan to transform the human body from a biological to a synthetic biological state and this is why synthetic biology is such a fast-emerging discipline of mainstream science. 'Covid vaccines' are infusing self-replicating synthetic genetic material into the cells to cumulatively take us on the Totalitarian Tiptoe from Human 1.0 to the synthetic biological Human 2.0 which will be physically and perceptually attached to the Smart Grid to one hundred percent control every thought, perception and deed. Humanity needs to wake up and *fast*.

This is the barest explanation of where the 'outcome' is planned to go but it's enough to see the journey happening all around us. Those new to this information will already see 'Covid' in a whole new context. I will add much more detail as we go along, but for the minutiae evidence see my mega-works, *The Answer, The Trigger* and *Everything You Need to Know But Have Never Been Told*.

Now – how does a Renegade Mind see the 'world'?

CHAPTER TWO

Renegade Perception

It is one thing to be clever and another to be wise
George R.R. Martin

A simple definition of the difference between a programmed mind and a Renegade Mind would be that one sees only dots while the other connects them to see the picture. Reading reality with accuracy requires the observer to (a) know the planned outcome and (b) realise that everything, but *everything*, is connected.

The entirety of infinite reality is connected – that's its very nature – and with human society an expression of infinite reality the same must apply. Simple cause and effect is a connection. The effect is triggered by the cause and the effect then becomes the cause of another effect. Nothing happens in isolation because it *can't*. Life in whatever reality is simple choice and consequence. We make choices and these lead to consequences. If we don't like the consequences we can make different choices and get different consequences which lead to other choices and consequences. The choice and the consequence are not only connected they are indivisible. You can't have one without the other as an old song goes. A few cannot control the world unless those being controlled allow that to happen – cause and effect, choice and consequence. Control – who has it and who doesn't – is a two-way process, a symbiotic relationship, involving the controller and controlled. 'They took my freedom away!!' Well, yes, but you also gave it to them. Humanity is subjected to mass control because humanity has acquiesced to that control. This is all cause and effect and literally a case of give and take. In the same way world events of every kind are connected and the Cult works incessantly to sell the illusion of the random and coincidental to maintain the essential (to them) perception of dots that hide the picture. Renegade Minds know this and constantly scan the world for patterns of connection. This is absolutely pivotal in understanding the happenings in the world and without that perspective clarity is impossible. First you know the planned outcome and then you identify the steps on the journey – the day-by-day apparently random which, when connected in relation to the outcome, no longer appear as individual events, but as the proverbial *chain* of events leading in the same direction. I'll give you some examples:

Political puppet show

We are told to believe that politics is 'adversarial' in that different parties with different beliefs engage in an endless tussle for power. There may have been some truth in that up to a point – and only a point – but today divisions between 'different' parties are rhetorical not ideological. Even the rhetorical is fusing into one-speak as the parties eject any remaining free thinkers while others succumb to the ever-gathering intimidation of anyone with the 'wrong' opinion. The Cult is not a new phenomenon and can be traced back thousands of years as my books have documented. Its intergenerational initiates have been manipulating events with increasing effect the more that global power has been centralised. In ancient times the Cult secured control through the system of monarchy in which 'special' bloodlines (of which more later) demanded the right to rule as kings and queens simply by birthright and by vanquishing others who claimed the same birthright. There came a time, however, when people had matured enough to see the unfairness of such tyranny and demanded a say in who governed them. Note the word – *governed* them. Not served them – *governed* them, hence government defined as 'the political direction and control exercised over the actions of the members, citizens, or inhabitants of communities, societies, and states; direction of the affairs of a state, community, etc.' Governments exercise control over rather than serve just like the monarchies before them. Bizarrely there are still countries like the United Kingdom which are ruled by a monarch *and* a government that officially answers to the monarch. The UK head of state and that of Commonwealth countries such as Canada, Australia and New Zealand is 'selected' by who in a *single family* had unprotected sex with whom and in what order. Pinch me it can't be true. Ouch! Shit, it is. The demise of monarchies in most countries offered a potential vacuum in which some form of free and fair society could arise and the Cult had that base covered. Monarchies had served its interests but they couldn't continue in the face of such widespread opposition and, anyway, replacing a 'royal' dictatorship that people could see with a dictatorship 'of the people' hiding behind the concept of 'democracy' presented far greater manipulative possibilities and ways of hiding coordinated tyranny behind the illusion of 'freedom'.

Democracy is quite wrongly defined as government selected by the population. This is not the case at all. It is government selected by *some* of the population (and then only in theory). This 'some' doesn't even have to be the majority as we have seen so often in first-past-the-post elections in which the so-called majority party wins fewer votes than the 'losing' parties combined. Democracy can give total power to a party in government from a minority of the votes cast. It's a sleight of hand to sell tyranny as freedom. Seventy-four million Trump-supporting Americans didn't vote for the 'Democratic' Party of Joe Biden in the distinctly dodgy election in 2020 and yet far from acknowledging the wishes and feelings of that great percentage of American society the Cult-owned Biden government set out from day one to destroy them and their right to a voice and opinion. Empty shell Biden and his Cult handlers said they were doing this to 'protect democracy'. Such is the level of lunacy and sickness to which politics has descended. Connect the dots and relate them to the desired outcome – a world government run by self-appointed technocrats and no longer even elected politicians. While operating through its political agents in government the Cult is at the same time encouraging public distain for politicians by putting idiots and incompetents in theoretical power on the road to deleting them. The idea is to instil a public reaction that says of the technocrats: 'Well, they couldn't do any worse than the pathetic politicians.' It's all about controlling perception and Renegade Minds can see through that while programmed minds cannot when they are ignorant of both the planned outcome and the manipulation techniques employed to secure that end. This knowledge can be learned, however, and fast if people choose to get informed.

Politics may at first sight appear very difficult to control from a central point. I mean look at the 'different' parties and how would you be able to oversee them all and their constituent parts? In truth, it's very straightforward because of their structure. We are back to the pyramid of imposition and acquiescence. Organisations are structured in the same way as the system as a whole. Political parties are not open forums of free expression. They are hierarchies. I was a national spokesman for the British Green Party which claimed to be a different kind of politics in which influence and power was devolved; but I can tell you from direct experience – and it's far worse now – that Green parties are run as hierarchies like all the others however much they may try to hide that fact or kid themselves that it's not true. A very few at the top of all political parties are directing policy and personnel. They decide if you are elevated in the party or serve as a government minister and to do that you have to be a yes man or woman. Look at all the maverick political thinkers who never ascended the greasy pole. If you want to progress within the party or reach 'high-office' you need to fall into line and conform. Exceptions to this are rare indeed. Should you want to run for parliament or Congress you have to persuade the local or state level of the party to select you and for that you need to play the game as dictated by the hierarchy. If you secure election and wish to progress within the greater structure you need to go on conforming to what is acceptable to those running the hierarchy from the peak of the pyramid. Political parties are perceptual gulags and the very fact that there are party 'Whips' appointed to 'whip' politicians into voting the way the hierarchy demands exposes the ridiculous idea that politicians are elected to serve the people they are supposed to represent. Cult operatives and manipulation has long seized control of major parties that have any chance of forming a government and at least most of those that haven't. A new party forms and the Cult goes to work to infiltrate and direct. This has reached such a level today that you see video compilations of 'leaders' of all parties whether Democrats, Republicans, Conservative, Labour and Green parroting the same Cult mantra of 'Build Back Better' and the 'Great Reset' which are straight off the Cult song-sheet to describe the transformation of global society in response to the Cult-instigated hoaxes of the 'Covid pandemic' and human-caused 'climate change'. To see Caroline Lucas, the Green Party MP that I knew when I was in the party in the 1980s, speaking in support of plans proposed by Cult operative Klaus Schwab representing the billionaire global elite is a real head-shaker.

Many parties – one master

The party system is another mind-trick and was instigated to change the nature of the dictatorship by swapping 'royalty' for dark suits that people believed – though now ever less so – represented their interests. Understanding this trick is to realise that a single force (the Cult) controls all parties either directly in terms of the major ones or through manipulation of perception and ideology with others. You don't need to manipulate Green parties to demand your transformation of society in the name of 'climate change' when they are obsessed with the lie that this is essential to 'save the planet'. You just give them a platform and away they go serving your interests while believing they are being environmentally virtuous. America's political structure is a perfect blueprint for how the two or multi-party system is really a one-party state. The Republican Party is controlled from one step back in the shadows by a group made up of billionaires and their gofers known as neoconservatives or Neocons.

I have exposed them in fine detail in my books and they were the driving force behind the policies of the imbecilic presidency of Boy George Bush which included 9/11 (see *The Trigger* for a comprehensive demolition of the official story), the subsequent 'war on terror' (war *of* terror) and the invasions of Afghanistan and Iraq. The latter was a No-Problem-Reaction-Solution based on claims by Cult operatives, including Bush and British Prime Minister Tony Blair, about Saddam Hussein's 'weapons of mass destruction' which did not exist as war criminals Bush and Blair well knew.

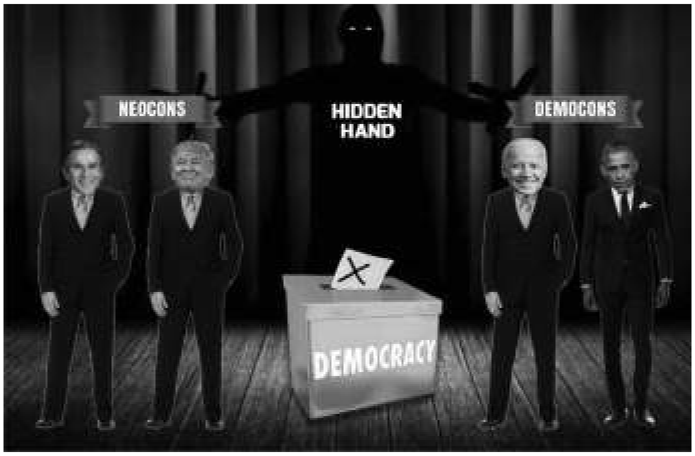


Figure 6: Different front people, different parties – same control system.

The Democratic Party has its own 'Neocon' group controlling from the background which I call the 'Democons' and here's the penny-drop – the Neocons and Democons answer to the same masters one step further back into the shadows (Fig 6). At that level of the Cult the Republican and Democrat parties are controlled by the same people and no matter which is in power the Cult is in power. This is how it works in almost every country and certainly in Britain with Conservative, Labour, Liberal Democrat and Green parties now all on the same page whatever the rhetoric may be in their feeble attempts to appear different. Neocons operated at the time of Bush through a think tank called The Project for the New American Century which in September, 2000, published a document entitled *Rebuilding America's Defenses: Strategies, Forces, and Resources*

For a New Century demanding that America fight 'multiple, simultaneous major theatre wars' as a 'core mission' to force regime-change in countries including Iraq, Libya and Syria. Neocons arranged for Bush ('Republican') and Blair ('Labour Party') to front-up the invasion of Iraq and when they departed the Democons orchestrated the targeting of Libya and Syria through Barack Obama ('Democrat') and British Prime Minister David Cameron ('Conservative Party'). We have 'different' parties and 'different' people, but the same unfolding script. The more the Cult has seized the reigns of parties and personnel the more their policies have transparently pursued the same agenda to the point where the fascist 'Covid' impositions of the Conservative junta of Jackboot Johnson in Britain were opposed by the Labour Party because they were not fascist enough. The Labour Party is likened to the US Democrats while the Conservative Party is akin to a British version of the Republicans and on both sides of the Atlantic they all speak the same language and support the direction demanded by the Cult although some more enthusiastically than others. It's a similar story in country after country because it's all centrally controlled. Oh, but what about Trump? I'll come to him shortly. Political 'choice' in the 'party' system goes like this: You vote for Party A and they get into government. You don't like what they do so next time you vote for Party B and they get into government. You don't like what they do when it's pretty much the same as Party A and why wouldn't that be with both controlled by the same force? Given that only two, sometimes three, parties have any chance of forming a government to get rid of Party B that you don't like you have to vote again for Party A which … you don't like. This, ladies and gentlemen, is what they call 'democracy' which we are told – wrongly – is a term interchangeable with 'freedom'.

The cult of cults

At this point I need to introduce a major expression of the Global Cult known as Sabbatian-Frankism. Sabbatian is also spelt as Sabbatean. I will summarise here. I have published major exposés and detailed background in other works. Sabbatian-Frankism combines the names of two frauds posing as 'Jewish' men, Sabbatai Zevi (1626-1676), a rabbi, black magician and occultist who proclaimed he was the Jewish messiah; and Jacob Frank (1726-1791), the Polish 'Jew', black magician and occultist who said he was the reincarnation of 'messiah' Zevi and biblical patriarch Jacob. They worked across two centuries to establish the Sabbatian-Frankist cult that plays a major, indeed central, role in the manipulation of human society by the Global Cult which has its origins much further back in history than Sabbatai Zevi. I should emphasise two points here in response to the shrill voices that will scream 'anti-Semitism': (1) Sabbatian-Frankists are NOT Jewish and only pose as such to hide their cult behind a Jewish façade; and (2) my information about this cult has come from Jewish sources who have long realised that their society and community has been infiltrated and taken over by interloper Sabbatian-Frankists. Infiltration has been the foundation technique of Sabbatian-Frankism from its official origin in the 17th century. Zevi's Sabbatian sect attracted a massive following described as the biggest messianic movement in Jewish history, spreading as far as Africa and Asia, and he promised a return for the Jews to the 'Promised Land' of Israel. Sabbatianism was not Judaism but an inversion of everything that mainstream Judaism stood for. So much so that this sinister cult would have a feast day when Judaism had a fast day and whatever was forbidden in Judaism the Sabbatians were encouraged and even commanded to do. This included incest and what would be today called Satanism. Members were forbidden to marry outside the sect and there was a system of keeping their children ignorant of what they were part of until they were old enough to be trusted not to unknowingly reveal anything to outsiders. The same system is employed to this day by the Global Cult in general which Sabbatian-Frankism has enormously influenced and now largely controls.

Zevi and his Sabbatians suffered a setback with the intervention by the Sultan of the Islamic Ottoman Empire in the Middle East and what is now the Republic of Turkey where Zevi was located. The

Sultan gave him the choice of proving his ‘divinity’, converting to Islam or facing torture and death. Funnily enough Zevi chose to convert or at least appear to. Some of his supporters were disillusioned and drifted away, but many did not with 300 families also converting – only in theory – to Islam. They continued behind this Islamic smokescreen to follow the goals, rules and rituals of Sabbatianism and became known as ‘crypto-Jews’ or the ‘Dönmeh’ which means ‘to turn’. This is rather ironic because they didn’t ‘turn’ and instead hid behind a fake Islamic persona. The process of appearing to be one thing while being very much another would become the calling card of Sabbatianism especially after Zevi’s death and the arrival of the Satanist Jacob Frank in the 18th century when the cult became Sabbatian-Frankism and plumbed still new depths of depravity and infiltration which included – still includes – human sacrifice and sex with children. Wherever Sabbatians go paedophilia and Satanism follow and is it really a surprise that Hollywood is so infested with child abuse and Satanism when it was established by Sabbatian-Frankists and is still controlled by them? Hollywood has been one of the prime vehicles for global perceptual programming and manipulation. How many believe the version of ‘history’ portrayed in movies when it is a travesty and inversion (again) of the truth? Rabbi Marvin Antelman describes Frankism in his book, *To Eliminate the Opiate*, as ‘a movement of complete evil’ while Jewish professor Gershom Scholem said of Frank in *The Messianic Idea in Judaism*: ‘In all his actions [he was] a truly corrupt and degenerate individual ... one of the most frightening phenomena in the whole of Jewish history.’ Frank was excommunicated by traditional rabbis, as was Zevi, but Frank was undeterred and enjoyed vital support from the House of Rothschild, the infamous banking dynasty whose inner-core are Sabbatian-Frankists and not Jews. Infiltration of the Roman Church and Vatican was instigated by Frank with many Dönmeh ‘turning’ again to convert to Roman Catholicism with a view to hijacking the reins of power. This was the ever-repeating modus operandi and continues to be so. Pose as an advocate of the religion, culture or country that you want to control and then manipulate your people into the positions of authority and influence largely as advisers, administrators and Svengalis for those that appear to be in power. They did this with Judaism, Christianity (Christian Zionism is part of this), Islam and other religions and nations until Sabbatian-Frankism spanned the world as it does today.

Sabbatian Saudis and the terror network

One expression of the Sabbatian-Frankist Dönmeh within Islam is the ruling family of Saudi Arabia, the House of Saud, through which came the vile distortion of Islam known as Wahhabism. This is the violent creed followed by terrorist groups like Al-Qaeda and ISIS or Islamic State. Wahhabism is the hand-chopping, head-chopping 'religion' of Saudi Arabia which is used to keep the people in a constant state of fear so the interloper House of Saud can continue to rule. Al-Qaeda and Islamic State were lavishly funded by the House of Saud while being created and directed by the Sabbatian-Frankist network in the United States that operates through the Pentagon, CIA and the government in general of whichever 'party'. The front man for the establishment of Wahhabism in the middle of the 18th century was a Sabbatian-Frankist 'crypto-Jew' posing as Islamic called Muhammad ibn Abd al-Wahhab. His daughter would marry the son of Muhammad bin Saud who established the first Saudi state before his death in 1765 with support from the British Empire. Bin Saud's successors would establish modern Saudi Arabia in league with the British and Americans in 1932 which allowed them to seize control of Islam's major shrines in Mecca and Medina. They have dictated the direction of Sunni Islam ever since while Iran is the major centre of the Shiite version and here we have the source of at least the public conflict between them. The Sabbatian network has used its Wahhabi extremists to carry out Problem-Reaction-Solution terrorist attacks in the name of 'Al-Qaeda' and 'Islamic State' to justify a devastating 'war on terror', ever-increasing surveillance of the population and to terrify people into compliance. Another insight of the Renegade Mind is the streetwise understanding that just because a country, location or people are attacked doesn't mean that those apparently representing that country, location or people are not behind the attackers. Often they are *orchestrating* the attacks because of the societal changes that can be then justified in the name of 'saving the population from terrorists'.

I show in great detail in *The Trigger* how Sabbatian-Frankists were the real perpetrators of 9/11 and not '19 Arab hijackers' who were blamed for what happened. Observe what was justified in the name of 9/11 alone in terms of Middle East invasions, mass surveillance and control that fulfilled the demands of the Project for the New American Century document published by the Sabbatian Neocons. What appear to be enemies are on the deep inside players on the same Sabbatian team. Israel and Arab 'royal' dictatorships are all ruled by Sabbatians and the recent peace agreements between Israel and Saudi Arabia, the United Arab Emirates (UAE) and others are only making formal what has always been the case behind the scenes. Palestinians who have been subjected to grotesque tyranny since Israel was bombed and terrorised into existence in 1948 have never stood a chance. Sabbatian-Frankists have controlled Israel (so the constant theme of violence and war which Sabbatians love) and they have controlled the Arab countries that Palestinians have looked to for real support that never comes. 'Royal families' of the Arab world in Saudi Arabia, Bahrain, UAE, etc., are all Sabbatians with allegiance to the aims of the cult and not what is best for their Arabic populations. They have stolen the oil and financial resources from their people by false claims to be 'royal dynasties' with a genetic right to rule and by employing vicious militaries to impose their will.

Satanic 'illumination'

The Satanist Jacob Frank formed an alliance in 1773 with two other Sabbatians, Mayer Amschel Rothschild (1744-1812), founder of the Rothschild banking dynasty, and Jesuit-educated fraudulent Jew, Adam Weishaupt, and this led to the formation of the Bavarian Illuminati, firstly under another name, in 1776. The Illuminati would be the manipulating force behind the French Revolution (1789-1799) and was also involved in the American Revolution (1775-1783) before and after the Illuminati's official creation. Weishaupt would later become (in public) a Protestant Christian in archetypal Sabbatian style. I read that his name can be decoded as Adam-Weishaupt or 'the first man to lead those who know'. He wasn't a leader in the sense that he was a subordinate, but he did lead those below him in a crusade of transforming human society that still continues today. The theme was confirmed as early as 1785 when a horseman courier called Lanz was reported to be struck by lighting and extensive Illuminati documents were found in his saddlebags. They made the link to Weishaupt and detailed the plan for world takeover. Current events with 'Covid' fascism have been in the making for a very long time. Jacob Frank was jailed for 13 years by the Catholic Inquisition after his arrest in 1760 and on his release he headed for Frankfurt, Germany, home city and headquarters of the House of Rothschild where the alliance was struck with Mayer Amschel Rothschild and Weishaupt. Rothschild arranged for Frank to be given the title of Baron and he became a wealthy nobleman with a big following of Jews in Germany, the Austro-Hungarian Empire and other European countries. Most of them would have believed he was on their side.

The name 'Illuminati' came from the Zohar which is a body of works in the Jewish mystical 'bible' called the Kabbalah. 'Zohar' is the foundation of Sabbatian-Frankist belief and in Hebrew 'Zohar' means 'splendour', 'radiance', 'illuminated', and so we have 'Illuminati'. They claim to be the 'Illuminated Ones' from their knowledge systematically hidden from the human population and passed on through generations of carefully-chosen initiates in the global secret society network or Cult. Hidden knowledge includes an awareness of the Cult agenda for the world and the nature of our collective reality that I will explore later. Cult 'illumination' is symbolised by the torch held by the Statue of Liberty which was gifted to New York by French Freemasons in Paris who knew exactly what it represents. 'Liberty' symbolises the goddess worshipped in

Babylon as Queen Semiramis or Ishtar. The significance of this will become clear. Notice again the ubiquitous theme of inversion with the Statue of 'Liberty' really symbolising mass control (Fig 7). A mirror-image statute stands on an island in the River Seine in Paris from where New York Liberty originated (Fig 8). A large replica of the Liberty flame stands on top of the Pont de l'Alma tunnel in Paris where Princess Diana died in a Cult ritual described in *The Biggest Secret*. Lucifer 'the light bringer' is related to all this (and much more as we'll see) and 'Lucifer' is a central figure in Sabbatian-Frankism and its associated Satanism. Sabbatians reject the Jewish Torah, or Pentateuch, the 'five books of Moses' in the Old Testament known as Genesis, Exodus, Leviticus, Numbers, and Deuteronomy which are claimed by Judaism and Christianity to have been dictated by 'God' to Moses on Mount Sinai. Sabbatians say these do not apply to them and they seek to replace them with the Zohar to absorb Judaism and its followers into their inversion which is an expression of a much greater global inversion. They want to delete all religions and force humanity to worship a one-world religion – Sabbatian Satanism that also includes worship of the Earth goddess. Satanic themes are being more and more introduced into mainstream society and while Christianity is currently the foremost target for destruction the others are planned to follow.

Figure 7: The Cult goddess of Babylon disguised as the Statue of Liberty holding the flame of Lucifer the 'light bringer'.

Radio France

Figure 8: Liberty's mirror image in Paris where the New York version originated.

Marx brothers

Rabbi Marvin Antelman connects the Illuminati to the Jacobins in *To Eliminate the Opiate* and Jacobins were the force behind the French Revolution. He links both to the Bund der Gerechten, or League of the Just, which was the network that inflicted communism/Marxism on the world. Antelman wrote:

> The original inner circle of the Bund der Gerechten consisted of born Catholics, Protestants and Jews [Sabbatian-Frankist infiltrators], and those representatives of respective subdivisions formulated schemes for the ultimate destruction of their faiths. The heretical Catholics laid plans which they felt would take a century or more for the ultimate destruction of the church; the apostate Jews for the ultimate destruction of the Jewish religion.

Sabbatian-created communism connects into this anti-religion agenda in that communism does not allow for the free practice of religion. The Sabbatian 'Bund' became the International Communist Party and Communist League and in 1848 'Marxism' was born with the Communist Manifesto of Sabbatian assets Karl Marx and Friedrich Engels. It is absolutely no coincidence that Marxism, just a different name for fascist and other centrally-controlled tyrannies, is being imposed worldwide as a result of the 'Covid' hoax and nor that Marxist/fascist China was the place where the hoax originated. The reason for this will become very clear in the chapter 'Covid: The calculated catastrophe'. The so-called 'Woke' mentality has hijacked traditional beliefs of the political left and replaced them with far-right make-believe 'social justice' better known as Marxism. Woke will, however, be swallowed by its own perceived 'revolution' which is really the work of billionaires and billionaire corporations feigning being 'Woke'. Marxism is being touted by Wokers as a replacement for 'capitalism' when we don't have 'capitalism'. We have cartelism in which the market is stitched up by the very Cult billionaires and corporations bankrolling Woke. Billionaires love Marxism which keeps the people in servitude while they control from the top. Terminally naïve Wokers think they are 'changing the world' when it's the Cult that is doing the changing and when they have played their vital part and become surplus to requirements they, too, will be targeted. The Illuminati-Jacobins were behind the period known as 'The Terror' in the French Revolution in 1793 and 1794 when Jacobin Maximillian de Robespierre and his Orwellian 'Committee of Public Safety' killed 17,000 'enemies of the Revolution' who had once been 'friends of the Revolution'. Karl Marx (1818-1883), whose Sabbatian creed of Marxism has cost the lives of at least 100 million people, is a hero once again to Wokers who have been systematically kept ignorant of real history by their 'education' programming. As a result they now promote a Sabbatian 'Marxist' abomination destined at some point to consume them. Rabbi Antelman, who spent decades researching the Sabbatian plot, said of the League of the Just and Karl Marx:

> Contrary to popular opinion Karl Marx did not originate the Communist Manifesto. He was paid for his services by the League of the Just, which was known in its country of origin, Germany, as the Bund der Geaechteten.

Antelman said the text attributed to Marx was the work of other people and Marx 'was only repeating what others already said'. Marx was 'a hired hack – lackey of the wealthy Illuminists'. Marx famously said that religion was the 'opium of the people' (part of the Sabbatian plan to demonise religion) and Antelman called his books, *To Eliminate the Opiate*. Marx was born Jewish, but his family converted to Christianity (Sabbatian modus operandi) and he attacked Jews, not least in his book, *A World Without Jews*. In doing so he supported the Sabbatian plan to destroy traditional Jewishness and Judaism which we are clearly seeing today with the vindictive targeting of orthodox Jews by the Sabbatian government of Israel over 'Covid' laws. I don't follow any religion and it has done much damage to the world over centuries and acted as a perceptual straightjacket. Renegade Minds, however, are always asking *why* something is being done. It doesn't matter if they agree or disagree with what is happening – *why* is it happening is the question. The 'why?' can be answered with regard to religion in that religions create interacting communities of believers when the Cult wants to dismantle all discourse, unity and interaction (see 'Covid' lockdowns) and the ultimate goal is to delete all religions for a one-world religion of Cult Satanism worshipping their 'god' of which more later. We see the same 'why?' with gun control in America. I don't have guns and don't want them, but why is the Cult seeking to disarm the population at the same time that law enforcement agencies are armed to their molars and why has every tyrant in history sought to disarm people before launching the final takeover? They include Hitler, Stalin, Pol Pot and Mao who followed confiscation with violent seizing of power. You know it's a Cult agenda by the people who immediately race to the microphones to exploit dead people in multiple shootings. Ultra-Zionist Cult lackey Senator Chuck Schumer was straight on the case after ten people were killed in Boulder, Colorado in March, 2121. Simple rule … if Schumer wants it the Cult wants it and the same with his ultra-Zionist mate the wild-eyed Senator Adam Schiff. At the same time they were calling for the disarmament of Americans, many of whom live a long way from a police response, Schumer, Schiff and the rest of these pampered clowns were sitting on Capitol Hill behind a razor-wired security fence protected by thousands of armed troops in addition to their own armed bodyguards. Mom and pop in an isolated home? They're just potential mass shooters.

Zion Mainframe

Sabbatian-Frankists and most importantly the Rothschilds were behind the creation of ‘Zionism’, a political movement that demanded a Jewish homeland in Israel as promised by Sabbatai Zevi. The very symbol of Israel comes from the German meaning of the name Rothschild. Dynasty founder Mayer Amschel Rothschild changed the family name from Bauer to Rothschild, or ‘Red-Shield’ in German, in deference to the six-pointed ‘Star of David’ hexagram displayed on the family’s home in Frankfurt. The symbol later appeared on the flag of Israel after the Rothschilds were centrally involved in its creation. Hexagrams are not a uniquely Jewish symbol and are widely used in occult (‘hidden’) networks often as a symbol for Saturn (see my other books for why). Neither are Zionism and Jewishness interchangeable. Zionism is a political movement and philosophy and not a ‘race’ or a people. Many Jews oppose Zionism and many non-Jews, including US President Joe Biden, call themselves Zionists as does Israel-centric Donald Trump. America’s support for the Israel government is pretty much a gimme with ultra-Zionist billionaires and corporations providing fantastic and dominant funding for both political parties. Former Congresswoman Cynthia McKinney has told how she was approached immediately she ran for office to ‘sign the pledge’ to Israel and confirm that she would always vote in that country’s best interests. All American politicians are approached in this way. Anyone who refuses will get no support or funding from the enormous and all-powerful Zionist lobby that includes organisations like mega-lobby group AIPAC, the American Israel Public Affairs Committee. Trump’s biggest funder was ultra-Zionist casino and media billionaire Sheldon Adelson while major funders of the Democratic Party include ultra-Zionist George Soros and ultra-Zionist financial and media mogul, Haim Saban. Some may reel back at the suggestion that Soros is an Israel-firster (Sabbatian-controlled Israel-firster), but Renegade Minds watch the actions not the words and everywhere Soros donates his billions the Sabbatian agenda benefits. In the spirit of Sabbatian inversion Soros pledged $1 billion for a new university network to promote ‘liberal values and tackle intolerance’. He made the announcement during his annual speech at the Cult-owned World Economic Forum in Davos, Switzerland, in January, 2020, after his ‘harsh criticism’ of ‘authoritarian rulers’ around the world. You can only laugh at such brazen mendacity. How *he* doesn’t laugh is the mystery. Translated from the Orwellian ‘liberal values and tackle intolerance’ means teaching non-white people to hate white people and for white people to loathe themselves for being born white. The reason for that will become clear.

The ‘Anti-Semitism’ fraud

Zionists support the Jewish homeland in the land of Palestine which has been the Sabbatian-Rothschild goal for so long, but not for the benefit of Jews. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. This is nothing more than a Sabbatian protection racket to stop legitimate investigation and exposure of their agendas and activities. The official definition of ‘anti-Semitism’ has more recently been expanded to include criticism of Zionism – a *political movement* – and this was done to further stop exposure of Sabbatian infiltrators who created Zionism as we know it today in the 19th century. Renegade Minds will talk about these subjects when they know the shit that will come their way. People must decide if they want to know the truth or just cower in the corner in fear of what others will say. Sabbatians have been trying to label me as ‘anti-Semitic’ since the 1990s as I have uncovered more and more about their background and agendas. Useless, gutless, fraudulent ‘journalists’ then just repeat the smears without question and on the day I was writing this section a pair of unquestioning repeaters called Ben Quinn and Archie Bland (how appropriate) outright called me an ‘anti-Semite’ in the establishment propaganda sheet, the London *Guardian*, with no supporting evidence. The

Sabbatian Anti-Semitism Industry said so and who are they to question that? They wouldn’t dare. Ironically ‘Semitic’ refers to a group of languages in the Middle East that are almost entirely Arabic. ‘Anti-Semitism’ becomes ‘anti-Arab’ which if the consequences of this misunderstanding were not so grave would be hilarious. Don’t bother telling Quinn and Bland. I don’t want to confuse them, bless ‘em. One reason I am dubbed ‘anti-Semitic’ is that I wrote in the 1990s that Jewish operatives (Sabbatians) were heavily involved in the Russian Revolution when Sabbatians overthrew the Romanov dynasty. This apparently made me ‘anti-Semitic’. Oh, really? Here is a section from *The Trigger*:

> British journalist Robert Wilton confirmed these themes in his 1920 book *The Last Days of the Romanovs* when he studied official documents from the Russian government to identify the members of the Bolshevik ruling elite between 1917 and 1919. The Central Committee included 41 Jews among 62 members; the Council of the People’s Commissars had 17 Jews out of 22 members; and 458 of the 556 most important Bolshevik positions between 1918 and 1919 were occupied by Jewish people. Only 17 were Russian. Then there were the 23 Jews among the 36 members of the vicious Cheka Soviet secret police established in 1917 who would soon appear all across the country.
>
> Professor Robert Service of Oxford University, an expert on 20th century Russian history, found evidence that [‘Jewish’] Leon Trotsky had sought to make sure that Jews were enrolled in the Red Army and were disproportionately represented in the Soviet civil bureaucracy that included the Cheka which performed mass arrests, imprisonment and executions of ‘enemies of the people’. A US State Department Decimal File (861.00/5339) dated November 13th, 1918, names [Rothschild banking agent in America] Jacob Schiff and a list of ultra-Zionists as funders of the Russian Revolution leading to claims of a ‘Jewish plot’, but the key point missed by all is they were not ‘Jews’ – they were Sabbatian-Frankists.

Britain’s Winston Churchill made the same error by mistake or otherwise. He wrote in a 1920 edition of the *Illustrated Sunday Herald* that those behind the Russian revolution were part of a ‘worldwide conspiracy for the overthrow of civilisation and for the reconstitution of society on the basis of arrested development, of envious malevolence, and impossible equality’ (see ‘Woke’ today because that has been created by the same network). Churchill said there was no need to exaggerate the part played in the creation of Bolshevism and in the actual bringing about of the Russian

Revolution ‘by these international and for the most part atheistical Jews’ [‘atheistical Jews’ = Sabbatians]. Churchill said it is certainly a very great one and probably outweighs all others: ‘With the notable exception of Lenin, the majority of the leading figures are Jews.’ He went on to describe, knowingly or not, the Sabbatian modus operandi of placing puppet leaders nominally in power while they control from the background:

> Moreover, the principal inspiration and driving power comes from the Jewish leaders. Thus Tchitcherin, a pure Russian, is eclipsed by his nominal subordinate, Litvinoff, and the influence of Russians like Bukharin or Lunacharski cannot be compared with the power of Trotsky, or of Zinovieff, the Dictator of the Red Citadel (Petrograd), or of Krassin or Radek – all Jews. In the Soviet institutions the predominance of Jews is even more astonishing. And the prominent, if not indeed the principal, part in the system of terrorism applied by the Extraordinary Commissions for Combatting Counter-Revolution has been taken by Jews, and in some notable cases by Jewesses.

What I said about seriously disproportionate involvement in the Russian Revolution by Jewish ‘revolutionaries’ (Sabbatians) is provable fact, but truth is no defence against the Sabbatian Anti-Semitism Industry, its repeater parrots like Quinn and Bland, and the now breathtaking network of so-called ‘Woke’ ‘anti-hate’ groups with interlocking leaderships and funding which have the role of discrediting and silencing anyone who gets too close to exposing the Sabbatians. We have seen ‘truth is no defence’ confirmed in legal judgements with the Saskatchewan Human Rights Commission in Canada decreeing this: ‘Truthful statements can be presented in a manner that would meet the definition of hate speech, and not all truthful statements must be free from restriction.’ Most ‘anti-hate’ activists, who are themselves consumed by hatred, are too stupid and ignorant of the world to know how they are being used. They are far too far up their own virtue-signalling arses and it’s far too dark for them to see anything.

The ‘revolution’ game

The background and methods of the ‘Russian’ Revolution are straight from the Sabbatian playbook seen in the French Revolution and endless others around the world that appear to start as a revolution of the people against tyrannical rule and end up with a regime change to more tyrannical rule overtly or covertly. Wars, terror attacks and regime overthrows follow the Sabbatian cult through history with its agents creating them as Problem-Reaction-Solutions to remove opposition on the road to world domination. Sabbatian dots connect the Rothschilds with the Illuminati, Jacobins of the French Revolution, the 'Bund' or League of the Just, the International Communist Party, Communist League and the Communist Manifesto of Karl Marx and Friedrich Engels that would lead to the Rothschild-funded Russian Revolution. The sequence comes under the heading of 'creative destruction' when you advance to your global goal by continually destroying the status quo to install a new status quo which you then also destroy. The two world wars come to mind. With each new status quo you move closer to your planned outcome. Wars and mass murder are to Sabbatians a collective blood sacrifice ritual. They are obsessed with death for many reasons and one is that death is an inversion of life. Satanists and Sabbatians are obsessed with death and often target churches and churchyards for their rituals. Inversion-obsessed Sabbatians explain the use of inverted symbolism including the *inverted* pentagram and *inverted* cross. The inversion of the cross has been related to targeting Christianity, but the cross was a religious symbol long before Christianity and its inversion is a statement about the Sabbatian mentality and goals more than any single religion.

Sabbatians operating in Germany were behind the rise of the occult-obsessed Nazis and the subsequent Jewish exodus from Germany and Europe to Palestine and the United States after World War Two. The Rothschild dynasty was at the forefront of this both as political manipulators and by funding the operation. Why would Sabbatians help to orchestrate the horrors inflicted on Jews by the Nazis and by Stalin after they organised the Russian Revolution? Sabbatians hate Jews and their religion, that's why. They pose as Jews and secure positions of control within Jewish society and play the 'anti-Semitism' card to protect themselves from exposure through a global network of organisations answering to the Sabbatian-created-and-controlled globe-spanning intelligence network that involves a stunning web of military-intelligence operatives and operations for a tiny country of just nine million. Among them are Jewish assets who are not Sabbatians but have been convinced by them that what they are doing is for the good of Israel and the Jewish community to protect them from what they have been programmed since childhood to believe is a Jew-hating hostile world. The Jewish community is just a highly convenient cover to hide the true nature of Sabbatians. Anyone getting close to exposing their game is accused by Sabbatian place-people and gofers of 'anti-Semitism' and claiming that all Jews are part of a plot to take over the world. I am not saying that. I am saying that Sabbatians – the *real* Jew-haters – have infiltrated the Jewish community to use them both as a cover and an 'anti-Semitic' defence against exposure. Thus we have the Anti-Semitism Industry targeted researchers in this way and most Jewish people think this is justified and genuine. They don't know that their 'Jewish' leaders and institutions of state, intelligence and military are not controlled by Jews at all, but cultists and stooges of Sabbatian-Frankism. I once added my name to a pro-Jewish freedom petition online and the next time I looked my name was gone and text had been added to the petition blurb to attack me as an 'anti-Semite' such is the scale of perceptual programming.

Moving on America

I tell the story in *The Trigger* and a chapter called 'Atlantic Crossing' how particularly after Israel was established the Sabbatians moved in on the United States and eventually grasped control of government administration, the political system via both Democrats and Republicans, the intelligence community like the CIA and National Security Agency (NSA), the Pentagon and mass media. Through this seriously compartmentalised network Sabbatians and their operatives in Mossad, Israeli Defense Forces (IDF) and US agencies pulled off 9/11 and blamed it on 19 'Al-Qaeda hijackers' dominated by men from, or connected to, Sabbatian-ruled Saudi

Arabia. The ‘19’ were not even on the planes let alone flew those big passenger jets into buildings while being largely incompetent at piloting one-engine light aircraft. ‘Hijacker’ Hani Hanjour who is said to have flown American Airlines Flight 77 into the Pentagon with a turn and manoeuvre most professional pilots said they would have struggled to do was banned from renting a small plane by instructors at the Freeway Airport in Bowie, Maryland, just *six weeks* earlier on the grounds that he was an incompetent pilot. The Jewish population of the world is just 0.2 percent with even that almost entirely concentrated in Israel (75 percent Jewish) and the United States (around two percent). This two percent and globally 0.2 percent refers to *Jewish* people and not Sabbatian interlopers who are a fraction of that fraction. What a sobering thought when you think of the fantastic influence on world affairs of tiny Israel and that the Project for the New America Century (PNAC) which laid out the blueprint in September, 2000, for America’s war on terror and regime change wars in Iraq, Libya and Syria was founded and dominated by Sabbatians known as ‘Neocons’. The document conceded that this plan would not be supported politically or publicly without a major attack on American soil and a Problem-Reaction-Solution excuse to send troops to war across the Middle East. Sabbatian Neocons said:

> … [The] process of transformation … [war and regime change] … is likely to be a long one, absent some catastrophic and catalysing event – like a new Pearl Harbor.

Four months later many of those who produced that document came to power with their inane puppet George Bush from the long-time Sabbatian Bush family. They included Sabbatian Dick Cheney who was officially vice-president, but really de-facto president for the entirety of the ‘Bush’ government. Nine months after the ‘Bush’ inauguration came what Bush called at the time ‘the Pearl Harbor of the 21st century’ and with typical Sabbatian timing and symbolism 2001 was the 60th anniversary of the attack in 1941 by the Japanese Air Force on Pearl Harbor, Hawaii, which allowed President Franklin Delano Roosevelt to take the United States into a Sabbatian-instigated Second World War that he said in his election campaign that he never would. The evidence is overwhelming that Roosevelt and his military and intelligence networks knew the attack was coming and did nothing to stop it, but they did make sure that America's most essential naval ships were not in Hawaii at the time. Three thousand Americans died in the Pearl Harbor attacks as they did on September 11th. By the 9/11 year of 2001 Sabbatians had widely infiltrated the US government, military and intelligence operations and used their compartmentalised assets to pull off the 'Al-Qaeda' attacks. If you read *The Trigger* it will blow your mind to see the utterly staggering concentration of 'Jewish' operatives (Sabbatian infiltrators) in essential positions of political, security, legal, law enforcement, financial and business power before, during, and after the attacks to make them happen, carry them out, and then cover their tracks – and I do mean *staggering* when you think of that 0.2 percent of the world population and two percent of Americans which are Jewish while Sabbatian infiltrators are a fraction of that. A central foundation of the 9/11 conspiracy was the hijacking of government, military, Air Force and intelligence computer systems in real time through 'back-door' access made possible by Israeli (Sabbatian) 'cyber security' software. Sabbatian-controlled Israel is on the way to rivalling Silicon Valley for domination of cyberspace and is becoming the dominant force in cyber-security which gives them access to entire computer systems and their passcodes across the world. Then add to this that Zionists head (officially) Silicon Valley giants like Google (Larry Page and Sergey Brin), Google-owned YouTube (Susan Wojcicki), Facebook (Mark Zuckerberg and Sheryl Sandberg), and Apple (Chairman Arthur D. Levinson), and that ultra-Zionist hedge fund billionaire Paul Singer has a $1 billion stake in Twitter which is only nominally headed by 'CEO' pothead Jack Dorsey. As cable news host Tucker Carlson said of Dorsey: 'There used to be debate in the medical community whether dropping a ton of acid had permanent effects and I think that debate has now ended.' Carlson made the comment after Dorsey told a hearing on Capitol Hill (if you cut through his bullshit) that he believed in free speech so long as he got to decide what you can hear and see. These 'big names' of Silicon Valley are only front men and women for the Global Cult, not least the Sabbatians, who are the true controllers of these corporations. Does anyone still wonder why these same people and companies have been ferociously censoring and banning people (like me) for exposing any aspect of the Cult agenda and especially the truth about the 'Covid' hoax which Sabbatians have orchestrated?

The Jeffrey Epstein paedophile ring was a Sabbatian operation. He was officially 'Jewish' but he was a Sabbatian and women abused by the ring have told me about the high number of 'Jewish' people involved. The Epstein horror has Sabbatian written all over it and matches perfectly their modus operandi and obsession with sex and ritual. Epstein was running a Sabbatian blackmail ring in which famous people with political and other influence were provided with young girls for sex while everything was being filmed and recorded on hidden cameras and microphones at his New York house, Caribbean island and other properties. Epstein survivors have described this surveillance system to me and some have gone public. Once the famous politician or other figure knew he or she was on video they tended to do whatever they were told. Here we go again …when you've got them by the balls their hearts and minds will follow. Sabbatians use this blackmail technique on a wide scale across the world to entrap politicians and others they need to act as demanded. Epstein's private plane, the infamous 'Lolita Express', had many well-known passengers including Bill Clinton while Bill Gates has flown on an Epstein plane and met with him four years after Epstein had been jailed for paedophilia. They subsequently met many times at Epstein's home in New York according to a witness who was there. Epstein's infamous side-kick was Ghislaine Maxwell, daughter of Mossad agent and ultra-Zionist mega-crooked British businessman, Bob Maxwell, who at one time owned the *Daily Mirror* newspaper. Maxwell was murdered at sea on his boat in 1991 by Sabbatian-controlled Mossad when he became a liability with his business empire collapsing as a former Mossad operative has confirmed (see *The Trigger*).

Money, money, money, funny money ...

Before I come to the Sabbatian connection with the last three US presidents I will lay out the crucial importance to Sabbatians of controlling banking and finance. Sabbatian Mayer Amschel Rothschild set out to dominate this arena in his family's quest for total global control. What is freedom? It is, in effect, choice. The more choices you have the freer you are and the fewer your choices the more you are enslaved. In the global structure created over centuries by Sabbatians the biggest decider and restrictor of choice is … money. Across the world if you ask people what they would like to do with their lives and why they are not doing that they will reply 'I don't have the money'. This is the idea. A global elite of multi-billionaires are described as 'greedy' and that is true on one level; but control of money – who has it and who doesn't – is not primarily about greed. It's about control. Sabbatians have seized ever more control of finance and sucked the wealth of the world out of the hands of the population. We talk now, after all, about the 'One-percent' and even then the wealthiest are a lot fewer even than that. This has been made possible by a money scam so outrageous and so vast it could rightly be called the scam of scams founded on creating 'money' out of nothing and 'loaning' that with interest to the population. Money out of nothing is called 'credit'. Sabbatians have asserted control over governments and banking ever more completely through the centuries and secured financial laws that allow banks to lend hugely more than they have on deposit in a confidence trick known as fractional reserve lending. Imagine if you could lend money that doesn't exist and charge the recipient interest for doing so. You would end up in jail. Bankers by contrast end up in mansions, private jets, Malibu and Monaco.

Banks are only required to keep a fraction of their deposits and wealth in their vaults and they are allowed to lend 'money' they don't have called 'credit. Go into a bank for a loan and if you succeed the banker will not move any real wealth into your account. They will type into your account the amount of the agreed ‘loan’ – say £100,000. This is not wealth that really exists; it is non-existent, fresh-air, created-out-of-nothing ‘credit’ which has never, does not, and will never exist except in theory. Credit is backed by nothing except wind and only has buying power because people think that it has buying power and accept it in return for property, goods and services. I have described this situation as like those cartoon characters you see chasing each other and when they run over the edge of a cliff they keep running forward on fresh air until one of them looks down, realises what’s happened, and they all crash into the ravine. The whole foundation of the Sabbatian financial system is to stop people looking down except for periodic moments when they want to crash the system (as in 2008 and 2020 ongoing) and reap the rewards from all the property, businesses and wealth their borrowers had signed over as ‘collateral’ in return for a ‘loan’ of fresh air. Most people think that money is somehow created by governments when it comes into existence from the start as a debt through banks ‘lending’ illusory money called credit. Yes, the very currency of exchange is a *debt* from day one issued as an interest-bearing loan. Why don’t governments create money interest-free and lend it to their people interest-free? Governments are controlled by Sabbatians and the financial system is controlled by Sabbatians for whom interest-free money would be a nightmare come true. Sabbatians underpin their financial domination through their global network of central banks, including the privately-owned US Federal Reserve and Britain’s Bank of England, and this is orchestrated by a privately-owned central bank coordination body called the Bank for International Settlements in Basle, Switzerland, created by the usual suspects including the Rockefellers and Rothschilds. Central bank chiefs don’t answer to governments or the people. They answer to the Bank for International Settlements or, in other words, the Global Cult which is dominated today by Sabbatians.

Built-in disaster

There are so many constituent scams within the overall banking scam. When you take out a loan of thin-air credit only the amount of that loan is theoretically brought into circulation to add to the amount in circulation; but you are paying back the principle plus interest. The additional interest is not created and this means that with every 'loan' there is a shortfall in the money in circulation between what is borrowed and what has to be paid back. There is never even close to enough money in circulation to repay all outstanding public and private debt including interest. Coldly weaved in the very fabric of the system is the certainty that some will lose their homes, businesses and possessions to the banking 'lender'. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts it becomes painfully obvious that there is not enough money to service all debt and interest. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts and it becomes painfully obvious – as in 2008 and currently – that there is not enough money to service all debt and interest. Sabbatian banksters have been leading the human population through a calculated series of booms (more debt incurred) and busts (when the debt can't be repaid and the banks get the debtor's tangible wealth in exchange for non-existent 'credit'). With each 'bust' Sabbatian bankers have absorbed more of the world's tangible wealth and we end up with the One-percent. Governments are in bankruptcy levels of debt to the same system and are therefore owned by a system they do not control. The Federal Reserve, 'America's central bank', is privately-owned and American presidents only nominally appoint its chairman or woman to maintain the illusion that it's an arm of government. It's not. The 'Fed' is a cartel of private banks which handed billions to its associates and friends after the crash of 2008 and has been Sabbatian-controlled since it was manipulated into being in 1913 through the covert trickery of Rothschild banking agents Jacob Schiff and Paul

Warburg, and the Sabbatian Rockefeller family. Somehow from a Jewish population of two-percent and globally 0.2 percent (Sabbatian interlopers remember are far smaller) ultra-Zionists headed the Federal Reserve for 31 years between 1987 and 2018 in the form of Alan Greenspan, Bernard Bernanke and Janet Yellen (now Biden's Treasury Secretary) with Yellen's deputy chairman a Israeli-American duel citizen and ultra-Zionist Stanley Fischer, a former governor of the Bank of Israel. Ultra-Zionist Fed chiefs spanned the presidencies of Ronald Reagan ('Republican'), Father George Bush ('Republican'), Bill Clinton ('Democrat'), Boy George Bush ('Republican') and Barack Obama ('Democrat'). We should really add the pre-Greenspan chairman, Paul Adolph Volcker, 'appointed' by Jimmy Carter ('Democrat') who ran the Fed between 1979 and 1987 during the Carter and Reagan administrations before Greenspan took over. Volcker was a long-time associate and business partner of the Rothschilds. No matter what the 'party' officially in power the United States economy was directed by the same force. Here are members of the Obama, Trump and Biden administrations and see if you can make out a common theme.

Barack Obama ('Democrat')

Ultra-Zionists Robert Rubin, Larry Summers, and Timothy Geithner ran the US Treasury in the Clinton administration and two of them reappeared with Obama. Ultra-Zionist Fed chairman Alan Greenspan had manipulated the crash of 2008 through deregulation and jumped ship just before the disaster to make way for ultra-Zionist Bernard Bernanke to hand out trillions to Sabbatian 'too big to fail' banks and businesses, including the ubiquitous ultra-Zionist Goldman Sachs which has an ongoing staff revolving door operation between itself and major financial positions in government worldwide. Obama inherited the fallout of the crash when he took office in January, 2009, and fortunately he had the support of his ultra-Zionist White House Chief of Staff Rahm Emmanuel, son of a terrorist who helped to bomb Israel into being in 1948, and his ultra-Zionist senior adviser David Axelrod, chief strategist in Obama's two successful presidential campaigns. Emmanuel, later mayor of Chicago and former senior fundraiser and strategist for Bill Clinton, is an example of the Sabbatian policy after Israel was established of migrating insider families to America so their children would be born American citizens. 'Obama' chose this financial team throughout his administration to respond to the Sabbatian-instigated crisis:

Timothy Geithner (ultra-Zionist) Treasury Secretary; Jacob J. Lew, Treasury Secretary; Larry Summers (ultra-Zionist), director of the White House National Economic Council; Paul Adolph Volcker (Rothschild business partner), chairman of the Economic Recovery Advisory Board; Peter Orszag (ultra-Zionist), director of the Office of Management and Budget overseeing all government spending; Penny Pritzker (ultra-Zionist), Commerce Secretary; Jared Bernstein (ultra-Zionist), chief economist and economic policy adviser to Vice President Joe Biden; Mary Schapiro (ultra-Zionist), chair of the Securities and Exchange Commission (SEC); Gary Gensler (ultra-Zionist), chairman of the Commodity Futures Trading Commission (CFTC); Sheila Bair (ultra-Zionist), chair of the Federal Deposit Insurance Corporation (FDIC); Karen Mills (ultra-Zionist), head of the Small Business Administration (SBA); Kenneth Feinberg (ultra-Zionist), Special Master for Executive [bail-out] Compensation. Feinberg would be appointed to oversee compensation (with strings) to 9/11 victims and families in a campaign to stop them having their day in court to question the official story. At the same time ultra-Zionist Bernard Bernanke was chairman of the Federal Reserve and these are only some of the ultra-Zionists with allegiance to Sabbatian-controlled Israel in the Obama government. Obama's biggest corporate donor was ultra-Zionist Goldman Sachs which had employed many in his administration.

Donald Trump ('Republican')

Trump claimed to be an outsider (he wasn't) who had come to 'drain the swamp'. He embarked on this goal by immediately appointing ultra-Zionist Steve Mnuchin, a Goldman Sachs employee for 17 years, as his Treasury Secretary. Others included Gary Cohn (ultra-Zionist), chief operating officer of Goldman Sachs, his first Director of the National Economic Council and chief economic adviser, who was later replaced by Larry Kudlow (ultra-Zionist). Trump's senior adviser throughout his four years in the White House was his sinister son-in-law Jared Kushner, a life-long friend of Israel Prime Minister Benjamin Netanyahu. Kushner is the son of a convicted crook who was pardoned by Trump in his last days in office. Other ultra-Zionists in the Trump administration included: Stephen Miller, Senior Policy Adviser; Avrahm Berkowitz, Deputy Adviser to Trump and his Senior Adviser Jared Kushner; Ivanka Trump, Adviser to the President, who converted to Judaism when she married Jared Kushner; David Friedman, Trump lawyer and Ambassador to Israel; Jason Greenblatt, Trump Organization executive vice president and chief legal officer, who was made Special Representative for International Negotiations and the Israeli-Palestinian Conflict; Rod Rosenstein, Deputy Attorney General; Elliot Abrams, Special Representative for Venezuela, then Iran; John Eisenberg, National Security Council Legal Adviser and Deputy Council to the President for National Security Affairs; Anne Neuberger, Deputy National Manager, National Security Agency; Ezra Cohen-Watnick, Acting Under Secretary of Defense for Intelligence; Elan Carr, Special Envoy to monitor and combat anti-Semitism; Len Khodorkovsky, Deputy Special Envoy to monitor and combat anti-Semitism; Reed Cordish, Assistant to the President, Intragovernmental and Technology Initiatives. Trump Vice President Mike Pence and Secretary of State Mike Pompeo, both Christian Zionists, were also vehement supporters of Israel and its goals and ambitions.

Donald 'free-speech believer' Trump pardoned a number of financial and violent criminals while ignoring calls to pardon Julian Assange and Edward Snowden whose crimes are revealing highly relevant information about government manipulation and corruption and the widespread illegal surveillance of the American people by US 'security' agencies. It's so good to know that Trump is on the side of freedom and justice and not mega-criminals with allegiance to Sabbatian-controlled Israel. These included a pardon for Israeli spy Jonathan Pollard who was jailed for life in 1987 under the Espionage Act. Aviem Sella, the Mossad agent who recruited Pollard, was also pardoned by Trump while Assange sat in jail and Snowden remained in exile in Russia. Sella had 'fled' (was helped to escape) to Israel in 1987 and was never extradited despite being charged under the Espionage Act. A Trump White House statement said that Sella's clemency had been 'supported by Benjamin Netanyahu, Ron Dermer, Israel's US Ambassador, David Friedman, US Ambassador to Israel and Miriam Adelson, wife of leading Trump donor Sheldon Adelson who died shortly before. Other friends of Jared Kushner were pardoned along with Sholom Weiss who was believed to be serving the longest-ever white-collar prison sentence of more than 800 years in 2000. The sentence was commuted of Ponzi-schemer Eliyahu Weinstein who defrauded Jews and others out of $200 million. I did mention that Assange and Snowden were ignored, right? Trump gave Sabbatians almost everything they asked for in military and political support, moving the US Embassy from Tel Aviv to Jerusalem with its critical symbolic and literal implications for Palestinian statehood, and the 'deal of the Century' designed by Jared Kushner and David Friedman which gave the Sabbatian Israeli government the green light to substantially expand its already widespread program of building illegal Jewish-only settlements in the occupied land of the West Bank. This made a two-state 'solution' impossible by seizing all the land of a potential Palestinian homeland and that had been the plan since 1948 and then 1967 when the Arab-controlled Gaza Strip, West Bank, Sinai Peninsula and Syrian Golan Heights were occupied by Israel. All the talks about talks and road maps and delays have been buying time until the West Bank was physically occupied by Israeli real estate. Trump would have to be a monumentally ill-informed idiot not to see that this was the plan he was helping to complete. The Trump administration was in so many ways the Kushner administration which means the Netanyahu administration which means the Sabbatian administration. I understand why many opposing Cult fascism in all its forms gravitated to Trump, but he was a crucial part of the Sabbatian plan and I will deal with this in the next chapter.

Joe Biden ('Democrat')

A barely cognitive Joe Biden took over the presidency in January, 2021, along with his fellow empty shell, Vice-President Kamala Harris, as the latest Sabbatian gofers to enter the White House. Names on the door may have changed and the 'party' – the force behind them remained the same as Zionists were appointed to a stream of pivotal areas relating to Sabbatian plans and policy. They included: Janet Yellen, Treasury Secretary, former head of the Federal Reserve, and still another ultra-Zionist running the US Treasury after Mnuchin (Trump), Lew and Geithner (Obama), and Summers and Rubin (Clinton); Anthony Blinken, Secretary of State; Wendy Sherman, Deputy Secretary of State (so that's 'Biden's' Sabbatian foreign policy sorted); Jeff Zients, White House coronavirus coordinator; Rochelle Walensky, head of the Centers for Disease Control; Rachel Levine, transgender deputy health secretary (that's 'Covid' hoax policy under control); Merrick Garland, Attorney General; Alejandro Mayorkas, Secretary of Homeland Security; Cass Sunstein, Homeland Security with responsibility for new immigration laws; Avril Haines, Director of National Intelligence; Anne Neuberger, National Security Agency cybersecurity director (note, cybersecurity); David Cohen, CIA Deputy Director; Ronald Klain, Biden's Chief of Staff (see Rahm Emanuel); Eric Lander, a 'leading geneticist', Office of Science and Technology Policy director (see Smart Grid, synthetic biology agenda); Jessica Rosenworcel, acting head of the Federal Communications Commission (FCC) which controls Smart Grid technology policy and electromagnetic communication systems including 5G. How can it be that so many pivotal positions are held by two-percent of the American population and 0.2 percent of the world population administration after administration no matter who is the president and what is the party? It's a coincidence? Of course it's not and this is why Sabbatians have built their colossal global web of interlocking 'anti-hate' hate groups to condemn anyone who asks these glaring questions as an 'anti-Semite'. The way that Jewish people horrifically abused in Sabbatian-backed Nazi Germany are exploited to this end is stomach-turning and disgusting beyond words.

Political fusion

Sabbatian manipulation has reversed the roles of Republicans and Democrats and the same has happened in Britain with the Conservative and Labour Parties. Republicans and Conservatives were always labelled the 'right' and Democrats and Labour the 'left', but look at the policy positions now and the Democrat-Labour 'left' has moved further to the 'right' than Republicans and Conservatives under the banner of 'Woke', the Cult-created far-right tyranny. Where once the Democrat-Labour 'left' defended free speech and human rights they now seek to delete them and as I said earlier despite the 'Covid' fascism of the Jackboot Johnson Conservative government in the UK the Labour Party of leader Keir Starmer demanded even more extreme measures. The Labour Party has been very publicly absorbed by Sabbatians after a political and media onslaught against the previous leader, the weak and inept Jeremy Corbyn, over made-up allegations of 'anti-Semitism' both by him and his party. The plan was clear with this 'anti-Semite' propaganda and what was required in response was a swift and decisive 'fuck off' from Corbyn and a statement to expose the Anti-Semitism Industry (Sabbatian) attempt to silence Labour criticism of the Israeli government (Sabbatians) and purge the party of all dissent against the extremes of ultra-Zionism (Sabbatians). Instead Corbyn and his party fell to their knees and appeased the abusers which, by definition, is impossible. Appeasing one demand leads only to a new demand to be appeased until takeover is complete. Like I say – 'fuck off' would have been a much more effective policy and I have used it myself with great effect over the years when Sabbatians are on my case which is most of the time. I consider that fact a great compliment, by the way. The outcome of the Labour Party capitulation is that we now have a Sabbatian-controlled

Conservative Party ‘opposed’ by a Sabbatian-controlled Labour Party in a one-party Sabbatian state that hurtles towards the extremes of tyranny (the Sabbatian cult agenda). In America the situation is the same. Labour’s Keir Starmer spends his days on his knees with his tongue out pointing to Tel Aviv, or I guess now Jerusalem, while Boris Johnson has an ‘anti-Semitism czar’ in the form of former Labour MP John Mann who keeps Starmer company on his prayer mat.

Sabbatian influence can be seen in Jewish members of the Labour Party who have been ejected for criticism of Israel including those from families that suffered in Nazi Germany. Sabbatians despise real Jewish people and target them even more harshly because it is so much more difficult to dub them ‘anti-Semitic’ although in their desperation they do try.

CHAPTER THREE

The Pushbacker sting

Until you realize how easy it is for your mind to be manipulated, you remain the puppet of someone else's game
Evita Ochel

I will use the presidencies of Trump and Biden to show how the manipulation of the one-party state plays out behind the illusion of political choice across the world. No two presidencies could – on the face of it – be more different and apparently at odds in terms of direction and policy.

A Renegade Mind sees beyond the obvious and focuses on outcomes and consequences and not image, words and waffle. The Cult embarked on a campaign to divide America between those who blindly support its agenda (the mentality known as 'Woke') and those who are pushing back on where the Cult and its Sabbatians want to go. This presents infinite possibilities for dividing and ruling the population by setting them at war with each other and allows a perceptual ring fence of demonisation to encircle the Pushbackers in a modern version of the Little Big Horn in 1876 when American cavalry led by Lieutenant Colonel George Custer were drawn into a trap, surrounded and killed by Native American tribes defending their land of thousands of years from being seized by the government. In this modern version the roles are reversed and it's those defending themselves from the Sabbatian government who are surrounded and the government that's seeking to destroy them. This trap was set years ago and to explain how we must return to 2016 and the emergence of Donald Trump as a candidate to be President of the United States. He set out to overcome the best part of 20 other candidates in the Republican Party before and during the primaries and was not considered by many in those early stages to have a prayer of living in the White House. The Republican Party was said to have great reservations about Trump and yet somehow he won the nomination. When you know how American politics works – politics in general – there is no way that Trump could have become the party's candidate unless the Sabbatian-controlled 'Neocons' that run the Republican Party wanted that to happen. We saw the proof in emails and documents made public by WikiLeaks that the Democratic Party hierarchy, or Democons, systematically undermined the campaign of Bernie Sanders to make sure that Sabbatian gofer Hillary Clinton won the nomination to be their presidential candidate. If the Democons could do that then the Neocons in the Republican Party could have derailed Trump in the same way. But they didn't and at that stage I began to conclude that Trump could well be the one chosen to be president. If that was the case the 'why' was pretty clear to see – the goal of dividing America between Cult agenda-supporting Wokers and Pushbackers who gravitated to Trump because he was telling them what they wanted to hear. His constituency of support had been increasingly ignored and voiceless for decades and profoundly through the eight years of Sabbatian puppet Barack Obama. Now here was someone speaking their language of pulling back from the incessant globalisation of political and economic power, the exporting of American jobs to China and elsewhere by 'American' (Sabbatian) corporations, the deletion of free speech, and the mass immigration policies that had further devastated job opportunities for the urban working class of all races and the once American heartlands of the Midwest.

Beware the forked tongue

Those people collectively sighed with relief that at last a political leader was apparently on their side, but another trait of the Renegade Mind is that you look even harder at people telling you what you want to hear than those who are telling you otherwise. Obviously as I said earlier people wish what they want to hear to be true and genuine and they are much more likely to believe that than someone saying what they don't want to here and don't want to be true. Sales people are taught to be skilled in eliciting by calculated questioning what their customers want to hear and repeating that back to them as their own opinion to get their targets to like and trust them. Assets of the Cult are also sales people in the sense of selling perception. To read Cult manipulation you have to play the long and expanded game and not fall for the Vaudeville show of party politics. Both American parties are vehicles for the Cult and they exploit them in different ways depending on what the agenda requires at that moment. Trump and the Republicans were used to be the focus of dividing America and isolating Pushbackers to open the way for a Biden presidency to become the most extreme in American history by advancing the full-blown Woke (Cult) agenda with the aim of destroying and silencing Pushbackers now labelled Nazi Trump supporters and white supremacists.

Sabbatians wanted Trump in office for the reasons described by ultra-Zionist Saul Alinsky (1909-1972) who was promoting the Woke philosophy through 'community organising' long before anyone had heard of it. In those days it still went by its traditional name of Marxism. The reason for the manipulated Trump phenomenon was laid out in Alinsky's 1971 book, *Rules for Radicals*, which was his blueprint for overthrowing democratic and other regimes and replacing them with Sabbatian Marxism. Not surprisingly his to-do list was evident in the Sabbatian French and Russian 'Revolutions' and that in China which will become very relevant in the next chapter about the 'Covid' hoax. Among Alinsky's followers have been the deeply corrupt Barack Obama, House Speaker Nancy Pelosi and Hillary Clinton who described him as a 'hero'. All three are Sabbatian stooges with Pelosi personifying the arrogant corrupt idiocy that so widely fronts up for the Cult inner core. Predictably as a Sabbatian advocate of the 'light-bringer' Alinsky features Lucifer on the dedication page of his book as the original radical who gained his own kingdom ('Earth' as we shall see). One of Alinsky's golden radical rules was to pick an individual and focus all attention, hatred and blame on them and not to target faceless bureaucracies and corporations. *Rules for Radicals* is really a Sabbatian handbook with its contents repeatedly employed all over the world for centuries and why wouldn't Sabbatians bring to power their designer-villain to be used as the individual on which all attention, hatred and blame was bestowed? This is what they did and the only question for me is how much Trump knew that and how much he was manipulated. A bit of both, I suspect. This was Alinsky's Trump technique from a man who died in 1972. The technique has spanned history:

> Pick the target, freeze it, personalize it, polarize it. Don't try to attack abstract corporations or bureaucracies. Identify a responsible individual. Ignore attempts to shift or spread the blame.

From the moment Trump came to illusory power everything was about him. It wasn't about Republican policy or opinion, but all about Trump. Everything he did was presented in negative, derogatory and abusive terms by the Sabbatian-dominated media led by Cult operations such as CNN, MSNBC, *The New York Times* and the Jeff Bezos-owned *Washington Post* – 'Pick the target, freeze it, personalize it, polarize it.' Trump was turned into a demon to be vilified by those who hated him and a demi-god loved by those who worshipped him. This, in turn, had his supporters, too, presented as equally demonic in preparation for the punchline later down the line when Biden was about to take office. It was here's a Trump, there's a Trump, everywhere a Trump, Trump. Virtually every news story or happening was filtered through the lens of 'The Donald'. You loved him or hated him and which one you chose was said to define you as Satan's spawn or a paragon of virtue. Even supporting some Trump policies or statements and not others was enough for an assault on your character. No shades of grey were or are allowed. Everything is black and white (literally and figuratively). A Californian I knew had her head utterly scrambled by her hatred for Trump while telling people they should love each other. She was so totally consumed by

Trump Derangement Syndrome as it became to be known that this glaring contradiction would never have occurred to her. By definition anyone who criticised Trump or praised his opponents was a hero and this lady described Joe Biden as 'a kind, honest gentleman' when he's a provable liar, mega-crook and vicious piece of work to boot. Sabbatians had indeed divided America using Trump as the fall-guy and all along the clock was ticking on the consequences for his supporters.

In hock to his masters

Trump gave Sabbatians via Israel almost everything they wanted in his four years. Ask and you shall receive was the dynamic between himself and Benjamin Netanyahu orchestrated by Trump's ultra-Zionist son-in-law Jared Kushner, his ultra-Zionist Ambassador to Israel, David Friedman, and ultra-Zionist 'Israel adviser', Jason Greenblatt. The last two were central to the running and protecting from collapse of his business empire, the Trump Organisation, and colossal business failures made him forever beholding to Sabbatian networks that bailed him out. By the start of the 1990s Trump owed $4 billion to banks that he couldn't pay and almost $1billion of that was down to him personally and not his companies. This mega-disaster was the result of building two new casinos in Atlantic City and buying the enormous Taj Mahal operation which led to crippling debt payments. He had borrowed fantastic sums from 72 banks with major Sabbatian connections and although the scale of debt should have had him living in a tent alongside the highway they never foreclosed. A plan was devised to lift Trump from the mire by BT Securities Corporation and Rothschild Inc. and the case was handled by Wilber Ross who had worked for the Rothschilds for 27 years. Ross would be named US Commerce Secretary after Trump's election. Another crucial figure in saving Trump was ultra-Zionist 'investor' Carl Icahn who bought the Taj Mahal casino. Icahn was made special economic adviser on financial regulation in the Trump administration. He didn't stay long but still managed to find time to make a tidy sum of a reported $31.3 million when he sold his holdings affected by the price of steel three days before Trump imposed a 235 percent tariff on steel imports. What amazing bits of luck these people have. Trump and Sabbatian operatives have long had a close association and his mentor and legal adviser from the early 1970s until 1986 was the dark and genetically corrupt ultra-Zionist Roy Cohn who was chief counsel to Senator Joseph McCarthy's 'communist' witch-hunt in the 1950s. *Esquire* magazine published an article about Cohn with the headline 'Don't mess with Roy Cohn'. He was described as the most feared lawyer in New York and 'a ruthless master of dirty tricks ... [with] ... more than one Mafia Don on speed dial'. Cohn's influence, contacts, support and protection made Trump a front man for Sabbatians in New York with their connections to one of Cohn's many criminal employers, the 'Russian' Sabbatian Mafia. Israel-centric media mogul Rupert Murdoch was introduced to Trump by Cohn and they started a long friendship. Cohn died in 1986 weeks after being disbarred for unethical conduct by the Appellate Division of the New York State Supreme Court. The wheels of justice do indeed run slow given the length of Cohn's crooked career.

QAnon-sense

We are asked to believe that Donald Trump with his fundamental connections to Sabbatian networks and operatives has been leading the fight to stop the Sabbatian agenda for the fascistic control of America and the world. Sure he has. A man entrapped during his years in the White House by Sabbatian operatives and whose biggest financial donor was casino billionaire Sheldon Adelson who was Sabbatian to his DNA?? Oh, do come on. Trump has been used to divide America and isolate Pushbackers on the Cult agenda under the heading of 'Trump supporters', 'insurrectionists' and 'white supremacists'. The US Intelligence/Mossad Psyop or psychological operation known as QAnon emerged during the Trump years as a central pillar in the Sabbatian campaign to lead Pushbackers into the trap set by those that wished to destroy them. I knew from the start that QAnon was a scam because I had seen the same scenario many times before over 30 years under different names and I had written about one in particular in the books. ‘Not again’ was my reaction when QAnon came to the fore. The same script is pulled out every few years and a new name added to the letterhead. The story always takes the same form: ‘Insiders’ or ‘the good guys’ in the government-intelligence-military ‘Deep State’ apparatus were going to instigate mass arrests of the ‘bad guys’ which would include the Rockefellers, Rothschilds, Barack Obama, Hillary Clinton, George Soros, etc., etc. Dates are given for when the ‘good guys’ are going to move in, but the dates pass without incident and new dates are given which pass without incident. The central message to Pushbackers in each case is that they don’t have to do anything because there is ‘a plan’ and it is all going to be sorted by the ‘good guys’ on the inside. ‘Trust the plan’ was a QAnon mantra when the only plan was to misdirect Pushbackers into putting their trust in a Psyop they believed to be real. Beware, beware, those who tell you what you want to hear and always check it out. Right up to Biden’s inauguration QAnon was still claiming that ‘the Storm’ was coming and Trump would stay on as president when Biden and his cronies were arrested and jailed. It was never going to happen and of course it didn’t, but what did happen as a result provided that punchline to the Sabbatian Trump/QAnon Psyop.

On January 6th, 2021, a very big crowd of Trump supporters gathered in the National Mall in Washington DC down from the Capitol Building to protest at what they believed to be widespread corruption and vote fraud that stopped Trump being re-elected for a second term as president in November, 2020. I say as someone that does not support Trump or Biden that the evidence is clear that major vote-fixing went on to favour Biden, a man with cognitive problems so advanced he can often hardly string a sentence together without reading the words written for him on the Teleprompter. Glaring ballot discrepancies included serious questions about electronic voting machines that make vote rigging a comparative cinch and hundreds of thousands of paper votes that suddenly appeared during already advanced vote counts and virtually all of them for Biden. Early Trump leads in crucial swing states suddenly began to close and disappear. The pandemic hoax was used as the excuse to issue almost limitless numbers of mail-in ballots with no checks to establish that the recipients were still alive or lived at that address. They were sent to streams of people who had not even asked for them. Private organisations were employed to gather these ballots and who knows what they did with them before they turned up at the counts. The American election system has been manipulated over decades to become a sick joke with more holes than a Swiss cheese for the express purpose of dictating the results. Then there was the criminal manipulation of information by Sabbatian tech giants like Facebook, Twitter and Google-owned YouTube which deleted pro-Trump, anti-Biden accounts and posts while everything in support of Biden was left alone. Sabbatians wanted Biden to win because after the dividing of America it was time for full-on Woke and every aspect of the Cult agenda to be unleashed.

Hunter gatherer

Extreme Silicon Valley bias included blocking information by the *New York Post* exposing a Biden scandal that should have ended his bid for president in the final weeks of the campaign. Hunter Biden, his monumentally corrupt son, is reported to have sent a laptop to be repaired at a local store and failed to return for it. Time passed until the laptop became the property of the store for non-payment of the bill. When the owner saw what was on the hard drive he gave a copy to the FBI who did nothing even though it confirmed widespread corruption in which the Joe Biden family were using his political position, especially when he was vice president to Obama, to make multiple millions in countries around the world and most notably Ukraine and China. Hunter Biden's one-time business partner Tony Bobulinski went public when the story broke in the *New York Post* to confirm the corruption he saw and that Joe Biden not only knew what was going on he also profited from the spoils. Millions were handed over by a Chinese company with close connections – like all major businesses in China – to the Chinese communist party of President Xi Jinping. Joe Biden even boasted at a meeting of the Cult's World Economic Forum that as vice president he had ordered the government of Ukraine to fire a prosecutor. What he didn't mention was that the same man just happened to be investigating an energy company which was part of Hunter Biden's corrupt portfolio. The company was paying him big bucks for no other reason than the influence his father had. Overnight Biden's presidential campaign should have been over given that he had lied publicly about not knowing what his son was doing. Instead almost the entire Sabbatian-owned mainstream media and Sabbatian-owned Silicon Valley suppressed circulation of the story. This alone went a mighty way to rigging the election of 2020. Cult assets like Mark Zuckerberg at Facebook also spent hundreds of millions to be used in support of Biden and vote 'administration'.

The Cult had used Trump as the focus to divide America and was now desperate to bring in moronic, pliable, corrupt Biden to complete the double-whammy. No way were they going to let little things like the will of the people thwart their plan. Silicon Valley widely censored claims that the election was rigged because it *was* rigged. For the same reason anyone claiming it was rigged was denounced as a 'white supremacist' including the pathetically few Republican politicians willing to say so. Right across the media where the claim was mentioned it was described as a 'false claim' even though these excuses for 'journalists' would have done no research into the subject whatsoever. Trump won seven million more votes than any sitting president had ever achieved while somehow a cognitively-challenged soon to be 78-year-old who was hidden away from the public for most of the campaign managed to win more votes than any presidential candidate in history. It makes no sense. You only had to see election rallies for both candidates to witness the enthusiasm for Trump and the apathy for Biden. Tens of thousands would attend Trump events while Biden was speaking in empty car parks with often only television crews attending and framing their shots to hide the fact that no one was there. It was pathetic to see footage come to light of Biden standing at a podium making speeches only to TV crews and party fixers while reading the words written for him on massive Teleprompter screens. So, yes, those protestors on January 6th had a point about election rigging, but some were about to walk into a trap laid for them in Washington by the Cult Deep State and its QAnon Psyop. This was the Capitol Hill riot ludicrously dubbed an 'insurrection'.

The spider and the fly

Renegade Minds know there are not two 'sides' in politics, only one side, the Cult, working through all 'sides'. It's a stage show, a puppet show, to direct the perceptions of the population into focusing on diversions like parties and candidates while missing the puppeteers with their hands holding all the strings. The Capitol Hill 'insurrection' brings us back to the Little Big Horn. Having created two distinct opposing groupings – Woke and Pushbackers – the trap was about to be sprung. Pushbackers were to be encircled and isolated by associating them all in the public mind with Trump and then labelling Trump as some sort of Confederate leader. I knew immediately that the Capitol riot was a set-up because of two things. One was how easy the rioters got into the building with virtually no credible resistance and secondly I could see – as with the 'Covid' hoax in the West at the start of 2020 – how the Cult could exploit the situation to move its agenda forward with great speed. My experience of Cult techniques and activities over more than 30 years has showed me that while they do exploit situations they haven't themselves created this never happens with events of fundamental agenda significance. Every time major events giving cultists the excuse to rapidly advance their plan you find they are manipulated into being for the specific reason of providing that excuse – Problem-Reaction-Solution. Only a tiny minority of the huge crowd of Washington protestors sought to gain entry to the Capitol by smashing windows and breaching doors. That didn't matter. The whole crowd and all Pushbackers, even if they did not support Trump, were going to be lumped together as dangerous insurrectionists and conspiracy theorists. The latter term came into widespread use through a CIA memo in the 1960s aimed at discrediting those questioning the nonsensical official story of the Kennedy assassination and it subsequently became widely employed by the media. It's still being used by inept 'journalists' with no idea of its origin to discredit anyone questioning anything that authority claims to be true. When you are perpetrating a conspiracy you need to discredit the very word itself even though the dictionary definition of conspiracy is merely 'the activity of secretly planning with other people to do something bad or illegal' and 'a general agreement to keep silent about a subject for the purpose of keeping it secret'. On that basis there are conspiracies almost wherever you look. For obvious reasons the Cult and its lapdog media have to claim there are no conspiracies even though the word appears in state laws as with conspiracy to defraud, to murder, and to corrupt public morals.

Agent provocateurs are widely used by the Cult Deep State to manipulate genuine people into acting in ways that suit the desired outcome. By genuine in this case I mean protestors genuinely supporting Trump and claims that the election was stolen. In among them, however, were agents of the state wearing the garb of Trump supporters and QAnon to pump-prime the Capital riot which some genuine Trump supporters naively fell for. I described the situation as 'Come into my parlour said the spider to the fly'. Leaflets appeared through the Woke paramilitary arm Antifa, the anti-fascist fascists, calling on supporters to turn up in Washington looking like Trump supporters even though they hated him. Some of those arrested for breaching the Capitol Building were sourced to Antifa and its stable mate Black Lives Matter. Both organisations are funded by Cult billionaires and corporations. One man charged for the riot was according to his lawyer a former FBI agent who had held top secret security clearance for 40 years. Attorney Thomas Plofchan said of his client, 66-year-old Thomas Edward Caldwell:

> He has held a Top Secret Security Clearance since 1979 and has undergone multiple Special Background Investigations in support of his clearances. After retiring from the Navy, he

> worked as a section chief for the Federal Bureau of Investigation from 2009-2010 as a GS-12 [mid-level employee].
>
> He also formed and operated a consulting firm performing work, often classified, for U.S government customers including the US. Drug Enforcement Agency, Department of Housing and Urban Development, the US Coast Guard, and the US Army Personnel Command.

A judge later released Caldwell pending trial in the absence of evidence about a conspiracy or that he tried to force his way into the building. *The New York Post* reported a 'law enforcement source' as saying that 'at least two known Antifa members were spotted' on camera among Trump supporters during the riot while one of the rioters arrested was John Earle Sullivan, a seriously extreme Black Lives Matter Trump-hater from Utah who was previously arrested and charged in July, 2020, over a BLM-Antifa riot in which drivers were threatened and one was shot. Sullivan is the founder of Utah-based Insurgence USA which is an affiliate of the Cult-created-and-funded Black Lives Matter movement. Footage appeared and was then deleted by Twitter of Trump supporters calling out Antifa infiltrators and a group was filmed changing into pro-Trump clothing before the riot. Security at the building was *pathetic* – as planned. Colonel Leroy Fletcher Prouty, a man with long experience in covert operations working with the US security apparatus, once described the tell-tale sign to identify who is involved in an assassination. He said:

> No one has to direct an assassination – it happens. The active role is played secretly by permitting it to happen. This is the greatest single clue. Who has the power to call off or reduce the usual security precautions?

This principle applies to many other situations and certainly to the Capitol riot of January 6th, 2021.

The sting

With such a big and potentially angry crowd known to be gathering near the Capitol the security apparatus would have had a major police detail to defend the building with National Guard troops on standby given the strength of feeling among people arriving from all over America encouraged by the QAnon Psyop and statements by Donald Trump. Instead Capitol Police 'security' was flimsy, weak, and easily breached. The same number of officers was deployed as on a regular day and that is a blatant red flag. They were not staffed or equipped for a possible riot that had been an obvious possibility in the circumstances. No protective and effective fencing worth the name was put in place and there were no contingency plans. The whole thing was basically a case of standing aside and waving people in. Once inside police mostly backed off apart from one Capitol police officer who ridiculously shot dead unarmed Air Force veteran protestor Ashli Babbitt without a warning as she climbed through a broken window. The 'investigation' refused to name or charge the officer after what must surely be considered a murder in the circumstances. They just lifted a carpet and swept. The story was endlessly repeated about five people dying in the 'armed insurrection' when there was no report of rioters using weapons. Apart from Babbitt the other four died from a heart attack, strokes and apparently a drug overdose. Capitol police officer Brian Sicknick was reported to have died after being bludgeoned with a fire extinguisher when he was alive after the riot was over and died later of what the Washington Medical Examiner's Office said was a stroke. Sicknick had no external injuries. The lies were delivered like rapid fire. There was a narrative to build with incessant repetition of the lie until the lie became the accepted 'everybody knows that' truth. The 'Big Lie' technique of Nazi Propaganda Minister Joseph Goebbels is constantly used by the Cult which was behind the Nazis and is today behind the 'Covid' and 'climate change' hoaxes. Goebbels said:

> If you tell a lie big enough and keep repeating it, people will eventually come to believe it. The lie can be maintained only for such time as the State can shield the people from the political, economic and/or military consequences of the lie. It thus becomes vitally important for the State to use all of its powers to repress dissent, for the truth is the mortal enemy of the lie, and thus by extension, the truth is the greatest enemy of the State.

Most protestors had a free run of the Capitol Building. This allowed pictures to be taken of rioters in iconic parts of the building including the Senate chamber which could be used as propaganda images against all Pushbackers. One Congresswoman described the scene as 'the worst kind of non-security anybody could ever imagine'. Well, the first part was true, but someone obviously did imagine it and made sure it happened. Some photographs most widely circulated featured people wearing QAnon symbols and now the Psyop would be used to dub all QAnon followers with the ubiquitous fit-all label of 'white supremacist' and 'insurrectionists'. When a Muslim extremist called Noah Green drove his car at two police officers at the Capitol Building killing one in April, 2021, there was no such political and media hysteria. They were just disappointed he wasn't white.

The witch-hunt

Government prosecutor Michael Sherwin, an aggressive, dark-eyed, professional Rottweiler led the 'investigation' and to call it over the top would be to understate reality a thousand fold. Hundreds were tracked down and arrested for the crime of having the wrong political views and people were jailed who had done nothing more than walk in the building, committed no violence or damage to property, took a few pictures and left. They were labelled a 'threat to the Republic' while Biden sat in the White House signing executive orders written for him that were dismantling 'the Republic'. Even when judges ruled that a mother and son should not be in jail the government kept them there. Some of those arrested have been badly beaten by prison guards in Washington and lawyers for one man said he suffered a fractured skull and was made blind in one eye. Meanwhile a woman is shot dead for no reason by a Capitol Police officer and we are not allowed to know who he is never mind what has happened to him although that will be *nothing*. The Cult's QAnon/Trump sting to identify and isolate Pushbackers and then target them on the road to crushing and deleting them was a resounding success. You would have thought the Russians had invaded the building at gunpoint and lined up senators for a firing squad to see the political and media reaction. Congresswoman Alexandria Ocasio-Cortez is a child in a woman's body, a terrible-twos, me, me, me, Woker narcissist of such proportions that words have no meaning. She said she thought she was going to die when 'insurrectionists' banged on her office door. It turned out she wasn't even in the Capitol Building when the riot was happening and the 'banging' was a Capitol Police officer. She referred to herself as a 'survivor' which is an insult to all those true survivors of violent and sexual abuse while she lives her pampered and privileged life talking drivel for a living. Her Woke colleague and fellow mega-narcissist Rashida Tlaib broke down describing the devastating effect on her, too, of *not being* in the building when the rioters were there. Ocasio-Cortez and Tlaib are members of a fully-Woke group of Congresswomen known as 'The Squad' along with Ilhan Omar and Ayanna Pressley. The Squad from what I can see can be identified by its vehement anti-white racism, anti-white men agenda, and, as always in these cases, the absence of brain cells on active duty.

The usual suspects were on the riot case immediately in the form of Democrat ultra-Zionist senators and operatives Chuck Schumer and Adam Schiff demanding that Trump be impeached for 'his part in the insurrection'. The same pair of prats had led the failed impeachment of Trump over the invented 'Russia collusion' nonsense which claimed Russia had helped Trump win the 2016 election. I didn't realise that Tel Aviv had been relocated just outside Moscow. I must find an up-to-date map. The Russia hoax was a Sabbatian operation to keep Trump occupied and impotent and to stop any rapport with Russia which the Cult wants to retain as a perceptual enemy to be pulled out at will. Puppet Biden began attacking Russia when he came to office as the Cult seeks more upheaval, division and war across the world. A two-year stage show 'Russia collusion inquiry' headed by the not-very-bright former 9/11 FBI chief Robert Mueller, with support from 19 lawyers, 40 FBI agents plus intelligence analysts, forensic accountants and other staff, devoured tens of millions of dollars and found no evidence of Russia collusion which a ten-year-old could have told them on day one. Now the same moronic Schumer and Schiff wanted a second impeachment of Trump over the Capitol 'insurrection' (riot) which the arrested development of Schumer called another 'Pearl Harbor' while others compared it with 9/11 in which 3,000 died and, in the case of CNN, with the Rwandan genocide in the 1990s in which an estimated 500,000 to 600,000 were murdered, between 250, 000 and 500,000 women were raped, and populations of whole towns were hacked to death with machetes. To make those comparisons purely for Cult political reasons is beyond insulting to those that suffered and lost their lives and confirms yet again the callous inhumanity that we are dealing with. Schumer is a monumental idiot and so is Schiff, but they serve the Cult agenda and do whatever they're told so they get looked after. Talking of idiots – another inane man who spanned the Russia and Capitol impeachment attempts was Senator Eric Swalwell who had the nerve to accuse Trump of collusion with the Russians while sleeping with a Chinese spy called Christine Fang or 'Fang Fang' which is straight out of a Bond film no doubt starring Klaus Schwab as the bloke living on a secret island and controlling laser weapons positioned in space and pointing at world capitals. Fang Fang plays the part of Bond's infiltrator girlfriend which I'm sure she would enjoy rather more than sharing a bed with the brainless Swalwell, lying back and thinking of China. The FBI eventually warned Swalwell about Fang Fang which gave her time to escape back to the Chinese dictatorship. How very thoughtful of them. The second Trump impeachment also failed and hardly surprising when an impeachment is supposed to remove a sitting president and by the time it happened Trump was no longer president. These people are running your country America, well, officially anyway. Terrifying isn't it?

Outcomes tell the story - always

The outcome of all this – and it's the *outcome* on which Renegade Minds focus, not the words – was that a vicious, hysterical and obviously pre-planned assault was launched on Pushbackers to censor, silence and discredit them and even targeted their right to earn a living. They have since been condemned as 'domestic terrorists' that need to be treated like Al-Qaeda and Islamic State. 'Domestic terrorists' is a label the Cult has been trying to make stick since the period of the Oklahoma bombing in 1995 which was blamed on 'far-right domestic terrorists'. If you read *The Trigger* you will see that the bombing was clearly a Problem-Reaction-Solution carried out by the Deep State during a Bill Clinton administration so corrupt that no dictionary definition of the term would even nearly suffice. Nearly 30, 000 troops were deployed from all over America to the empty streets of Washington for Biden's inauguration. Ten thousand of them stayed on with the pretext of protecting the capital from insurrectionists when it was more psychological programming to normalise the use of the military in domestic law enforcement in support of the Cult plan for a police-military state. Biden's fascist administration began a purge of 'wrong-thinkers' in the military which means anyone that is not on board with Woke. The Capitol Building was surrounded by a fence with razor wire and the Land of the Free was further symbolically and literally dismantled. The circle was completed with the installation of Biden and the exploitation of the QAnon Psyop.

America had never been so divided since the civil war of the 19th century, Pushbackers were isolated and dubbed terrorists and now, as was always going to happen, the Cult immediately set about deleting what little was left of freedom and transforming American society through a swish of the hand of the most controlled 'president' in American history leading (officially at least) the most extreme regime since the country was declared an independent state on July 4th, 1776. Biden issued undebated, dictatorial executive orders almost by the hour in his opening days in office across the whole spectrum of the Cult wish-list including diluting controls on the border with Mexico allowing thousands of migrants to illegally enter the United States to transform the demographics of America and import an election-changing number of perceived Democrat voters. Then there were Biden deportation amnesties for the already illegally resident (estimated to be as high as 20 or even 30 million). A bill before Congress awarded American citizenship to anyone who could prove they had worked in agriculture for just 180 days in the previous two years as 'Big Ag' secured its slave labour long-term. There were the plans to add new states to the union such as Puerto Rico and making Washington DC a state. They are all parts of a plan to ensure that the Cult-owned Woke Democrats would be permanently in power.

Border – what border?

I have exposed in detail in other books how mass immigration into the United States and Europe is the work of Cult networks fuelled by the tens of billions spent to this and other ends by George Soros and his global Open Society (open borders) Foundations. The impact can be seen in America alone where the population has increased by *100 million* in little more than 30 years mostly through immigration. I wrote in *The Answer* that the plan was to have so many people crossing the southern border that the numbers become unstoppable and we are now there under Cult-owned Biden. El Salvador in Central America puts the scale of what is happening into context. A third of the population now lives in the United States, much of it illegally, and many more are on the way. The methodology is to crush Central and South American countries economically and spread violence through machete-wielding psychopathic gangs like MS-13 based in El Salvador and now operating in many American cities. Biden-imposed lax security at the southern border means that it is all but open. He said before his 'election' that he wanted to see a surge towards the border if he became president and that was the green light for people to do just that after election day to create the human disaster that followed for both America and the migrants. When that surge came the imbecilic Alexandria Ocasio-Cortez said it wasn't a 'surge' because they are 'children, not insurgents' and the term 'surge' (used by Biden) was a claim of 'white supremacists'.

This disingenuous lady may one day enter the realm of the most basic intelligence, but it won't be any time soon.

Sabbatians and the Cult are in the process of destroying America by importing violent people and gangs in among the genuine to terrorise American cities and by overwhelming services that cannot cope with the sheer volume of new arrivals. Something similar is happening in Europe as Western society in general is targeted for demographic and cultural transformation and upheaval. The plan demands violence and crime to create an environment of intimidation, fear and division and Soros has been funding the election of district attorneys across America who then stop prosecuting many crimes, reduce sentences for violent crimes and free as many violent criminals as they can. Sabbatians are creating the chaos from which order – their order – can respond in a classic Problem-Reaction-Solution. A Freemasonic moto says 'Ordo Ab Chao' (Order out of Chaos) and this is why the Cult is constantly creating chaos to impose a new 'order'. Here you have the reason the Cult is constantly creating chaos. The 'Covid' hoax can be seen with those entering the United States by plane being forced to take a 'Covid' test while migrants flooding through southern border processing facilities do not. Nothing is put in the way of mass migration and if that means ignoring the government's own 'Covid' rules then so be it. They know it's all bullshit anyway. Any pushback on this is denounced as 'racist' by Wokers and Sabbatian fronts like the ultra-Zionist Anti-Defamation League headed by the appalling Jonathan Greenblatt which at the same time argues that Israel should not give citizenship and voting rights to more Palestinian Arabs or the 'Jewish population' (in truth the Sabbatian network) will lose control of the country.

Society-changing numbers

Biden's masters have declared that countries like El Salvador are so dangerous that their people must be allowed into the United States for humanitarian reasons when there are fewer murders in large parts of many Central American countries than in US cities like

Baltimore. That is not to say Central America cannot be a dangerous place and Cult-controlled American governments have been making it so since way back, along with the dismantling of economies, in a long-term plan to drive people north into the United States. Parts of Central America are very dangerous, but in other areas the story is being greatly exaggerated to justify relaxing immigration criteria. Migrants are being offered free healthcare and education in the United States as another incentive to head for the border and there is no requirement to be financially independent before you can enter to prevent the resources of America being drained. You can't blame migrants for seeking what they believe will be a better life, but they are being played by the Cult for dark and nefarious ends. The numbers since Biden took office are huge. In February, 2021, more than 100,000 people were known to have tried to enter the US illegally through the southern border (it was 34,000 in the same month in 2020) and in March it was 170,000 – a 418 percent increase on March, 2020. These numbers are only known people, not the ones who get in unseen. The true figure for migrants illegally crossing the border in a single month was estimated by one congressman at 250,000 and that number will only rise under Biden's current policy. Gangs of murdering drug-running thugs that control the Mexican side of the border demand money – thousands of dollars – to let migrants cross the Rio Grande into America. At the same time gun battles are breaking out on the border several times a week between rival Mexican drug gangs (which now operate globally) who are equipped with sophisticated military-grade weapons, grenades and armoured vehicles. While the Capitol Building was being 'protected' from a non-existent 'threat' by thousands of troops, and others were still deployed at the time in the Cult Neocon war in Afghanistan, the southern border of America was left to its fate. This is not incompetence, it is cold calculation.

By March, 2021, there were 17,000 unaccompanied children held at border facilities and many of them are ensnared by people traffickers for paedophile rings and raped on their journey north to America. This is not conjecture – this is fact. Many of those designated children are in reality teenage boys or older. Meanwhile Wokers posture their self-purity for encouraging poor and tragic people to come to America and face this nightmare both on the journey and at the border with the disgusting figure of House Speaker Nancy Pelosi giving disingenuous speeches about caring for migrants. The woman's evil. Wokers condemned Trump for having children in cages at the border (so did Obama, *Shhhh*), but now they are sleeping on the floor without access to a shower with one border facility 729 percent over capacity. The Biden insanity even proposed flying migrants from the southern border to the northern border with Canada for 'processing'. The whole shambles is being overseen by ultra-Zionist Secretary of Homeland Security, the moronic liar Alejandro Mayorkas, who banned news cameras at border facilities to stop Americans seeing what was happening. Mayorkas said there was not a ban on news crews; it was just that they were not allowed to film. Alongside him at Homeland Security is another ultra-Zionist Cass Sunstein appointed by Biden to oversee new immigration laws. Sunstein despises conspiracy researchers to the point where he suggests they should be banned or *taxed* for having such views. The man is not bonkers or anything. He's perfectly well-adjusted, but adjusted to what is the question. Criticise what is happening and you are a 'white supremacist' when earlier non-white immigrants also oppose the numbers which effect their lives and opportunities. Black people in poor areas are particularly damaged by uncontrolled immigration and the increased competition for work opportunities with those who will work for less. They are also losing voting power as Hispanics become more dominant in former black areas. It's a downward spiral for them while the billionaires behind the policy drone on about how much they care about black people and 'racism'. None of this is about compassion for migrants or black people – that's just wind and air. Migrants are instead being mercilessly exploited to transform America while the countries they leave are losing their future and the same is true in Europe. Mass immigration may now be the work of Woke Democrats, but it can be traced back to the 1986 Immigration Reform and Control Act (it wasn't) signed into law by Republican hero President Ronald Reagan which gave amnesty to millions living in the United States illegally and other incentives for people to head for the southern border. Here we have the one-party state at work again.

Save me syndrome

Almost every aspect of what I have been exposing as the Cult agenda was on display in even the first days of 'Biden' with silencing of Pushbackers at the forefront of everything. A Renegade Mind will view the Trump years and QAnon in a very different light to their supporters and advocates as the dots are connected. The QAnon/Trump Psyop has given the Cult all it was looking for. We may not know how much, or little, that Trump realised he was being used, but that's a side issue. This pincer movement produced the desired outcome of dividing America and having Pushbackers isolated. To turn this around we have to look at new routes to empowerment which do not include handing our power to other people and groups through what I will call the 'Save Me Syndrome' – 'I want someone else to do it so that I don't have to'. We have seen this at work throughout human history and the QAnon/Trump Psyop is only the latest incarnation alongside all the others. Religion is an obvious expression of this when people look to a 'god' or priest to save them or tell them how to be saved and then there are 'save me' politicians like Trump. Politics is a diversion and not a 'saviour'. It is a means to block positive change, not make it possible.

Save Me Syndrome always comes with the same repeating theme of handing your power to whom or what you believe will save you while your real 'saviour' stares back from the mirror every morning. Renegade Minds are constantly vigilant in this regard and always asking the question 'What can I do?' rather than 'What can someone else do for me?' Gandhi was right when he said: 'You must be the change you want to see in the world.' We are indeed the people we have been waiting for. We are presented with a constant raft of reasons to concede that power to others and forget where the real power is. Humanity has the numbers and the Cult does not. It has to use diversion and division to target the unstoppable power that comes from unity. Religions, governments, politicians, corporations, media, QAnon, are all different manifestations of this power-diversion and dilution. Refusing to give your power to governments and instead handing it to Trump and QAnon is not to take a new direction, but merely to recycle the old one with new names on the posters. I will explore this phenomenon as we proceed and how to break the cycles and recycles that got us here through the mists of repeating perception and so repeating history.

For now we shall turn to the most potent example in the entire human story of the consequences that follow when you give your power away. I am talking, of course, of the ‘Covid’ hoax.

CHAPTER FOUR

'Covid': Calculated catastrophe

Facts are threatening to those invested in fraud
DaShanne Stokes

We can easily unravel the real reason for the 'Covid pandemic' hoax by employing the Renegade Mind methodology that I have outlined this far. We'll start by comparing the long-planned Cult outcome with the 'Covid pandemic' outcome. Know the outcome and you'll see the journey.

I have highlighted the plan for the Hunger Games Society which has been in my books for so many years with the very few controlling the very many through ongoing dependency. To create this dependency it is essential to destroy independent livelihoods, businesses and employment to make the population reliant on the state (the Cult) for even the basics of life through a guaranteed pittance income. While independence of income remained these Cult ambitions would be thwarted. With this knowledge it was easy to see where the 'pandemic' hoax was going once talk of 'lockdowns' began and the closing of all but perceived 'essential' businesses to 'save' us from an alleged 'deadly virus'. Cult corporations like Amazon and Walmart were naturally considered 'essential' while mom and pop shops and stores had their doors closed by fascist decree. As a result with every new lockdown and new regulation more small and medium, even large businesses not owned by the Cult, went to the wall while Cult giants and their frontmen and women grew financially fatter by the second. Mom and pop were denied an income and the right to earn a living and the wealth of people like Jeff Bezos (Amazon), Mark Zuckerberg (Facebook) and Sergei Brin and Larry Page (Google/Alphabet) have reached record levels. The Cult was increasing its own power through further dramatic concentrations of wealth while the competition was being destroyed and brought into a state of dependency. Lockdowns have been instigated to secure that very end and were never anything to do with health. My brother Paul spent 45 years building up a bus repair business, but lockdowns meant buses were running at a fraction of normal levels for months on end. Similar stories can told in their hundreds of millions worldwide. Efforts of a lifetime coldly destroyed by Cult multi-billionaires and their lackeys in government and law enforcement who continued to earn their living from the taxation of the people while denying the right of the same people to earn theirs. How different it would have been if those making and enforcing these decisions had to face the same financial hardships of those they affected, but they never do.

Gates of Hell

Behind it all in the full knowledge of what he is doing and why is the psychopathic figure of Cult operative Bill Gates. His puppet Tedros at the World Health Organization declared ‘Covid’ a pandemic in March, 2020. The WHO had changed the definition of a ‘pandemic’ in 2009 just a month before declaring the ‘swine flu pandemic’ which would not have been so under the previous definition. The same applies to ‘Covid’. The definition had included… ‘an infection by an infectious agent, occurring simultaneously in different countries, with a significant mortality rate relative to the proportion of the population infected’. The new definition removed the need for ‘significant mortality’. The ‘pandemic’ has been fraudulent even down to the definition, but Gates demanded economy-destroying lockdowns, school closures, social distancing, mandatory masks, a ‘vaccination’ for every man, woman and child on the planet and severe consequences and restrictions for those that refused. Who gave him this power? The

Cult did which he serves like a little boy in short trousers doing what his daddy tells him. He and his psychopathic missus even smiled when they said that much worse was to come (what they knew was planned to come). Gates responded in the matter-of-fact way of all psychopaths to a question about the effect on the world economy of what he was doing:

> Well, it won't go to zero but it will shrink. Global GDP is probably going to take the biggest hit ever [Gates was smiling as he said this] … in my lifetime this will be the greatest economic hit. But you don't have a choice. People act as if you have a choice. People don't feel like going to the stadium when they might get infected … People are deeply affected by seeing these stats, by knowing they could be part of the transmission chain, old people, their parents and grandparents, could be affected by this, and so you don't get to say ignore what is going on here.
>
> There will be the ability to open up, particularly in rich countries, if things are done well over the next few months, but for the world at large normalcy only returns when we have largely vaccinated the entire population.

The man has no compassion or empathy. How could he when he's a psychopath like all Cult players? My own view is that even beyond that he is very seriously mentally ill. Look in his eyes and you can see this along with his crazy flailing arms. You don't do what he has done to the world population since the start of 2020 unless you are mentally ill and at the most extreme end of psychopathic. You especially don't do it when to you know, as we shall see, that cases and deaths from 'Covid' are fakery and a product of monumental figure massaging. 'These stats' that Gates referred to are based on a 'test' that's not testing for the 'virus' as he has known all along. He made his fortune with big Cult support as an infamously ruthless software salesman and now buys global control of 'health' (death) policy without the population he affects having any say. It's a breathtaking outrage. Gates talked about people being deeply affected by fear of 'Covid' when that was because of *him* and his global network lying to them minute-by-minute supported by a lying media that he seriously influences and funds to the tune of hundreds of millions. He's handed big sums to media operations including the BBC, NBC, Al Jazeera, Univision, *PBS NewsHour,* *ProPublica, National Journal, The Guardian, The Financial Times, The Atlantic, Texas Tribune, USA Today* publisher Gannett, *Washington Monthly, Le Monde,* Center for Investigative Reporting, Pulitzer Center on Crisis Reporting, National Press Foundation, International Center for Journalists, Solutions Journalism Network, the Poynter Institute for Media Studies, and many more. Gates is everywhere in the 'Covid' hoax and the man must go to prison – or a mental facility – for the rest of his life and his money distributed to those he has taken such enormous psychopathic pleasure in crushing.

The Muscle

The Hunger Games global structure demands a police-military state – a fusion of the two into one force – which viciously imposes the will of the Cult on the population and protects the Cult from public rebellion. In that regard, too, the 'Covid' hoax just keeps on giving. Often unlawful, ridiculous and contradictory 'Covid' rules and regulations have been policed across the world by moronic automatons and psychopaths made faceless by face-nappy masks and acting like the Nazi SS and fascist blackshirts and brownshirts of Hitler and Mussolini. The smallest departure from the rules decreed by the psychos in government and their clueless gofers were jumped upon by the face-nappy fascists. Brutality against public protestors soon became commonplace even on girls, women and old people as the brave men with the batons – the Face-Nappies as I call them – broke up peaceful protests and handed out fines like confetti to people who couldn't earn a living let alone pay hundreds of pounds for what was once an accepted human right. Robot Face-Nappies of Nottingham police in the English East Midlands fined one group £11,000 for attending a child's birthday party. For decades I charted the transformation of law enforcement as genuine, decent officers were replaced with psychopaths and the brain dead who would happily and brutally do whatever their masters told them. Now they were let loose on the public and I would emphasise the point that none of this just happened. The step-by-step change in the dynamic between police and public was orchestrated from the shadows by those who knew where this was all going and the same with the perceptual reframing of those in all levels of authority and official administration through ‘training courses’ by organisations such as Common Purpose which was created in the late 1980s and given a massive boost in Blair era Britain until it became a global phenomenon. Supposed public ‘servants’ began to view the population as the enemy and the same was true of the police. This was the start of the explosion of behaviour manipulation organisations and networks preparing for the all-war on the human psyche unleashed with the dawn of 2020. I will go into more detail about this later in the book because it is a core part of what is happening.

Police desecrated beauty spots to deter people gathering and arrested women for walking in the countryside alone ‘too far’ from their homes. We had arrogant, clueless sergeants in the Isle of Wight police where I live posting on Facebook what they insisted the population must do or else. A schoolmaster sergeant called Radford looked young enough for me to ask if his mother knew he was out, but he was posting what he *expected* people to do while a Sergeant Wilkinson boasted about fining lads for meeting in a McDonald’s car park where they went to get a lockdown takeaway. Wilkinson added that he had even cancelled their order. What a pair of prats these people are and yet they have increasingly become the norm among Jackboot Johnson’s Yellowshirts once known as the British police. This was the theme all over the world with police savagery common during lockdown protests in the United States, the Netherlands, and the fascist state of Victoria in Australia under its tyrannical and again moronic premier Daniel Andrews. Amazing how tyrannical and moronic tend to work as a team and the same combination could be seen across America as arrogant, narcissistic Woke governors and mayors such as Gavin Newsom (California), Andrew Cuomo (New York), Gretchen Whitmer (Michigan), Lori Lightfoot (Chicago) and Eric Garcetti (Los Angeles) did their Nazi and Stalin impressions with the full support of the compliant brutality of their enforcers in uniform as they arrested small business owners defying fascist shutdown orders and took them to jail in ankle shackles and handcuffs. This happened to bistro owner Marlena Pavlos-Hackney in Gretchen Whitmer's fascist state of Michigan when police arrived to enforce an order by a state-owned judge for 'putting the community at risk' at a time when other states like Texas were dropping restrictions and migrants were pouring across the southern border without any 'Covid' questions at all. I'm sure there are many officers appalled by what they are ordered to do, but not nearly enough of them. If they were truly appalled they would not do it. As the months passed every opportunity was taken to have the military involved to make their presence on the streets ever more familiar and 'normal' for the longer-term goal of police-military fusion.

Another crucial element to the Hunger Games enforcement network has been encouraging the public to report neighbours and others for 'breaking the lockdown rules'. The group faced with £11,000 in fines at the child's birthday party would have been dobbed-in by a neighbour with a brain the size of a pea. The technique was most famously employed by the Stasi secret police in communist East Germany who had public informants placed throughout the population. A police chief in the UK says his force doesn't need to carry out 'Covid' patrols when they are flooded with so many calls from the public reporting other people for visiting the beach. Dorset police chief James Vaughan said people were so enthusiastic about snitching on their fellow humans they were now operating as an auxiliary arm of the police: 'We are still getting around 400 reports a week from the public, so we will respond to reports …We won't need to be doing hotspot patrols because people are very quick to pick the phone up and tell us.' Vaughan didn't say that this is a pillar of all tyrannies of whatever complexion and the means to hugely extend the reach of enforcement while spreading distrust among the people and making them wary of doing anything that might get them reported. Those narcissistic Isle of Wight sergeants Radford and Wilkinson never fail to add a link to their Facebook posts where the public can inform on their fellow slaves.

Neither would be self-aware enough to realise they were imitating the Stasi which they might well never have heard of. Government psychologists that I will expose later laid out a policy to turn communities against each other in the same way.

A coincidence? Yep, and I can knit fog

I knew from the start of the alleged pandemic that this was a Cult operation. It presented limitless potential to rapidly advance the Cult agenda and exploit manipulated fear to demand that every man, woman and child on the planet was 'vaccinated' in a process never used on humans before which infuses self-replicating *synthetic* material into human cells. Remember the plan to transform the human body from a biological to a synthetic biological state. I'll deal with the 'vaccine' (that's not actually a vaccine) when I focus on the genetic agenda. Enough to say here that mass global 'vaccination' justified by this 'new virus' set alarms ringing after 30 years of tracking these people and their methods. The 'Covid' hoax officially beginning in China was also a big red flag for reasons I will be explaining. The agenda potential was so enormous that I could dismiss any idea that the 'virus' appeared naturally. Major happenings with major agenda implications never occur without Cult involvement in making them happen. My questions were twofold in early 2020 as the media began its campaign to induce global fear and hysteria: Was this alleged infectious agent released on purpose by the Cult or did it even exist at all? I then did what I always do in these situations. I sat, observed and waited to see where the evidence and information would take me. By March and early April synchronicity was strongly – and ever more so since then – pointing me in the direction of *there is no 'virus'*. I went public on that with derision even from swathes of the alternative media that voiced a scenario that the Chinese government released the 'virus' in league with Deep State elements in the United States from a top-level bio-lab in Wuhan where the 'virus' is said to have first appeared. I looked at that possibility, but I didn't buy it for several reasons. Deaths from the 'virus' did not in any way match what they would have been with a ‘deadly bioweapon’ and it is much more effective if you sell the *illusion* of an infectious agent rather than having a real one unless you can control through injection who has it and who doesn’t. Otherwise you lose control of events. A made-up ‘virus’ gives you a blank sheet of paper on which you can make it do whatever you like and have any symptoms or mutant ‘variants’ you choose to add while a real infectious agent would limit you to what it actually does. A phantom disease allows you to have endless ludicrous ‘studies’ on the ‘Covid’ dollar to widen the perceived impact by inventing ever more ‘at risk’ groups including one study which said those who walk slowly may be almost four times more likely to die from the ‘virus’. People are in psychiatric wards for less.

A real ‘deadly bioweapon’ can take out people in the hierarchy that are not part of the Cult, but essential to its operation. Obviously they don’t want that. Releasing a real disease means you immediately lose control of it. Releasing an illusory one means you don’t. Again it’s vital that people are extra careful when dealing with what they want to hear. A bioweapon unleashed from a Chinese laboratory in collusion with the American Deep State may fit a conspiracy narrative, but is it true? Would it not be far more effective to use the excuse of a ‘virus’ to justify the real bioweapon – the ‘vaccine’? That way your disease agent does not have to be transmitted and arrives directly through a syringe. I saw a French virologist Luc Montagnier quoted in the alternative media as saying he had discovered that the alleged ‘new’ severe acute respiratory syndrome coronavirus , or SARS-CoV-2, was made artificially and included elements of the human immunodeficiency ‘virus’ (HIV) and a parasite that causes malaria. SARS-CoV-2 is alleged to trigger an alleged illness called Covid-19. I remembered Montagnier’s name from my research years before into claims that an HIV ‘retrovirus’ causes AIDs – claims that were demolished by Berkeley virologist Peter Duesberg who showed that no one had ever proved that HIV causes acquired immunodeficiency syndrome or AIDS. Claims that become accepted as fact, publicly and medically, with no proof whatsoever are an ever-recurring story that profoundly applies to

'Covid'. Nevertheless, despite the lack of proof, Montagnier's team at the Pasteur Institute in Paris had a long dispute with American researcher Robert Gallo over which of them discovered and isolated the HIV 'virus' and with *no evidence* found it to cause AIDS. You will see later that there is also no evidence that any 'virus' causes any disease or that there is even such a thing as a 'virus' in the way it is said to exist. The claim to have 'isolated' the HIV 'virus' will be presented in its real context as we come to the shocking story – and it is a story – of SARS-CoV-2 and so will Montagnier's assertion that he identified the full SARS-CoV-2 genome.

Hoax in the making

We can pick up the 'Covid' story in 2010 and the publication by the Rockefeller Foundation of a document called 'Scenarios for the Future of Technology and International Development'. The inner circle of the Rockefeller family has been serving the Cult since John D. Rockefeller (1839-1937) made his fortune with Standard Oil. It is less well known that the same Rockefeller – the Bill Gates of his day – was responsible for establishing what is now referred to as 'Big Pharma', the global network of pharmaceutical companies that make outrageous profits dispensing scalpel and drug 'medicine' and are obsessed with pumping vaccines in ever-increasing number into as many human arms and backsides as possible. John D. Rockefeller was the driving force behind the creation of the 'education' system in the United States and elsewhere specifically designed to program the perceptions of generations thereafter. The Rockefeller family donated exceptionally valuable land in New York for the United Nations building and were central in establishing the World Health Organization in 1948 as an agency of the UN which was created from the start as a Trojan horse and stalking horse for world government. Now enter Bill Gates. His family and the Rockefellers have long been extremely close and I have seen genealogy which claims that if you go back far enough the two families fuse into the same bloodline. Gates has said that the Bill and Melinda Gates Foundation was inspired by the Rockefeller Foundation and why not when both are serving the same Cult? Major tax-exempt foundations are overwhelmingly criminal enterprises in which Cult assets fund the Cult agenda in the guise of 'philanthropy' while avoiding tax in the process. Cult operatives can become mega-rich in their role of front men and women for the psychopaths at the inner core and they, too, have to be psychopaths to knowingly serve such evil. Part of the deal is that a big percentage of the wealth gleaned from representing the Cult has to be spent advancing the ambitions of the Cult and hence you have the Rockefeller Foundation, Bill and Melinda Gates Foundation (and *so* many more) and people like George Soros with his global Open Society Foundations spending their billions in pursuit of global Cult control. Gates is a global public face of the Cult with his interventions in world affairs including Big Tech influence; a central role in the 'Covid' and 'vaccine' scam; promotion of the climate change shakedown; manipulation of education; geoengineering of the skies; and his food-control agenda as the biggest owner of farmland in America, his GMO promotion and through other means. As one writer said: 'Gates monopolizes or wields disproportionate influence over the tech industry, global health and vaccines, agriculture and food policy (including biopiracy and fake food), weather modification and other climate technologies, surveillance, education and media.' The almost limitless wealth secured through Microsoft and other not-allowed-to-fail ventures (including vaccines) has been ploughed into a long, long list of Cult projects designed to enslave the entire human race. Gates and the Rockefellers have been working as one unit with the Rockefeller-established World Health Organization leading global 'Covid' policy controlled by Gates through his mouth-piece Tedros. Gates became the WHO's biggest funder when Trump announced that the American government would cease its donations, but Biden immediately said he would restore the money when he took office in January, 2021. The Gates Foundation (the Cult) owns through limitless funding the world health system and the major players across the globe in the 'Covid' hoax.

Okay, with that background we return to that Rockefeller Foundation document of 2010 headed 'Scenarios for the Future of Technology and International Development' and its 'imaginary' epidemic of a virulent and deadly influenza strain which infected 20 percent of the global population and killed eight million in seven months. The Rockefeller scenario was that the epidemic destroyed economies, closed shops, offices and other businesses and led to governments imposing fierce rules and restrictions that included mandatory wearing of face masks and body-temperature checks to enter communal spaces like railway stations and supermarkets. The document predicted that even after the height of the Rockefeller-envisaged epidemic the authoritarian rule would continue to deal with further pandemics, transnational terrorism, environmental crises and rising poverty. Now you may think that the Rockefellers are our modern-day seers or alternatively, and rather more likely, that they well knew what was planned a few years further on. Fascism had to be imposed, you see, to 'protect citizens from risk and exposure'. The Rockefeller scenario document said:

> During the pandemic, national leaders around the world flexed their authority and imposed airtight rules and restrictions, from the mandatory wearing of face masks to body-temperature checks at the entries to communal spaces like train stations and supermarkets. Even after the pandemic faded, this more authoritarian control and oversight of citizens and their activities stuck and even intensified. In order to protect themselves from the spread of increasingly global problems – from pandemics and transnational terrorism to environmental crises and rising poverty – leaders around the world took a firmer grip on power.
>
> At first, the notion of a more controlled world gained wide acceptance and approval. Citizens willingly gave up some of their sovereignty – and their privacy – to more paternalistic states in exchange for greater safety and stability. Citizens were more tolerant, and even eager, for top-down direction and oversight, and national leaders had more latitude to impose order in the ways they saw fit.
>
> In developed countries, this heightened oversight took many forms: biometric IDs for all citizens, for example, and tighter regulation of key industries whose stability was deemed vital to national interests. In many developed countries, enforced cooperation with a suite of new regulations and agreements slowly but steadily restored both order and, importantly, economic growth.

There we have the prophetic Rockefellers in 2010 and three years later came their paper for the Global Health Summit in Beijing, China, when government representatives, the private sector, international organisations and groups met to discuss the next 100 years of 'global health'. The Rockefeller Foundation-funded paper was called 'Dreaming the Future of Health for the Next 100 Years and more prophecy ensued as it described a dystopian future: 'The abundance of data, digitally tracking and linking people may mean the 'death of privacy' and may replace physical interaction with transient, virtual connection, generating isolation and raising questions of how values are shaped in virtual networks.' Next in the 'Covid' hoax preparation sequence came a 'table top' simulation in 2018 for another 'imaginary' pandemic of a disease called Clade X which was said to kill 900 million people. The exercise was organised by the Gates-funded Johns Hopkins University's Center for Health Security in the United States and this is the very same university that has been compiling the disgustingly and systematically erroneous global figures for 'Covid' cases and deaths. Similar Johns Hopkins health crisis scenarios have included the Dark Winter exercise in 2001 and Atlantic Storm in 2005.

Nostradamus 201
